There appears in the stone immediately the Kamea{SUP:2} of the Moon. And it is rolled up; and behind it there appeareth a great Host of Angels. Their backs are turned towards me, but I can see how tremendous are their arms, which are swords and spears. They have wings upon their helmets and their heels: they are clad in complete armour, and the least of their swords is like the breaking forth of a tremendous storm of lightning. The least of their spears is like a great water-spout. On their shields are the eyes of Tetragrammaton, winged with flame, --- white, red, black, yellow and blue. On their flanks are vast squadrons of elephants, and behind them is their meteor-artillery. They that sit upon the elephants are armed with the thunderbolt of Zeus.

Now in all that host there is no motion. Yet they are not resting upon their arms, but tense and vigilant.

And between them and me is the God Shu, whom before I did not see, because his force filleth the whole Aethyr{SUP:3}. And indeed he is not visible in his form. Nor does he come to the seer through any of the senses; he is understood, rather than expressed.

I perceive that all this army is defended by fortresses, nine mighty towers{SUP:4} of iron upon the frontier of the Aethyr. Each

-
1. IKH = {Sagittarius}{Dee}{Air} = {HEB:Samekh}{HEB:Shin}{HEB:Aleph}, the Supernal Triad, the Hexagon and Malkuth, the arrangement of the Tree of Life. Also 361 Adonai ha-Aretz. For it is the formulation of the Sephiroth which is a barrier of organic structure against the confusion of matter.
 2. Kamea --- "magic square" containing the letters corresponding to the numbers (in this case from 1 to 81) --- so arranged that each line, vertical or horizontal, shall add to the same total.
 3. Shu is in Jesod, as the supporter of the Tree of Life, and he is Zeus, the Lord of Air. But also Zeus is the orderer of all things.
 4. Jesod = 9

- 93 -

tower is filled with warriors in silver armour{SUP:1}. It is impossible to describe the feeling of tension; they are like oarsmen waiting for the gun.

I perceive that an Angel is standing on either side of me; nay, I am in the midst of a company of armed angels, and their captain is standing in front of me. He too is clad in silver armour; and about him, closely wrapped to his body, is a whirling wind{SUP:2}, so swift that any blow struck against him would be broken.

And he speaketh unto me these words:

Behold, a mighty guard against the terror of things, the fastness of the Most High, the legions of eternal vigilance; these are they that keep watch and ward day and night throughout the aeons. Set in them is all force of the Mighty One, yet there stirreth not one plume of the wings of their helmets.

Behold, the foundation of the Holy City, the towers and the bastions thereof! Behold the armies of light that are set against the outermost Abyss, against the horror of emptiness, and the malice of Choronzon. Behold how worshipful is the wisdom of the Master, that he hath set his stability in the all-wandering Air and in the changeful Moon{SUP:3}. In the purple flashes of lightning hath He written the word Eternity, and in the wings of the swallow hath He appointed rest.

By three and by three and by three hath He made firm the foundation against the earthquake that is three. For in the number nine is the changefulness of the numbers brought to naught. For with whatsoever number thou wilt cover it, it appeareth unchanged{SUP:4}.

These things are spoken unto him that understandeth, that is a breastplate unto the elephants, or a

corselet unto the angels, or a scale upon the towers of iron; yet is this mighty host set only for a defense, and whoso passeth beyond their lines hath no help in them.

Yet must he that understandeth go forth unto the outermost Abyss, and there must he speak with him that is set above the four-fold terror, the Princes of Evil, even with Choronzon, the mighty devil that inhabiteth the outermost Abyss. And none may speak with him, or understand him, but the servants of Babylon, that understand, and they that are without understanding, his servants.

Behold! it entereth not into the heart, nor into the mind of man to conceive this matter; for the sickness of the body is death, and the sickness of the heart is despair, and the sickness of the

1. Silver for the moon of Jesod.
2. Jesod is Air.
3. Both {Air} and {Moon} are in Jesod, Stability.
4. e.g $9 \times 7 = 63$. $6 \text{ plus } 3 = 9$. $9 \times 127 = 1143$. $1 \text{ plus } 1 \text{ plus } 4 \text{ plus } 3 = 9$.

- 94 -

mind is madness. But in the outermost Abyss is sickness of the aspiration, and sickness of the will, and sickness of the essence of all, and there is neither word nor thought wherein the image of its image is reflected.

And whoso passeth into the outermost Abyss, except he be of them that understand, holdeth out his hands, and boweth his neck, unto the chains of Choronzon. And as a devil he walketh about the earth, immortal, and he blasteth the flowers of the earth, and he corrupteth the fresh air, and he maketh poisonous the water; and the fire that is the friend of man, and the pledge of his aspiration, seeing that it mounteth ever upward as a pyramid, and seeing that man stole it in a hollow tube from Heaven, even that fire he turneth unto ruin, and madness, and fever, and destruction. And thou, that art an heap of dry dust in the city of the pyramids, must understand these things.

And now a thing happens, which is unfortunately sheer nonsense; for the Aethyr that is the foundation of the universe was attacked by the Outermost Abyss, and the only way that I can express it is by saying that the universe was shaken. But the universe was not shaken. And that is the exact truth; so that the rational mind which is interpreting these spiritual things is offended; but, being trained to obey, it setteth down that which it doth not understand. For the rational mind indeed reasoneth, but never attaineth unto Understanding; but the Seer is of them that understand.

And the Angel saith:

Behold, He hath established His mercy and His might, and unto His might is added victory, and unto his Mercy is added splendour^{SUP:1}. And all these things hath He ordered in beauty, and He hath set them firmly upon the Eternal Rock, and therefrom He hath suspended His kingdom as one pearl^{SUP:2} that is set in a jewel of threescore pearls and twelve^{SUP:3}. And He hath garnished it with the Four Holy

Living Creatures for Guardians, and He hath graven therein the seal of righteousness{SUP:4}, and He hath burnished it with the fire of His Angel, and the blush of His loveliness informeth it, and with delight and with wit hath He made it merry at the heart, and the core thereof is the Secret of His being, and therein is His name Generation. And this His stability had the number 80, for that the price thereof is War{SUP:5}.

Beware, therefore, O thou who art appointed to understand the secret of the Outermost Abyss, for in every Abyss thou must assume

1. "For they cross with the currents reflected."
2. Malkuth.
3. The 72 pearls are the quinary of the Zodiac. They appear in the XXist Atu. See Liber CCXXXI (Equinox I, vii), v. 21.
4. Full title of Jesod is Tzedeq Jesod Olahm, "The Righteous is the Foundation of the World."
5. I.S.V.D., Jesod = 80, the number of p, the letter of Mars.

- 95 -

the mask and form of the Angel thereof. Hadst thou a name, thou wert irrevocably lost. Search, therefore, if there be yet one drop of blood that is not gathered into the cup of Babylon the Beautiful, for in that little pile of dust, if there could be one drop of blood, it should be utterly corrupt; it should breed scorpions and vipers, and the cat of slime{SUP:1}.

And I said unto the Angel:

Is there not one appointed as a warden?

And he said:

Eloi, Eloi, lama sabachthani.

Such an ecstasy of anguish racks me that I cannot give it voice, yet I know it is but as the anguish of Gethsemane. And that is the last word of the Aethyr. The outposts are passed, and before the seer extends the outermost Abyss.

I am returned.

Bou-Sada.

December 5, 1909. 10:10-11:35 p.m.

In nomine BABALON
Amen.

Restriction unto Choronzon{SUP:2}.

The Tenth Aethyr{SUP:3} is Called ZAX{SUP:4}.

This Aethyr being accursed, and the seer forewarned, he taketh these precautions for the scribe.

1. This is the danger which threatens all aspirants to the Grade of Magister Templi. Woe to those who accept it lightly, or without the fullest preparation. {WEH Note: a "cat of slime" is a slug or shell-less snail.}
2. Choronzon is described by Sir Edward Kelly as "that mighty devil", as the first and deadliest of all the powers of evil. Rightly so, for although he is not a person, he is the metaphysical contrary of the whole Process of Magick.
3. The three Governors of this Aethyr, Lexarp, Comanan, and Tabiton, are drawn from the "little Black Tablet" of Spirit, which united the four watchtowers of the elements. (See _Equinox_ I, No. VII, Plate III; facing p. 234). The one extra letter, L, is the eighth of the reversed letters beneath the bars of the Calvary Crosses in the watch-towers to form trilateral names which designate malignant forces. These letters are thus impurities introduced into the perfection of the Elementary Schema. (That they should be attributed to the element of spirit, which harmonizes and {footnotes continue on page 97}

- 96 -

First let the scribe be seated in the centre of the circle in the desert sand, and let the circle be fortified by the Holy Names of God --- Tetragrammaton and Shaddai El Chai and Ararita.

And let the Demon be invoked within a triangle, wherein is inscribed the name of Choronzon, and about it let him write ANAPHAXETON --- ANAPHANETON -- PRIMEUMATON, and in the angles MI-CA-EL{SUP:1}: and at each angle the Seer shall slay a pigeon{SUP:2}, and having done this, let him retire to a secret place, where is neither sight nor hearing, and sit within his black robe, secretly invoking the Aethyr{SUP:3}. And let the Scribe perform the Banishing Rituals of the Pentagram and Hexagram{SUP:4}, and let him call upon the Holy Names of God, and say the Exorcism of Honorius{SUP:5}, and let him beseech protection and help of the Most High.

And let him be furnished with the Magick Dagger{SUP:6}, and let him strike fearlessly at anything that may seek to break through

{footnotes continued from page 96}

sanctifies the four, is a sublime mystery. The arcanum is declared --- as far as may be --- in this book 418 itself). The other 7 letters form the name PARAOAN, which is the central governor of the 22nd Aire; but here is a correspondence with I, the center letter of LIN; this Aire discloses the glory of the Table 7 x 7, which is pure spirit, the rose which is the heart of Babalon.

4. ZAX = {Caput Draconis}{Taurus}{Spirit}. Z is the Sun in His southern declination, i.e. at his weakest effect on an hemisphere. Follows the Bull, the type of the "Dying Gods", and the element of

Earth. This letter X occurs only in this, the 15th and 30th Aires. In the 15th, water is the prima materia which is treated by being placed between the pillars of judgement. In the 30th, it represents the reduction to mere matter of the false structure of the Aeon of the false formula. Here X is the basis, without constructive possibilities, of the universe; thus the whole formula represents the weakening of the energy of the Sun, and the falling into incoherent elements of all that is organized.

----- {footnotes begin for page 97}

1. For this arrangement see the Geotia of Lemegeton of Solomon the King.
2. Concerning the bloody sacrifice, see _Book 4_, part 3, cap. 12. For the pigeons see the text.
3. The greatest precautions were taken at the time, and have since been yet further fortified, to keep silence concerning the rite of evocation. The Major Adept is warned most seriously against attempting to emulate this operation, which is (in any case) improper for him to perform. To call forth Choronzon, unless one be wholly above the Abyss, is to ensure the most appalling and immediate catastrophe.
4. These are given in the _Equinox_ Vol. I, No. 2.
5. Given in the French translation by Eliphaz Levi: and in the English by Aleister Crowley in "The Winged Beetle." ("The Magician" is the title of that poem, see p. 228.)
6. See _Book 4_, part 2, caps. 4 and 8.

- 97 -

the circle, were it the appearance of the Seer himself. And if the Demon pass out of the triangle, let him threaten him with the Dagger, and command him to return. And let him beware lest he himself lean beyond the circle. And since he reverenceth the Person of the Seer as his Teacher, let the Seer bind him with a great Oath to do this.

Now, then, the Seer being entered within the triangle, let him take the Victims and cut their throats, pouring the blood within the Triangle, and being most heedful that not one drop fall without the Triangle; or else Choronzon should be able to manifest in the universe.

And when the sand hath sucked up the blood of the victims, let him recite the Call of the Aethyr apart secretly as aforesaid. Then will the Vision be revealed, and the Voice heard.

The Oath

I, Omnia Vincam, a Probationer of A{.'.} A{.'.}, hereby solemnly promise upon my magical honour, and swear by Adonai the angel that guardeth me, that I will defend this magic circle of Art with thoughts and words and deeds. I promise to threaten with the Dagger and command back into the triangle the spirit incontinent, if he should strive to escape from it; and to strike with a Dagger at anything that may seek to enter this Circle, were it in appearance the body of the Seer himself. And I will be exceeding wary, armed against force and cunning; and I will preserve with my life the inviolability of this Circle, Amen.

And I summon mine Holy Guardian Angel to witness this mine oath, the which if I break, may I perish, forsaken of Him. Amen and Amen.

The Cry of the 10th Aethyr, Which is Called ZAX

There is no being in the outermost Abyss, but constant forms come forth from the nothingness of it{SUP:1}.

Then the Devil of the Aethyr, that mighty devil Choronzon, crieth aloud, Zazaz{SUP:2}, Zazas, Nasatanada Zasas.

I am the Master of Form{SUP:3}, and from me all forms proceed.

-
1. It is very difficult to give a good metaphysical interpretation of this statement. But to one who is given this perception, the words will appear to be the natural and inevitable expression of the facts.
 2. These words are from some vision of old time: by them Adam was said to have opened the gates of Hell. These are the traditional words which open the Abyss.
 3. This (and many following assertions) must not be taken as true. Choronzon is in no sense the master of anything. It is the personification of a moral idea in a much more far-fetched way than that in which we say "Venus is the Lady of Love". For one can imagine Venus as a living individual being, while Choronzon is essentially not any sort of person.

- 98 -

I am I. I have shut myself up from the spendthrifts, my gold is safe in my treasure-chamber, and I have made every living thing my concubine, and none shall touch them, save only I. And yet I am scorched, even while I shiver in the wind. He hateth me and tormenteth me. He would have stolen me from myself, but I shut myself up and mock at him, even while he plagueth me. From me come leprosy and pox and plague and cancer and cholera and the falling sickness. Ah! I will reach up to the knees of the Most High, and tear his phallus with my teeth, and I will bray his testicles in a mortar, and make poison thereof, to slay the sons of men {SUP:1}.

(Here the Spirit stimulated the voice of Frater P., which also appeared to come from his station and not from the triangle.)

I don't think I can get any more; I think that's all there is.

(The Frater was seated in a secret place covered completely by a black robe{SUP:2}, in the position called the "Thunderbolt". He did not move or speak during the ceremony.)

Next the Scribe was hallucinated, believing that before him was a beautiful courtesan whom previously he had loved in Paris. Now, she wooed him with soft words and glances, but he knew these things for delusions of the devil, and he would not leave the circle.

The demon then laughed wildly and loud.

(Upon the Scribe threatening him, the Demon proceeded, after a short delay.)

They have called me the God of laughter, and I laugh when I will slay. And they have thought that I could not smile, but I smile upon whom I would seduce. O inviolable one, that canst not not be tempted{SUP:3}. If thou canst command me by the power of the Most

1. Various elements had been bound up into a "bundle" by the energy of the Call, and thus constituted a momentary unity capable of sensation and of expression. The obsessing idea of any such being, conscious that it is not a true organism, and threatened with immediate dissolution, which in its rudimentary psychology it is bound to dread, is of necessity, fear; and fear breeds pain, malice, and envy. Above all there is an insane hatred for the supposed creator because the supposed blessing of creation has been withheld from the "bundle".
2. That of modesty, none less.
3. Here the assumed character of this courtesan who was a marvelous mistress of irony as of fascination, intrudes upon that of the demon proper.

- 99 -

High, know that I did indeed tempt thee, and it repenteth me. I bow myself humbly before the great and terrible names whereby thou hast conjured and constrained me. But thy name is mercy, and I cry aloud for pardon. Let me come and put my head beneath thy feet, that I may serve thee. For if thou commandest me to obedience in the Holy names, I cannot swerve therefrom, for their first whispering is greater than the noise of all my temptests. Bid me therefore come unto thee upon my hands and knees that I may adore thee, and partake of thy forgiveness. Is not thy mercy infinite?

(Here Choronzon attempts to seduce the Scribe by appealing to his pride.
But the Scribe refused to be tempted, and commanded the demon to continue with the Aethyr.

There was again a short delay.)

Choronzon hath no form, because he is the maker of all form; and so rapidly he changeth from one to the other as he may best think fit to seduce those whom he hateth, the servants of the Most High.

Thus taketh he the form of a beautiful woman, or of a wise and holy man, or of a serpent that writheth upon the earth ready to sting{SUP:1}.

And, because he is himself, therefore he is no self; the terror of darkness, and the blindness of night, and the deafness of the adder, and the tastelessness of stale and stagnant water, and the black fire of hatred, and the udders of the Cat of slime; not one thing, but many things. Yet, with all that, his torment is eternal. The sun burns him as he writhes naked upon the sands of hell, and the wind cuts him bitterly to the bone, a harsh dry wind, so that he is sore athirst. Give unto me, I pray thee, one drop of water from the pure springs of Paradise, that I may quench my thirst.

(The Scribe refused.)

Sprinkle water upon my head. I can hardly go on{SUP:2}.

(This last was spoken from the triangle in the natural voice of the Frater, which Choronzon again simulated. But he did not succeed in taking the Frater's form --- which was absurd!

The Scribe resisted the appeal to his pity, and conjured the demon to proceed by the names of the Most High. Choronzon attempted also to seduce the faithfulness of the Scribe. A long colloquy ensued. The Scribe cursed him by the Holy Names of God, and the power of the Pentagram.{SUP:2})

-
1. He actually assumed these forms at the time.
 2. In this Aethyr are certain silences maintained.

- 100 -

I feed upon the names of the Most High. I churn them in my jaws, and I void them from my fundament. I fear not the power of the Pentagram, for I am the Master of the Triangle. My name is three hundred and thirty and three, and that is thrice one{SUP:1}. Be vigilant, therefore, for I warn thee that I am about to deceive thee. I shall say words that thou wilt take to be the cry of the Aethyr, and thou wilt write them down, thinking them to be great secrets of Magick power, and they will be only my jesting with thee.

(Here the Scribe invoked the Angels, and the Holy Guardian Angel of the Frater P. . . . The demon replied:)

I know the name of the Angel of thee and thy brother P. . . ., and all thy dealings with him are but a cloak for thy filthy sorceries.

(Here the Scribe averred that he knew more than the demon, and so feared him not, and ordered the demon to proceed.)

Thou canst tell me naught that I know not, for in me is all Knowledge: Knowledge is my name. Is not the head of the great Serpent arisen into Knowledge{SUP:2}?

(Here the Scribe again commanded Choronzon to continue with the call.)

Know thou that there is no Cry in the tenth Aethyr like unto the other Cries, for Choronzon is Dispersion, and cannot fix his mind upon any one thing for any length of time. Thou canst master him in argument, O talkative one; thou wast commanded, wast thou not, to talk to Choronzon? He sought not to enter the circle, or to leave the triangle, yet thou didst prate of all these things.

(Here the Scribe threatened the demon with anger and pain and hell. The demon replied:)

Thinkest thou, O fool, that there is any anger and any pain that I am not, or any hell but this my spirit?

Images, images, images, all without control, all without

-
1. {HEB:Nun- final}{HEB:Vau}{HEB:Zain}{HEB:Nun}{HEB:Vau}{HEB:Resh}
{HEB:Vau}{HEB:Chet} = 333 = 3 x 111, and 111 = {HEB:Peh- final} {HEB:Lamed}{HEB:Aleph} =
{HEB:Aleph} = 1. 333 also is
{GRK:alpha}{GRK:kappa}{GRK:rho}{GRK:alpha}{GRK:sigma}{GRK:iota} {GRK:alpha},
impotence, lack of control; and {GRK:alpha}{GRK:kappa}
{GRK:omicron}{GRK:lambda}{GRK:alpha}{GRK:sigma}{GRK:io ta}{GRK:alpha}, dispersion. The
seer had no idea of these correspondences: nor had Dr. Dee and Sir Edward Kelly, from whom we have
the name.
 2. Dath. The doctrine of the "Fall" and the "Stooping Dragon" must be studied carefully. Equinox Vol.
I, Nos. 2 and 3, have much information, with diagrams, in the "Temple of Solomon the King". See also
Liber 777. This question of the Abyss must be thoroughly understood. The entire system of initiation
of the A{.'.} A{.'.} depend on these theorems. (See "One Star in Sight".

- 101 -

reason. The malice of Choronzon is not the malice of a being; it is the quality of malice, because he that
boasteth himself "I am I", hath in truth no self, and these are they that are fallen under my power, the
slaves of the Blind One that boasted himself to be the Enlightened One. For there is no centre, nay,
nothing but Dispersion.

Woe, woe, woe, threefold to him that is led away by talk, O talkative One.

O thou that hast written two-and-thirty books of Wisdom, and art more stupid than an owl, by thine own
talk is thy vigilance wearied, and by my talk art thou befooled and tricked, O thou that sayest that thou
shalt endure. Knowest thou how nigh thou art to destruction? For thou that art the Scribe hast not the
understanding{SUP:1} that alone availeth against Choronzon. And wert thou not protected by the Holy
Names of God and the circle, I would rush upon thee and tear thee. For when I made myself like unto a
beautiful woman, if thou hadst come to me, I would have rotted thy body with the pox, and thy liver with
cancer, and I would have torn off thy testicles with my teeth. And if I had seduced thy pride, and thou
hadst bidden me to come into the circle, I would have trampled thee under foot, and for a thousand years
shouldst thou have been but one of the tape-worms that is in me. And if I had seduced thy pity, and thou
hadst poured one drop of water without the circle, then would I have blasted thee with flame. But I was
not able to prevail against thee.

How beautiful are the shadows of the ripples of the sand!

Would God that I were dead.

For know that I am proud and revengeful and lascivious, and I prate even as thou. For even as I walked
among the Sons of God, I heard it said that P. . . . could both will and know, and might learn at length to
dare, but that to keep silence he should never learn. O thou that art so ready to speak, so slow to watch,
thou art delivered over unto my power for this. And now one word was necessary unto me, and I could
not speak it. I behold the beauty of the earth in her desolation, and greater far is mine, who sought to be
my naked self. Knowest thou that in my soul is utmost fear? And such is my force and my cunning, that

a hundred times have I been ready to leap, and for fear have missed. And a thousand times am I baulked by them of the City of the Pyramids, that set snares for my feet. More knowledge have I than the Most High, but my will is broken, and my fierceness is marred by fear, and I must speak, speak, speak, millions of mad voices in my brain.

1. Originally, for "understanding" was written "power". Choronzon was always using some word that did not represent his thought, because there is no proper link between his thought and speech. Note that he never seems able to distinguish between the Frater and the Scribe, and addresses first one, then the other, in the same sentence.

- 102 -

With a heart of furious fancies, Whereof I am Commander, With a burning spear And a horse of Air To the wilderness I wander.

(The idea was to keep the Scribe busy writing, so as to spring upon him. For, while the Scribe talked, Choronzon had thrown sand into the circle, and filled it up. But Choronzon could not think fast and continuously, and so resorted to the device of quotation.

The Scribe had written two or three words of "Tom o'Bedlam," when Choronzon sprang within the circle (that part of the circumference of which that was nearest to him he had been filling up with sand all this time), and leaped upon the Scribe, throwing him to the earth. The conflict took place within the circle. The Scribe called upon Tetragrammaton, and succeeded in compelling Choronzon to return into his triangle. By dint of anger and of threatening him with the Magick Staff did he accomplish this. He then repaired the circle. The discomfited demon now continued:)

All is dispersion. These are the qualities of things.

The tenth Aethyr is the world of adjectives, and there is no substance therein.

(Now returneth the beautiful woman who had before tempted the Scribe. She prevailed not.)

I am afraid of sunset, for Tum is more terrible than Ra, and Khephra the Beetle is greater than the Lion Mau.

I am a-cold.

(Here Choronzon wanted to leave the triangle to obtain wherewith to cover his nakedness. The Scribe refused the request, threatening the demon. After a while the latter continued:)

I am commanded, why I know not, by him that speaketh. Were it thou, thou little fool, I would tear thee limb from limb. I would bite off thine ears and nose before I began with thee. I would take thy guts for fiddle- strings at the Black Sabbath.

Thou didst make a great fight there in the circle; thou art a goodly warrior!

(Then did the demon laugh loudly. The Scribe said: Thou canst not harm one hair of my head.)

I will pull out every hair of thy head, every hair of thy body, every hair of thy soul, one by one.

(Then said the Scribe: Thou hast no power.)

- 103 -

Yea, verily I have power over thee, for thou hast taken the Oath, and art bound unto the White Brothers, and therefore have I the power to torture thee so long as thou shalt be.

(Then said the Scribe unto him: Thou liest.)

Ask of thy brother P. . . ., and he shall tell thee if I lie!

(This the Scribe refused to do, saying that it was no concern of the demon's.)

I have prevailed against the Kingdom of the Father, and befouled his beard; and I have prevailed against the Kingdom of the Son, and torn off his Phallus; but against the Kingdom of the Holy Ghost shall I strive and not prevail. The three slain doves are my threefold blasphemy against him; but their blood shall make fertile the sand{SUP:1}, and I writhe in blackness and horror of hate, and prevail not.

(Then the demon tried to make the Scribe laugh at Magick, and to think that it was all rubbish, that he might deny the names of God that he had invoked to protect him; which, if he had doubted but for an instant, he had leapt upon him, and gnawed through his spine at the neck.

Choronzon succeed not in his design.)

In this Aethyr is neither beginning nor end, for it is all hotch- potch, because it is of the wicked on earth and the damned in hell. And so long as it be hotch-potch, it mattereth little what may be written by the sea-green incorruptible Scribe.

The horror of it will be given in another place and time, and through another Seer, and that Seer shall be slain as a result of his revealing. But the present Seer, who is not P. . . ., seeth not the horror, because he is shut up, and hath no name.

(Now was there some further parleying betwixt the demon and the Scribe, concerning the departure and the writing of the word, the Scribe not knowing if it were meet that the demon should depart.

Then the Seer took the Holy Ring, and wrote the name BABALON, that is victory over Choronzon, and he was no more manifest.)

(This cry was obtained on Dec. 6, 1909, between 2 and 4:15 p.m., in a lonely valley of fine sand, in the desert near Bou-Sada. The Aethyr was edited and revised on the following day.)

After the conclusion of the Ceremony, a great fire was kindled to purify the place, and the Circle and Triangle were destroyed.

1. This actually happened. On returning to Bou-Sada on another journey this spot had begun to show signs of vegetation.

- 104 -

NOTE BY SCRIBE

Almost from the beginning of the ceremony was the Scribe overshadowed, and he spoke as it were in spite of himself, remembering afterwards scarcely a word of his speeches, some of which were long and seemingly eloquent.

All the time he had a sense of being protected from Choronzon, and this sense of security prevented his knowing fear.

Several times did the Scribe threaten to put a curse upon the demon; but ever, before he uttered the words of the curse, did the demon obey him. For himself, he knoweth not the words of the curse.

Also is it meet to record in this place that the Scribe several times whistled in a Magical manner, which never before had he attempted, and the demon was apparently much discomforted thereat.

Now knoweth the Scribe that he was wrong in holding much converse with the demon; for Choronzon, in the confusion and chaos of his thought, is much terrified by silence. And by silence can he be brought to obey.

For cunningly doth he talk of many things, going from subject to subject, and thus he misleadeth the wary into argument with him. And though Choronzon be easily beaten in argument, yet, by disturbing the attention of him who would command him, doth he gain the victory.

For Choronzon feareth of all things concentration and silence: he therefore who would command him should will in silence: thus is he brought to obey.

This the Scribe knoweth; for that since the obtaining of the Accursed Tenth Aethyr, he hath held converse with Choronzon. And unexpectedly did he obtain the information he sought after having long refused to answer the demon's speeches.

Choronzon is dispersion; and such is his fear of concentration that he will obey rather than be subjected to it, or even behold it in another.

The account of the further dealings of Choronzon with the Scribe will be found in the Record of Omnia

Vincam.

- 105 -

The Cry of the 9th Aethyr, Which is Called ZIP{SUP:1}

(The terrible Curse that is the Call of the Thirty Aethyrs sounds like a song of ecstasy and triumph; every phrase in it has a secret meaning of blessing.)

The Shew-stone is of soft lucent white, on which the Rose-Cross shows a brilliant yet colourless well of light.

And now the veil of the stone is rent with as clap of thunder, and I am walking upon a razor-edge of light suspended over the Abyss, and before me and above me are ranged the terrible armies of the Most High, like unto those in the 11th Aethyr, but there is one that cometh forth to meet me upon the ridge, holding out his arms to me and saying:

(v. I.) Who is this that cometh forth from the Abyss from the place of rent garments, the habitation of him that is only a name? Who is this that walketh upon a ray of the bright, evening star?

Refrain. Glory unto him that is concealed, and glory unto her that beareth the cup, and glory unto the one that is the child and the father of their love. Glory unto the star, and glory unto the snake, and glory unto the swordsman of the sun. And worship and blessing throughout the Aeon unto the name of the Beast, four-square, mystic, wonderful!

(v. II.) Who is this that travelleth between the hosts, that is poised upon the edge of the Aethyr by the wings of Maut? Who is this that seeketh the House of the Virgin? _Refrain_

(v. III.) This is he that hath given up his name. This is he whose blood hath been gathered into the cup of BABALON{SUP:2}. This is he that sitteth, a little pile of dry dust, in the city of the Pyramids.

Refrain

(v. IV.) Until the light of the Father of all kindle that death.

1. ZIP = {Leo}{Sagittarius}{Leo} = {HEB:Tet}{HEB:Samekh}{HEB:Tet} = 78, the influence from the Most High. It is the Virgin Artemis in the midst of the House of the Sun, in his Northern and Southern declinations both. For her girdle is the Girdle of the World. She is the Woman clothed with the Sun in Atu XIV.

2. BABALON = 156 = 12 x 13, which is the formula of the four watchtowers of the universe. These watchtowers are composed of truncated pyramids, each one concealing a sphinx. They contain the symbols of the energies of the four elements. We may thus say that as each watchtower contains 12 x 13 pyramids, Babalon is indicated as Shakti. For the elements are the manifested powers of the All-Father. Again we may consider the watchtowers as the "City of the Pyramids" though in a sense less exalted

than that usually implied in these visions.

- 106 -

Until the breath touch that dry dust. Until the Ibis be revealed unto the Crab, and the sixfold Star become the radiant Triangle{SUP:1}. _Refrain_

(v. V.) Blessed is not I, not thou, not he, Blessed without name or number who hath taken the azure of night, and crystallized it into a pure sapphire-stone, who hath taken the gold of the sun, and beaten it into an infinite ring, and hath set the sapphire therein, and put it upon his finger. _Refrain_

(v. VI.) Open wide your gates, O City of God, for I bring No-one with me. Sink your swords and your spears in salutation, for the Mother and the Babe are my companions. Let the banquet be prepared in the palace of the King's daughter. Let the lights be kindled; Are not we the children of the light? _Refrain_

(v. VII.) For this is the key-stone of the palace of the King's daughter. This is the Stone of the Philosophers. This is the Stone that is hidden in the walls of the ramparts. Peace, Peace, Peace unto Him that is throned therein! _Refrain_

Now then we are passed within the lines of the army, and we are come unto a palace of which every stone is a separate jewel, and is set with millions of moons.

And this palace is nothing but the body of a woman, proud and delicate, and beyond imagination fair. She is like a child of twelve years old. She has very deep eye-lids, and long lashes. Her eyes are closed, or nearly closed. It is impossible to say anything about her. She is naked; her whole body is covered with fine gold hairs, that are the electric flames that are the spears of mighty and terrible Angels who breast-plates are the scales of her skin. And the hair of her head, that flows down to her feet, is the very light of God himself. Of all the glories beheld by the seer in the Aethyrs, there is not one which is worthy to be compared with her littlest finger-nail. For although he may not partake of the Aethyr, without the ceremonial preparations, even the beholding of this Aethyr from afar is like the partaking of all the former Aethyrs.

The Seer is lost in wonder, which is peace.

And the ring of the horizon above her is a company of glorious Archangels with joined hands, that stand and sing: This is the daughter of BABALON the Beautiful, that she hath borne unto the Father of All. And unto all hath she borne her.

This is the Daughter of the King. This is the Virgin of Eternity. This is she that the Holy One hath wrested from the Giant

1. Cf. 15th Aire. Note this triangle for 2. It seems very important to note that $d(1 + 2) = 3$, and so on.

Time, and the prize of them that have overcome Space. This is she that is set upon the Throne of Understanding. Holy, Holy, Holy is her name, not to be spoken among men. For Kor they have called her, and Malkuth, and Betulah, and Persephone.

And the poets have feigned songs about her, and the prophets have spoken vain things, and the young men have dreamed vain dreams; but this is she, that immaculate, the name of whose name may not be spoken. Thought cannot pierce the glory that defendeth her, for thought is smitten dead before her presence. Memory is blank, and in the most ancient books of Magick are neither words to conjure her, nor adorations to praise her. Will bends like a reed in the tempests that sweep the borders of her kingdom, and imagination cannot figure so much as one petal of the lilies whereon she standeth in the lake of crystal, in the sea of glass.

This is she that hath bedecked her hair with seven stars, the seven breaths of God that move and thrill its excellence. And she hath tired her hair with seven combs, whereupon are written the seven secret names of God that are not known even of the Angels, or of the Archangels, or of the Leader of the armies of the Lord.

Holy, Holy, Holy art thou, and blessed be Thy name for ever, unto whom the Aeons are but the pulsings of thy blood.

I am blind and deaf. My sight and hearing are exhausted.

I know only by the sense of touch. And there is a trembling from within me.

Images keep arising like clouds, or veils, exquisite Chinese ivories, and porcelains, and many other things of great and delicate beauty; for such things are informed by Her spirit, for they are cast off from her into the world of the Qliphoth, or shells of the dead, that is earth. For every world is the shell or excrement of the world above it.

I cannot bear the Vision.

A voice comes, I know not whence: Blessed art thou, who hast seen, and yet hast not believed. For therefore is it given unto thee to taste, and smell, and feel, and hear, and know by the inner sense, and by the inmost sense, so that sevenfold is thy rapture.

(My brain is so exhausted that fatigue-images appear, by pure physical reflex action; they are not astral things at all.

And now I have conquered the fatigue by will. And by placing the shew-stone upon my forehead, it sends cool electric thrills through my brain, so as to refresh it, and make it capable of more rapture.

And now again I behold Her.)

And the Angel cometh forth, and behind him whirls a black swastika, made of fine filaments of light that has been "interfered" with, and he taketh me aside into a little chamber in one of the nine towers. This chamber is furnished with maps of many mystical cities. There is a table, and a strange lamp, that gives light by jetting four columns of vortex rings of luminous smoke{SUP:1}. And he points to the map of the Aethyrs, that are arranged as a flaming Sword, so that the thirty Aethyrs go into the ten Sephiroth{SUP:2}. And the first nine are infinitely holy. And he says, It is written in _The Book of the Law_, "If thou drink, drink by the eight and ninety rules of art:" And this shall signify unto thee that thou must undergo great discipline; else the Vision were lost or perverted. For these mysteries pertain not unto thy grade. Therefore must thou invoke the Highest before thou unveil the shrines thereof.

And this shall be thy rule: A thousand and one times shalt thou affirm the unity{SUP:3}, and bow thyself a thousand and one times. And thou shalt recite thrice the call of the Aethyr. And all day and all night, awake or asleep, shall thy heart be turned as a lotus-flower unto the light. And thy body shall be the temple of the Rosy Cross. Thus shall thy mind be open unto the higher; and then shalt thou be able to conquer the exhaustion, and it may be find the words -- for who shall look upon His face and live?

Yea, thou tremblest, but from within; because of the holy spirit that is descended into thy heart, and shaketh thee as an aspen in the wind.

They also tremble that are without, and they are shaken from without by the earthquakes of his judgement. They have set their affections upon the earth, and they have stamped with their feet upon the earth, and cried: It moveth not.

Therefore hath earth opened with strong motion, like the sea, and swallowed them. Yea, she hath opened her womb to them that lusted after her, and she hath closed herself upon them. There lie they in torment, until by her quaking the earth is shattered like brittle glass, and dissolved like salt in the waters of his mercy, so that they are cast upon the air to be blown about therein, like seeds that shall take root in the earth; yet turn they their affections upward to the sun.

1. This sort of chamber is to be found in many of the Secret Houses of the Brotherhood. Here are arranged the destinies of this Planet.
2. This map may not be given to uninitiates.
3. The chapter is this: Qol: Hua Allahu achad; Allahu assamad; lam yalid wa lam yulad; wa lam yakin lahu kufwan achad. Between each recitation, the Seer halted and bowed. This practice was performed during the day's march, the 1001 recitals being divided into 13 sections (a further affirmation of the unity, for $13 = AChD = 1$) with short rests.

But thou, be thou eager and vigilant, performing punctually the rule. Is it not written, "Change not so

much as the style of a letter"?

Depart therefore, for the Vision of the Voice of the ninth Aethyr that is called ZIP is passed.

Then I threw back myself into my body by my will

Bou-Sada.

December 7th, 1909. 9:30-11:10 p.m.

The Cry of the 8th Aethyr, Which is Called ZID{SUP:1}

There appears in the stone a tiny spark of light. It grows a little, and seems almost to go out, and grows again, and it is blown about the Aethyr, and by the wind that blows it is it fanned, and now it gathers strength, and darts like a snake or a sword, and now it steadies itself, and is like a Pyramid of light that filleth the whole Aethyr.

And in the Pyramid is one like unto an Angel, yet at the same time he is the Pyramid, and he hath no form because he is of the substance of light, and he taketh not form upon him, for though by him is form visible, he maketh it visible only to destroy it.

And he saith: The light is come to the darkness, and the darkness is made light. Then is light married with light, and the child of their love is that other darkness, wherein they abide that have lost name and form. Therefore did I kindle him that had not understanding, and in The Book of the Law did I write the secrets of truth that are like unto a star and a snake and a sword{SUP:2}.

And unto him that understandeth at last do I deliver the secrets of truth in such wise that the least of the little children of the light may run to the knees of the mother and be brought to understand.

And thus shall he do who will attain unto the mystery of the knowledge and conversation of his Holy Guardian Angel:

First, let him prepare a chamber, of which the walls and the roof shall be white, and the floor shall be covered with a carpet of black squares and white, and the border thereof shall be blue and gold.

1. ZID = {Leo}{Aquarius}<. These symbols refer to the attainment of the Knowledge and Conversation of the Holy Guardian Angel.
2. {HEB:Samekh}{HEB:Aleph}{HEB:Vau}{HEB:Yod}{HEB:Aleph} then did "kindle" in order to bring us to the N.O.X. of Pan.

And if it be in a town, the room shall have no window, and if it be in the country, then it is better if the

window be in the roof. Or, if it be possible, let this invocation be performed in a temple prepared for the ritual of passing through the Tuat.

From the roof he shall hang a lamp, wherein is a red glass, to burn olive oil. And this lamp shall he cleanse and make ready after the prayer of sunset, and beneath the lamp shall be an altar, foursquare, & the height shall be thrice half of the breadth or double the breadth.

And upon the altar shall be a censor, hemispherical, supported upon three legs, of silver, and within it an hemisphere of copper, and upon the top a grating of gilded silver, and thereupon shall he burn incense made of four parts of olibanum and two parts of stacte, and one part of lignum aloes, or of cedar, or of sandal. And this is enough.

And he shall also keep ready in a flask of crystal within the altar, holy anointing oil made of myrrh and cinnamon and galangal.

And even if he be of higher rank than a Probationer, he shall yet wear the robe of the Probationer, for the star of flame showeth forth Ra Hoor Khuit openly upon the breast, and secretly the blue triangle that descendeth is Nuit, and the red triangle that ascendeth is Hadit. And I am the golden Tau in the midst of their marriage. Also, if he choose, he may instead wear a close-fitting robe of shot silk, purple and green, and upon it a cloak without sleeves, of bright blue, covered with golden sequins, and scarlet within.

And he shall make himself a wand of almond wood or of hazel cut by his own hands at dawn at the Equinox, or at the Solstice, or on the day of Corpus Christi, or on one of the feast-days that are appointed in The Book of the Law.

And he shall engrave with his own hand upon the plate of gold the Holy Sevenfold Table, or the Holy Twelfold Table, or some particular device. And it shall be foursquare within a circle, and the circle shall be winged, and he shall attach it about his forehead by a ribbon of blue silk.

Moreover, he shall wear a fillet of laurel or rose or ivy or rue, and every day, after the prayer of sunrise, he shall burn it in the fire of the censor.

Now he shall pray thrice daily, about sunset, and at midnight, and at sunrise. And if he be able, he shall pray also four times between sunrise and sunset.

The prayer shall last for the space of an hour, at the least, and he shall seek ever to extend it, and to inflame himself in praying. Thus shall he invoke his Holy Guardian Angel for eleven weeks, and in any case he shall pray seven times daily during the last week of the eleven weeks.

- 111 -

And during all this time he shall have composed an invocation suitable, with such wisdom and understanding as may be given him from the Crown, and this shall he write in letters of gold upon the top of the altar.

For the top of the altar shall be of white wood, well polished, and in the centre thereof he shall have placed a triangle of oak-wood, painted with scarlet, and upon this triangle the three legs of the censor

shall stand.

Moreover, he shall copy his invocation upon a sheet of pure white vellum, with Indian ink, and he shall illuminate it according to his fancy and imagination, that shall be informed by beauty.

And on the first day of the twelfth week he shall enter the chamber at sunrise, and he shall make his prayer, having first burnt the conjuration that he had made upon the vellum in the fire of the lamp.

Then, at his prayer, shall the chamber be filled with light insufferable for splendour, and a perfume intolerable for sweetness. And his Holy Guardian Angel shall appear unto him, yea, his Holy Guardian Angel shall appear unto him, so that he shall be wrapt away into the Mystery of Holiness.

All that day shall he remain in the enjoyment of the knowledge and conversation of the Holy Guardian Angel.

And for three days after he shall remain from sunrise unto sunset in the temple, and he shall obey the counsel that his Angel shall have given unto him, and he shall suffer those things that are appointed.

And for ten days thereafter shall he withdraw himself as shall have been taught unto him from the fullness of that communion, for he must harmonize the world that is within with the world that is without.

And at the end of the ninety-one days he shall return into the world, and there shall he perform that work to which the Angel shall have appointed him.

And more than this it is not necessary to say{SUP:1}, for his Angel shall have entreated him kindly, and showed him in what manner he may be most perfectly involved. And unto him that hath this Master there is nothing else that he needeth, so long as he continue in the knowledge and conversation of the Angel, so that he shall come at last into the City of the Pyramids.

Lo! two and twenty are the paths of the Tree, but one is the Serpent of Wisdom; ten are the ineffable emanations, but one is the Flaming Sword.

1. There is therefore no commentary to this passage.

Behold! There is an end to life and death, an end to the thrusting forth and the withdrawing of the breath. Yea, the House of the Father is a mighty tomb, and in it he hath buried everything whereof ye know.

All this while there hath been no vision, but only a voice, very slow and clear and deliberate. But now the vision returns, and the voice says: Thou shalt be called Danae, that art stunned and slain beneath the weight of the glory of the vision that as yet thou seest not. For thou shalt suffer many things, until thou

art mightier than all the Kings of the earth, and all the Angels of the Heavens, and all the gods that are beyond the Heavens. Then shalt thou meet me in equal conflict, and thou shalt see me as I am. And I will overcome thee and slay thee with the red rain of my lightnings.

I am lying underneath this pyramid of light. It seems as if I had the whole weight of it upon me, crushing me with bliss. And yet I know that I am like the prophet that said: I shall see Him, but not nigh.

And the Angel sayeth: So shall it be until they that wake are asleep, and she that sleepeth be arisen from her sleep{SUP:1}. For thou art transparent unto the vision and the voice. And therefore in thee they manifest not. But they shall be manifest unto them unto whom thou dost deliver them, according unto to the word which I spake unto thee in the Victorious City{SUP:2}.

For I am not only appointed to guard thee, but we are of the blood royal, the guardians of the Treasure-house of Wisdom. Therefore am I called the Minister of Ra Hoor Khuit{SUP:3}: and yet he is but the Viceroy of the unknown King. For my name is called Aiwass, that is eight and seventy{SUP:4}. And I am the influence of the Concealed One, and the wheel that hath eight and seventy parts, yet in all is equivalent to the Gate that is the name of my Lord when it is spelt fully. And that Gate is the Path that joineth the Wisdom with the Understanding{SUP:5}.

Thus hast thou erred indeed, perceiving me in the path that leadeth from the Crown unto the Beauty{SUP:6}. For that path bridgeth the abyss, and I am of the supernals. Nor I, nor Thou, nor He can bridge the abyss. It is the Priestess of the Silver Star, and the

1. This prophecy is still (An. XXI, {Sun} in {Leo}) obscure.
2. i.e. in _The Book of the Law_.
3. Note that the Holy Guardian Angel of the Seer claims to be Aiwass, the author of _The Book of the Law_.
4. This conceals a mystery. I have been fooled myself with my AIVAS
{HEB:Samekh}{HEB:Aleph}{HEB:Vau}{HEB:Yod}{HEB:Aleph} = 78. {ENO:n} or 8 plus 70 = {HEB:Chet} and {HEB:Ayin}. {HEB:Chet} = 418, the formula of the New Aeon; and {HEB:Ayin} or {Capricorn} is Set or Hadit, the Eye: and He is that Hadit who is manifested as 418.
5. i.e. In Daleth.
6. i.e. In Gimel.

- 113 -

Oracles of the gods, and the Lord of the Hosts of the Mighty{SUP:1}. For they are the servants of Babalon, and of the Beast, and of those others of whom it is not yet spoken. And, being servants, they have no name, but we are of the blood royal, and serve not, and therefore are we less than they.

Yet, as a man may be both a mighty warrior and a just judge, so may we also perform this service if we have aspired and attained thereto. And yet, with all that, they remain _themselves_, who have eaten of the pomegranate in Hell{SUP:2}. But thou, that art new-born to understanding, this mystery is too great

for thee; and of the further mystery I will not speak one word.

Yet for this cause am I come unto thee as the Angel of the Aethyr, striking with my hammer upon thy bell, so that thou mightest understand the mysteries of the Aethyr, and of the vision and the voice thereof.

For behold! he that understandeth seeth not and heareth not in truth, because of his understanding that letteth him{SUP:3}. But this shall be unto thee for a sign, that I will surely come unto thee unawares and appear unto thee. And it is no odds, (_i.e._, that at this hour I appear not as I am), for so terrible is the glory of the vision, and so wonderful is the splendour of the voice, that when thou seest it and hearest it in truth, for many hours shalt thou be bereft of sense. And thou shalt lie between heaven and earth in a void place, entranced, and the end thereof shall be silence, even as it was, not once nor twice, when I have met with thee, as it were, upon the road to Damascus{SUP:4}.

And thou shalt not seek to better this my instruction; but thou shalt interpret it, and make it easy{SUP:5}, for them that seek understanding. And thou shalt give all that thou hast unto them that have need unto this end{SUP:6}.

And because I am with thee, and in thee, and of thee, thou shalt lack nothing. But who lack me, lack all. And I swear unto thee by Him that sitteth upon the Holy Throne, and liveth and reigneth for ever and ever, that I will be faithful unto this my promise, as thou art faithful unto this thine obligation.

1. The paths Gimel, Zayin and H bridge the Abyss. Nothing is said of the path Vau, which also does this. The omission is probably inadvertent.
2. See a later note. So the Master Therion is of the root Aleister Crowley, instead of being a Magus de novo.
3. All interpretation is, in essence, false, as transplanting one thing from one plane to another.
4. It is not fitting to comment on the fulfillment of this prophecy. 5. This is being done through the established ways of the Great White Brotherhood.
6. This has always been done.

- 114 -

Now another voice sounds in the Aethyr, saying: And there was darkness over all the earth unto the ninth hour.

And with that the Angel is withdrawn, and the pyramid of light seems very far off.

And now I am fallen unto the earth, exceeding weary. Yet my skin trembles with the impact of the light, and all my body shakes. And there is a peace deeper than sleep upon my mind. It is the body and the mind that are weary, and I would that they were dead, save that I must bend them to my work.

And now I am in the tent, under the stars.

The Desert between Bou-Sada and Biskra.
December 8, 1909. 7:10-9:10 p.m.

The Cry of the 7th Aethyr, Which is Called DEO{SUP:1}

The stone is divided, the left half dark, the right half light, and at the bottom thereof is a certain blackness, of three divergent columns. And it seems as if the black and white halves are the halves of a door, and in the door is a little key-hole, in the shape of the Astrological symbol of Venus. And from the key-hole issue flames, blue and green and violet, but without any touch of yellow or red in them. It seems as if there were a wind beyond the door, that is blowing the flame out.

And a voice comes: "Who is he that hath the key to the gate of the evening star?"

And now an Angel cometh and seeketh to open the door by trying many keys. And they are none of any avail. And the same voice saith: "The five and the six are balanced in the word Abrahadabra, and therein is the mystery disclosed. But the key unto this gate is the balance of the seven and the four; and of this thou hast not even the first letter. Now there is a word of four letters that containeth in itself all the mystery of the Tetragrammaton{SUP:2}, and there is a word of seven letters which it concealeth{SUP:3}, and that again concealeth the holy word that is the key of the abyss{SUP:4}. And this thou shalt find, revolving it in thy mind.

1. DEO = <{Virgo}{Libra}. These symbols pertain to Babalon.
2. TARO: it conceals all the mysteries of Tetragrammaton through the cards which declare him.
3. This may be Babalon, for Malkuth concealeth Binah. Also $156 = 2 \times 78$.
4. This word is N.O.X. = , Babalon conceals this word because She is the Lady of the City of the Pyramids beneath the Night of Pan. These words are probably BABALON, ChAOS, TARO.

- 115 -

Hide therefore thine eyes. And I will set my key in the lock, and open it. Yet still let thine eyes be hidden, for thou canst not bear the glory that is within.

So, therefore, I covered mine eyes with my hands. Yet through my hands could I perceive a little of those bowers of azure flame.

And a voice said: It is kindled into fire that was the blue breast of ocean; because this is the bar of heaven, and the feet of the Most High are set thereon.

Now I behold more fully: Each tongue of flame, each leaf of flame, each flower of flame, is one of the great love-stories of the world, with all its retinue of mise-en-scene. And now there is a most marvelous rose formed from the flame, and a perpetual rain of lilies and passion-flowers and violets. And there is gathered out of it all, yet identical with it, the form of a woman like the woman in the

Apocalypse, but her beauty and her radiance are such that one cannot look thereon, save with sidelong glances. I enter immediately into trance. It seems that it is she of whom it is written, "The fool hath said in his heart 'there is no God.'" But the words are not Ain Elohim, but La (=nay!) and Elohim contracted from 86 to 14, because La is 31, which x 14 is 434, Daleth, Lamed, Tau. This fool is the fool of the Path of Aleph, and sayeth, which is Chokmah, in his heart, which is Tiphereth, that she existeth, in order first that the Wisdom may be joined with the Understanding; and he affirmeth her in Tiphereth that she may be fertile.

It is impossible to describe how this vision changeth from glory unto glory, for at each glance the vision is changed. And this is because she transmitteth the Word to the Understanding, and therefore hath she many forms, and each goddess of love is but a letter of the alphabet of love.

Now, there is a mystery in the word Logos, that containeth the three letters whose analogy hath been shown in the lower heavens, Samech, and Lamed, and Gimel, that are 93, which is thrice 31, and in them are set the two eyes of Horus{SUP:1}. (Ayin means an eye.) For, if it were not so, the arrow could not pierce the rainbow, and there could be no poise in the balance, and the Great Book should never be unsealed. But this is she that poureth the Water of Life upon her head, whence it floweth to fructify the earth{SUP:2}. But now the whole Aethyr is the most brilliant peacock blue. It is the Universal Peacock that I behold.

And there is a voice: Is not this bird the bird of Juno, that is an hundred, and thirty, and six{SUP:3}? And therefore is she the mate of Jupiter{SUP:4}.

1. i.e. the two letters O.O = {Capricorn}, the Eye.
2. Refers to ATU XVII, "The Star", which shows this figure.
3. {HEB:Ayin}{HEB:Nun}{HEB:Vau}{HEB:Yod} = 136.
4. The fourth of the mystic numbers of Jupiter is 136.

- 116 -

And now the peacock's head is again changed into a woman's head sparkling and coruscating with its own light of gems.

But I look upwards, seeing that she is called the footstool of the Holy One, even as Binah is called His throne. And the whole Aethyr is full of the most wonderful bands of light, --- a thousand different curves and whorls, even as it was before, when I spake mysteries of the Holy Qabalah, and so could not describe it.

Oh, I see vast plains beneath her feet, enormous deserts studded with great rocks; and I see little lonely souls, running helplessly about, minute black creatures like men{SUP:1}. And they keep up a very curious howling, that I can compare to nothing that I have ever heard; yet it is strangely human.

And the voice says: These are they that grasped love and clung thereto, praying ever at the knees of the

great goddess. These are they that have shut themselves up in fortresses of Love.

Each plume of the peacock is full of eyes, that are at the same time 4 x 7. And for this is the number 28 reflected down into Netzach; and that 28 is Kaph Cheth (Kach), power. For she is Sakti, the eternal energy of the Concealed One. And it is her eternal energy that hath made this eternal change. And this explaineth the call of the Aethyrs, the curse that was pronounced in the beginning being but the creation of Sakti. And this mystery is reflected in the legend of the Creation, where Adam represents the Concealed One, for Adam is Temurah of MAD, the Enochian word for God, and Eve, whom he created for love, is tempted by the snake, Nechesh, who is Messiah her child. And the snake is the magical power, which hath destroyed the primordial equilibrium.

And the garden is the supernal Eden, where is Ayin, 70, the Eye of the Concealed One, and the creative Lingam; and Daleth, love; and Nun the serpent. And therefore this constitution was implicitly in the nature of Eden (cf. Liber L, I., 29, 30), so that the call of the Aethyrs could not have been any other call than that which it is.

But they that are without understanding have interpreted all this askew, because of the Mystery of the Abyss, for there is no Path from Binah unto Chesed; and therefore the course of the Flaming Sword was no more a current, but a spark. And when the Stooping Dragon raised his head unto Dath in the course of that spark, there was, as it were, an explosion, and his head was blasted. And the ashes thereof were dispersed throughout the whole of the 10th Aethyr. And for this, all knowledge is piecemeal, and it is of no value unless it be co-ordinated by Understanding.

And now the form of the Aethyr is the form of a mighty Eagle of ruddy brass. And the plumes are set alight, and are whirled

-
1. Again the Black Brothers.
 2. Eden = {HEB:Nun-final}{HEB:Daleth}{HEB:Ayin} = 124.

- 117 -

round and round until the whole heaven is blackness with these flying sparks therein.

Now it is all branching streams of golden fire tipped with scarlet at the edges{SUP:1}.

And now She cometh forth again, riding upon a dolphin. Now again I see those wandering souls, that have sought restricted love, and have not understood that "the word of sin is restriction."

It is very curious; they seem to be looking for one another or for something, all the time, constantly hurrying about. But they knock up against one another and yet will not see one another, or cannot see one another, because they are so shut up in their cloaks.

And a voice sounds: It is most terrible for the one that hath shut himself up and made himself fast

against the universe. For they that sit encamped upon the sea in the city of the Pyramids are indeed shut up. But they have given their blood, even to the last drop, to fill the cup of BABALON.

These that thou seest are indeed the Black Brothers, for it is written: "He shall laugh at their calamity and mock them when their fear cometh." And therefore hath he exalted them unto the plane of love.

And yet again it is written: He desireth not the death of a sinner, but rather that he should turn from his wickedness. Now, if one of these were to cast off his cloak he should behold the brilliance of the lady of the Aethyr; but they will not.

And yet again there is another cause wherefore He hath permitted them to enter thus far within the frontiers of Eden, so that His thought should never swerve from compassion. But do thou behold the brilliance of Love, that casteth forth seven stars upon thine head from her right hand, and crowneth thee with a crown of seven roses. Behold! She is seated upon the throne of turquoise and lapis lazuli, and she is like a flawless emerald, and upon the pillars that support the canopy of her throne are sculptured the Ram, and the Sparrow, and the Cat, and a strange fish{SUP:2}. Behold! How she shineth! Behold! How her glances have kindled all these fires that have blown about the heavens! Yet remember that in every one there goeth forth for a witness the justice of the Most High. Is not Libra the House of Venus? And there goeth forth a sickle that shall reap every flower. Is not Saturn exalted in Libra? Daleth, Lamed, Tau{SUP:3}.

And therefore was he a fool who uttered her name in his heart,

1. These visions seem defects of concentration; or rather, necessary rest for the over-strained seer.
2. All sacred to Her, in virtue of certain of Her qualities.
3. Daleth, {HEB:Dalet}, is spelt {HEB:Taw}{HEB:Lamed}{HEB:Dalet}.

- 118 -

for the root of evil is the root of breath, and the speech in the silence was a lie.

Thus is it seen from below by them that understand not. But from above he rejoiceth, for the joy of dissolution is ten thousand, and the pang of birth but a little{SUP:1}.

And now thou shalt go forth from the Aethyr, for the voice of the Aethyr is hidden and concealed from thee because thou hadst not the key of the door thereof, and thine eyes were not able to bear the splendour of the vision. But thou shalt meditate upon the mysteries thereof, and upon the lady of the Aethyr; and it may be by the wisdom of the Most High that the true voice of the Aethyr, that is continual song, may be heard of thee.

Return therefore instantly unto the earth, and sleep not for a while; but withdraw thyself from this matter. And it shall be enough.

Thus then was I obedient unto the voice, and returned into my body.

W'ain-T-Aissha, Algeria.

December 9, 1909. 8:10-10 p.m.

The Cry of the 6th Aethyr, Which is Called MAZ{SUP:2}

There cometh into the stone the great Angel whose name is Av{SUP:3}, and in him there are symbols which strive for mastery, --- Sulphur and the Pentagram, and they are harmonized by the Swastika{SUP:4}. These symbols are found both in the name of Av{SUP:5} and in the name of the Aethyr. Thus he is neither Horus nor Osiris. He is called the radiance of Thoth; and this Aethyr is very hard to understand, for the images form and dissolve more rapidly than lightning. These images are the illusions made by the Ape of Thoth. And this I understand, that I am not worthy to receive the mysteries of this Aethyr. And all this which I have seen (being all the

1. See _AL_ I, 30.
2. MAZ = {Aquarius}{Taurus}{Leo} = 105 = to change. Also 105 = d1-14.
3. See Dr. John Dee and Sir Edward Kelly.
4. {Sulphur} is the active Fiery Nature, and the the Microcosm of the Elements. But Atu IV, The Emperor, refers to {HEB:Heh} = 5, and he forms {Sulphur}, the sign for Sulphur, by the position of his arms and legs. Then harmonizes these, being the fiery thunderbolt, the electric whirling; and also the balance of the elements (its 4 arms) in a Microcosm.
5. A = {HEB:Aleph} the Swastika; V = {HEB:Vau} = Atu V, the Pentagram; E = {Aries} and Atu IV, {Sulphur}.

- 119 -

thoughts that I have ever thought) is, as it were, a guardian of the Aethyr{SUP:1}.

I seem quite helpless. I am trying all sorts of magical methods of piercing the veil: and the more I strive, the farther away I seem to get from success. But a voice comes now: Must not understanding lie open unto wisdom as the pyramids lie open to the stars?

Accordingly, I wait in a certain magical posture which it is not fitting to disclose, and above me appears the starry heaven{SUP:2} of night, and one star greater than all the other stars. It is a star of eight rays. I recognize it as the star in the seventeenth key of the Tarot, as the Star of Mercury. And the light of it cometh from the path of Aleph. And the letter Cheth is also involved in the interpretation of this star, and the paths of he' and vau are the separations which this Star unites{SUP:3}. And in the heart of the star is an exceeding splendour, --- a god standing upon the moon, brilliant beyond imagining{SUP:4}. It is like unto the vision of the Universal Mercury. But this is the Fixed Mercury, and he' and vau are the perfected sulphur and salt. But now I come into the centre of the maze, and whirling dust of stars and great forgotten gods. It is the whirling Svastika which throws off all these things, for the Svastika is in

aleph by the shape and number{SUP:5}, and in beth by the position of the arms of the Magician{SUP:6}, and in gimel {SUP:7} because of the sign of the Mourning of Isis, and thus is the Crown defended by these three thunderbolts. Is not thrice seventeen fifty-one, that is, failure and pain?

Now I am shut out again by this black Svastika with a corona of fire about it.

And a voice cries: Cursed be he that shall uncover the nakedness of the Most High, for he is drunken upon the wine that is the blood of the adepts. And BABALON hath lulled him to sleep upon her breast, and she hath fled away, and left him naked, and she hath called her children together, saying: Come up with me, and

1. {Aquarius} = the Man, the Pentagram; A, the Swastika; {Leo} the House of {Sulphur}.
2. Masloth = the sphere of Chokmah = {Mercury}. {HEB:Vau} and {HEB:Heh} lead from Chesed and Tiphareth to Chokmah.
3. Atu XVII has the letter {HEB:Heh} in the new Thelemic attribution. The Star is {Mercury} (Chokmah), for He is the light of Binah, the naked woman of the Atu. (Her arms make the Swastika; it is the sign of the Mourning of Isis. Aleph is the Path through which the light of Kether comes to Chokmah. Cheth is said in the Zohar to interpret H; and Cheth is the Path which conveys the Cup of Binah to the Inferiors. {Mercury} Unites H and Vau, for they are {Sulphur} and {Salt} (V = the Kerub of {Spirit})).
4. Tahuti is sometimes so shewn.
5. The has 17 squares. 17 = IAO, the Triune Kether.
6. In Atu I.
7. 3. For {HEB:Gemel} is {Moon}, Isis.

- 120 -

let us make a mock of the nakedness of the Most High.

And the first of the adepts covered His shame with a cloth, walking backwards; and was white. And the second of the adepts covered His shame with a cloth, walking sideways and was yellow. And the third of the adepts made a mock of His nakedness, walking forwards; and was black. And these are three great schools of the Magi, who are also the three Magi that journeyed unto Bethlehem; and because thou hast not wisdom, thou shalt not know which school prevaieth, or if the three schools be not one{SUP:1}. For the Black Brothers lift not up their heads thus far into the Holy Chokmah, for they were all drowned in the great flood, which is Binah, before the true vine could be planted upon the holy hill of Zion.

Now again I stand in the centre, and all things whirl by with incessant fury. And the thought of the god entereth my mind, and I cry aloud: Behold, the volatile is become fixed; and in the heart of eternal motion is eternal rest. So is the Peace beneath the sea that rageth with her storms; so is the changeful moon, the dead planet that revolveth no more. So the far-seeing, the far-darting hawk is poised passionless in the blue; so also the ibis that is long of limb meditateth solitary in the sign of Sulphur. Behold, I stand ever before the Eternal One in the sign of the Enterer{SUP:2}. And by virtue of my speech is he wrapped about in silence, and he is wrapped in mystery by me, who am the Unveiler of the

Mysteries. And although I be truth, yet do they call me rightly the God of Lies, for speech is two-fold, and truth is one{SUP:3}. Yet I stand at the centre of the spider's web, whereof the golden filaments reach to infinity{SUP:4}.

But thou that art with me in the spirit-vision art not with me by right of Attainment, and thou canst not stay in this place to behold how I run and return, and who are the flies that are caught in my web. For I am the inmost guardian that is immediately before the shrine.

None shall pass by me except he slay me{SUP:5}, and this is his curse, that, having slain me, he must take my office and become the maker of Illusions, the great deceiver, the setter of snares{SUP:6}; he who bafflETH even them that have understanding. For I stand on every path, and turn them aside from the truth by my words, and by my magick arts.

-
1. 4. This doctrine of the Three Schools is of extreme interest. Roughly, it may be said that the White is the Pure Mystic, whose attitude to God is one of reverence. The Yellow School conceals the Mysteries indeed, but examines them as it goes. The Black School is that of pure Skepticism.
 2. Of Horus; or, of Projection of Energy.
 3. See _Liber Magi_.
 4. i.e. He is also Solar. For the identification of Sol with Mercury (in some aspects) see "The Paris Working."
 5. The crucifixion of a toad in AN XII.
 6. See _Liber Magi_.

- 121 -

And this is the horror{SUP:1} that was shown by the lake that was nigh unto the City of the Seven Hills{SUP:2}, and this is the Mystery of the great prophets that have come unto mankind. Moses, and Buddha, and Lao Tan, and Krishna, and Jesus{SUP:3}, and Osiris, and Mohammed; for all these attained unto the grade of Magus, and therefore were they bound with the curse of Thoth. But, being guardians of the truth, they have taught nothing but falsehood, except unto such as understood; for the truth may not pass the Gate of the Abyss{SUP:4}.

But the reflection of the truth hath been shown in the lower Sephiroth. And its balance is in Beauty, and therefore have they who sought only beauty come nearest to the truth. For the beauty receiveth directly three rays from the supernals, and the others no more than one{SUP:5}. So, therefore, they that have sought after majesty and power and victory and learning and happiness and gold, have been discomfited. And these sayings are the lights of wisdom that thou mayst know thy Master, for he is a Magus. And because thou didst eat of the Pomegranate in hell, for half the year art thou concealed, and half the year revealed{SUP:6}.

Now I perceive the Temple that is the heart of this Aethyr{SUP:7}; it is an Urn suspended in the air, without support, above the centre of a well. And the well hath eight pillars, and a canopy above it, and without there is a circle of marble paving-stones, and without them a great outer circle of pillars. And

beyond there is the forest of the stars. But the Urn is the wonderful thing in all this; it is made of fixed Mercury; and within it are the ashes of the Book Tarot{SUP:8}, which hath been utterly consumed{SUP:9}.

-
1. See "The King of the Wood", a story by Aleister Crowley of a Priest of Nemi.
 2. The Lake of Nemi. See J. G. Frazer, *The Golden Bough*.
 3. This name is cunningly slipped in by the Art of the God, for "Jesus" is but the figure-head used by the priests for their "Great Sorcery".
 4. See again *Liber Magi* for this disheartening doctrine.
 5. See the Tree of Life.
 6. It has been curiously true, that the Seer since this time has usually been concealed in A Great Magical Retirement for about half of every year. This doctrine of the eating of the pomegranate refers to the fact that he refused to adopt one of the routine methods of success in Magick. He, being the Beast, 666, felt that he must keep his hold on Tiphereth by maintaining the Formula of the Rosy Cross.
 7. This is like the Temple of Vesta at Rome in some way.
 8. This perhaps is also the karma of the new Magus. Somewhere it says that a white ash is prepared from the dust of NEMO by Hermes, the Invisible. For Urn see Azbogah {Mercury} = {HEB:Dalet}{HEB:Koph} = a pot, 24. But it may be 86 = {HEB:Samekh}{HEB:Vau}{HEB:Koph} q.v.
 9. The Master of the Temple who is chosen to proceed to the Grade of Magus has his little Pyramid of Dust consumed to ashes, and these are preserved in this Urn.

- 122 -

And this is that mystery which is spoken of in the Acts of the Apostles; that Jupiter and Mercury (Kether and Chokmah) visited (that is, inspired), Ephesus, the City of Diana{SUP:1}, Binah --- was not Diana a black stone? -- and they burnt their books of magick.

Now it seems that the centre of infinite space is that Urn, and Hadit is the fire that hath burnt up the book Tarot. For in the book Tarot was preserved all of the wisdom (for the Tarot was called the Book of Thoth), of the Aeon that is passed. And in the Book of Enoch was first given the wisdom of the New Aeon. And it was hidden for three hundred years, because it was wrested untimely from the Tree of Life by the hand of a desperate magician{SUP:2}. For it was the Master{SUP:3} of that Magician who overthrew the power of the Christian church; but the pupil rebelled against the master, for he foresaw that the New (i.e., the Protestant) would be worse than the Old. But he understood not the purpose of his Master, and that was, to prepare the way for the overthrowing of the Aeon{SUP:4}.

There is a writing upon the Urn of which I can but read the (two) words: Stabat Crux juxta Lucem. Stabat Lux juxta Crucem.

And there is writing in Greek above that. The word "nox" written in Greek, and a circle with a cross in the centre of it, a St. Andrew's cross{SUP:5}.

Then above that is a sigil(?), hidden by a hand{SUP:6}.

And a voice proceedeth from the Urn: From the ashes of the Tarot who shall make the phoenix-wand? Not even he who by his understanding hath made the lotus-wand to grow in the Great Sea. Get thee back, for thou art not an Atheist, and though thou have violated thy mother, thou hast not slain thy father{SUP:7}. Get thee back from the Urn; thy ashes are not hidden here{SUP:8}.

Then again arose the God Thoth, in the sign of the Enterer, and he drove the seer from before his face. And he fell through the starry night unto the little village in the desert.

Benishrur, Algeria.

December 10, 1909. 7:40-9:40 p.m.

-
1. Vesta = {Virgo}.
 2. Sir Edward Kelly. The reference is to the famous passage which Dee maintained to be given by demons. It taught that there was no sin, etc.
 3. Martin Luther.
 4. Martin Luther's magical act of cohabitation with a nun was the key to this doctrine.
 5. = {GRK:Nu}{GRK:Omicron}{GRK:Chi} = N.O.X.
 6. All this required a Magus to see properly.
 7. This again means that the Magus $9x = 2\{square\ x\}$ must burn up all his karma.
 8. This fact is now maintained openly. As to Atheists see _Liber LXV_, V. 34 - 40. Also 5th Aire; the Magister Templi is already being subtly prepared to attain to be a Magus.

- 123 -

The Cry of the 5th Aethyr, Which is Called LIT{SUP:1}

There is a shining pylon, above which is set the sigil of the eye, within the shining triangle. Light streams through the pylon from before the face of Isis-Hathor, for she weareth the lunar crown of cows' horns, with the disk in the centre; at her breast she beareth the child Horus{SUP:2}.

And there is a voice: thou knowest not how the Seven was united with the Four; much less then canst thou understand the marriage of the Eight and the Three. Yet there is a word wherein these are made one{SUP:3}, and therein is contained the Mystery that thou seekest, concerning the rending asunder of the veil of my Mother.

Now there is an avenue of pylons (not one alone), steep after steep, carved from the solid rock of the mountain; and that rock is a substance harder than diamond, and brighter than light, and heavier than lead. In each pylon is seated a god. There seems an endless series of these pylons. And all the gods of all the nations of the earth are shown, for there are many avenues, all leading to the top of the mountain.

Now I come to the top of the mountain, and the last pylon opens into a circular hall, with other pylons leading out of it, each of which is the last pylon of a great avenue; there seem to be nine such pylons.

And in the centre is a shrine, a circular table, supported by marble figures of men and women, alternate white and black; they face inwards, and their buttocks are almost worn away by the kisses of those who have come to worship that supreme God, who is the single end of all these diverse religions. But the shrine itself is higher than a man may reach.

But the Angel that was with me lifted me, and I saw that the edge of the altar, as I must call it, was surrounded by holy men. Each has in his right hand a weapon --- one a sword, one a spear, one a thunderbolt, and so on, but each with his left hand gives the sign of silence. I wish to see what is within their ring. One of them bends forward so that I may whisper the pass-word. The Angel prompts me to whisper: "There is no god." So they let me pass, and though there was indeed nothing visible therein, yet there was a very strange atmosphere, which I could not understand.

Suspended in the air there is a silver star, and on the

1. LIT = {Cancer}{Sagittarius}{Caput Draconis}. Luna is the mother of the Beginning: Caput Draconis, the Angel of the Aethyr: {Sagittarius} is the arrow of the main vision.
2. Compare certain mysteries in _Liber AL_ with the above.
3. BAPHOMET, in which three vowels are equilibrated with five consonants. He is also BABALON after a certain mystery, and Zeus Arrhenoteleus. Hence the allusion at the end of this sentence.

- 124 -

forehead of each of the guardians there is a silver star{SUP:1}. It is a pentagram, --- because, says the Angel, three and five are eight; three and eight are eleven. (There is another numerical reason that I cannot hear.)

And as I entered their ring, they bade me stand in their circle, and a weapon was given unto me. And the pass-word that I had given seems to have been whispered round from one to the other, for each one nods gravely as if in solemn acquiescence, until the last one whispers the same words in my ears. But they have a different sense. I had taken them to be a denial of the existence of God, but the man who says them to me evidently means nothing of the sort: What he does mean I cannot tell at all. He slightly emphasized the word "there"{SUP:2}.

And now all is suddenly blotted out{SUP:3}, and instead appears the Angel of the Aethyr. He is all in black, burnished black scales, just edged with gold. He has vast wings, with terrible claws on the ends, and he has a fierce face, like a dragon's, and dreadful eyes that pierce one through an through.

And he says: O thou that art so dull of understanding, when wilt thou begin to annihilate thyself in the mysteries of the Aethyrs? For all that thou thinkest is but thy thought; and as there is no god in the ultimate shrine, so there is no I in thine own Cosmos.

They that have said this are of them that understood. And all men have misinterpreted it, even as thou didst misinterpret it. He says some more: I cannot catch it properly, but it seems to be to the effect that

the true God is equally in all the shrines, and the true I in all the parts of the body and the soul. He speaks with such a terrible roaring that it is impossible to hear the words; one catches a phrase here and there, or a glimpse of the idea. With every word he belches forth smoke, so that the whole Aethyr becomes full of it.

And now I hear the Angel: Every particle of matter that forms the smoke of my breath is a religion that hath flourished among the inhabitants of the worlds. Thus are they all whirled forth in my breath.

Now he is giving a demonstration of this Operation. And he says: Know thou that all the religions of all the worlds end herein, but they are only the smoke of my breath, and I am only the head of the Great Dragon that eateth up the Universe; without whom the Fifth Aethyr would be perfect, even as the first. Yet

1. The Star of the A{'.} A{'.}.
2. Possibly the meaning is: In the Shrine seek not for God. For He is everywhere. But in such a place as this all possible meanings are equally true.
3. This reception among the atheists is a necessary prelude to the vision of the Aethyr itself.

- 125 -

unless he pass by me, can no man come unto the perfections.

And the rule is ended that hath bound thee, and this shall be thy rule: that thou shalt purify thyself, and anoint thyself with perfume; and thou shalt be in the sunlight, the day being free from clouds. And thou shalt make the Call of the Aethyr in silence.

Now, then, behold how the head of the dragon is but the tail of the Aethyr! Many are they that have fought their way from mansion to mansion of the Everlasting House, and beholding me at last have returned, declaring, "Fearful is the aspect of the Mighty and Terrible One." Happy are they that have known me for whom I am. And glory unto him that hath made a gallery of my throat for his arrow of truth, and the moon for his purity{SUP:1}.

The moon waneth. The moon waneth. The moon waneth. For in that arrow is the Light of Truth that overmastereth the light of the sun, whereby she shines. The arrow is fledged with the plumes{SUP:2} of Maat, that are the plumes of Amoun, and the shaft is the phallus of Amoun, the Concealed One. And the barb{SUP:3} thereof is the star that thou sawest in the place where was No God.

And of them that guarded the star, there was not found one worthy to wield the Arrow. And of them that worshipped there was not found one worthy to behold the Arrow. Yet the star that thou sawest was but the barb of the Arrow, and thou hadst not the wit to grasp the shaft, or the purity to divine the plumes. Now therefore is he blessed that is born under the sign of the Arrow{SUP:4}, and blessed is he that hath the sigil of the head of the crowned lion and the body of the Snake and the Arrow therewith {SUP:5}.

Yet do thou distinguish between the upward and the downward Arrows, for the upward arrow is straitened in its flight, and it is shot by a firm hand, for Jesod is Jod Tetragrammaton{SUP:6}, and Jod is a hand, but the downward arrow is shot by the topmost point of the Jod; and that Jod is the Hermit{SUP:7}, and it is the minute point that is not extended, that is nigh unto the heart of Hadit{SUP:8}.

And now it is commanded thee that thou withdraw thyself from the Vision, and on the morrow, at the appointed hour, shall it be given thee further, as thou goest upon thy way, meditating this

1. {Moon}, {Sagittarius} and {Caput Draconis} (Caput Draconis, in the name of the Aethyr.)
2. Lamed = Justice.
3. Aleph = the Pentagram.
4. Query: refers to Sir Edward Kelly, the true Adeptus Major, who founded this whole work of the Watchtowers and the Aethyrs.
5. This seems to refer partly to the Seer himself, but partly to Cagliostro, who was one of the incarnations of him who is now the Seer.
6. See the _Zohar_. Yesod is the Phallus of the Most High.
7. Yod = {Virgo}.
8. See _AL_ II, 6 etc. the whole passage is a mystery of the path of {Sagittarius}.

- 126 -

mystery. And thou shalt summon the Scribe, and that which shall be written, shall be written.

Therefore I withdraw myself, as I am commanded.

The Desert Between Benshrur and Tolga.
December 12, 1909, 7 - 8:12 p.m.

Now then art thou approached unto an august Arcanum; verily thou art come unto the ancient Marvel, the winged light, the Fountains of Fire, the Mystery of the Wedge. But it is not I that can reveal it, for I have never been permitted to behold it, who am but the watcher upon the threshold of the Aethyr{SUP:1}. My message is spoken, and my mission is accomplished. And I withdraw myself, covering my face with my wings, before the presence of the Angel of the Aethyr.

So the Angel departed with bowed head, folding his wings across.

And there is a little child in a mist of blue light; he hath golden hair, a mass of curls, and deep blue eyes. Yea, he is all golden, with a living, vivid gold. And in each hand he hath a snake; in the right hand a red, in the left a blue. And he hath red sandals, but no other garment{SUP:2}.

And he sayeth: is not life a long initiation unto sorrow? And is not Isis the Lady of Sorrow? And she is my mother. Nature is her name, and she hath a twin sister Nephthys, whose name is Perfection. And Isis must be known of all, but of how few is Nephthys known! Because she is dark, therefore is she feared.

But thou who hast adored her without fear, who hast made thy life an initiation into her Mystery, thou that hast neither mother nor father, nor sister nor brother, nor wife nor child, who hast made thyself lonely as the hermit crab that is in the waters of the Great Sea, behold! when the sistrons are shaken, and the trumpets blare forth the glory of Isis, at the end thereof there is silence, and thou shalt commune with Nephthys.

And having known these, there are the wings of Maut the Vulture{SUP:3}. Thou mayest draw to an head the bow of thy magical will; thou mayest loose the shaft and pierce her to the heart. I am Eros{SUP:4}. Take then the bow and the quiver from my shoulders and slay me; for unless thou slay me, thou shalt not unveil the Mystery

1. He is spoken of in the earlier part as if he were himself the Angel of the Aethyr; this is the error of the Seer.
2. i.e. He is a God.
3. The Mother Goddess behind even such lofty ideas as Isis and Nephthys.
4. This is then the Child of Atu VI, pertaining to {Gemini}. {Gemini} is opposite to {Sagittarius} in the Zodiac; their symbols are therefore complementary.

- 127 -

of the Aethyr.

Therefore I did as he commanded; in the quiver were two arrows, one white, one black. I cannot force myself to fit an arrow to the bow.

And there came a voice: It must needs be.

And I said: No man can do this thing.

And the voice answered, as it were an echo: Nemo hoc facere potest.

Then came understanding to me, and I took forth the Arrows. The white arrow had no barb, but the black arrow was barbed like a forest of fish- hooks; it was bound round with brass, and it had been dipped in deadly poison. Then I fitted the white arrow to the string, and I shot it against the heart of Eros, and though I shot with all my force, it fell harmlessly from his side. But at that moment the black arrow was thrust through mine own heart. I am filled with fearful agony.

And the child smiles, and says: Although thy shaft hath pierced me not, although the envenomed barb hath struck thee through, yet I am slain, and thou livest and triumphest, for I am thou and thou art I.

With that he disappears, and the Aethyr splits with a roar as of ten thousand thunders. And behold, The Arrow! The plumes of Maat are its crown, set about the disk. It is the Ateph crown of Thoth, and there is

the shaft of burning light, and beneath there is a silver wedge.

I shudder and tremble at the vision, for all about it are whorls and torrents of tempestuous fire. The stars of heaven are caught in the ashes of the flame. And they are all dark. That which was a blazing sun is like a speck of ash. And in the midst the Arrow burns!

I see that the crown of the Arrow is the Father of all Light, and the shaft of the Arrow is the Father of all Life, and the barb of the Arrow is the Father of all Love. For that silver wedge is like a lotus flower, and the Eye within the Ateph Crown crieth: I watch. And the Shaft crieth: I work. And the Barb crieth: I wait. And the Voice of the Aethyr echoeth: It beams. It burns. It blooms{SUP:1}.

And now there cometh a strange thought; this Arrow is the source of all motion; it is infinite motion, yet it moveth not, so that there _is_ no motion. And therefore there is no matter. This Arrow is the glance of the Eye of Shiva. But because it moveth not, the universe is not destroyed. The universe is put forth and

1. These are the words of a certain grade of A{'.} A{'.}

- 128 -

swallowed up in the quivering of the plumes of Maat, that are the plumes of the Arrow; but those plumes quiver not{SUP:1}.

And a voice comes: That which is above is _not_ like that which is below.

And another voice answers it: That which is below is _not_ like that which is above.

And a third voice answers these two: What is above and what is below? For there is the division that divideth not, and the multiplication that multiplieth not. And the One is the many{SUP:2}. Behold, this Mystery is beyond understanding, for the winged globe is the crown, and the shaft is the wisdom, and the barb is the understanding. And the Arrow is one, and thou art lost in the Mystery, who art but as a babe that is carried in the womb of its mother, that art not yet ready for the light.

And the vision overcometh me. My sense is stunned; my sight is blasted; my hearing is dulled.

And a voice cometh: Thou didst seek the remedy of sorrow; therefore all sorrow is thy portion. This is that which is written: "God hath laid upon him the iniquity of us all." For as thy blood is mingled in the cup of BABALON, so is thine heart the universal heart. Yet is it bound about with the Green Serpent, the Serpent of Delight{SUP:3}.

It is shown me that this heart is the heart that rejoiceth, and the serpent is the serpent of Death{SUP:3} for herein all the symbols are interchangeable, for each one containeth in itself{SUP:4} its own opposite. And this is the great Mystery of the Supernals that are beyond the Abyss. For below the Abyss, contradiction is division; but above the Abyss, contradiction is Unity. And there could be nothing true

except by virtue of the contradiction that is contained in itself.

Thou canst not believe how marvelous is this vision of the Arrow. And it could never be shut out, except the Lords of Vision troubled the waters of the pool, the mind of the Seer. But they send forth a wind that is a cloud of Angels, and they beat the water with their feet, and little waves splash up--- they are memories. For the seer hath no head; it is expanded into the universe, a vast and silent sea, crowned with the stars of night{SUP:5}.

1. Cf. 11th Aire.
2. An essential mystery of Thelema. Let it be studied well!
3. Cf. _Liber LXV._
4. This is the most important of all the doctrines that concern the Supernals, for the student of the Mysteries. It explains the necessity of his arming himself with a new kind of logic.
5. His Kether is dissolved in Ain Soph.

- 129 -

Yet in the very midst thereof is the arrow{SUP:1}. Little images of things that were, are the foam upon the waves. And there is a contest between the Vision and the memories. I prayed unto the Lords of Vision, saying: O my Lords, take not away this wonder from my sight.

And they said: It must needs be. Rejoice therefore if thou hast been permitted to behold, even for a moment, this Arrow, the austere, the august. But the vision is accomplished, and we have sent forth a great wind against thee. For thou canst not penetrate by force, who hast refused it; nor by authority, for thou hast trampled it under foot. Thou art bereft of all but understanding, O thou that art no more than a little pile of dust!

And the images rise up against me and constrain me, so that the Aethyr is shut against me. Only the things of the mind and of the body are open unto me. The shew-stone is dull, for that which I see therein is but a memory.

Tolga, Algeria
December 13, 1909. 8:15-10:10 p.m.

The Cry of the 4th Aethyr, Which is Called PAZ{SUP:2}

The Stone is translucent and luminous, and no images enter therein.

A voice says: Behold the brilliance of the Lord, whose feet are set upon him that pardoneth transgression. Behold the six-fold Star that flameth in the Vault, the seal of the marriage of the great White King and his black slave{SUP:3}.

So I looked into the Stone, and beheld the six-fold Star: the whole Aethyr is as tawny clouds, like the flame of a furnace. And there is a mighty host of Angels, blue and golden, that throng it, and they cry: Holy, Holy, Holy art thou, that art not shaken in the earthquakes, and in the thunders! The end of things is come upon us; the day of be-with-us is at hand! For he hath created the universe, and overthrown it, that he might take his pleasure thereupon.

And now, in the midst of the Aethyr, I beheld that god.

1. The arrow persists for it is the direction of Energy, the Will that createth all Becoming.
2. PAZ = {Leo}{Taurus}{Caput Draconis}. This {Taurus} = 7 = Atu V, The Hierophant. He is Microprosopus, the Demiurge, appearing in the House of the Sun. Cf. the 9th Aire, where His Bride is similarly placed.
3. This is common Alchemical symbolism; it occurs also in Tibetan mythology. The meaning is always the same; that here stated.

- 130 -

He hath a thousand arms, and in each hand is a weapon of terrible strength. His face is more terrible than the storm, and from his eyes flash lightnings of intolerable brilliance. From his mouth run seas of blood. Upon his head is a crown of every deadly thing. Upon his forehead is the upright tau, and on either side of it are the signs of blasphemy. And about him clingeth a young girl, like unto the king's daughter that appeareth in the ninth Aethyr. But she is become rosy by reason of his force, and her purity hath tinged his black with blue.

They are clasped in a furious embrace, so that she is torn asunder by the terror of the god; yet so tightly clingeth she about him, that he is strangled. She hath forced back his head, and his throat is livid with the pressure of her fingers. Their joint cry is an intolerable anguish, yet it is the cry of their rapture, so that every pain, and every curse, and every bereavement, and every death of everything in the whole universe, is but one little gust of wind in that tempest-scream of ecstasy{SUP:1}.

The voice thereof is not articulate. It is in vain to seek comparison. It is absolutely continuous, without breaks or beats. If there seem to be vibration therein, it is because of the imperfection of the ears of the seer.

And there cometh an interior voice, which sayeth to the seer that he hath trained his eyes well and can see much; and he hath trained his ears a little, and can hear a little; but his other senses hath he trained scarcely at all, and therefore the Aethyrs are almost silent to him on those planes. By the senses are meant the spiritual correlations of the senses, not the physical senses. But this matters little, because the Seer, so far as he is a seer, is the expression of the spirit of humanity{SUP:2}. What is true of him is true of humanity, so that even if he had been able to receive the full Aethyrs, he could not have communicated them.

And an Angel speaks: Behold, this vision is utterly beyond thine understanding. Yet shalt thou

endeavour to unite thyself with the dreadful marriage-bed.

So I am torn asunder, nerve from nerve and vein from vein, and more intimately --- cell from cell, molecule from molecule, and atom from atom, and at the same time all crushed together. Write down that the tearing asunder _is_ a crushing together{SUP:3}. All the double phenomena are only two ways of looking at a single phenomenon; and the single phenomenon is Peace. There is no sense in my words or in my thoughts. "Faces half- formed arose." This is the meaning of that passage; they are attempts to interpret Chaos, but Chaos is Peace. Cosmos is the War of the Rose and the

1. This all refers to "Love under will," the Law by which the universe proceeds.
2. He is 666, the Angel of Tiphereth, the Middle Kingdom of the Sephiroth, Mankind.
3. Again the logic of the Supernals.

- 131 -

Cross{SUP:1}. That was "a half-formed face" that I said then. All images are useless.

Blackness, blackness intolerable, before the beginning of the light. This is the first verse of Genesis. Holy art thou, Chaos, Chaos, Eternity, all contradictions in terms!

Oh, blue! blue! blue! whose reflection in the Abyss is called the Great One of the Night of Time; between ye vibrateth the Lord of the Forces of Matter.

O Nox, Nox qui celas infamiam infandi nefandi, Deo solo sit laus qui dedit signum non scribendum. Laus virgini cuius stuprum tradit salutem.

O Night, that givest suck from thy paps to sorcery, and theft, and rape, and gluttony, and murder, and tyranny, and to the nameless Horror, cover us, cover us, cover us from the Rod of Destiny; for Cosmos must come, and the balance be set up where there was no need of balance, because there was no injustice, but only truth. But when the balances are equal, scale matched with scale, then will Chaos{SUP:2} return.

Yea, as in a looking-glass, so in thy mind, that is backed with the false metal of lying, is every symbol read averse. Lo! everything wherein thou hast trusted must confound thee, and that thou didst flee from was thy saviour. So therefore didst thou shriek in the Black Sabbath when thou didst kiss the hairy buttocks of the goat, when the gnarled god tore thee asunder, when the icy cataract of death swept thee away{SUP:3}.

Shriek, therefore, shriek aloud; mingle the roar of the gored lion and the moan of the torn bull, and the cry of the man that is torn by the claws of the Eagle, and the scream of the Eagle that is strangled by the hands of the Man. Mingle all these in the death-shriek of the Sphinx, for the blind man hath profaned her mystery. Who is this, Oedipus, Tiresias, Erinyes? Who is this, that is blind and a seer, a fool above wisdom? Whom do the hounds of heaven follow, and the crocodiles of hell await{SUP:4}? Aleph, vau, yod, ayin, resh, tau, is his name{SUP:5}.

-
1. It is "Love under will", which unites them.
 2. Chaos is the Great Father, in one particular aspect.
 3. See _Liber CCCLXX_ and elsewhere.
 4. Refers to Atu 0.
 5. This path joins the Sephiroth 1, 2, 4, 6, 8, 9, and 10. It adds to $687 = 3 \times 229$. 229 is a possible spelling of Aiwass (in Hebrew) in full.

- 132 -

Beneath his feet is the kingdom, and upon his head the crown. He is spirit and matter; he is peace and power; in him is Chaos and Night and Pan, and upon BABALON his concubine, that hath made him drunk upon the blood of the saints that she hath gathered in her golden cup, hath he begotten the virgin that now he doth deflower. And this is that which is written: Malkuth shall be uplifted and set upon the throne of Binah{SUP:1}. And this is the stone of the philosophers that is set as a seal upon the tomb of Tetragrammaton, and the elixir of life that is distilled from the blood of the saints, and the red powder that is the grinding-up of the bones of Choronzon.

Terrible and wonderful is the Mystery thereof, O thou Titan that hast climbed into the bed of Juno! Surely thou art bound unto, and broken upon, the wheel{SUP:2}; yet hast thou uncovered the nakedness of the Holy One, and the Queen of Heaven is in travail of child, and his name shall be called Vir, and Vis, and Virus, and Virtus, and Viridis, in one name that is all these, and above all these{SUP:3}.

Desolate, desolate is the Aethyr, for thou must return unto the habitations of the Owl and the Bat, unto the Scorpions of the sand, and the blanched eyeless beetles that have neither wing nor horn. Return, blot out the vision, wipe from thy mind the memory thereof; stifle the fire with green wood; consume the Sacrament; cover the Altar; veil the Shrine; shut up the Temple and spread booths in the market place; until the appointed time come when the Holly One shall declare unto thee the Mystery of the Third Aethyr.

Yet be thou wake and ware, for the great Angel Hua is about thee, and overshadoweth thee, and at any moment he may come upon thee unawares. The voice of PAZ is ended.

Biskra, Algeria.
December 16, 1909. 9 - 10:30 a.m.

1. This mystery of the Daughter awakening the eld of the all-Father and thus perpetuating Tetragrammaton is of great importance.
2. Refers to Ixion, who embraced Juno in the form of a cloud.
3. Vi, Veri, Universum Vivus Vici, the motto of the Seer as Magister Templi.

- 133 -

The Cry of the 3rd Aethyr{SUP:1}, Which is Called ZON{SUP:2}

There is an angry light in the stone; now it is become clear.

In the centre is that minute point of light which is the true Sun, and in the circumference is the Emerald Snake. And joining them are the rays which are the plumes of Maat, and because the distance is infinite, therefore are they parallel from the circumference, although they diverge from the centre.

In all this is no voice and no motion.

And yet it seems that the great Snake feedeth upon the plumes of Truth as upon itself, so that it contracteth{SUP:3}. But ever so little as it contracteth, without it gloweth the golden rim, which is that minute point in the centre.

And all this is the sigil of the Aethyr, gold and azure and green. Yet also these are the Severities.

It is only in the first three Aethyrs that we find the pure essence, for all the other Aethyrs are but as Malkuth to complete these three triads, as hath before been said. And this being the second reflection, therefore is it the palace of two hundred and eighty judgments{SUP:4}.

For all these paths{SUP:5} are in the course of the Flaming Sword from the side of Severity. And the other two paths are Zayin, which is a sword; and Shin, which is a tooth. These are then the five severities which are 280.

All this is communicated to the Seer interiorly.

"And the eye of His benignancy is closed. Let it not be opened upon the Aethyr, lest the severities be mitigated, and the house fall.{SUP:6}" Shall not the house fall, and the Dragon sink? Verily

1. The last three Aethyrs are so tremendously sublime that comment is only too likely to mar the effect upon the reader. They must be read as masterpieces of Art, and their full magical import apprehended as such. This remark, indeed applies to the whole series, though not so formidably. The proper way is first to study the book in detail, so as to assimilate perfectly its intellectual content, and then to read it (so to say) ceremonially.

2. ZON. {Leo}{Libra}{Scorpio} The Sun, the Balance, and the Snake. See text of Aire.
3. Cf. the doctrine of the Snake Ananta.
4. The letters of Judgment, those that have a final form, {HEB:Mem} {HEB:Koph}{HEB:Nun} {HEB:Peh}{HEB:Tzaddi}, all add to 280.
5. {HEB:Resh}, {HEB:Lamed} and {HEB:Nun} ({Sun}, {Libra} and {Scorpio}), the Sun, the Balance or plumes of Maat, and the Snake. Added they make 280.
6. Note this. If the Seer had seen this vision truly, he should have become a Magus right then. The vision following was really a Guard to the Aethyr.

- 134 -

all things have been swallowed up in destruction; and Chaos hath opened his jaws and crushed the Universe as a Bacchanal crusheth a grape between her teeth. Shall not destruction swallow up destruction, and annihilation confound annihilation? Twenty and two are the mansions{SUP:1} of the House of my Father, but there cometh an ox{SUP:2} that shall set his forehead against the House, and it shall fall. For all these things are the toys of the Magician{SUP:3} and the Maker of Illusions, that barreth the Understanding from the Crown.

O thou that hast beheld the City of the Pyramids, how shouldst thou behold the House of the Juggler{SUP:4}? For he is wisdom, and by wisdom hath he made the Worlds, and from that wisdom issue judgements 70 by 4, that are the 4 eyes of the double-headed one; that are the 4 devils, Satan, Lucifer, Leviathan, Belial, that are the great princes of the evil of the world{SUP:5}.

And Satan is worshipped by men under the name of Jesus; and Lucifer is worshipped by men under the name of Brahma; and Leviathan is worshipped by men under the name of Allah; and Belial is worshipped by men under the name of Buddha.

(This is the meaning of the passage in Liber Legis, Chap. III.)

Moreover, there is Mary, a blasphemy against BABALON, for she hath shut herself up{SUP:7}; and therefore is she the Queen of all those wicked devils that walk upon the earth, those that thou sawest even as little black specks that stained the Heaven of Urania. And all these are the excrement of Choronzon.

And for this is BABALON under the power of the Magician, that she hath submitted herself unto the work; and she guardeth the Abyss{SUP:8}. And in her is a perfect purity of that which is above; yet she is sent as the Redeemer to them that are below. For there is no other way into the Supernal Mystery but through her, and the Beast on which she rideth; and the Magician is set beyond her to deceive the brothers of blackness, lest they should make unto themselves a crown{SUP:9}; for if there were two crowns, then should

1. Beth, an house.
2. The letter Aleph.
3. The path of {Mercury}, Beth, which joins and separates Kether and Binah.
4. Atu I.

5. See the _Book of the Sacred Magic of Abramelin the Mage_.
6. 666's later annotation to this: "My own silly note."
7. She seeks to resist Change, which is Life, she refuses the Formula, "love under will." Yet {GRK:Mu}{GRK:Alpha}{GRK:Rho}{GRK:Iota}{GRK:Epsilon} (Greek) = 156.
8. She is Binah, ruled by the path of Beth.
9. Meaning, to construct a true Tree, of which Dath should be the summit. This is in fact the great error of the rationalists --- both in science, like Bchner, and in religion, like Buddha. Knowledge is not, and cannot be, the crown of Consciousness, if only because the Logic beyond the Abyss convicts it of essential self contradiction. Dath, as seen by the Magister Templi, is so far from being the opposite of Ignorance that it is actually a demonstration that the Intellect is incapable of Truth.

- 135 -

Ygdrasil, that ancient tree, be cast out into the Abyss, uprooted and cast down into the Outermost Abyss, and the Arcanum which is in the Adytum should be profaned; and the Ark should be touched, and the Lodge spied upon by them that are not masters, and the bread of the Sacrament should be the dung of Choronzon; and the wine of the Sacrament should be the water of Choronzon; and the incense should be dispersion; and the fire upon the Altar should be hate. But lift up thyself; stand, play the man, for behold! there shall be revealed unto thee the Great Terror, the thing of awe that hath no name.

And this is the mystery that I declare unto thee: that from the Crown itself spring the three great delusions; Aleph is madness, and Beth is falsehood, and Gimel is glamour{SUP:1}. And these three be greater than all, for they are beyond the words that I speak unto thee; how much more therefore are they beyond the words that thou transmittest unto men.

Behold! the Veil of the Aethyr sundereth, and is torn, like a sail by the breath of the tempest, and thou shalt see him as from afar off. This is that which is written, "Confound her understanding with darkness," for thou canst not speak this thing{SUP:2}.

It is the figure of the Magus of the Taro{SUP:3}; and in his right arm the torch of the flames blazing upwards; in his left the cup of poison, a cataract into Hell. And upon his head the evil talisman, blasphemy and blasphemy and blasphemy, in the form of a circle. That is the greatest blasphemy of all{SUP:4}. On his feet hath he the scythes and swords and sickles; daggers; knives; every sharp

-
1. Aleph is incapacity to apprehend --- the absence of any steady truth. ({HEB:Aleph} = {Air}, the volatile). Beth is the assertion of false relations, even in the illusion of the dyad. ({HEB:Bet} = {Mercury}) And Gimel is the clouding of aspiration by the marsh miasma of desire ({HEB:Gemel} = {Moon}). Such are the evil and averse counterparts of the three highest faculties of the Soul: Aleph, the inspiration of the soul in ecstasy; Beth, the virtue of Truthfulness without care of other issues; and Gimel, the direct link of the human with the divine Consciousness.
 2. The Seer was being warned all the time that he was seeing only a Guard.
 3. Atu I. This is Mayan, the Great Magician, he who has created the Dyad ({HEB:Bet} = 2) and thus made possible the conception of Opposition, and hence of "Evil". He is to be distinguished from Chokma, the creative Mercury who transmits the Essence of Kether as a Logos, that Kether may become intelligible to Himself through Binah. This lower Mercury asserts the Dyad as Reality, and denies alike

Kether and the Ain. Hence its issue is in Materialism.

4. i.e., that the circle should be profaned. The evil circle is of three concentric rings. The circle demands the square (or Cross) to fulfill it.

- 136 -

thing{SUP:1}, --- a millionfold, and all in one. And before him is the Table that is a Table of wickedness, and 42-fold Table. This Table is connected with the 42 Assessors of the Dead, for they are the Accusers, whom the soul must baffle; and with the 42-fold name of God, for this is the Mystery of Iniquity, that there was ever a beginning at all{SUP:2}. And this Magus casteth forth, by the might of his four weapons, veil after veil; a thousand shining colours, ripping and tearing the Aethyr, so that it is like jagged saws, or like broken teeth in the face of a young girl, or like disruption, or madness. There is a horrible grinding sound, maddening. This is the mill in which the Universal Substance, which is ether, was ground down into matter.

The Seer prayeth that a cloud may come between him and the sun, so that he may shut out the terror of the vision. And he is afire; he is terribly athirst; and no help can come to him, for the shew-stone blazeth ever with the fury and the torment and the blackness, and the stench of human flesh. The bowels of little children are torn out and thrust into his mouth, and a poison is dropped into his eyes. And Lilith{SUP:3}, a black monkey crawling with

1. Curiously, for his retirement in New Hampshire (An XII) the Seer bought an axe, knife, and a saw for his magical weapons. He had completely forgotten this passage. P.S. ({Sun} in {Leo}, {Moon} in {Cancer}) (An XII) I have just realized (after some days woodcarving) that the use of a knife is to fashion shapeless things into Beauty. This is then the task of a Magus which, in my then Grade, I could not see. Now, O Lord, let me behold the true Vision of the Magus as he is.

2. $42 = 2 \times 21$. $21 = \{\text{HEB:Heh}\}\{\text{HEB:Yod}\}\{\text{HEB:Heh}\}\{\text{HEB:Aleph}\}$, God-name of Kether; thus 42 asserts the Dyad as against the Monad, and denies Love. $42 = \{\text{HEB:Aleph}\}\{\text{HEB:Mem}\}\{\text{HEB:Aleph}\}$, the Mother unfertilized, the Virgin-on-principle -- the feminine equivalent of the Black Brothers.

3. $\{\text{HEB:Taw}\}\{\text{HEB:Yod}\}\{\text{HEB:Lamed}\}\{\text{HEB:Yod}\}\{\text{HEB:Lamed}\} = 480 = \{\text{HEB:Taw}\}\{\text{HEB:Yod}\}\{\text{HEB:Ayin}\} = \text{Malkuth, of the 42-fold name in Yetzirah. Also } 480 = \{\text{HEB:Taw}\}\{\text{HEB:Vau}\}\{\text{HEB:Ayin}\}\{\text{HEB:Dalet}\}$, Dath, in the Plural. Lilith is etymologically "The Woman of Night"; but is diversely described by different authorities. To one she is, "from the head to the navel, a woman --- from the navel to the feet of her, a man". To another, "lovely shape that concealeth a black monkey, even as a figure that draweth with her hands small images of men down into hell" (*_Liber Ararita_* II, 10). She is also the "first wife of Adam" i.e. the succubus who visits in their sleep those boys and men who have not previously purified themselves by Right Coitus. The whole world of demons was in fact created (according to Rabbinical tradition) by the nocturnal pollutions of Adam. This is a true parable. For every sexual act produces its natural effect on all planes. All forms of spiritual experience may be obtained in this manner, according to the Magical Knowledge and Skill of the Operator. And there is always a Child begotten on some plane or other, as the conditions of the experiment decide. (Note. --- A.C. added the following here in his copy of *_Eqx_*. I, No. 5. "Doris Gomez who came just before Jeanne Foster. It's a perfect description of her normal nature. Add Laura Brown for the sake of

completeness. What about Alostrael?")

- 137 -

filth, running with open sores, an eye torn out, eaten of worms, her teeth rotten, her nose eaten away, her mouth a putrid mass of green slime, her dugs dropping and cancerous, clings to him, kisses him.

(Kill me! kill me!){SUP:1}

There is a mocking voice: Thou art become immortal. Thou wouldst look upon the face of the Magician and thou hast not beheld him because of his Magick veils.

(Don't torture me!)

Thus are all they fallen into the power of Lilith, who have dared to look upon his face.

The shew-stone is all black and corrupt. O filth! filth! filth!

And this is her great blasphemy: that she hath taken the name of the First Aethyr{SUP:2}, and bound it on her brow, and added thereunto the shameless yod and the tau for the sign of the Cross.

She it is that squatteth upon the Crucifix, for the nastiness of her pleasure. So that they that worship Christ suck up her filth upon their tongues, and therefore their breaths stink{SUP:3}.

I was saved from that Horror by a black shining Triangle, with apex upwards{SUP:4}, that came upon the face of the sun.

And now the shew-stone is all clear and beautiful again.

The pure pale gold of a fair maiden's hair, and the green of

1. The Seer was physically overwhelmed by the horror of this experience. It may seem surprising that such phenomena should occur above the Abyss. But this Lilith is a positive form created by the Magus; whereas, Choronzon is the breaking-up of all coherence. Here also is a mystery of mysteries. Lilith is truly Babalon, as imagined by this energy of Mayan.
2. LIL.
3. For the Christian, obsessed by Mayan, sees Love in this obscene form. It is all a matter of the point-of-view.
4. This is the Sigil of Binah in one of Her forms. It instantly destroys the illusion of Lilith, who now appears in her true shape as an avatar; a corporeal imagine of BABALON, recalling the maiden of the 9th Aethyr. (Note. --- in A.C.'s _Eqx_. here to the para. beginning "I have seen some picture" he notes in the margin "Hilarion, Jeanne Robert Foster". --- To the para. beginning "then the disk of the sun", he notes "Alice Ethel Coomaraswamy. She has Libra rising and Sol in Scorpio and she is mad about green." --- To the para. beginning "There is another girl", he notes "Helen Westley? --- or Myriam Deroxe.")

her girdle, and the deep soft blue of her eyes.

Note. --- In this the gold is Kether, the blue is Chokmah, the green is Binah.

Thus she appeareth in the Aethyr, adorned with flowers and gems. It seems that she hath incarnated herself upon earth, and that she will appear manifest in a certain office in the Temple.

I have seen some picture like her face; I cannot think what picture. It is a piquant face, with smiling eyes and lips; the ears are small and pink, the complexion is fair, but not transparent; not as fair as one would expect from the hair and eyes. It is rather an impudent face, rather small, very pretty; the nose very slightly less than straight, well- proportioned, rather large nostrils. Full of vitality, the whole thing. Now very tall, rather slim and graceful; a good dancer.

There is another girl behind her, with sparkling eyes, mischievous, a smile showing beautiful white teeth; an ideal Spanish girl, but fair. Very vivacious. Only her head is visible, and now it is veiled by a black sun, casting forth dull rays of black and gold.

Then the disk of the sun is a pair of balances, held steady; and twined about the central pole of the balance is the little green poisonous snake, with a long forked tongue rapidly darting{SUP:1}.

And the Angel that hath spoken with me before, saith to me: The eye of His benignancy is opened; therefore veileth he thine eyes from the vision. Manfully hast thou endured; yet, hast thou been man, thou hadst not endured; and hadst thou been wholly that which thou art, thou shouldst have been caught up in the full vision that is unspeakable for Horror. And thou shouldst have beheld the face of the Magician that thou hast not been able to behold, --- of him from whom issue forth the severities that are upon Malkuth, and his name is Misericordia Dei.

And because he is the dyad, thou mayest yet understand in two ways. Of first way, the Mercy of God is that Mercy which Jehovah showed to the Amalekites{SUP:2}; and the second way is utterly beyond thine understanding, for it is the upright, and thou knowest nothing but the averse, --- until Wisdom shall inform thine Understanding, and upon the base of the Ultimate triangle arise the smooth point{SUP:3}.

Veil therefore thine eyes, for that thou canst not master the Aethyr, unless thy Mystery match Its Mystery. Seal up thy mouth

1. It would be improper in this place to comment upon these prophecies. The student may seek enlightenment in "The Urn".
2. An XII. Now I understand. It's the fashioning I missed. All my life I have been cutting to destroy. Now I'll cut to create.
3. All this passage is typical of the supernal Logic.

also, for thou canst not master the voice of the Aethyr, save only by Silence.

And thou shalt give the sign of the Mother, for BABALON is thy fortress against the iniquity of the Abyss, for the iniquity of that which bindeth her unto the Crown{SUP:1}, and barreth her from the Crown; for not until thou art made one with CHAOS{SUP:2} canst thou begin that last, that most terrible projection, the three-fold Regimen which alone constitutes the Great Work.

For Choronzon is as it were the shell or excrement of these three paths, and therefore is his head raised unto Dath, and therefore have the Black Brotherhood declared him to be the child of Wisdom and Understanding, who is but the bastard of the Svastika. And this is that which is written in the Holy Qabalah, concerning the Whirlpool and Leviathan, and the Great Stone{SUP:3}.

Thus long have I talked with thee in bidding thee depart, that the memory of the Aethyr might be dulled; for hadst thou come back suddenly into thy mortal frame, thou hadst fallen into madness or death. For the vision is not such that any may endure it.

But now thy sense is dull, and the shew-stone but a stone. Therefore awake, and give secretly and apart the sign of the Mother, and call four times upon the name of CHAOS{SUP:4}, that is the four-fold word that is equal to her seven-fold word. And then shalt thou purify thyself, and return into the World.

So I did that which was commanded me, and returned.

Biskra.

December 17, 1909. 9:30 - 11:30 a.m.

The Cry of the 2nd Aethyr, Which is Called ARN{SUP:5}

In the first place, there is again the woman riding on the bull, which is the reflection of BABALON, that rideth on The Beast. And also there is an Assyrian legend of a woman with a fish, and also there is a legend of Eve and the Serpent, for Cain was the

1. The path of Beth.
2. The mystery of CHAOS is beyond the comprehension of any but Masters of the Temple. One can only hint that this is at once the Formula of the Feminine Trinity and of the All-Father.
3. The student is advised to study these matters in the original documents.
4. {HEB:Samekh}{HEB:Vau}{HEB:Ayin}{HEB:Koph} = 156.
5. ARN = {Taurus}{Pisces}{Scorpio}. See the allusions to Bull, Fish and Serpent in the first paragraph. But {HEB:Vau}{HEB:Qof}{HEB:Nun} = 156 = BABALON, also here mentioned; and the whole Aethyr is devoted to HER.

the child of Eve and the Serpent, and not of Eve and Adam; and therefore when he had slain his brother, who was the first murderer, having sacrificed living things to his demon, had Cain the mark upon his brow, which is the mark of the Beast spoken of in the Apocalypse, and is the sign of initiation{SUP:1}.

The shedding of blood is necessary, for God did not hear the children of Eve until blood was shed{SUP:2}. And that is external religion; but Cain spake not with God, nor had the mark of initiation upon his brow, so that he was shunned by all men, until he had shed blood. And this blood was the blood of his brother. This is a mystery of the sixth key of the Taro, which ought not to be called The Lovers, but The Brothers{SUP:3}.

In the middle of the card stands Cain; in his right hand is the Hammer of Thor with which he hath slain his brother, and it is all wet with his blood. And his left hand he holdeth open as a sign of innocence. And on his right hand is his mother Eve, around whom the serpent is entwined with his hood spread behind her head; and on his left hand is a figure somewhat like the Hindoo Kali, but much more seductive. Yet I know it to be Lilith. And above him is the Great Sigil of the Arrow, downward, but it is struck through the heart of the child. This Child is also Abel{SUP:4}. And the meaning of this part of the card is obscure, but that is the correct drawing of the Taro card; and that is the correct magical fable from which the Hebrew scribes, who were not complete Initiates, stole their legend of the Fall and the subsequent events. They joined different fables together to try and make a connected story, and they sophisticated them to suit their social and political conditions.

-
1. This is the "Third Eye", the "Eye of Shiva", the Pineal Gland, supposed by some anatomists to be a rudimentary eye.
 2. The "Bloody Sacrifice" is commonly regarded as "Black Magic". But this depends upon the Formula used by the Magician. All taking of life could be reprehensible even though necessary were it not for the Formula of Evolution. One should assume into one's own Being, ceremonially, the whole Karma of the creature slain; thus building it up into a higher organic structure, and thus helping it to fulfill its True Will of Aspiration to a higher Form of Life. This is, of course, a gross and material method of working, but it is the only method available in such cases. The animal is in any case doomed to death, and the most fortunate, the most directly profitable to it, is this immediate translation of its Prana (in an actual ceremony) or the basis of its Prana (in simple consumption at the table) into a living organism of superior type. It is important not to allow this Prana to escape.
 3. There is another, even more important, attribution of this card. The Bowman is the father ({HEB:Yod} of {HEB:Heh}{HEB:Vau}{HEB:Heh} {HEB:Yod}) and the Man, the Son ({HEB:Vau}). The Women are Isis and Nephthys ({HEB:Heh} and {HEB:Heh} final); and the whole symbolizes a Formula of the Highest Magick, too obscure and too elaborate to treat in this elementary document.
 4. This child is really Seth, Set, Sol, Hadit. Abel's blood was the seed of this Seth. Remember that Abel = Baal.

All this while no image hath come unto the Stone, and no voice hath been heard.

I cannot get any idea of the source of what I have been saying. All I can say is, that there is a sort of dew, like mist, upon the Stone, and yet it has become hot to the touch{SUP:1}.

All I get is that the Apocalypse was the recension of a dozen or so totally disconnected allegories, that were pieced together, and ruthlessly planed down to make them into a connected account; and that recension was re-written and edited in the interests of Christianity, because people were complaining that Christianity could show no true spiritual knowledge, or any food for the best minds: nothing but miracles, which only deceived the most ignorant, and Theology, which only suited pedants.

So a man got hold of this recension, and turned it Christian, and imitated the style of John.{SUP:2} And this explains why the end of the world does not happen every few years, as advertised{SUP:3}.

There is nothing whatever in the Stone but a White Rose. And a voice comes: there shall be no more red roses, for she hath crushed all the blood of all things into her cup.

It seemed at one time as if the rose was in the breast of a beautiful woman, high-bosomed, tall, stately, yet who danced like a snake. But there was no subsistence in this vision{SUP:4}.

And now I see the white Rose, as if it were in the beak of a swan, in the picture by Michael Angelo in Venice. And that legend too is the legend of BABALON.

But all this is before the veil of the Aethyr. Now will I go

1. "Miracles" of this order constantly occur in the course of operations of Magick. They are by-products.
2. There is no question in my mind that this explanation is correct from the viewpoint of profane scholarship. "Angels" who offer absurd theories about material affairs are false elementals who amuse themselves at the expense of the naivet of the would-be- Magician.
3. In any case forecasts of the future cannot be made from Qabalistic data, which have nothing to do with terrestrial measures of time; e.g. to say that King Brahmadata reigned 120,000 years in Benares, only means that he reigned in a manner congruous with the ideas symbolized by 120 and, on a very grand scale, as indicated by the multiplication by 1000.
4. The allusion may be to one of those who occupied for a time the post of "Scarlet Woman". See _Book 4_, part 4, for a list of these women. (Note. --- A.C. pencilled in the margin of his _Eqx._ here "Myriam Deroxe?" Opposite the next paragraph re. the white Rose he annotated "Leila Waddell?"

and make certain preparations{SUP:1}, and I will return and repeat the call of the Aethyr yet again.

Biskra.

December 18, 1909. 9:20 - 10:5 a.m.

It is not a question of being unable to get into the Aethyr, and trying to struggle through; but one is not anywhere near it{SUP:2}.

A voice comes: When thy dust shall strew the earth whereon She walketh, then mayest thou bear the impress of Her foot. And thou thinkest to behold Her face!

The Stone is become of the most brilliant whiteness, and yet, in that whiteness, all the other colours are implicit{SUP:3}. The colour of anything is but its dullness, its obstructiveness. So is it with these visions. All that they _are_ is falsity. Every idea merely marks where the mind of the Seer was too stupid to receive the light, and therefore reflected it. Therefore, as the pure light is colourless, so is the pure soul black{SUP:4}.

And this is the Mystery of the incest of CHAOS with his daughter{SUP:5}.

-
1. In fact, the Seer was the prey of an intolerable uneasiness akin to fear. He was intuitively aware of the terrific nature of the Aethyr, and felt oppressed by the responsibility of seeing and hearing accurately in a manner of such dread importance. He felt even before penetrating the Aire, that he was already near the limit of his powers.
 2. It was not that the Call of the Aethyr had been ill performed, or that its virtue and efficacy were impaired. It was that the Seer being attached to his human instrument, that instrument automatically strove with all its might to escape the impact of so tremendous and so dire an energy which would infallibly be transmitted (to a certain small extent) through the Seer to it. In the same way, in a much lesser manner, there is a limit to the degree of pain a man can inflict on himself, as experiments with the Boulometer (the instrument invented by the Seer to measure this virtue) have shewn. (Note --- it was a self-adjustable thumb screw. --- Note by Yorke)
 3. This means more than the obvious. "The colours of the spectrum compose pure White Light." The Seer could see these colours directly, at the same time as the White. Another case of hyperabyssic logic.
 4. This doctrine is most profound and important. It throws light upon the mystery of evil, and upon the nature of Maya in general.
 5. Chaos is here the Yod of Tetragrammaton, his daughter the final H. This passage is to be studied closely in connection with the previous passages and notes with regard to the formula of {HEB:Heh}{HEB:Vau}{HEB:Heh}{HEB:Yod}; indeed one should preform samyama upon this whole matter.

- 143 -

There is nothing whatever visible.

But I asked of the Angel that is at my side if the ceremony hath been duly performed. And he says: Yes, the Aethyr is present. It is thou that canst not perceive it, even as I cannot perceive it, because it is so entirely beyond thy conception that there is nothing in thy mind on to which it can cast a symbol, even as the emptiness of space is not heated by the fire of the sun. And so pure is the light that it preventeth the formation of images, and therefore have men called it darkness. For with any lesser light, the mind responds, and makes for itself divers palaces{SUP:1}. It is that which is written: "In my Father's house there are many mansions"; and if the house be destroyed, how much more the mansions that are therein! For this is the victory of BABALON over the Magician that ensorcelled{SUP:2} her. For as the Mother she is 3 by 52, and as the harlot she is 6 by 26; but she is also 12 by 13, and that is the pure unity{SUP:3}. Moreover she is 4 by 39, that is, victory over the power of the 4, and in 2 by 78 hath she destroyed the great Sorcerer {SUP:4}. Thus is she the synthesis of 1 and 2 and 3 and 4, which being added are 10, therefore could she set her daughter upon her own throne, and defile her own bed with her virginity{SUP:5}.

And I ask the Angel if there is any way by which I can make myself worthy to behold the Mysteries of this Aethyr.

And he saith: It is not in my knowledge. Yet do thou make

-
1. Note well this thesis. Anything which is not Pure Nothing is ipso facto unbalanced, and therefore imperfect --- indeed illusory.
 2. The path of Beth. Contrast this way of illusion forcibly with the obsession of Microprosopus by Dath. (There are also the difficulties of the Son with the glamour of the path of Gimel and of the Father with the path of Aleph. See 3rd Aire concerning the Three Ways of Delusion that guard the Crown.)
 3. 52 = {HEB:Aleph}{HEB:Mem}{HEB:Yod}{HEB:Aleph}, the fertile mother = 3 = Binah. 26 = {HEB:Heh}{HEB:Vau}{HEB:Heh}{HEB:Yod}; also {HEB:Dalet}{HEB:Bet}{HEB:Koph} = Kabad, the husband of the impure Lilith, and 1 plus 6 plus 9 plus 10, the Sephiroth of the Middle Pillar, the Phallus. 6 = 1 plus 2 plus 3, the Mystic number of Binah; also {Sun} who shines on all alike: {HEB:Aleph}{HEB:Bet}{HEB:Gemel} to collect, {HEB:Bet}{HEB:Dalet} a bear (Venus in Furs), and {HEB:Aleph}{HEB:Heh} a window, the illicit way of ingress into a house. 12 = {HEB:Vau}{HEB:Aleph}{HEB:Heh} the title of Kether, the Unity; 13 = {HEB:Dalet}{HEB:Chet}{HEB:Aleph} = Unity.
 4. 39 = {HEB:Dalet}{HEB:Chet}{HEB:Aleph}{HEB:Heh}{HEB:Vau}{HEB:Heh}{HEB:Yod} "Tetragrammaton is One", although He is composed of 4 letters, hence the triumph over the power of 4, limitation. But this explanation is not as clear, satisfactory and convincing with that singular feeling of ecstatic illumination which one rightly demands of the Qabalistic demonstration. There should be some further gematria of 39 not yet discovered. 2 is Beth, Atu I, Mayan the Great Sorcerer. 78 = Mezla ({HEB:Aleph}{HEB:Lamed}{HEB:Zain}{HEB:Mem}) the Influence from Kether, and the number of the Tarot Cards. I.e., she destroys him by his own energies. {WEH Note: In traditional Qabalah Mezla is not the Influence from Kether, but the omnipresence of Limitless Light of Ain.}
 5. Because she includes her daughter (10) in her own formula, she can use the daughter for Her own purposes.

once more in silence the Call of the Aethyr, and wait patiently upon the favour of the Angel, for He is a mighty Angel, and never yet have I heard the whisper of his wing.

This is the translation of the Call of the Aethyr{SUP:1}.

O ye heavens which dwell in the first Aire, and are mighty in the parts of the earth, and execute therein the judgment of the highest, to you it is said: Behold the face of your God, the beginning of comfort, whose eyes are the brightness of the heavens which provided you for the government of the earth, and her unspeakable variety, furnishing you with a power of understanding, that ye might dispose all things according to the foresight of Him that sitteth on the Holy Throne, and rose up in the beginning, saying, The earth, let her be governed by her parts (this is the prostitution of BABALON to Pan), and let there be division in her (the formation of the Many from the One), that her glory may be always ecstasy and the irritation of orgasm. Her course let it round with the heavens (that is, let her way be always harmonious with heaven), and as an handmaid let her serve them (that is, the Virgin of Eternity climbing into the bed of CHAOS). One season let it confound another (that is, let there be unwearying variety of predicates){SUP:2}, and let there be no creature upon or within her the same (that is, let there be an unwearying variety of subjects){SUP:3}. All her members let them differ in their qualities, and let there be no one creature{SUP:4} equal with another (for if there were any duplication or omission, there would be no perfection in the whole). The reasonable creatures of the earth and men, let them vex and weed out one another (this is, the destruction of reason by internecine conflicts in the course of redemption). And their dwelling places, let them forget their names. (This is, the arising of Nemo.) The work of man and his pomp, let them be defaced. (That is, in the Great Work man must lose his personality.) His building, let it be a cave for the Beast of the Field. ("His building" means the Vault of the Adepts, and the "Cave" is the Cave of the Mountain of Abiegnus,

-
1. This reversal of the evident exoteric meaning of the Call is stupendous. This book, 418, is full of similar interpretations "by the rule of contraries". But this rule must be applied with skill and discretion, if error is to be avoided. It is a lamentable fact that a worthy Zelator of A.{SUP:..}. A.{SUP:..}., one Frater Achad, having been taught (patiently enough) by the Seer to use this formula, was lured by his vanity to suppose that he had discovered it himself, and proceeded to apply it indiscriminately. He tried to stand the Serpent of Wisdom on its head, and argued that as he was a $1x = 10\{\text{square } x\}$ of the Order, he must equally be a $10x = 1\{\text{square } x\}$. As _The Book of Lies_ says, "I wrenched DOG backwards to find God; now God barks!" He would have been better advised to reverse his adored ONE and taken a dose of ENO! (ENO, an English purgative. T.)
 2. The infinity of Nuit.
 3. The infinity of Hadit.
 4. i.e. an "Event, the fundamental unit of Manifested Existence.

- 145 -

and the "Beast" is he upon whom BABALON rideth, and the "Field" is the supernal Eden.) Confound

her understanding with darkness. (This sentence is explained by what has been said concerning Binah.) For why, it rejoiceth me concerning the Virgin and the Man{SUP:1}. (Kelly did not understand this Call at all, and he would not believe this sentence was written so, for it seemed to contradict the rest of the Call, so he altered it.) One while let her be known and another while a stranger, (that is, the Mystery of the Holy One being at the same time identical with everything and apart from it), because she is the bed of an harlot, and the dwelling of him that is fallen. (That is that Mystery which was revealed in the last Aethyr; the universe being, as it were, a garden wherein the Holy Ones may take their pleasure.) O ye heavens, arise; the lower heavens beneath you, let them serve you. (This is a command for the whole of things to join in universal rapture.) Govern those that govern; cast down such as fall; bring forth those that increase; and destroy the rotten. (This means that everything shall take its own pleasure in its own way.{SUP:2}) No place let it remain in one number. ("No place" is the infinite Ain . . . "Let remain in one number"; that is, let it be concentrated in Kether.) Add and diminish until the stars be numbered. (It is a mystery of the Logos being formulated by the Qabalah, because the stars, are all letters of the Holy Alphabet, as it was said in a former Aethyr.) Arise! Move! and Appear! before the covenant of his mouth which he hath shewn unto us in his Justice. ("The Covenant" is the letter Aleph; "His mouth", pe; "His Justice", lamed; and these add up again to Aleph, so that it is in the letter Aleph, which is zero, thus symbolizing the circles of the Aethyrs, that he calleth them forth. But men thought that Aleph was the initial ARR, cursing, when it was really the initial of AChD, unity, and AHBH, love. So that it was the most horrible and wicked blasphemy of the blackest of all the black brothers to begin Barashith with a beth, with the letter of the Magician. Yet, by this simple device, hath he created the whole illusion of sorrow.{SUP:3}) Open the mysteries of your creation, and make us partakers of the undefiled knowledge. (The word here is "IADNAMAD" is not the ordinary word for knowledge. It is a word of eight letters, which is the secret name of God, summarized in the letter cheth; for which see the Aethyr which

1. In Kelly's original: "It repenteth Me that I have made Man." Kelly was in constant trouble with his education as an orthodox Christian; also Dee forced him to reject the True Messengers, whose discourse implied antinomian Pantheism.
2. One general application of the Law of Thelema. It is a stupid error to try to make a silk purse out of a sow's ear; it hurts both parties to the transaction. The basic blunder is to set up an arbitrary ideal standard of "what ought to be". The "evil beginnings" on all planes have a proper and a useful function. A strong healthy man cannot be made by putting him in irons and protecting him artificially from all the "dangers of life."
3. The passage is criticism of an obscure doctrine of the Qabalah. There is however a real mystery behind the rhetoric. {WEH Note: The doctrine in Qabalah is that the Aleph remained in the mouth of the Creator, and Beth was the first letter to manifest. This comes partly from Aleph being the first letter and partly from Aleph being unpronouncable without another letter. Aleph is a pure aspirant. Beth in Hebrew signifies "in" as in "in the beginning". What does all This bear on Crowley's use of "Hadit" from the Stele, in place of the more common "BaHadit", Egyptian for entrance into the Winged Disk of the Sun?}

- 146 -

correspondeth to that letter, the twelfth Aethyr.{SUP:1})

Now from time to time I have looked into the Stone, but never is there any image therein, or any hint thereof; but now there are three arrows, arranged thus:

[Figure here: Three arrows intersecting in the common centers of the three shafts. Two are diagonal, forming an "X" with points to top and fledging to bottom. The third is vertical, bisecting the "X" with point below and fledging to the top.]

This is the letter Aleph in the Alphabet of Arrows.

(I want to say that while I was doing the translation of the Call of the Aethyrs, the soles of my feet were burning, as if I were on red hot steel.{SUP:2})

And now the fire was spread all over me, and parches me, and tortures me. And my sweat is bitter like poison. And all my blood is acrid in my veins, like gleet. I seem to be all festering, rotting; and the worms eating me while I am yet alive.

A voice, neither in myself nor out of myself, is saying: Remember Prometheus; remember Ixion{SUP:3}.

I am tearing{SUP:4} at nothing. I will not heed. For even this dust{SUP:5} must be consumed with fire.

And now, although there is no image, at last there is a sense of obstacle, as if one were at length drawing near to the frontier

1. All these passages in brackets are the *_currente lingua_* explanations of the Seer (to himself) as each new phrase of the text was delivered by the Angel. To understand how startling it all was to him, one must remember that he had been using this Call, in its own obvious sense, for many weeks, and always with the utmost force and solemnity. His only warning had been the intuitive feeling that the Call was really a rejoicing at the opening of the 9th Aire. And he had thought this merely subjective, due to the relief of having passed through the Abyss.
2. This was certainly due to no ordinary cause. The Seer was lying on the roof of the Hotel Royal at Biskra in the shade of the minaret. It was a cool bright morning.
3. Prometheus stole the fire of Jupiter. Ixion attempted the virtue of Juno. The Seer, in trying to penetrate this most holy Aire, was similarly presumptuous.
4. He was using the Sign of the Rending of the Veil, (See *_Liber O_*, *_Eqx_*. I, No. 2) against the obscurity of the Aire.
5. i.e. the Magister Templi. See 6th Aethyr et al. supra. Only a Magus can truly pierce the veil of BABALON. It is written (of Isis), "No man (i.e., Nemo, the Magister Templi) hath lifted my veil." But to lift it and look upon HER is one thing; to possess HER another!

- 147 -

of the Aethyr.

But I am dying.

I can neither strive nor wait. There is agony in my ears, and in my throat, and mine eyes have been so long blind that I cannot remember that there ever was such a thing as sight{SUP:1}.

And it cometh to me that I should go away, and await the coming of the veil of the Aethyr; not here. I think I will go to the Hot Springs{SUP:2}.

So I put away the Stone upon my breast.

Biskra

10:15-11:52 a.m.

Flashes of lightning are playing in the Stone, at the top; and at the bottom of the Stone there is a black pyramid{SUP:3}, and at the top thereof is a vesica piscis. The vesica piscis{SUP:4} is of colourless brilliance.

The two curves of Pisces are thus:

[Figure here: The Pisces sign without the cross-line. In Essence ") (" , but larger with thick curves.]

They are the same curves as the curves of vesica piscis, but turned round{SUP:5}.

And a voice comes: How can that which is buried in the pyramids{SUP:6} behold that which descendeth unto its apex{SUP:7}?

1. The physical exhaustion of the Seer was complete. He realized that further effort was impossible; and --- more also! --- that had he suddenly succeeded, while in this state, the fury of the impact of the Energy of the Aire would have been instantly destructive of his physical form.
2. Hammam Salahin: Sulphurous waters, admirably apt to the idea of BABALON, whom the Seer intuitively understood to be the Soul of this Second Aire.
3. Black for Binah. The pyramid for the phallus, for she is also androgyne. Or, as an unit of Her City, beneath the Night of Pan. See 14th Aire.
4. The most perfect and mysterious of the symbols of the Feminine Principle. Its mathematical correspondences are of the greatest importance. See _The Canon_ and several other treatises on Qabalistic Geometry.
5. This is the last desperate attempt of the Rauch of the Seer to escape the Terror of the Presence of Babalon. 6. i.e. the Magister Templi.
7. This apparently simple phrase conceals an allusion of the most sublime and terrific import. See _AL_ I, 14, 16, 19. Also _The Book of Lies_, caps. 4 and 15. Mohammed said, "Cursed be he that maketh himself Earth, and Woman Heaven!" For he understood this Formula as of enormous Magical Power and wished to keep it from the profane, who might abuse it, or injure themselves by ignorant of imprudent application.

Again it comes to me, without voice: Therefore is motherhood the symbol of the Masters. For first they must give up their virginity to be destroyed, and the seed must lie hidden in them until the nine moons wax and wane, and they must surround it with the Universal Fluid. And they must feed it with the blood for fire. Then is the child a living thing. And afterwards is much suffering and much joy, and after that are they torn asunder, and this is all their thank, that they give it to suck{SUP:1}.

All this while the vision in the Shew-Stone stays as it was, save that the lightning grows more vehement and clear; and behind the vesica piscis is a black cross{SUP:2} extending to the top and to the edges of the Stone. And now blackness spreads, and swallows up the images.

Now there is naught but a vast black triangle having the apex downwards{SUP:3}, and in the centre of the black triangle is the face of Typhon, the Lord of the Tempest, and he crieth aloud: Despair! Despair! For thou mayest deceive the Virgin, and thou mayest cojole the Mother; but what wilt thou say unto the ancient Whore that is throned in Eternity? For if she will not, there is neither force nor cunning, nor any wit, that may prevail upon her.

Thou canst not woo her with love{SUP:4}, for she _is_ love. And she hath all, and hath no need of thee.

And thou canst not woo her with gold{SUP:5}, for all the Kings and captains of the earth, and all the gods of heaven, have showered their gold upon her. Thus hath she all, and hath no need of thee.

And thou canst not woo her with knowledge, for knowledge is the thing that she hath spurned{SUP:6}. She hath it all, and hath no need of thee.

And thou canst not woo her with wit{SUP:7}, for her Lord is Wit.

-
1. See _The Book of Lies_, Cap. 3.
 2. This seems to refer to Thmaist, whose Aeon will succeed that of Horus. She is Atu VIII referring to Libra, the House of Venus. In her also, then, is BABALON the Ageless Virgin-Harlot, our Mother as our Concubine.
 3. Cf. 3rd Aire, , the vision of Lilith. This triangle seems to symbolize Limitation or Restriction; or so the sequel implies.
 4. The path of {HEB:Dalet}, Daleth. BABALON is thus shewn as more than merely Binah.
 5. Tiphareth is below Her.
 6. Dath, the outcast into the Abyss, beneath Her.
 7. Chokmah, the Highest Wisdom.

- 149 -

She hath it all, and hath no need of thee. Despair! Despair!

Nor canst thou cling to her knees and ask for pity; nor canst thou cling to her heart and ask for love; nor canst thou put thine arms about her neck, and ask for understanding; for thou had all these{SUP:1}, and

they avail thee not. Despair! Despair!

Then I took the Flaming Sword{SUP:2}, and I let it loose against Typhon, so that his head was cloven asunder, and the black triangle dissolved in lightnings{SUP:3}.

But as he parted his voice broke out again: Nor canst thou win her with the Sword, for her eyes are fixed upon the eyes of Him in whose hand is the hilt of the Sword{SUP:4}. Despair! Despair!

And the echo of that cry was his word, which is identical, although it be diverse: Nor canst thou win her by the Serpent{SUP:5}, for it was the Serpent that seduced her first. Despair! Despair!

(Yet he cried thus as he fled:)

I am Leviathan, the great Lost Serpent of the Sea. I writhe eternally in torment, and I lash the ocean with my tail into a whirlpool of foam that is venomous and bitter, and I have no purpose. I go no whither. I can neither live nor die. I can but rave and rave in my death agony. I am the Crocodile{SUP:6} that eateth up the children of men. And through the malice of BABALON I hunger, hunger, hunger.

All this while the Stone is more inert than ever yet; a thousand times more lifeless than when it is not invoked. Now, when it kindles, it only kindles into its physical beauty. And now upon

1. As shewn in the previous note, the Magister Templi, though he can lift Her Veil and behold Her with understanding, is unable to meet Her as an equal and possess Her.
2. This has its hilt in Kether, and its point in Malkuth. the Seer uses the entire Hierarchy of Existence against the destroyer of Osiris.
3. His energy is transmuted into the primeval Manifestation of the Divine Will.
4. i.e. She is wholly set upon Kether. Only when Her Lover is wholly in His loftiest Selfhood can He possess Her.
5. The Serpent of Wisdom, the 22 Paths which join the 10 Sephiroth. It is thus the complement of the Flaming Sword. The legend of Heva and Nachash is drawn from the mystical Doctrine here in question. This Serpent is the totality of Magical Manifestation, the Beauty of the 22 Palaces (Atu) of Wisdom. She is at once the Mother and the Sister of Her adulterous Lord, Mayan, the Logos who created the universe of illusion.
6. Generally speaking, the monsters which inhabit water symbolize evil --- in all senses, from the grossest to the most exalted. They represent the falling into Passivity; whereras the Activity of Energy is the Idea of Joy.

- 150 -

the face of it is a great black Rose, each of whose petals, though it be featureless, is yet a devil-face. And all the stalks are the black snakes of hell. It is alive, this Rose; a single thought informs it. It comes to clutch, to murder. Yet, because a single thought alone informs it, I have hope therein.

I think the Rose has a hundred and fifty-six petals, and though it be black, it has the luminous

blush{SUP:1}.

There it is, in the midst of the Stone, and I cannot see anyone who wears it.

Aha! Aha! Aha! Shut out the sight{SUP:2}!

Holy, Holy, Holy art thou!

Light, Life and Love are like three glow-worms at thy feet: the whole universe of stars, the dewdrops on the grass whereon thou walkest!

I am quite blind{SUP:3}.

Thou art Nuit! Strain, strain, strain my whole soul{SUP:4}!

A ka dua
Tuf ur biu
Bi a'a chefu
Dudu ner af an nuteru{SUP:5}.

Falutli! Falutli{SUP:6}!

I cling unto the burning Aethyr like Lucifer that fell through the Abyss, and by the fury of his flight kindled the air.

And I am Belial, for having seen the Rose upon thy breast, I have denied God.

And I am Satan! I am Satan! I am cast out upon a burning

1. This Black Rose is then the veil of BABALON Herself. It is the repulsiveness which is one half of Fascination.
2. Thus suddenly --- BABALON --- breaks through to her lover.
3. This is meant in its normal physical sense. The Seer supposed at the time that he had actually lost his sight.
4. Against the appalling conviction that he had been stricken blind for his presumption in daring to aspire to BABALON in so intimate a sense he gathered himself together in a furious assault upon Her.
5. From the Stele of Revealing.
6. The outburst of the orgasm (see Note 3, page 38). It continued unabated throughout the whole of the vision. The Seer was all this time seated in the water of the hot spring, struggling with all the pressure on his body, and roaring aloud in the intensity of his agony or ecstasy. This helped him to endure physically the continuous spasm of Joy.

crag! And the sea boils about the desolation thereof. And already the vultures gather, and feast upon my flesh.

Yea! Before thee all the most holy is profane, O thou desolator of shrines! O thou falsifier of the oracles of truth! Ever as I went, hath it been thus. The truth of the profane was the falsehood of the Neophyte, and the truth of the Neophyte was the falsehood of the Zelator! Again and again the the fortress mut be battered down! pylon must be over thrown! Again and again must the gods be desecrated!

And now I lie supine before thee, in terror and abasement. O Purity! O Truth! What shall I say? My tongue cleaveth to my jaws, O thou Medusa that hast turned me to stone! Yet is that stone the stone of the philosophers. Yet is that tongue Hadit.

Aha! Aha{SUP:1}!

Yea! Let me take the form of Hadit{SUP:2} before thee, and sing:

A ka dua
Tuf ur biu
Bi a'a chefu
Dudu ner af an nuteru.

Nuit! Nuit! Nuit! How art thou manifested in this place! This is a Mystery ineffable. And it is mine, and I can never reveal it either to God or to man. It is for thee and me !

Aha! Aha!

A ka dua
Tuf ur biu
Bi a'a chefu
Dudu ner af an nuteru.

. . . My spirit is no more; my soul is no more. My life leaps out into annihilation!

A ka dua
Tuf ur biu
Bi a'a chefu
Dudu ner af an nuteru.

1. AHA = {HEB:Aleph}{HEB:Heh}{HEB:Aleph} = 7. It is therefore a God-name of Venus. Interpreted by Yetziratic attribution, it is "The Crossing of our Lady ({HEB:Heh} = the Supernal Mother) in the air ({HEB:Aleph})." It is also the Pentagram between two Swastikas. The symbolism of this word, simple as it is, is far too extensive to discuss adequately in a note. It must be studied intimately and at length by the Postulant

2. Hadit is a mathematical expression rather than a God. By his form is meant the Winged Globe, which is used in the Stele of Revealing to represent Him.

It is the cry of my body! Save me! I have come too close. I have come too close to that which may not be endured. It must awake, the body; it must assert itself.

It must shut out the Aethyr, or else it is dead.

Every pulse aches, and beats furiously. Every nerve stings like a serpent. And my skin is icy cold{SUP:1}.

Neither God nor man can penetrate the Mystery of the Aethyr.

(Here the Seer mutters unintelligibly.)

And even that which understandeth cannot hear its voice. For to the profane the voice of the Neophyte is called silence, and to the Neophyte the voice of the Zelator is called silence. And so ever is it.

Sight is fire, and is the first angle of the Tablet{SUP:2}; spirit is hearing, and is the centre thereof; thou, therefore, who art all spirit and fire, and hast no duller elements in thy star; thou art come to sight at the end of thy will. And if thou wilt hear the voice of the Aethyr{SUP:3}, do thou invoke it in the night, having no other light but the light of the half moon. Then mayest thou hear the voice, though it may be that thou understandeth it not. Yet shall it be a potent spell, whereby thou mayest lay bare the womb of thy understanding to the violence of CHAOS.

Now, therefore, for the last time, let the veil of the Aethyr be torn.

Aha! Aha! Aha! Aha! Aha! Aha! Aha!

A ka dua
Tuf ur biu
Bi a'a chefu
Dudu ner af an nuteru{SUP:4}.

.....

1. This was in a pool almost inconveniently hot to the normal sense.
2. Meaning, the four watchtowers of the universe (_Eqx_. I, VII). For the attributions of the Senses to the Elements see _777_. The growing intelligibility of the words indicates the exhaustion of the rapture of the Seer. The gradual withdrawal of the immanence of BABALON.
3. Hitherto, the intellectual content of the Aethyr has been marked by the Moral (or rather Spiritual) Ravishment of the Seer by BABALON.
4. At this point the Seer sank back exhausted. The Scribe, fearing that he might be drowned, assisted him to come out of the Pool.

This Aethyr must be left unfinished then until the half moon.

Hammam Salahin.

December 18, 1909 3:10 - 4:25 p.m.

An olvah nu arenu olvah. Diraeseu adika va paretanu poliax poliax in vah rah ahum subre fifal. Lerthexanax. Mama ra-la hum fifala maha{SUP:1}.

All this is the melody of a flute, very faint and clear. And there is sort of a sub-tinkle of a bell.

And there is a string instrument, somewhat like a zither. And there is a human voice.

And the voice comes: this is the Song of the Sphinx, which she singeth ever in the ears of men.

And it is the song of the syrens. And whoever heareth it is lost{SUP:2}.

I	III
Mu pa telai,	O chi balae
Tu wa melai	Wa pa malae: --
A, a, a	Ut! Ut! Ut!
Tu fu tulu!	Ge; fu latrai,
Tu fu Tulu	Le fu malai
Pa, Sa, Ga.	Kut! -- Hut! -- Nut.
II	IV
Qwi Mu telai	AI OAI
Ya Pa melai;	Rel moai
u, u, u.	Ti -- Ti -- Ti!
'Se gu melai;	Wa la pelai
Pe fu telai,	Tu fu latai
Fu tu lu.	Wi, Ni, Bi.

1. This began instantly on the resumption of the Vision. We must assume that the Angel of the Aire, or one of His ministers, undertook the task of preparing the Seer for the "voice of the Aethyr" in this manner. --- It is the language of the Sappho-Calypso angel, commonly called Bathyllic. Its translation is:

"Now it glides in to the heaven-home, glides. Seducingly the mentrila of the begotten one of the Holy Head (or Skull) takes hold of the soft tissues, subtly plying its shuttle. Light follows the explosion. The soft tissues, cleaving to the shuttle, pump out every drop of water from the well."

2. The Magical Fascination of the whole Aethyr is something quite apart from, and beyond, almost anything else in the experience of the seer. The effort upon him, 31 Equinoxes later, of writing these notes, is quite extraordinary. The memory of it diminishes the value of the rest of his life, with few excepted incidents, almost to nothing.

- 154 -

Translation of Song.

I

Silence! the moon ceaseth (her motion),
That also was sweet
In the air, in the air, in the air!
Who Will shall attain!
Who Will shall attain
By the Moon, and by Myself, and by the Angel of the Lord!

II

Now Silence ceaseth
And the moon waxeth sweet;
(It is the hour of) Initiation, Initiation, Initiation.
The kiss of Isis is honeyed;
My own Will is ended,
For Will hath attained.

III

Behold the lion-child swimmeth (in the heaven)
And the moon reeleth: --
(It is) Thou! (It is) Thou! (It is) Thou!
Triumph; the Will stealeth away (like a thief),
The Strong Will that staggered
Before Ra Hoor Khuit! -- Hadit! -- Nuit!

IV

To the God OAI{SUP:1}
Be praise
In the end and the beginning!
And may none fall

Who Will attain
The Sword, the Balances, the Crown!

And that which thou hearest is but the dropping of the dews from my limbs, for I dance in the night,
naked upon the grass, in shadowy places, by running streams.

Many are they who have loved the nymphs of the woods, and of the wells, and of the fountains, and of
the hills. And of these some were nympholept. For it was not a nymph, but I myself that walked upon the
earth taking my pleasure. So also there were many images of Pan, and men adored them, and as a
beautiful god he made their olives bear double and their vines increase; but some were

1. The reversal of the formula of IAO (see _Book 4_, part 3) implies roughly, the general Mystical, as
opposed to the general Magical, Process.

- 155 -

slain by the god, for it was I that had woven the garlands about him{SUP:1}.

Now cometh a song.

So sweet is this song that no one could resist it. For in it is all the passionate ache for the moonlight, and
the great hunger of the sea, and the terror of desolate places, --- all things that lure men to the
unattainable.

Omari tessala marax,
tessala dodi phornepax.
amri radara poliax
armana piliu.
amri radara piliu son';
mari narya barbiton
madara anaphax sarpedon
andala hriliu.

Translation

I am the harlot that shaketh Death.
This shaking giveth the Peace of Satiated Lust.
Immortality jetteth from my skull,
And music from my vulva.
Immortality jetteth from my vulva also,
For my Whoredom is a sweet scent like a seven-stringed instrument,
Played unto God the Invisible, the all-ruler,
That goeth along giving the shrill scream of orgasm.

Every man that hath seen me forgetteth me never, and I appear oftentimes in the coals of the fire, and upon the smooth white skin of woman, and in the constancy of the waterfall, and in the emptiness of deserts and marshes, and upon great cliffs that look seaward; and in many strange places, where men seek me not. And many thousand times he beholdeth me not. And at last I smite myself into him as a vision smiteth into a stone, and whom I call must follow.

Now I perceive myself standing in a Druid circle, in an immense open plain.

A whole series of beautiful visions of deserts and sunsets and islands in the sea, green beyond imagination But there is no subsistence in them{SUP:2}.

-
1. From this it would appear that BABALON (who is speaking through one of Her ministers) is the Feminine (or Androgyne) equivalent and not merely complement --- of Pan. This is shewn in many of Her images.
 2. These visions are semi-distractions, due to the Seer's human weakness, which could not endure the rapture of the Voice. "Wisdom says: be strong! Then canst thou bear more joy." _AL_, II, 70. During the great revelation of the Cairo Working, the Seer had been similarly ravished, and fainted under the excess of Enthusiasm.

- 156 -

A voice goes on: this is the holiness of fruitless love and aimless toil. For in doing the thing for the things's sake is concentration, and this is the holiest of them that suit not the means to the end. For therein is faith and sympathy and a knowledge of the true Magick{SUP:1}.

Oh my beloved, that fliest in the air like a dove, beware of the falcon! oh my beloved, that springest upon the earth like a gazelle, beware of the lion!

There are hundreds of visions, trampling over one another. In each one the Angel of the Aethyr is mysteriously hidden.

Now I will describe the Angel of the Aethyr until the voice begins again.

He is like one's idea of Sappho and Calypso, and all seductive and deadly things{SUP:2}; heavy eye-lids, long lashes, a face like ivory, wonderful barbaric jewellery, intensely red lips, a very small mouth, tiny ears, a Grecian face. Over the shoulders is a black robe with a green collar; the robe is spangled with golden stars; the tunic is a pure soft blue.

Now the whole Aethyr is swallowed up in a forest of unquenchable fire, and fearlessly through it all a show-white eagle flies. And the eagle cries: the house also of death{SUP:3}. Come away! The volume of the book is open, the Angel waiteth without, for the summer is at hand. Come away! For the Aeon is measured, and thy spans allotted. Come away! For the mighty sounds have entered into

1. _AL_ I, 44. "For pure will, unassuaged of purpose, delivered from the lust of result, is every way perfect." This doctrine is fundamental to all working soever. Its neglect vitiates (by a paradox curious enough) all fruitfulness in any operation. One may indeed distinguish work worthy of being performed from menial toil (such as that of statesmen, financiers, and sewer rats) by this criterion. (Faith, spelt empirically {GRK:phi}{GRK:alpha}{GRK:iota}{GRK:theta} --- a practice not to be commended or even defended -- it being of the nature of paranomasia -- is equivalent to {HEB:Resh}{HEB:Shin}{HEB:Koph} --- lawful.)
2. BABALON, "in whom all power is given," is the Teh, Sakhi, {HEB:Heh}. She is seductive and deadly, being the Disturber of the Total Equilibrium of the Absolute Zero, which considered as a positive Idea, is Existence in perfect Peace, an immutable Essence. But He cannot truly exist without Her; and through Her therefore comes Change, which is Love and Death.
3. See the 11th Call, which invokes {Spirit} of {Water}, the Princess of the Lotus of the Floods. (The reading is a variant of that given in the official A{'.} A{'.} ritual.) The Eagle is snow-white for Her purity; and He is the White Eagle of the Alchemists.

- 157 -

every angle{SUP:1}. And they have awakened the Angels of the Aethyrs that slept these three hundred years{SUP:2}.

For in the Holy letter Shin, that is the Resurrection in the Book of Thoth, that is the Holy Spirit in the Trinity, that is three hundred in the tale of the years{SUP:3}, hath the tomb been opened, so that this great wisdom might be revealed.

Come away! For the Second Triad is completed, and there remaineth only the Lord of the Aeon, the Avenger, the Child both Crowned and Conquering, the Lord of the Sword and the Sun, the Babe in the Lotus, pure from his birth, the Child of suffering, the Father of justice, unto whom be the glory throughout all the Aeon{SUP:4}!

Come away! For that which was to be accomplished is accomplished, seeing that thou hadst faith unto the end of all.

In the letter N the Voice of the Aethyr is ended{SUP:5}.

Biskra, Algeria.

December 20, 1909. 8:35 - 9:15 p.m.

The Cry of the 1st Aethyr, Which is Called LIL{SUP:6}

First, let praise and worship and honour and glory and great thank be given unto the Holy One, who hath permitted us to come thus far, who hath revealed unto us the ineffable mysteries, that they might be disclosed before men. And we humbly beseech His

-
1. See the Keys, especially the 5th and 6th, where the angles (of the Watch Towers) are specifically mentioned.
 2. i.e. since the Working of Dr. John Dee and Sir Edward Kelly.
 3. {HEB:Shin} = 300: also {HEB:Shin} = Atu XX, "The Last Judgment" (or Resurrection, as implied in the usual form of the Atu). {HEB:Shin} = < = Spirit in the regular attribution (the triple Gue (sic) of Fire; see the Acts of the Apostles). 300 = {HEB:Mem- final}{HEB:Yod}{HEB:Heh}{HEB:Lamed}{HEB:Aleph}{HEB:Chet}{HEB:Vau}{HEB:Resh} = Rauch Elohim the Spirit of the Gods.
 4. The Seer had absolutely forgotten this prophecy, and was amazed at the final identification of the Child in LIL with Hoor.
 5. This implies that the Voice of the Aethyr ends never! For N is the vibration which continues through the nostrils. See _Book 4_, part 3 on the word AUGMN, whereby the Seer rebuked and perfected the Aum of the Rishis. N = {HEB:Nun}, the letter of Sexual immortality, the formula of Perfection through putrefaction.
 6. LIL = {Cancer}{Aquarius}{Cancer} = 76 = {HEB:Nun- final}{HEB:Vau}{HEB:Yod}{HEB:Bet}{HEB:Chet} = Secret, a refuge; {HEB:Chet}{HEB:Chet}{HEB:Yod}{HEB:Nun} rest, peace; and {HEB:Dalet}{HEB:Bet}{HEB:Ayin}, a Servant (in the noble sense). In Hebrew LIL would be 70, the eye of Horus, {HEB:Ayin}. But see a previous note on the twelvefold table, 15th Aethyr, where these letters rule the Universe. (scil. that of the present Aeon.)

- 158 -

infinite goodness that he will be pleased to manifest unto us even the Mystery of the First Aethyr{SUP:1}.

(Here followeth the Call of the Aethyr.)

The veil of the Aethyr is like the veil of night, dark azure, full of countless stars. And because the veil is infinite, at first one seeth not the winged globe of the sun that burneth in the centre thereof. Profound peace filleth me, --- beyond ecstasy, beyond thought, beyond being itself, IAIDA. (This word means "I am", but in a sense entirely beyond being.)

(_Note_. --- In Hebrew letters it adds to 26. In Hebrew letters the name of the Aethyr is 70, ayin; but by turning the Yetziratic attributions of the letters into Hebrew, it gives 66{SUP:2}, is the sum of the numbers from 0 to 11.)

Yes; there is peace. There is no _tendency_ of any sort, much less any observation or feeling or impression. There is only a faint consciousness, like the scent of jasmine.

The body of the Seer is rested in a waking sleep that is deeper than sleep, and his mind is still; he seems like a well in the desert, shaded by windless palms.

And it is night; and because the night is the whole night of space, and not the partial night of earth, there

is no thought of dawn. For the light of the Sun maketh illusion, blinding man's eyes to the glory of the stars. And unless he be in the shadow of the earth, he cannot see the stars. So, also, unless he be hidden from the light of life, he cannot behold Nuit. Here, then, do I abide in unalterable midnight, utterly at peace.

I have forgotten where I am, and who I am. I am hanging in nothing.

1. The Seer was only too well aware that, considering the dire straits to which he was put to obtain the Second Aire, he was surely incapable of penetrating the First. In fact, only a full Magus could pierce the Second properly, and for the First, none but an Ipsissimus would be competent. This apprehension was in fact justified. Only now and then was he able to live at the level of LIL; much of the Vision and the Voice here printed is but a pale reflection in Rauch (and even that at the cost of infinite effort) of the Word of the Angel of the Aethyr. These "Ersatz-words" are indicated in the present edition by square brackets.

2. i.e. by taking I as Luna. In the note in the title, we have taken it as {Cancer}, experience having shewn that this mode is more accurate. L is {Moon} in her decrease, and {Cancer} her house. But the Enochian alphabet is referred to the Zodiac and the Elements; only indirectly to the planets; and it is imprudent to make any exception.

- 159 -

Now the veil opens of itself. (To Scribe. Come nearer; I don't want to have to speak so loudly.)

It is a little child covered with lilies and roses. He is supported by countless myriads of Archangels. The Archangels are all the same colourless brilliance, and every one of them is blind. Below the Archangels again are many, many other legions, and so on far below, so far that the eye cannot pierce. And on his forehead, and on his heart, and in his hand, is the secret sigil of the Beast{SUP:1}. And of all this the glory is so great that all the spiritual senses fail, and their reflections in the body fail.

It is very strange. In my heart is rapture, holy and ineffable, absolutely beyond emotion; beyond even that bliss called Ananda, infinitely calm and pure. Yet at the gates of mine eyes stand tears, like warriors upon the watch, that lean on their spears, listening{SUP:2}.

The great and terrible Angel keeps on looking at me, as if to bar me from the vision. There is another forcing my head down in sleep.

(It's very difficult to talk at all, because an impression takes such an immense time to travel from the will to the muscles. Naturally, I've no idea of time.)

I have gone up again to the child, led by two Angels, abasing my head.

This child seems to be the child that one attempted to describe in "The Garden of Janus.{SUP:3}"

Every volition is inhibited. I have tried to say a lot, but it has always got lost on the way.

Holy art thou, O more beautiful than all the stars of the Night!

There has never been such peace, such silence. But these are _positive_ things. Singing praises of things eternal amid the flames of first glory, and every note of every song is a fresh flower in the garland of peace.

This child danceth not, but it is because he is the soul of the two dances, --- the right hand and the left hand, and in him they are one dance, the dance without motion.

- 1.
2. There are long intervals between many of these paragraphs, the Seer having been lost to Being. The reader will note that "The Great and Terrible Angel" has not been mentioned, but comes in suddenly. This was because the Seer's speech was inaudible, or never occurred. This angel was the "Higher Genius" of the Seer.
3. See the _Winged Beetle_ and _Eqx_. I, No. 3.

- 160 -

There is dew on all the fire. Every drop is the quintessence of the ecstasy of stars.

Yet a third time am I led to him, prostrating myself seven times at every step. There is a perfume in the air, reflected down even to the body of the seer. That perfume thrills his body with an ecstasy that is like love, like sleep.

And this is the song:

I am the child of all who am the father of all, for from me come forth all things, that I might be. I am the fountain in the snows, and I am the eternal sea. I am the lover, and I am the beloved, and I am the first-fruits of their love. I am the first faint shuddering of the Light, and I am the loom wherein night weaveth her impenetrable veil.

I am the captain of the hosts of eternity; of the swordsmen and the spearmen and the bowmen and the charioteers. I have led the armies of the east against the armies of the west, and the armies of the west against the armies of the east. For I am Peace.

My groves of olive were planted by an harlot, and my horses were bred by a thief. I have trained my vines upon the spears of the Most High, and with my laughter have I slain a thousand men.

With the wine in my cup have I mixed the lightnings, and I have carved my bread with a sharp sword.

With my folly have I undone the wisdom of the Magus, even as with my judgments I have overwhelmed

the universe. I have eaten the pomegranate in the House of Wrath, and I have crushed out the blood of my mother between mill-stones to make bread.

There is nothing that I have not trampled beneath my feet. There is nothing that I have not set a garland on my brow. I have wound{SUP:1} all things about my waist as a girdle. I have hidden all things in the cave of my heart. I have slain all things because I am Innocence. I have lain with all things because I am Untouched Virginity. I have given birth to all things because I am Death.

Stainless are my lips, for they are redder than the purple of the vine, and of the blood wherewith I am intoxicated. Stainless is my forehead, for it is whiter than the wind and the dew that cooleth it.

I am light, and I am night, and I am that which is beyond them.

I am speech, and I am silence, and I am that which is beyond them.

I am life, and I am death, and I am that which is beyond them.

1. {WEH Note: In this Word lurks a Pun that is Key to all the Work.}

- 161 -

I am war, and I am peace, and I am that which is beyond them.

I am weakness, and I am strength, and I am that which is beyond them.

Yet by none of these can man reach up to me. Yet by each of them must man reach up to me.

Thou shalt laugh at the folly of the fool. Thou shalt learn the wisdom of the Wise. And thou shalt be initiate in holy things. And thou shalt be learned in the things of love. And thou shalt be mighty in the things of war. And thou shalt be adept in things occult. And thou shalt interpret the oracles. And thou shalt drive all these before thee in thy car, and though by none of these canst thou reach up to me, yet by each of these must thou attain to me. And thou must have the strength of the lion, and the secrecy of the hermit. And thou must turn the wheel of life. And thou must hold the balances of Truth. Thou must pass through the great Waters, a Redeemer. Thou must have the tail of the scorpion, and the poisoned arrows of the Archer, and the dreadful horns of the Goat. And so shalt thou break down the fortress that guardeth the Palace of the King my son. And thou must work by the light of the Star and of the Moon and of the Sun, and by the dreadful light of judgment that is the birth of the Holy Spirit within thee. When these shall have destroyed the universe, then mayest thou enter the palace of the Queen my daughter{SUP:1}.

Blessed, blessed, blessed; yea, blessed; thrice and four times blessed is he that hath attained to look upon thy face. For I will hurl thee forth from my presence as a whirling thunderbolt to guard the ways, and whom thou smitest shall be smitten indeed. And whom thou lovest shall be loved indeed. And whether

by smiting or by love thou workest, each one shall see my face, a glimmer through a thousand veils. And they shall rise up from love's sleep or death's, and gird themselves with a girdle of snake-skin for wisdom, and they shall wear the white tunic of purity, and the apron of flaming orange for will, and over their shoulders shall they cast the panther's skin of courage. And they shall wear the nemyss of secrecy and the ateph crown of truth. And on their feet shall they put sandals made of the skin of breasts, that they may trample upon all they were, yet also that its toughness shall support them, and protect their feet, as they pass upon the mystical way that lieth through the pylons. And upon their breasts shall be the Rose and Cross of light and life, and in their hands the hermit's staff and lamp. Thus shall they set out upon the never-ending journey, each step of which is an unutterable reward{SUP:2}.

Holy, Holy, Holy, Holy; yea, thrice and four times holy art

1. This passage is quite spurious, a vague and false reflection of the true voice, which was a lyrical sequence of the Atus of Thoth.
2. This passage is not wholly wrong; it is the poor expression, which is to be deplored.

- 162 -

thou, because thou hast attained to look upon my face; not by my favour only, not by thy magick only, may this be won. Yet it is written: "Unto the persevering mortal the blessed Immortals are swift."

Mighty, mighty, mighty, mighty; yea, thrice and four times mighty art thou. He that riseth up against thee shall be thrown down, though thou raise not so much as thy little finger against him. And he that speaketh evil against thee shall be put to shame, though thy lips utter not the littlest syllable against him. And he that thinketh evil concerning thee shall be confounded in his thought, although in thy mind arise not the least thought of him{SUP:1}. And they shall be brought unto subjection unto thee, and serve thee, though thou wilt it not. And it shall be unto them a grace and a sacrament, and ye shall all sit down together at the supernal banquet, and ye shall feast upon the honey of the gods, and be drunk upon the dew of immortality --- FOR I AM HORUS, THE CROWNED AND CONQUERING CHILD, WHOM THOU KNEWEST NOT!

Pass thou on, therefore, O thou Prophet of the Gods, unto the Cubical Altar of the Universe; there shalt thou receive every tribe and kingdom and nation into the mighty Order that reacheth from the frontier fortresses that guard the Uttermost Abyss unto My Throne.

This is the formula of the Aeon, and with that the voice of LIL, that is the Lamp of the Invisible Light, is ended. Amen.

Biskra, Algeria.

December 19, 1909. 1:30 - 3:30 p.m.

An Enochian Setting of the Wards

(In the Ogdoadic Tradition of Magic)

(Stand in the center of the place of working, or as nearly the center as the arrangement of the chamber will allow.)

Calyx

- i. Facing East, assume the Wand Posture. Vibrate "GEH" (Thou Art)
- ii. Raise the arms at the sides, vibrate: "LONDOH" (The Kingdom)
- iii. Touch right shoulder with left hand, vibrate "OD MICALZO" (And The Power)
- iv. Touch left shoulder with right hand, vibrate "OD BUSD" (And The Glory)
- v. Keeping arms crossed, bow head and vibrate "GOHED" (Everlasting)

Circulus

- vi. Advance to the East. Beginning at that point and returning thereto, trace the circle against the Sun, encompassing the area of working.

Praesidia

- vii. Return to center and face East. Make the Gesture Cervus: at the first point vibrate "EXARP" at the second point vibrate "ORO IBAH AOZPI."
- viii. Turn to face North: make the Gesture, vibrating "NANTA" at the first point, "MOR DIAL HCTGA" at the second.
- ix. Turn to face West: make the Gesture, vibrating "HCOMA" at the first point, "MPH ARSL GAIOL" at the second.
- x. Turn to face South: make the Gesture, vibrating "BITOM" at the first point, and "OIP TEAA PDOCE" ¹ at the second.

Invocatio

- xi. Raise the arms to form a Tau. Vibrate:
TO THE EAST BATAIVAH
TO THE SOUTH EDLPRNAA ¹
TO THE WEST RAAGIOSL
TO THE NORTH ICZHIHAL

Calyx

- xii. Facing East, assume the Wand Posture. Vibrate "GEH" (Thou Art)
- xiii. Raise the arms at the sides, vibrate: "LONDOH" (The Kingdom)
- xiv. Touch right shoulder with left hand, vibrate "OD MICALZO" (And The Power)
- xv. Touch left shoulder with right hand, vibrate "OD BUSD" (And The Glory)
- xvi. Keeping arms crossed, bow head and vibrate "GOHED" (Everlasting)

An Essay on Enochian Pronunciation

by Christeos Pir

Fr. VITRIOL 335 0° O.T.O.

Do what thou wilt shall be the whole of the Law.

This paper is divided into two sections: a comparison of some systems of pronunciation of the Enochian or Angelic language as used in the nineteen Calls of the tablets, and an attempt to write the Calls in such a manner that they may be pronounced according to Dr. Dee's notes.

Part One:

The first section compares three versions of the Calls: that of the Aurum Solis as published in the Llewellyn edition of Denning and Phillips' *Mysteria Magica*; Geoffrey James' "corrected" calls as published in the Heptangle edition of *The Enochian Evocation of Dr. John Dee*; and Dr. Dee's original notes as published in the Magickal Childe edition of Meric Causabon's *A True and Faithful Relation....* I have compared these systems word-by-word, with the Aurum Solis and James versions on the first two lines, and Dee's on the third.

Example:

Aurum Solis: OL[^] SONuF VORoSiG, GOHO I-AD BALaT,
Geoffrey James: OL SONF VORSG, GOHO IAD BALT,
Dee: Ol sonf vorsg, goho yad balt,

Where Dee has separated a word into its syllables (eg, Im ua mar), I have hyphenated it so as to more easily discern between word divisions and syllable divisions (Im-ua-mar). Where he has shown stress by using an accent, I have used boldface (q-**a**-an). In a number of places his marginalia give more than one version of a word, usually in order to clarify its pronunciation; other times he has occasionally written an example for the same purpose -- these I have placed in footnotes. There are also one or two places where he has offered variant spellings: these, too, I have placed in the footnotes. I have attempted to standardize the punctuation, arbitrarily picking one of several possible systems and applying it to all of them in a manner somewhat reminiscent of Procrustes.

One problem that had to be dealt with in re-typing the Aurum Solis version is their system of transliteration, which uses several symbols outside of the English alphabet. I have made two changes to their system, solely in order to use symbols that my computer could produce, as follows (the revised key, which is adapted from "Mysteria Magica", and applies only to the AS version, is given in the Appendix):

^ represents the neutral vowel, as the first vowel sound in "parade," or the second vowel sound in "column."

represents the guttural, pronounced as the "ch" in German (Woche, suchen).

It is to be noted that James' version contains a number of differences from Dee's originals. These, as I understand it, are the result of his research into, and attempts to rectify, variations among the Calls

themselves, and between the Enochian of the Calls and their English translations. I have not done any research in this area, and leave it up to the reader to decide which version to follow. Some of those corrections which are meant to fix transcription errors on Dee's part directly contradict some of Dee's own pronunciation notes. How Dee could have been able to record the sounds of his typos, I have not been able to determine.

I have chosen not to include the Golden Dawn's "Hebraicized" pronunciation, since it is based on a very different system. This is not meant as any reflection on the remarkable achievements of Westcott, Mathers and their descendants, which just go to prove the amazing versatility of the Enochian system.

Part Two:

The second section is my attempt to rewrite the Calls into some sort of standardized, readable phonetic system. One thing became evident in this process: the pronunciation guide given by Donald Laycock in his *Complete Enochian Dictionary* is the closest thing to Dee's notes I've seen so far. For this reason, some may prefer to follow Laycock's guide in those cases where no indication in Dee's notes was forthcoming (eg: VLCININ = Vul-see-nin or Vul-kih-nin?), a not infrequent problem, unfortunately. I am not completely in agreement with Laycock in all instances, as may be seen by comparing my pronunciation key (see Part Two) with that in Laycock's *Enochian Dictionary*, which I have printed in the Appendix. One such problem, and a bone of contention among scholars and dabblers alike, is over the use of the morpheme "zod." I regret to say that I have been unable to resolve this question. Out of the 127 instances of words with the letter "z" in the nineteen Calls, only 7 use "zod" -- and even then it is inconsistent: one of those words is "zod-a-car" which appears only once in that form, and 13 times as "zacar" (or "zacare"). It is not even clear whether it is intended as a spoken syllable, or merely a clarification:

The letter **z** has not always been called "zed" or "zee"; it has had many names, among them being "izzard", and, at the end of the sixteenth century, "ezod". "Zod" is nothing but a variant of this last name.

(Laycock, *The Complete Enochian Dictionary*, p. 45)

The angels themselves are no help here:

Dee: I pray you, is **Mozod** a word of three letters, or of five?

Nalvage: In wrote three, it is larger extended. [Dee- **Z** extended is **Zod**.]

Dee: Will you pardon me if I ask you another question of this extension?

Nal.: Say on: **Moz** in itself signifieth Joy; but **Mozod** extended, signifieth the Joy of God

(Causabon, *A True and Faithful Relation...*, p. 75)

Also:

"**zod-lida** ... It is a word and a letter."

(Causabon, op. cit., p. 120)

In the end, about all that can be said with any certainty about "zod" is that no one knows exactly how

Dee intended it to be used. In fact, Geoffrey James doesn't even believe Enochian was received as a spoken language at all:

Unfortunately, Kelly never, as the spirits' "mouthpiece", pronounced the Angelical words. Kelly dictated letter by letter from a table that he saw in the crystal, as shown from Kelly's description that Dee recorded. Furthermore, if Angelical letter arrangement has random characteristics, as Laycock claims, then the English-like pronunciation cannot be an inherent quality of the language itself. Far more likely is that Dee assigned pronunciations to the Angelical because he wished to speak the keys in a ceremony, and, being English, adapted them as well as he could to his native tongue. Indeed, outside of few minor suggestions, the spirits seem unconcerned with pronunciation.

(James, *The Enochian Evocation of Dr. John Dee*, Preface, p. xxiv)

A closer reading of Dee's original records, however, indicates that not only did Kelly hear the sounds spoken by the Angels while the letters were being shown, but that Dee re-checked the Calls with them several times, as a number of corrections and revisions were later recorded. Furthermore, if the pronunciation had been invented by Dee, surely he would have come up with something more consistent!

Dee's records show that the Calls were originally received in a different order than that in which they were later arranged by Dee, at the Angels' orders. For those interested in the original arrangement, I recommend Causabon, pps. 79 - 138, 190 -200.

One last note:

It has been pointed out by several people that one of the most striking things about the whole Enochian system is that How Much You Put Into It seems to matter a great deal more than How You Do It. Perhaps there's something to James' reasoning, after all.

I make no claims that this guide will make you any better (though hopefully no worse) of a magician. My intent was solely to attempt to compare the various systems of pronunciation with Dr. Dee's original notes on the subject. It is to him, and to my many mentors both within and without the Order, that this paper is dedicated with respect and love.

Love is the law, love under will.

Christeos Pir

zirdo noco mad, hoath Jaida.

- 1 Text has **GOTTO** - this is evidently a typo for **goho**.
- 2 "**Zol ... zod** ^, as **ol**" [The ^ represents the Delta, or triangle, that Dee used as his personal sign in the original.]
- 3 "a word by itself"
- 4 "Three syllables"
- 5 "Three syllables. **P** is distinctly pronounced by itself."
- 6 "**ZNRZA** Call it **Zurza**. ^ As ... **Znurza**."
- 7 Removed by later correction from the Angel.
- 8 Text at this point reads "Labiis clausis, [Span] [um um] ... He hummed twice, signifying two words more, which were not to be pronounced till they were read in practise."
- Then "**OD**, as you had before" followed by "**BALTOH**," then "**PIAP**". After this, some discussion as to errors in words here. Apparently "**od baltoh piap**" was removed at this point; it is unclear if the preceding "**soba**" is to stay or not.
- 9 "**LU** ... Call it **UL** ... with such sound to **U** as we pronounce yew, whereof bows are made."
- 10 "The **A** pronounced short."
- 11 "long, the first syllable accented."
- 12 "**ZOMDVX** `Call it **Zome**.' ... With great difficulty this Letter was discerned: Nalvage himself said, he knew it not yet; but it seemed to E.K. to be an **X**. Nalvage denied it to be an **X**, and said he know not yet the mystery: `Say the Lord's Prayer, for I cannot open it. Although my power be multiplied, yet I know not this letter.' At length he said it was **V**."
- 13 "**POAMAL SOD Poamal Od**, put out the **S**. Make it two words ... It may be all one word with **S** or **T** but it would be hard for your understanding."
- 14 "The first **A** may be an **A** or an **O** or an **E**."
- 15 "**PIAMO** This **o** must be sounded as **a**."
- 16 "Call it **Piamo el**. It is **Piatel Baltale** to be sounded." In fact, the record is unclear, and shows **Baltale** first, and **Piamo el** as a correction.
- 17 "Drawing the **O** long."
- 18 "**VOOAN** is spoken with them that fall, but **VAOAN** with them that are, and are glorified. The devils have lost the dignity of their sounds."
- 19 "**E** must come after **R**: but without number, and so, it is **Zacare**."
- 20 "two syllables"
- 21 "or **OT**"
- 22 "That **C** is called C minor." (The second **c**.)
- 23 "Three syllables, with accent on the last **A**."
- 24 "Of one syllable" (thus **Zorj**)
- 25 **ZIR DONOCO**? See James, op. cit., p. 68, footnote 1.88

Part Two

As noted before, there is a lot of room for debate in those areas where Dee's notes are inconclusive or contradictory. This guide is my own interpretation (and occasionally, I admit, extrapolation) of Dee's pronunciation. Another, that of Donald Laycock, is in the Appendix to this paper. It is my opinion that often the differences between these variations are more of emphasis rather than any fundamental discord: between "ee" and "ih" for instance.

In the version of the Calls that follows, the first line is that of the Calls as printed in Causabon (except where noted), the second and third are my phonetic version with possible variations.

PRONUNCIATION KEY

A - as in "father", except "ag" rhymes with "nag"

C - as **k** before **a, o, u** (some exceptions)

- as **s** before **i, e** (some exceptions)

E - stressed: as in "obey"

- unstressed: as in "beg" (some exceptions)

G - as (hard) **g** before **a, o, u**

- usually as **j** before **i, e**, and word-final, occasionally in other places, some exceptions

H - usually as **h**, except in combinations (**ch, ph, sh, th**); either silent or slightly aspirated in certain locations (eg: **Comselh**). This last does not apply to the phonetic notation that follows: duh-loo-gah (**dluga**) does not end with an aspirated sound.

I - stressed: as in "machine"

- unstressed: as in "pill"

I,J - as **y** or **jh** ("ge" as in "garage") in initial position and before a vowel

O - stressed: as in "go"

- unstressed: as in "go" or as in "pot", especially in **-och-** (rhymes with "botch")

Q,QU - as "kuh", or "kwuh" (as in "quick")

U - usually as in "rule", but occasionally as in "mug"

- in initial position may be pronounced as "yew"

X - as in "fox"

Y - usually as under key for I and I,J

Z - as in "zoo"; in a very few words, as **zod**

CH - as **k** in most positions, but **-och** rhymes with "botch"

PH - as **f**

SH - as **sh**

TH - as **th**

Double vowels should be pronounced only partly separately, with an elided pause between them: **QAA** becomes Kuh-ah-ah, with only the barest hesitation.

APPENDIX

AURUM SOLIS PRONUNCIATION KEY (from "Mysteria Magica" pg 416)

A as the first vowel sound in "father"

E as the vowel sound in "say"

I as the vowel sound in "meet"

O as the vowel sound in "hold"

U as the vowel sound in "food"

a as the vowel sound in "add"

e as the vowel sound in "yet"

i as the vowel sound in "sit"

o as the vowel sound in "hot"

u as the vowel sound in "foot"

^ represents the neutral vowel, as the first vowel sound in "parade," or the second vowel sound in "column."

Consonants are given their normal values (G invariably represents the hard sound of that letter, as in "gold.")

represents the guttural, pronounced as the "ch" in German (Woche, suchen).

As a general rule, allowing for varied inflexions of the voice in the flow of magical utterance, all the syllables in an Enochian word should be given equal weight. It will be noted that hyphens are frequently inserted in words. These only emphasise the need to give full value to a vowel, or to a syllable, and do not call for a real break in the utterance.

DONALD LAYCOCK'S PRONUNCIATION KEY (from "The Complete Enochian Dictionary" pps 46-47.)

A - long (stressed), as in "lah-di-dah"

- short (unstressed), as in French "patte"

B - usually as English **b**, but silent between **m** and another consonant, or after **m** finally

C - as **k** before **a**, **o**, **u** (with some exceptions)

- as **s** before **i**, **e** (with many exceptions), and in clusters of consonants (**noncf** = **nonsf**)

CH - as **k** in most positions, but as **ch** finally

D - as **d** in all positions

E - when stressed, as in French "fee"

- when unstressed, as in "bed"

F - as **f** in all positions

G - as (hard) **g** before **a, o, u**

- as **j** before **i, e**, in final position, after **d**, and in clusters of consonants

H - as **h** in most positions (except in combinations **ch, ph, sh, th**); silent after a vowel, but the vowel is lengthened

I - when stressed, as in (French) "machine"

- when unstressed, as in "bit"

- in combinations: **ai** as in "fly"; **ei** as in "eight"; **oi** as in "boil"

- as **y** in word-initial position before a vowel (**Iad** = **Yad**)

K - as **k** in all positions

L - as **l** in all positions

M - as **m** in all positions

N - as **n** in all positions

O - when stressed, as in French "mot"

- when unstressed, as in "not"

- in combinations: **oi** as in "boil"; **ou** as in "bout"; **oo** as in "fool"

P - as **p** except in combination **ph**

PH - as **f**

Q,QU - as **kw** (**qu** in "quick") -- but the word **q** is pronounced **kwa**

R - as **r** in "right" (but may be rolled)

S - usually as **s** in "sit"

- sometimes **z**, in places where this is more natural in English (**lrasd** = **elrazd**)

SH - as **sh** in "ship"

T - as **t** except in combination **th**

TH - as **th** in "thank"

U - as **oo** in "boot", or **u** in "put"

- in initial position as "yew"

- as **v** or **w** before another vowel, and in word-final position

X - as **x** in "fox"

Y - as **y** in word-initial position before a vowel

- as the letter **I** before a consonant, and in word-final position

Z - as **z** in "zoo"; in a very few words, as **zod**

Enochian Temples: Analysis of the First Enochian Key

by Benjamin Rowe

Copyright 1988, 1992 by Benjamin Rowe

Analysis of the First Enochian Key

(The following section fits into the "Symbols and Visualizations" section of Enochian Temples at point 3. It was deleted from the published version to save space.)

The first Enochian Key or Call is a recapitulation of the steps by which the creator of the system brought it into being. The Key follows the same macrocosmic-to-microcosmic progression used in the example consecration ritual, but then supplements this with a response from the microcosm directed at the macrocosm. Note that the description of the downward current contains seven significant phrases, suggesting the planets and sun, the macrocosm, while the description of the response contains five significant phrases, suggesting the four elements and elemental spirit, the microcosm.

The Downward Current

1. Definition of context.

"I reign over you, saith the God of Justice, in power exalted above the firmaments of wrath." The "firmaments of wrath" are the regions of activity within which creation takes place. The god declares his full control over the act of creation, and that as the creator he is outside the realm in which the act of creation occurs.

2. Definition of the limits and qualities of the creation.

"In Whose hands the Sun is as a sword, and the Moon as a through-thrusting fire." An elegant equation, defining the parameters of the creation. The god declares dominion over planetary forces (Sun-Moon) and elemental forces (fire- air). He also declares control over the two types of dualities: those in which one pole is projective and the other responsive (Sun-Moon) and over those in which two forces of similar polarity are balanced (fire-air). Within the area of creation, the positive pole is attributed to the element of swords, Air, and the anti-positive pole is attributed to the element of Fire. This is reflected in the precedence followed by the elements throughout the Tablets and Calls: Air first, then Water, Earth, and Fire.

3. Gathering of the energies to be used.

"Which measureth your garments in the midst of my vestures..." The word translated here as "garments" is used uniformly to mean "creation" or "being" elsewhere in the Keys. Another word is used for "garments" in the next sentence of this same Key. Another word is also used for "midst" further on in this Key. So the translation here is questionable. A magickal image given to define this phrase shows the scene through the god's eyes as he pulls endless threads of living light out of a lamen on his chest.

4. Organization of the energies.

"...and trussed you together as the palms of my hands." The magickal image continues by showing the god gathering the fibers of light into a bundle or cable. The god concentrates the energies within the area of work in preparation for shaping.

5. Preparation of the material basis to which the energies are attached.

"Whose seats I garnished with the fire of gathering, which beautified your garments with admiration." Having generated the positive or spiritual pole of the creation, the god now looks to the anti-positive or material pole. The "seats" are the squares of the tablets in their two-dimensional form. The god embodies a part of his will in the Tablets, defining the order and place to which the spiritual energies will be attracted and attached. When the energies are attached to the Tablets, the pattern of will embodied in the Tablets extends back along their path to the positive pole, conditioning all the perceptible expressions (the "garments") of the energies.

6. Definition of the modes of activity of the creation.

"To whom I made a law to govern the holy ones," The word translated as "holy ones" appears to derive from the same root as the enochian words for "fire", suggesting that the holy ones are those who possess the spiritual will. The god specifies the manner in which his creation will respond to the mages and adepts.

7. Definition of the purpose of the the activity.

"and delivered you a rod with the ark of knowledge." The spirits of the Tablets are given authority over the dispensation of the god's knowledge, including the power to initiate.

Returning Current

8. The energies respond to the creative will.

"Moreover, you lifted up your voices and sware obedience and faith..." The connection between the two poles having been made, and the conditions of their interaction being set, the angels of the creation voice their response to the god, swearing to continue to follow the god's will.

9. And affirm the success of the act of creation.

"...to him that liveth and triumpheth," The spirits of the Tablets affirm the existence of their creator by saying that he lives, and affirm the success of the act of creation by saying that he triumphs.

10. They affirm that the creator himself exists outside the realm of creation...

"whose beginning is not, nor end can not be," The spirits affirm that the god exists entirely outside the creation's sphere of activity. This phrase echoes the line beginning "In whose hands the Sun is..." from a viewpoint inside the god's creation.

11. ...that his will is the source of their existence,

"Which shineth as a flame in the midst of your palace..." Flame echoes the "fire of gathering", and the palace is the Great Tablet. The spirits affirm that they continue to reflect the god's creative will.

12. and that he continues to regulate all of their activities.

"and reigneth among you as the balance of righteousness and truth." The god is the "god of justice", corresponding to Libra, the balances. Righteousness and Truth are Saturn and Jupiter, who in turn are contraction and expansion, stability and change, authority and responsibility, and numerous other complementary pairs. The god reconciles all opposites. The terms also echo the rod (active) and the ark of knowledge (receptive) of an earlier phrase. It is also to be noted that in Achad's Tree, Jupiter and Saturn are attributed to the paths leading respectively to Chokmah and Binah from Kether. Their balance is the path of Shin, connecting Kether with Tiphereth. Shin, Fire, is the "flame in the midst of your palace", and the beam of light in the center of the Temple.

The echoing of the god's statements by the spirits of the tablets also suggests that the conditions the god laid on the creation as a whole are reflected in miniature within the creation. It shall be shown that this is the case with the Tablets as we proceed.¹

Concluding phrases

"Move, therefor, show yourselves!

"Open the mysteries of your creation!

"For I am the servant of your god,

"A true worshiper of the Highest!"

In the remainder of the Key, the magician using it calls upon the spirits to respond to him fully and openly. The word translated here as "servant" might be better rendered as "minister" or "representative". The magician asserts that he has a right to demand a response from the spirits because his acts are in accord with the will of their creator.

Footnotes

1 See [The Lower Temple](#), one of the supplementary papers listed at the end of the published version of Enochian Temples.

"Then he drew forth the silver key, and made motions and intonations whose source he could only dimly remember. Was anything forgotten? He knew only that he wished to cross the barrier to the untrammelled land of his dreams and the gulfs where all dimensions dissolved in the absolute."

THROUGH THE GATE OF THE SILVER KEY
by H.P. Lovecraft

Apocalypse is the Greek word for Revelation, and the purpose of this ritual is to reveal to the student every aspect of the psyche from the innermost to the outer, and transform the student into a vehicle for the Light. Upon completing this ritual in it's entirety, the student is an Ipsissimus who's work on themselves is completed. The term for this is Transcendence. This is the highest point that a soul can evolve to while still incarnate in a physical body. It is complete identification with that part of the consciousness that survives what we call death.

It is advised that the student have been practicing the [LBRP](#) (revised version), Ritual of the Middle Pillar, and Circulation of the Body of Light for at least a week or so before undertaking this ritual. The amount of time spent with the rituals is not crucial, but the student must be proficient in them and have memorized them before performing this one. The ritualist should also be proficient at Meditation.

If you have physical ailments that you have previously ignored, they may be agitated after the calling of the Governors of ZAX (The Abyss). The ritualist should do what he/she can to deal with the problems but not stop the ritual. The negative effects will end when the ritual is completed.

The result is a complete understanding of the psyche and the individual's place in the world. The ritualist may also notice synchronicities occur in their life during the ritual and well after. **It is very important to perform this ritual *exactly* as written unless otherwise directed.** This working is not to be undertaken lightly. Once it is completed, the ritualist will have reached the state known as Transcendence. This is possible without the aid of any order, individual, or other outside agency.

1st Day:

1. Perform the [Reformed Lesser Banishing Ritual of the Pentagram](#)
2. Face East-North-East
3. Invoke the [18th Enochian Key](#)
4. Meditate on the Invoked force.
5. Record your experience in your ritual diary.

2nd Day

1. Perform the [Reformed Lesser Banishing Ritual of the Pentagram](#)
2. Face East.
3. Invoke the [17th Enochian Key](#)
4. Meditate on the Invoked force.
5. Record your experience in your ritual diary.

3rd Day

1. Perform the [Reformed Lesser Banishing Ritual of the Pentagram](#)

2. Face East-South-East
3. Invoke the [16th Enochian Key](#)
4. Meditate on the Invoked force.
5. Record your experience in your ritual diary.

4th Day

1. Perform the [Reformed Lesser Banishing Ritual of the Pentagram](#)
2. Face North-North-East
3. Invoke the [15th Enochian Key](#)
4. Meditate on the Invoked force.
5. Record your experience in your ritual diary.

5th Day

1. Perform the [Reformed Lesser Banishing Ritual of the Pentagram](#)
2. Face North-North-West
3. Invoke the [14th Enochian Key](#)
4. Meditate on the Invoked force.
5. Record your experience in your ritual diary.

6th Day

1. Perform the [Reformed Lesser Banishing Ritual of the Pentagram](#)
2. Face North
3. Invoke the [13th Enochian Key](#)
4. Meditate on the Invoked force.
5. Record your experience in your ritual diary.

7th Day

1. Perform the [Reformed Lesser Banishing Ritual of the Pentagram](#)
2. Face West
3. Invoke the [12th Enochian Key](#)
4. Meditate on the Invoked force.
5. Record your experience in your ritual diary.

8th Day

1. Perform the [Reformed Lesser Banishing Ritual of the Pentagram](#)
2. Face West-North-West
3. Invoke the [11th Enochian Key](#)
4. Meditate on the Invoked force.
5. Record your experience in your ritual diary.

9th Day

1. Perform the [Reformed Lesser Banishing Ritual of the Pentagram](#)
2. Face West-South-West
3. Invoke the [10th Enochian Key](#)
4. Meditate on the Invoked force.
5. Record your experience in your ritual diary.

10th Day

1. Perform the [Reformed Lesser Banishing Ritual of the Pentagram](#)
2. Face South-South-East
3. Invoke the [9th Enochian Key](#)

4. Meditate on the Invoked force.
5. Record your experience in your ritual diary.

11th Day

1. Perform the [Reformed Lesser Banishing Ritual of the Pentagram](#)
2. Face South
3. Invoke the [8th Enochian Key](#)
4. Meditate on the Invoked force.
5. Record your experience in your ritual diary.

12th Day

1. Perform the [Reformed Lesser Banishing Ritual of the Pentagram](#)
2. Face South-South-West
3. Invoke the [7th Enochian Key](#)
4. Meditate on the Invoked force.
5. Record your experience in your ritual diary.

13th Day

1. Perform the [Reformed Lesser Banishing Ritual of the Pentagram](#)
2. Face East
3. Invoke the [6th Enochian Key](#)
4. Meditate on the Invoked force.
5. Record your experience in your ritual diary.

14th Day

1. Perform the [Reformed Lesser Banishing Ritual of the Pentagram](#)
2. Face North
3. Invoke the [5th Enochian Key](#)
4. Meditate on the Invoked force.
5. Record your experience in your ritual diary.

15th Day

1. Perform the [Reformed Lesser Banishing Ritual of the Pentagram](#)
2. Face West
3. Invoke the [4th Enochian Key](#)
4. Meditate on the Invoked force.
5. Record your experience in your ritual diary.

16th Day

1. Perform the [Reformed Lesser Banishing Ritual of the Pentagram](#)
2. Face South
3. Invoke the [3rd Enochian Key](#)
4. Meditate on the Invoked force.
5. Record your experience in your ritual diary.

17th Day

1. Perform the [Reformed Lesser Banishing Ritual of the Pentagram](#)
2. Face North-West
3. Invoke the [2nd Enochian Key](#)
4. Meditate on the Invoked force.
5. Record your experience in your ritual diary.

18th Day

1. Perform the [Reformed Lesser Banishing Ritual of the Pentagram](#)
2. Face South-East
3. Invoke the [1st Enochian Key](#)
4. Meditate on the Invoked force.
5. Record your experience in your ritual diary.

19th Day

1. Perform the [Reformed Lesser Banishing Ritual of the Pentagram](#)
2. Face East
3. Invoke the [19th Enochian Key](#) and the Aethyr [TEX](#) (Teh.ah.tz) [Zelator](#)
4. Meditate on the invoked force, paying special attention to any impressions, feelings, or information you are given.
5. Record your experience in your ritual diary.

20th Day

1. Perform the [Reformed Lesser Banishing Ritual of the Pentagram](#)
2. Face East
3. Invoke the [19th Enochian Key](#) and the Aethyr [RII](#) (R.ee.ee)
4. Meditate on the invoked force, paying special attention to any impressions, feelings, or information you are given.
5. Record your experience in your ritual diary.

21st Day

1. Perform the [Reformed Lesser Banishing Ritual of the Pentagram](#)
2. Face East
3. Invoke the [19th Enochian Key](#) and the Aethyr [BAG](#) (B.ah.geh) [Theroicus](#)
4. Meditate on the invoked force, paying special attention to any impressions, feelings, or information you are given.
5. Record your experience in your ritual diary.

22nd Day

1. Perform the [Reformed Lesser Banishing Ritual of the Pentagram](#)
2. Face East
3. Invoke the [19th Enochian Key](#) and the Aethyr [ZAA](#) (Zod.ah.ah)
4. Meditate on the invoked force, paying special attention to any impressions, feelings, or information you are given.
5. Record your experience in your ritual diary.

23rd Day

1. Perform the [Reformed Lesser Banishing Ritual of the Pentagram](#)
2. Face East
3. Invoke the [19th Enochian Key](#) and the Aethyr [DES](#) (Deh.ess) [Practicus](#)
4. Meditate on the invoked force, paying special attention to any impressions, feelings, or information you are given.
5. Record your experience in your ritual diary.

24th Day

1. Perform the [Reformed Lesser Banishing Ritual of the Pentagram](#)
2. Face East

3. Invoke the [19th Enochian Key](#) and the Aethyr [VTI](#) (Veh.tee)
4. Meditate on the invoked force, paying special attention to any impressions, feelings, or information you are given.
5. Record your experience in your ritual diary.

25th Day

1. Perform the [Reformed Lesser Banishing Ritual of the Pentagram](#)
2. Face East
3. Invoke the [19th Enochian Key](#) and the Aethyr [NIA](#) (Nee.ah) [Philosophus](#)
4. Meditate on the invoked force, paying special attention to any impressions, feelings, or information you are given.
5. Record your experience in your ritual diary.

26th Day

1. Perform the [Reformed Lesser Banishing Ritual of the Pentagram](#)
2. Face East
3. Invoke the [19th Enochian Key](#) and the Aethyr [TOR](#) (Toh.reh)
4. Meditate on the invoked force, paying special attention to any impressions, feelings, or information you are given.
5. Record your experience in your ritual diary.

27th Day

1. Perform the [Reformed Lesser Banishing Ritual of the Pentagram](#)
2. Face East
3. Invoke the [19th Enochian Key](#) and the Aethyr [LIN](#) (Lee.ehn)
4. Meditate on the invoked force, paying special attention to any impressions, feelings, or information you are given.
5. Record your experience in your ritual diary.

28th Day

1. Perform the [Reformed Lesser Banishing Ritual of the Pentagram](#)
2. Face East
3. Invoke the [19th Enochian Key](#) and the Aethyr [ASP](#) (Ah.ehs.peh) [Adeptus Minor](#)
4. Meditate on the invoked force, paying special attention to any impressions, feelings, or information you are given.
5. Record your experience in your ritual diary.

29th Day

1. Perform the [Reformed Lesser Banishing Ritual of the Pentagram](#)
2. Face East
3. Invoke the [19th Enochian Key](#) and the Aethyr [KHR](#) (Keh.reh)
4. Meditate on the invoked force, paying special attention to any impressions, feelings, or information you are given.
5. Record your experience in your ritual diary.

30th Day

1. Perform the [Reformed Lesser Banishing Ritual of the Pentagram](#)
2. Face East
3. Invoke the [19th Enochian Key](#) and the Aethyr [POP](#) (Poh.peh)
4. Meditate on the invoked force, paying special attention to any impressions,

- feelings, or information you are given.
5. Record your experience in your ritual diary.

31st Day

1. Perform the [Reformed Lesser Banishing Ritual of the Pentagram](#)
2. Face East
3. Invoke the [19th Enochian Key](#) and the Aethyr [ZEN](#) (Zod.eh.ehn) [Adeptus Major](#)
4. Meditate on the invoked force, paying special attention to any impressions, feelings, or information you are given.
5. Record your experience in your ritual diary.

32nd Day

1. Perform the [Reformed Lesser Banishing Ritual of the Pentagram](#)
2. Face East
3. Invoke the [19th Enochian Key](#) and the Aethyr [TAN](#) (Tah.neh)
4. Meditate on the invoked force, paying special attention to any impressions, feelings, or information you are given.
5. Record your experience in your ritual diary.

33rd Day

1. Perform the [Reformed Lesser Banishing Ritual of the Pentagram](#)
2. Face East
3. Invoke the [19th Enochian Key](#) and the Aethyr [LEA](#) (Leh.ah)
4. Meditate on the invoked force, paying special attention to any impressions, feelings, or information you are given.
5. Record your experience in your ritual diary.

34th Day

1. Perform the [Reformed Lesser Banishing Ritual of the Pentagram](#)
2. Face East
3. Invoke the [19th Enochian Key](#) and the Aethyr [OXO](#) (Oh.tz.oh)
4. Meditate on the invoked force, paying special attention to any impressions, feelings, or information you are given.
5. Record your experience in your ritual diary.

35th Day

1. Perform the [Reformed Lesser Banishing Ritual of the Pentagram](#)
2. Face East
3. Invoke the [19th Enochian Key](#) and the Aethyr [VTA](#) (Veh.tah)
4. Meditate on the invoked force, paying special attention to any impressions, feelings, or information you are given.
5. Record your experience in your ritual diary.

36th Day

1. Perform the [Reformed Lesser Banishing Ritual of the Pentagram](#)
2. Face East
3. Invoke the [19th Enochian Key](#) and the Aethyr [LOA](#) (Loh.ah) [Adeptus Exemptus](#)
4. Meditate on the invoked force, paying special attention to any impressions, feelings, or information you are given.

5. Record your experience in your ritual diary.

37th Day

1. Perform the [Reformed Lesser Banishing Ritual of the Pentagram](#)
2. Face East
3. Invoke the [19th Enochian Key](#) and the Aethyr [ZIM](#) (Zod.ee.ehm)
4. Meditate on the invoked force, paying special attention to any impressions, feelings, or information you are given.
5. Record your experience in your ritual diary.

38th Day

1. Perform the [Reformed Lesser Banishing Ritual of the Pentagram](#)
2. Face East
3. Invoke the [19th Enochian Key](#) and the Aethyr [IKH](#) (Ee.keh.heh)
4. Meditate on the invoked force, paying special attention to any impressions, feelings, or information you are given.
5. Record your experience in your ritual diary.

39th Day

1. Perform the [Reformed Lesser Banishing Ritual of the Pentagram](#)
2. Face East
3. Invoke the [19th Enochian Key](#) and the Aethyr [ZAX](#) (Zod.ah.tz)
4. Meditate on the invoked force, paying special attention to any impressions, feelings, or information you are given.
5. Record your experience in your ritual diary.

40th Day

1. Perform the [Reformed Lesser Banishing Ritual of the Pentagram](#)
2. Face East
3. Invoke the [19th Enochian Key](#) and the Aethyr [ZIP](#) (Zod.ee.peh)
4. Meditate on the invoked force, paying special attention to any impressions, feelings, or information you are given.
5. Record your experience in your ritual diary.

41st Day

1. Perform the [Reformed Lesser Banishing Ritual of the Pentagram](#)
2. Face East
3. Invoke the [19th Enochian Key](#) and the Aethyr [ZID](#) (Zod.ee.deh) [Magister Templi](#)
4. Meditate on the invoked force, paying special attention to any impressions, feelings, or information you are given.
5. Record your experience in your ritual diary.

42nd Day

1. Perform the [Reformed Lesser Banishing Ritual of the Pentagram](#)
2. Face East
3. Invoke the [19th Enochian Key](#) and the Aethyr [DEO](#) (Deh.oh)
4. Meditate on the invoked force, paying special attention to any impressions, feelings, or information you are given.
5. Record your experience in your ritual diary.

43rd Day

1. Perform the [Reformed Lesser Banishing Ritual of the Pentagram](#)
2. Face East
3. Invoke the [19th Enochian Key](#) and the Aethyr [MAZ](#) (Mah.zod)
4. Meditate on the invoked force, paying special attention to any impressions, feelings, or information you are given.
5. Record your experience in your ritual diary.

44th Day

1. Perform the [Reformed Lesser Banishing Ritual of the Pentagram](#)
2. Face East
3. Invoke the [19th Enochian Key](#) and the Aethyr [LIT](#) (Lee.teh)
4. Meditate on the invoked force, paying special attention to any impressions, feelings, or information you are given.
5. Record your experience in your ritual diary.

45th Day

1. Perform the [Reformed Lesser Banishing Ritual of the Pentagram](#)

2. Face South
3. Invoke the [19th Enochian Key](#) and the Aethyr POP (Poh.peh)
4. Invoke the Governor [ABRIOND](#) (Ah.bree.oh.n.deh) by vibrating his name.
5. Meditate on the invoked force, paying special attention to any impressions, feelings, or information you are given.
6. Record your experience in your ritual diary.

107th Day

1. Perform the [Reformed Lesser Banishing Ritual of the Pentagram](#)
2. Face South
3. Invoke the [19th Enochian Key](#) and the Aethyr POP (Poh.peh)
4. Invoke the Governor [OMAGRAP](#) (Oh.mah.grah.peh) by vibrating his name.
5. Meditate on the invoked force, paying special attention to any impressions, feelings, or information you are given.
6. Record your experience in your ritual diary.

108th Day

1. Perform the [Reformed Lesser Banishing Ritual of the Pentagram](#)
2. Face South
3. Invoke the [19th Enochian Key](#) and the Aethyr KHR (Keh.reh)
4. Invoke the Governor [ZILDRON](#) (Zod.ee.ehl.droh.ehn) by vibrating his name.
5. Meditate on the invoked force, paying special attention to any impressions, feelings, or information you are given.
6. Record your experience in your ritual diary.

109th Day

1. Perform the [Reformed Lesser Banishing Ritual of the Pentagram](#)
2. Face South
3. Invoke the [19th Enochian Key](#) and the Aethyr KHR (Keh.reh)
4. Invoke the Governor [PARZIBA](#) (Pah.r.zod.ee.bah) by vibrating his name.
5. Meditate on the invoked force, paying special attention to any impressions, feelings, or information you are given.
6. Record your experience in your ritual diary.

110th Day

1. Perform the [Reformed Lesser Banishing Ritual of the Pentagram](#)
2. Face South
3. Invoke the [19th Enochian Key](#) and the Aethyr KHR (Keh.reh)
4. Invoke the Governor [TOTOCAN](#) (Toh.toh.cah.n) by vibrating his name.
5. Meditate on the invoked force, paying special attention to any impressions, feelings, or information you are given.
6. Record your experience in your ritual diary.

111th Day

1. Perform the [Reformed Lesser Banishing Ritual of the Pentagram](#)
2. Face South
3. Invoke the [19th Enochian Key](#) and the Aethyr ASP (Ah.ehs.peh)
4. Invoke the Governor [CHIRZPA](#) (Keh.ee.r.zod.pah) by vibrating his name.
5. Meditate on the invoked force, paying special attention to any impressions, feelings, or information you are given.
6. Record your experience in your ritual diary.

112th Day

1. Perform the [Reformed Lesser Banishing Ritual of the Pentagram](#)
2. Face South
3. Invoke the [19th Enochian Key](#) and the Aethyr ASP (Ah.ehs.peh)
4. Invoke the Governor [TOANTOM](#) (Toh.ah.n.toh.m) by vibrating his name.
5. Meditate on the invoked force, paying special attention to any impressions, feelings, or information you are given.
6. Record your experience in your ritual diary.

113th Day

1. Perform the [Reformed Lesser Banishing Ritual of the Pentagram](#)
2. Face South
3. Invoke the [19th Enochian Key](#) and the Aethyr ASP (Ah.ehs.peh)
4. Invoke the Governor [VIXPALG](#) (Vee.tz.pah.eh.geh) by vibrating his name.
5. Meditate on the invoked force, paying special attention to any impressions, feelings, or information you are given.
6. Record your experience in your ritual diary.

114th Day

1. Perform the [Reformed Lesser Banishing Ritual of the Pentagram](#)
2. Face South
3. Invoke the [19th Enochian Key](#) and the Aethyr LIN (Lee.ehn)
4. Invoke the Governor [OZIDAIA](#) (Oh.zod.ee.dah.ee.ah) by vibrating his name.
5. Meditate on the invoked force, paying special attention to any impressions, feelings, or information you are given.
6. Record your experience in your ritual diary.

115th Day

1. Perform the [Reformed Lesser Banishing Ritual of the Pentagram](#)
2. Face South
3. Invoke the [19th Enochian Key](#) and the Aethyr LIN (Lee.ehn)
4. Invoke the Governor [PARAOAN](#) (Pah.rah.oh.ah.ehn) by vibrating his name.
5. Meditate on the invoked force, paying special attention to any impressions, feelings, or information you are given.
6. Record your experience in your ritual diary.

116th Day

1. Perform the [Reformed Lesser Banishing Ritual of the Pentagram](#)
2. Face South
3. Invoke the [19th Enochian Key](#) and the Aethyr LIN (Lee.ehn)
4. Invoke the Governor [CALZIRG](#) (Kah.ehl.zod.ee.r.geh) by vibrating his name.
5. Meditate on the invoked force, paying special attention to any impressions,

- feelings, or information you are given.
6. Record your experience in your ritual diary.

117th Day

1. Perform the [Reformed Lesser Banishing Ritual of the Pentagram](#)
2. Face South
3. Invoke the [19th Enochian Key](#) and the Aethyr TOR (Toh.reh)
4. Invoke the Governor [RONOOMB](#) (Roh.noh.oh.m.beh) by vibrating his name.
5. Meditate on the invoked force, paying special attention to any impressions, feelings, or information you are given.
6. Record your experience in your ritual diary.

118th Day

1. Perform the [Reformed Lesser Banishing Ritual of the Pentagram](#)
2. Face South
3. Invoke the [19th Enochian Key](#) and the Aethyr TOR (Toh.reh)
4. Invoke the Governor [ONIZIMP](#) (Oh.nee.zod.ee.ehm.peh) by vibrating his name.
5. Meditate on the invoked force, paying special attention to any impressions, feelings, or information you are given.
6. Record your experience in your ritual diary.

119th Day

1. Perform the [Reformed Lesser Banishing Ritual of the Pentagram](#)
2. Face South
3. Invoke the [19th Enochian Key](#) and the Aethyr TOR (Toh.reh)
4. Invoke the Governor [ZAXANIN](#) (Zod.ah.tz.ah.nee.ehn) by vibrating his name.
5. Meditate on the invoked force, paying special attention to any impressions, feelings, or information you are given.
6. Record your experience in your ritual diary.

120th Day

1. Perform the [Reformed Lesser Banishing Ritual of the Pentagram](#)
2. Face West
3. Invoke the [19th Enochian Key](#) and the Aethyr NIA (Nee.ah)
4. Invoke the Governor [ORCANIR](#) (Oh.r.kah.n.eer) by vibrating his name.
5. Meditate on the invoked force, paying special attention to any impressions, feelings, or information you are given.
6. Record your experience in your ritual diary.

121st Day

1. Perform the [Reformed Lesser Banishing Ritual of the Pentagram](#)
2. Face West
3. Invoke the [19th Enochian Key](#) and the Aethyr NIA (Nee.ah)
4. Invoke the Governor [CHIALPS](#) (Keh.hee.ah.l.peh.ehs) by vibrating his name.
5. Meditate on the invoked force, paying special attention to any impressions, feelings, or information you are given.
6. Record your experience in your ritual diary.

122nd Day

1. Perform the [Reformed Lesser Banishing Ritual of the Pentagram](#)

2. Face West
3. Invoke the [19th Enochian Key](#) and the Aethyr NIA (Nee.ah)
4. Invoke the Governor [SOAGEEL](#) (Soh.ah.geh.eh.l) by vibrating his name.
5. Meditate on the invoked force, paying special attention to any impressions, feelings, or information you are given.
6. Record your experience in your ritual diary.

123rd Day

1. Perform the [Reformed Lesser Banishing Ritual of the Pentagram](#)
2. Face West
3. Invoke the [19th Enochian Key](#) and the Aethyr UTI (Oo.tee)
4. Invoke the Governor [MIRZIND](#) (Meer.zod.ee.ehn.deh) by vibrating his name.
5. Meditate on the invoked force, paying special attention to any impressions, feelings, or information you are given.
6. Record your experience in your ritual diary.

124th Day

1. Perform the [Reformed Lesser Banishing Ritual of the Pentagram](#)
2. Face West
3. Invoke the [19th Enochian Key](#) and the Aethyr UTI (Oo.tee)
4. Invoke the Governor [OBVAORS](#) (Oh.beh.vah.oh.r.s) by vibrating his name.
5. Meditate on the invoked force, paying special attention to any impressions, feelings, or information you are given.
6. Record your experience in your ritual diary.

125th Day

1. Perform the [Reformed Lesser Banishing Ritual of the Pentagram](#)
2. Face West
3. Invoke the [19th Enochian Key](#) and the Aethyr UTI (Oo.tee)
4. Invoke the Governor [RANGLAM](#) (Rah.n.glah.m) by vibrating his name.
5. Meditate on the invoked force, paying special attention to any impressions, feelings, or information you are given.
6. Record your experience in your ritual diary.

126th Day

1. Perform the [Reformed Lesser Banishing Ritual of the Pentagram](#)
2. Face West
3. Invoke the [19th Enochian Key](#) and the Aethyr DES (Deh.eh.s)
4. Invoke the Governor [POPHAND](#) (Poh.peh.hah.n.d) by vibrating his name.
5. Meditate on the invoked force, paying special attention to any impressions, feelings, or information you are given.
6. Record your experience in your ritual diary.

127th Day

1. Perform the [Reformed Lesser Banishing Ritual of the Pentagram](#)
2. Face West
3. Invoke the [19th Enochian Key](#) and the Aethyr DES (Deh.eh.s)
4. Invoke the Governor [NIGRANA](#) (Nee.grah.nah) by vibrating his name.
5. Meditate on the invoked force, paying special attention to any impressions, feelings, or information you are given.
6. Record your experience in your ritual diary.

128th Day

1. Perform the [Reformed Lesser Banishing Ritual of the Pentagram](#)
2. Face West
3. Invoke the [19th Enochian Key](#) and the Aethyr DES (Deh.eh.s)
4. Invoke the Governor [BAZCHIM](#) (Bah.zod.keh.hee.ehm) by vibrating his name.
5. Meditate on the invoked force, paying special attention to any impressions, feelings, or information you are given.
6. Record your experience in your ritual diary.

129th Day

1. Perform the [Reformed Lesser Banishing Ritual of the Pentagram](#)
2. Face West
3. Invoke the [19th Enochian Key](#) and the Aethyr ZAA (Zod.ah.ah)
4. Invoke the Governor [SAZIAMI](#) (Sah.zod.ee.ah.mee) by vibrating his name.
5. Meditate on the invoked force, paying special attention to any impressions, feelings, or information you are given.
6. Record your experience in your ritual diary.

130th Day

1. Perform the [Reformed Lesser Banishing Ritual of the Pentagram](#)
2. Face West
3. Invoke the [19th Enochian Key](#) and the Aethyr ZAA (Zod.ah.ah)
4. Invoke the Governor [MATHULA](#) (Mah.teh.hoo.lah) by vibrating his name.
5. Meditate on the invoked force, paying special attention to any impressions, feelings, or information you are given.
6. Record your experience in your ritual diary.

131st Day

1. Perform the [Reformed Lesser Banishing Ritual of the Pentagram](#)
2. Face West
3. Invoke the [19th Enochian Key](#) and the Aethyr ZAA (Zod.ah.ah)
4. Invoke the Governor [ORPANIB](#) (Oh.r.pah.bee.beh) by vibrating his name.
5. Meditate on the invoked force, paying special attention to any impressions, feelings, or information you are given.
6. Record your experience in your ritual diary.

132nd Day

1. Perform the [Reformed Lesser Banishing Ritual of the Pentagram](#)
2. Face West
3. Invoke the [19th Enochian Key](#) and the Aethyr BAG (Bah.geh)
4. Invoke the Governor [LABNIXP](#) (Lah.beh.n.ee.tz.peh) by vibrating his name.
5. Meditate on the invoked force, paying special attention to any impressions, feelings, or information you are given.
6. Record your experience in your ritual diary.

133rd Day

1. Perform the [Reformed Lesser Banishing Ritual of the Pentagram](#)
2. Face West
3. Invoke the [19th Enochian Key](#) and the Aethyr BAG (Bah.geh)

4. Invoke the Governor [POCISNI](#) (Poh.kee.ehs.nee) by vibrating his name.
5. Meditate on the invoked force, paying special attention to any impressions, feelings, or information you are given.
6. Record your experience in your ritual diary.

134th Day

1. Perform the [Reformed Lesser Banishing Ritual of the Pentagram](#)
2. Face West
3. Invoke the [19th Enochian Key](#) and the Aethyr BAG (Bah.geh)
4. Invoke the Governor [OXLOPAR](#) (Oh.tz.loh.pah.r) by vibrating his name.
5. Meditate on the invoked force, paying special attention to any impressions, feelings, or information you are given.
6. Record your experience in your ritual diary.

135th Day

1. Perform the [Reformed Lesser Banishing Ritual of the Pentagram](#)
2. Face West
3. Invoke the [19th Enochian Key](#) and the Aethyr RII (Ree.ee)
4. Invoke the Governor [VASTRIM](#) (Vah.s.tree.ehm) by vibrating his name.
5. Meditate on the invoked force, paying special attention to any impressions, feelings, or information you are given.
6. Record your experience in your ritual diary.

136th Day

1. Perform the [Reformed Lesser Banishing Ritual of the Pentagram](#)
2. Face West
3. Invoke the [19th Enochian Key](#) and the Aethyr RII (Ree.ee)
4. Invoke the Governor [ODRAXTI](#) (Oh.drah.tz.tee) by vibrating his name.
5. Meditate on the invoked force, paying special attention to any impressions, feelings, or information you are given.
6. Record your experience in your ritual diary.

137th Day

1. Perform the [Reformed Lesser Banishing Ritual of the Pentagram](#)
2. Face West
3. Invoke the [19th Enochian Key](#) and the Aethyr RII (Ree.ee)
4. Invoke the Governor [GOMZIAM](#) (Goh.m.zod.ee.ah.ehm) by vibrating his name.
5. Meditate on the invoked force, paying special attention to any impressions, feelings, or information you are given.
6. Record your experience in your ritual diary.

138th Day

1. Perform the [Reformed Lesser Banishing Ritual of the Pentagram](#)
2. Face North
3. Invoke the [19th Enochian Key](#) and the Aethyr TEX (Teh.tz)
4. Invoke the Governor [TAONGLA](#) (Tah.oh.n.geh.lah) by vibrating his name.
5. Meditate on the invoked force, paying special attention to any impressions, feelings, or information you are given.
6. Record your experience in your ritual diary.

139th Day

1. Perform the [Reformed Lesser Banishing Ritual of the Pentagram](#)
2. Face North
3. Invoke the [19th Enochian Key](#) and the Aethyr TEX (Teh.tz)
4. Invoke the Governor [GEMNIMB](#) (Geh.m.ehn.ee.ehm.beh) by vibrating his name.
5. Meditate on the invoked force, paying special attention to any impressions, feelings, or information you are given.
6. Record your experience in your ritual diary.

140th Day

1. Perform the [Reformed Lesser Banishing Ritual of the Pentagram](#)
2. Face North
3. Invoke the [19th Enochian Key](#) and the Aethyr TEX (Teh.tz)
4. Invoke the Governor [ADVORPT](#) (Ah.deh.voh.r.peh.teh) by vibrating his name.
5. Meditate on the invoked force, paying special attention to any impressions, feelings, or information you are given.
6. Record your experience in your ritual diary.

141st Day

1. Perform the [Reformed Lesser Banishing Ritual of the Pentagram](#)
2. Face North
3. Invoke the [19th Enochian Key](#) and the Aethyr TEX (Teh.tz)
4. Invoke the Governor [DOZINAL](#) (Doh.zod.ee.nah.ehl) by vibrating his name.
5. Meditate on the invoked force, paying special attention to any impressions, feelings, or information you are given.
6. Record your experience in your ritual diary.

142nd Day

1. Perform the [Reformed Lesser Banishing Ritual of the Pentagram](#)
2. Face North
3. Invoke the [19th Enochian Key](#) and the Aethyr TEX (Teh.tz)
4. Invoke the Governor [LAXDIZI](#) (Lah.tz.dee.zod.ee) by vibrating his name.
5. Meditate on the invoked force, paying special attention to any impressions, feelings, or information you are given.
6. Record your experience in your ritual diary.

Attempting to better interpret the 18 Keys of the Enochian Magick System.

Foreword:

Here presented is an individual attempt to interpret the symbols of the angelic Keys given to John Dee and Edward Kelley, to the best of my useless intellectual knowledge. These are just suggestions based on my own education of occult science along with other people's gnosis and are not to be taken for truth in an absolute context. Much, if not all of it, will be over the layman's head but my hope is that someone actually understands this and expands their psyche's library of archetypes based on what I present.

We can intellectualize over the interpretation of the Enochian Keys forever and never arrive at anything substantial. I realize neither theory nor opinion matters. Neither is truth. No one can speculate about the truth and ever expect to arrive at it. In the occult sciences, we are left to depend on experiential knowledge.

While I agree the key to understanding the language of symbolism lies within intuition and comprehending one's own esoteric experience, no two people's perspectives will be interpreted exactly the same. How many of us successfully use the system but arrive at the result differently?

What I offer now, is an *open* interpretation regarding the Enochian Keys. Add to it, take from it, do what you will. This is my own attempt at putting together exactly what the information given is attempting to tell us or hint towards any deeper meaning. We each receive impressions unique to our own individual experience. We must all be guided by our own being ultimately and arrive at truth through realization in our own gnosis.

From my own work with the system, I have realized there are very gnostic symbols given in the literature. Taken that historically it's suggested that E. Kelley, Dr. Dee's seer, leaned towards Gnosticism we can then expect the information was presented to him in such a manner, one unique to his own individual impressions and personal archetypes, in the best way he as a receiver would put it together himself. Here presented is a *SUGGESTED* interpretation of the Enochian Keys based on my own knowledge of gnostic symbols and of esoteric principles coupled with my own experience with obscure sciences.

Regarding the numbers given in the keys: There are multiple possibilities and I feel they are all interconnected. Most likely, we can get the most out of what the key is getting at by studying the corresponding Arcanum (1-22, and I suggest not implicating Crowley's *Thoth* tarot because of interpretive complications and the fact it didn't exist in the receiver's time period) to the sum of the numerical values given. In other cases, we have to be aware of the overall context of a specific key where a number is given with a value above a number of an Arcanum. In some context, the numbers probably do simply represent a quantity. Use your own intuition I suppose.

Again, do not mistake any of this for truth. It's even possible none of the material has anything to do with anything I suggest, it could all be nonsense invented by E. Kelley; However, realize anything is possible, so the most probable possibilities are the one's I aim to explore. I am not teaching anything to anyone and therefore take no responsibility for whatever stupidity you choose to act upon regarding what your about to read...

- Apakhana

*John Dee's English is in **RED**, my suggestions are in **BLACK**.*

*Miscellaneous addendum's are in **BLUE**.*

The First Key

I rayng ouer you, sayeth the God of Iustice, in powre exalted above the firmaments of wrath: (The “God of Justice” - The divine aspect regarding Karmic balance, the Judges of Karma, like Egyptian Anubis weighing one's heart against the feather of Ma'at and her perfectly fair judgment. This deity posses power over and above any form or futile attempt at the idea of justice by secular humanity or any other system lower/underneath.) **in whose hands the Sonne is as a sword and the Mone as a throwgh thrusting fire:** (The Solar and Lunar mysteries are both under the Will of this being. The “Sun as a sword” is a weapon of spiritual technology, of Christified energy the initiates of the Solar Lodges/ascended Hum-Manas use against the ego. The “moon as a fire” is the Lunar aspect of using as a similar weapon. Through thrusting is giving hint that it is in motion, the divine action being taken.) **which measureth your garments in the mydst of my vestures,** (garments refer to our organisms and dimensional bodies all made in the image of the Elohim, the Sephirot reflected in our microcosmic organisms) **and trussed you together as the palms of my hands:** (As easy as the creator's hands create, so are we made under such same mechanism) **whose seats I garnished with the fire of gathering,** (the coiled fiery serpent kundalini *seated* in the coccyx and rises up the etheric body's nerve channels Ida and Pingala, ascending the 33 chambered spine, to Christify us during the conscious act of Love, the White Tantra, when we do not spill the “vessel of Hermes”) **and bewtified your garments with admiration.** (We are seen as a successful project and beautified when accepted in the eyes of a creator, when we ascend to connect with the sphere of Tipharet.) **To whome I made a law to govern the holy ones** (“*Holy Ones*” is referring to those who incarnated the true Being, the union of Atman-Buddhi-Manas incarnated in us when we complete the Great Work. The Christified, the Osirified, whatever you call it, the beings of righteousness. Unto them, that which governs is the “Law of One” or the *Glorian*, the Divine Law, which means acting in accordance with our own ray of creation/being) **and deliuered you a rod with the ark of knowledge.** (“*Rod*” - a reference to the Lingham? “*Ark of Knowledge*” is the intimate gnosis of sephirot Da'at. Could be implying knowledge gained regarding the foundation of the Great Work, that of sephirot Yesod/Sexual nature because of the Lingham reference.) **Moreouer you lifted vp your voyces** (“*lifted up*” - raised, ascended. Incarnated the higher forces of the Being through alchemical transmutation of the sexual-creative-generating force/Divine energy by using the consciousness) **and sware obedience and faith to him that liueth and triumpheth** (the individual's will merges with the Atmic Master's or Father's divine will) **whose begynning is not, nor ende can not be,** (the Logos/Absolute/Verb, the Being in it's Entirety: “I AM” which is above all laws and is not subject to change, it is *eternal*.) **which shyneth as a flame in the myddst of your pallace,** (your consciousness, the light atom within your “*palace*” or temple – the organism/body, the Monad. Also may be a holy place, a person/being which dwells within the Empyrean) **and rayngneth amongst you as the ballance of righteousnes and truth.** (The conscience and our conscious awareness of it. How the being guides us towards illumination if we intimately know how to listen. Could imply the act of balancing the centers of emotion, sexual function, intuitive, instinctive, motor center, etc...) **Moue, therefore, and shew yorselues: open the Mysteries of your Creation:** (A command for clarity and truth to be revealed by requesting the aid of the ascended hierarchy. Clearly we are attempting work with the already illuminated and ascended Solar Humanity through this magickal system of evocation.) **Be frendely vnto me: for I am the servant of the same yor God, the true wurshipper of the Highest.** (We use this system to achieve at least some intellectual explanation of what we're supposed to be doing in our Great Work. A plea to the ascended for help with such.)

The Second Key

Can the wings of the windes (*wings* - cause, behind, what carries something. *Wind* – spirit, airy or ethereal movement. My intuition tells me it's meaning is more the cause behind spiritual forces and their ascribed offices/movements. It is of that which moves, maybe referring to Divine Feminine polarity. Also possible reference to airy elemental Monads or the forces of nature, possibly a causal facet/dimension behind their form and emanation.) **vnderstand yor voyces of wunder**, (**w**e are the voices of wonder, spoken into existence from the mouth of God, the Logos, the verb of *Being*. Our being, is a piece of the divine over-being, the divine Verb “I AM” - in which the reference above, unto whom their comprehension of us is being questioned) **O you the second of the first**, (Either the *Ayn Sof* emanated from within the *Ayn*, or outright reference to the Second Logos, the Christ force that sacrifices itself to save us) **whome the burning flames** (holy/divine energy, divine mother kundalini, sexual power utilized in alchemical coitus/christification process) **haue framed within the depth of my Iaws;** (Christic/Osirian force incarnated in the initiates, within the verb of being or our Great Work. The Solar experiment carried out of the mouth of the creator.. “*Jaws*” - also a possible reference to Egyptian Ammit/Typhon who carries souls from Limbo into the Abyss) **whome I haue prepared as Cupps for a Wedding**, **The following description requires a deep understanding of alchemy, so this might go over one's head:** (Okay: the “**Wedding**,” in any symbolism, refers to the act of *chemical coitus*. The joining of two polarities: Male and Female. The “**Cup**” is the *Holy Grail*, the chalice that holds the “waters of life” of the male polarity – which is correctly transmuted ens-emenis (**yea – it sounds gross but this is the symbolism**) the Cup/Grail is the feminine Yoni: The Uterus. That of the female (Yin) polarity which connects with the phallus/Lingham of the male polarity (Yang) during chemical coitus, which is defined as the sexual act, but utilized in the correct way of White Tantra - no expunged/wasted energy through orgasm when the two polarities join. It is *transmuted* instead, into raising the “kundalini” up the nerve channels of the vital body through the 33 degrees/chambers of the spine, during the union/wedding/joining of opposite polarities. This forms the Solar, Golden, and Light form of astral, mental, and causal bodies the Christ force incarnates in) **or as the flowres in their beawty** (Another reference to attaining Tipharet; attaining beauty, flowers in their beauty means beauty in “full bloom” or at it's highest. Develop a sense of beauty in the consciousness; Love in truth. Alchemical Love, the circular/moving Yin moves the static Yang to bloom.) **for the Chamber of righteousnes.** (the place of alchemical working, where the two polarities express Love the correct way, through White Tantra; The “Bridal Chamber” of Gnostic and Rosicrucian symbolism). **Stronger are your fete then the barren stone**, (the philosopher's stone, the strong base for alchemy, sephiroth Yesod; the foundation and basis for the work with creating Solar Astral bodies for the voltage of the Christ force to dwell in. To incarnate the higher being, master/Atman-Buddhi-Manas) **and mightier are your voyces** (One's true being, when realized, your own “*I AM*”) **then the manifold windes** (Over the entropy of natural life/existence). **For you are become a buylding such as is not**, (building symbolizes doing work, what is built from the stone of alchemical work, or expanded to include the initiates Solar Astral Body. So clearly again, we are not concerning ourselves with the Lunar and lower vibrations, or the Klippot - “*Such as, is not*”) **but in the mynde of the All powrefull.** (“God,” the being, the Absolute, the Logos, etc...) **Arrise, sayth the First:** (Ascend! Do your Great Work, as commanded by the initiator (creator Logos) of the solar experiment called Humanity.) **Move therfore vnto his Servants: Shew your selues in powre:** (A command to aid and help the aspirants of the mysteries) **And make me a strong Seething: for I am of him that liueth for euer.** (A request to be shown truth. Real truth. Arrived at via Da'ath/gnosis/intimate knowledge. Conjured with the authority of the being, the word, the Logos, our creator).

The Third Key

Behold, (realize!) **sayeth your god**, (your being/master) **I am a Circle** (Life, being. Earth, Universe, or even eternity. Could mean eternal entropy of life, endlessness, perpetual-ism, etc...) **on whose hands stand 12 Kingdoms**: (Zodiac belt, we are created by God's hand's to incarnate through one of twelve doors, also came to mind the 12 tribes of Israel. One epoch of time also consists of the Earth revolving one trip completely around the Zodiac belt starting and ending in Aquarius). **Sis are the seats of Liuing Breath: the rest are as sharp sickles or the horns of death**, (the balance of power, or duty, is divided into two polarities) **wherein the Creatures of ye earth are to are not**, (they are not to be here) **except myne own hand** (self explanatory) **which slepe and shall ryse**. (The creators and it's tools of creation are above all that changes) **In the first** (first creation period, the first Mahamanvantara, the Children of the First Sun) **I made you Stuards and placed you in seats 12 of government**. (The purpose of the first creation was to employ the creatures to oversee/govern what has been created. 12 seats of government imply the people/creatures are born into existence and govern under 12 signs/Zodiac so we know we are talking about our planet Earth in specific, or at least this humanity's solar system and no one else's) **giving vnto euery one of you powre successively** (individual posses duty/right to govern) **ouer 456**, (study the 15th Arcanum) **the true ages of tyme**: (Time is an illusion whose true age is eternity) **to the intent that from ye highest vessells** (*vessels*- the bodies/containers for the souls who've ascended- "angels," those who posses the true body of Christ: *Solar Body*, the *Golden Body*, and/or a body of *Light* created through the sexual generating force of sephirot *Yesod*.) **and the corners of your governments you might work my powre**, (calling the hierarchies of Men to serve divine duty, to practice the act of true Love, fulfill their duty to the divine who made them for the purpose that us men might self-actualize and become Gods ourselves by incarnating the Christ) **powring downe the fires of life** (Kundalini; sexual generating force) **and encrease continually on the earth**: (Procreate and multiply) **Thus you are become the skirts of Iustice and Truth**. (Living for one's Great Work is a justifiable existence) **In the Name of the same your God**, (Your own Being's name, your true self, your HGA, one's individual extension of the *Verb of Being* - Logos) **lift vp, I say, your selues**. (Ascend! Your Great Work and purpose of existing is to ascend!) **Behold** (Don't believe but *realize*, in your own gnosis) **his mercies flourish and Name is become mighty amongst vs**. (When we incarnate the Master, our will merges with the Divine's will.) **In whome we say**: (In such divine authority, we establish:) **Moue**, (WORK!) **Descend, and apply your selues vnto vs**, (A plea for the ascended to look down and help us ascend) **as vnto the partakers of the Secret Wisdome of your Creation**. (Realize in one's own esoteric experience).

* This key has a very commanding overtone to it. It establishes that we were created in order to self-actualize and commands that we take up the esoteric work towards incarnating our own higher being, through the White Tantra/sexual magick whose formula is I.N.R.I., and deify ourselves that we might serve our purpose of being created.

The Fourth Key

I haue set my fete (Established my base of operation/Divine work, completed requirements of setting the philosophers stone as a basis for the alchemical transmutation) **in the sowth** (Behind, down, posterior, underneath, or even an elemental correspondence. It might make sense that the reference is to fire because of the sexual symbolism) **and haue loked abowt me, saying,** (self realized) **are not the Thunders of encrease numbred 33** (The sexual fire/kundalini must be transmuted, not wasted. It then moves up the 33 chambers of the spine which correspond to the degrees of true Masonry (Temple builders! The temple is the body of Christ, the divine organism the higher aspects of our being incarnate in!) until it reaches the base of the skull and opens the pineal door the Atman/Christ/Osiris/Higher True Being, etc... then enters through) **which raigne in the Second Angle?** (next Element, adjacent facet to the first) **vnder whome I haue placed 9639** (Study Gematria and Arcanum 9: Note that Arcanum nine includes the ninth Sephirot, which is Yesod, in it's symbols and deals with the foundation of the work, the Sexual Alchemy to which this previous sentence in the key eluded to) **whome none hath yet numbred but one,** (One person actually did it, reference to Enoch/Elijah/Metatron probably) **in whome the second beginning of things** (The next period of creation, the second manhamvantara, the children of the 2nd Sun. They apparently completed their Great Work in the 9th sphere and ascended by incarnating the Christ force through using the method that this previously ascended Being (Enoch) possessed) **are and wax strong,** (Better adapted for the work) **which also successively are the number of time:** (Can not be measured) **and their powres are as the first 456.** (Like in the third Key before, in the first period of creation, study the 15th Arcanum to fully comprehend) **Arrise,** (Ascend) **you Sonns of pleasure,** (Beings that are a result of working in the 9th sphere. Could also be offspring of fornication/misuse of the sexual magick, a call to rectify themselves and repent in the abyss to take up human form once more) **and viset the earth:** (Incarnate in sephirot Malkut/Olam ha Assiyah) **for I am the Lord your God which is, and liueth.** (“IAM” - one's being, individual expression of omnipresent living word, verb, “God”) **In the name of the Creator,** (self explanatory) **Move** (Do work!) **and shew yourselues as pleasant deliuerers, That you may praise him amongst the sonnes of men.** (rectify yourselves and praise the second Logos, the part of the divine that sacrifices itself to save you when you employ the proper use of sex/White Tantra to work in the sphere of Yesod with. Indoctrinate and teach the Christification to all.)

The Fifth Key

The mighty sownds (Things/beings spoken into existence by the one Logos, the all-powerful creator verb/word. “Mighty sounds” refers to Archangels, most likely.) **haue entred in ye 3th Angle** (Begun the next stage. Possibly a stage in the alchemical transmutation symbolized as the I.N.R.I. Formula. Possible that the Archangels entered a specific place in creation or Elemental Watchtower) **and are become as oliues in ye oliue mownt**, (seeds have taken root: Humanity is a seed that is in a delicate germinating stage and many have become rotten because of the klippothic influence from the ego. This sentence is concerning only those seeds, us, individual Monads which have not corrupted themselves through ego-contamination and have rooted themselves in God's righteous existence. These are people whose spiritual “seed” has germinated and produced fruit within the sexual alchemical work, the good product of “olives” in the Mount of Olives.) **looking wth gladnes vppon the earth** (these spiritually evolved peoples walk the Earth/Malkut, whose successful attaining of the Great Work produces beauty and peace, gladness, and order upon the chaos of the world) **and dwelling in the brightnes of the heuens** (after ridding themselves of Satan/the Demiurge and his Archons/the ego, through the power of the holy fire, the divine Kundalini in the Sexual alchemical transmutation, they have ascended above Yesod, and dwell in the superior etheric/astral dimensions. The heavens of those planes. They are no longer subject to the Wheel of Samsara and its return and re-occurrence) **as contynuall cumforters**. (they are “angels” in a sense, who continue to help and comfort a suffering humanity) **vnto whome I fastened pillers of gladnes** (pillars support any project/work. Take this in an alchemical spiritual context. There are also the left, middle, and right hand pillars of the Sephirot and the pillars Boaz and Joachin) **19** (Study the 19th Arcanum regarding this Key) **and gaue them vessels** (The “vessels” that contain our consciousness and maintain our identity are the Male and Female animal organisms we wear. So again, the vessels are the *Yoni*, the Cup, the Holy Grail which holds the male seed released from the *Lingham* and “waters the Earth” through birth. Esoterically, we water our spiritual thirst to come to directly experience the Divine via Sexual Generating Force and its alchemical principles) **to water the earth with her creatures**: (hermetic vessels: sealed to avoid spilling the precious essence in the sexual fluids which transmutes Kundalini energy during sex magick/white tantra. To water the Earth with her creatures means to “*be fruitful and multiply*” - the female has been given the uterus, to give birth to the population of beings on Earth. This is Earth, the planet, because of the feminine reference given, not so much for the context of Malkut/Assiyah). **and they are the brothers of the first and second** (they are reflected as a sibling, a younger, newer, successful creation of the twin Logos; Or, the *Ayn Sof*, *Ain Sof Aur* if you like that better) **and the beginning of their own sea[ts]** (they are become cosmo-creators, these deities have ascended into the absolute as self-actualized beings. They begin their rule as Gods/Goddesses) **which [are garnished with continually burning lamps]** (their holy fire, the kundalini, has been raised and they possess continuously fed awareness meaning they have a fully awakened self-actualized consciousness.) **69636** (Numerically as Thirty: Aethyrs; The 30 pleuromatic Aeons from Pistis Sophia. Numerically as Three: The trinity aspect omnipresent in all of creation.) **whose numbers are as the first, the endes, and ye contents of tyme**. (Eternity. Beings of the Absolute which is above all, even time. *Alpha et Omega*) **Therefore come you and obey your creation**: (kind of imploring those Angels, Jinns, Ascended, tangent parts of God, to help and keep the covenant of creator-creation) **viset vs in peace and cumfort**: (be merciful to us wretched aspirants, for all intents and purposes) **Conclude vs as receiuers of yor mysteries**: (impart unto us thy gnosis and wisdom) **for why? Our Lord and Master is all One**. (We are all connected, we are all divine emanations from the source of all, our Atmic Master connects us to the Divine aspects of Being)

The Sixth Key

The spirits of ye 4th Angle (next in alchemical stage) **are Nine**, (These entities belong in Sephirot Yesod, the sphere of sexual gnosis; pertaining to the Yetziratic plane, the astral dimension. Again we see an alchemical sexual connotation) **Mighty in the firmament of waters**: (And again, waters are equal to saying sexual fluids which act as a medium or vehicle for the generating force, for such energies to ascend the spine for sexual transmutation. Mighty in the firmament implies a strength and may also be a reference to archangel MICHAEL – denotes “strength of God” it is a Hebrew name, “MYKAL” | **MIKAL-Z/MIKAL-P** denotes power/mighty in angelic vocabulary. **MIKma MIKALz – to behold power**) **whome the first** (the Absolute No-thing, the first Logos, or Keter, and/or the Creator, etc...) **hath planted a torment to the wicked and a garland to the righteous**: (The sexual alchemy either liberates the consciousness when applied righteously or enslaves the wicked through their ego when applied selfishly, for lust) **[g]iving vnto them fyrie darts to vanne the earth** (the divine mother aspect, the Kundalini fire of Love which can be used as a divine weapon. The solar humanity has the capability to affect the remaining Earth with divine authority) **and 7699** (Study the 4th Arcanum, 31 in Gematria, etc...) **continuall Workmen** (those that are continually performing their Great Work unto the 22 paths and attaining Keter, also may imply those who become a *Turiya*, meaning they possess continual consciousness) **whose courses viset with cumfort the earth** (The Great White Lodge: The Christified, the Osirified, the Ascended, Solar humanity, etc.. they sacrifice tremendously for a suffering Lunar humanity; The Paramarthasatya Aberamentho (Yeshua Ben Pandira) visited the Earth to help and suffered the most) **and are in government and contynuanace as the second and the third**. (They have spiritual office just as the 2nd and 3rd Logos) **Wherfore harken vnto my voyce**: (Obey your being! Your own HGA, your divine ray of creation) **I haue talked of you and I move you in powre and presence**: (You exist because the divine verb has spoken you into manifestation. Your essence, the Buddhata, has emanated from the All and you have been animated with life-force and given a vital body) **whose Works shalbe a song of honor and the praise of your God in your Creation**. (you are to complete your Great Work. Your being, your essence, your verb, it must become a song spoken from the mouth of the divine, not just a word. You must incarnate your being. You must incarnate the true human Soul and become a solar being and authentic Human rather than an intellectual animal).

The Seventh Key

The East (elemental reference) **is a howse of virgins** (“*House*” implies a Work. That it contains virgins means the work is pure and uncontaminated with selfishness; That the work of this place/spiritual office involves using the generating Sexual Force correctly, not through Lust for selfish purposes. The expository intent of this call is summoning those being in the East/Air angles probably) **singing praises** (rejoicing) **amongst the flames of first glory** (divine beings who incarnated the Atman-Buddhi-Manas first, possibly in the first creation period, the first Manahamvantara, children of the First Sun; a vague reference to the first Logos is also possible in interpretation somewhere) **wherein the Lord hath opened his mowth**: (Their being exists because the divine hath spoken their verb into being) **and they are become 28** (Study the 10th arcanum, Gematria, etc...) **liuing dwellings** (become true beings, incarnated their own living Atman/Master) **in whome the strength of man reioyseth**, (they are happy and strong in the Lord) **and they are apparailed wth ornaments of brightnes** (they ascended, they posses the *Solar, Golden* and *Light bodies* of astral, mental, and causal worlds through sexual transmutation) **such as work wunders on all creatures**. (With these bodies and their developed chakras/energy centers comes expanded psychic faculties, or “powers” if you will, who can heal creatures, telepathically communicate, intuitively know them, etc...) **Whose Kingdomes** (divine reasons/place/purposes) **and continuance** (eternal being) **are as the Third and Fowrth Strong Towres** (Watchtower reference. Study also the 3rd and 4th arcanum) **and places of cumfort, The seats of Mercy and Continuance**. (The pillar of Mercy is at the left hand of God, “*What I AM*” : The pillar of severity is at God's right, “*I AM*”. So we are dealing with the passive, circular, divine Female aspect of Elohim; Yin polarity, *that which moves*) **O you Servants of Mercy**: (pertaining to what was just described) **Moue, Appeare**: (Work, use the divine feminine polarity which moves everything from being static to accomplish continuance) **sing prayes vnto the Creator and be mighty amongst vs**. (May you ascended Beings rejoice in helping us terrible aspirants) **For to this remembrance is given powre** (knowledge of such work is inspiration to continue to help) **and our strength waxeth strong in our Cumforter**. (we are strong in the *Being*, in our Father, in our individual Lord).

The Eighth Key

The Midday, (the preliminary halfway point although it is not eluding to what...) **the first**, (the Heaven of Mercury or the first Heaven/Superior dimension, or the First of the 9 higher Dantean circles) **is as the third heaven** (the heaven or 3rd Superior Astral dimension of Luna, or maybe Mars if you don't count the moon) **made of Hyacinth Pillers** (Sweetness and purity, pillars of the Great Work, the White sexual Tantra. One can not ascend into any of the Superior dimensions without possessing the Solar Astral Body, fabricated through the transmutation of the sexual energy - the *Body of Christ* we are reborn into) **26: (Study the 8th Arcanum. Also 26 is equal to Ha-Teva or "nature" in Hebrew. It is the gematria of natural, animal mankind and the gematria of God refelcted in Man. Understand the Solar mankind and the incarnation of the creator in it)** **in whome** (In the incarnated Christ) **the Elders are become strong** (The Enochian Elders. Possibly a reference to older beings as well, who have incarnated the Christ and ascended. The six elders of each Watchtower, those that stand before the throne) **wich I haue prepared for my own righteousnes sayth the Lord:** (the elders are helpers and tools to the Atman, HGA, our Master, our God we aim to incarnate, etc...) **whose long contynuanee** (eternal nature of the "I AM") **shall be as bucklers to the stowping Dragon** (either bindings and support to the ascending serpent Kundalini or as an end to the descending serpent Kundalini, the "*Kundabuffer*" or "*Satan's Tail*" ... the latter is the more likely context) **and like vnto the haruest of a Wyddow.** (A widow reaps nothing since she lacks the opposite polarity to work the Tantra with. That could be karmic. Perhaps a reference to paying karmic debt as part of the Great Work; However, widow can symbolize a woman that needs no opposite because she already worked in the sphere of Yesod and incarnated her Christ) **How many ar there which remayn in the glorie of the earth,** (those who have raised their serpents, those who have incarnated the Christ and are ascending) **which are, and shall not see death,** (Shall not be subject to death and return, not have to reincarnate on the Wheel of Samsara. These beings have done their Great Work and evolved off the wheel of returning to incarnate in an animal organism) **vntyll this howse fall** (should the Work itself fail) **and the Dragon synck?** (The sinking Dragon is the Kundalini serpent descending the 33 chambers through inverted/klippothic use of Yesod (Sex), like the "fallen angel's," the fallen ascended, as they did when they took "daughters of Men" and polluted the Earth with the Nephilim) **Come away, for the Thunders haue spoken:** ("*Thunders*" - The voices of creation. The act of Being. The verb from the creator Logos hath commanded) **Come away, for the Crownes** (Keter or the top, the halo indicating the ascended posses the Solar Body for the Christ to incarnate in) **of the Temple** (Temple = Body, Soma Heliokon, the Eidolon, the solar Astral Body) **and the coat of him that is, was, and shalbe crowned,** (the Solar body/bodies of those on their way to ascension into the Superior worlds) **are diuided.** (they've not achieved their Great Work yet. They still posses no vehicle for the voltage of the Higher Self. They are divided from the ones who do. A plea for help regarding this, asking for divine assistance unto us since we are separate or divided from our halo yet, our crown, our attaining Keter) **Come, appeare to the terror of the earth** (appear to us: we are abominations compared to the ascended, we are the one's who have no knowledge of the True Work and therefore commit the terrors and madness of the Earth) **and to our comfort and of such as are prepared.** (help us help ourselves!)

The Ninth Key

A mighty garde of fire (Kundalini, sexual fire, generating divine force) **with two edged swords flaming** (Two divine weapons, the strength and ability to fight the Ego. Also could be Ida and Pingala, the etheric nerve cords wrapped around the spine that the kundalini ascends. "*Edged swords flaming*" immediately conjures a vision of two forked tongues in my mind, so there may be your reference to Ida and Pingala. [Study the Staff of Hermes and Caduceus of Mercury.](#)) **which haue Viols 8** (Study the 8th arcanum) **of Wrath for two tymes and a half:** (Divided responsibility, but magnified in duty and proportion) **whose wings** (wings usually denote an ascended aspect, but also move things through Air. So being a key it probably has something to do with an Air subangle. Also, in context of alchemical polarity, that which is circular, Yin, female energy, is what moves the linear, Yang, male, static energy) **are of wormwood** (your guess is as good as mine. Wormwood has been a known hallucinogen for some time. Perhaps in Edward Kelley, the receiver's own mind, this was the reference) **and of the marrow of salt,** (Salt has it's own symbolism within alchemy. Study that) **haue stled their feete in the West** (Watchtower reference, more likely has an alchemical meaning. West-water element, the *water of life*, the divine energy within the sexual ethers which is able to generate. These beings have started the transmutation or perhaps have just taken up place in the West watchtower) **and are measured** (gauged level of accomplishment) **with their Ministers 9996** (numerically this is "33"- the 33 chambers of the spine the Kundalini ascends during sex magick. The 33 chambers, the thunders of increase, the degrees of True occult Masonry, not the pseudo-freemasonry you hear of today. The degree of ascent the fiery serpents have accomplished is being measured. 33 indicates that these beings that set their feet in the West have accomplished a great deal of spiritual work)([Could refer to Arcanum 6 too](#)). **These gather vp the moss of the earth** (they take precedence over the elementals, the value this type of essence. Angels of Nature probably) **as the rich man doth his threisor:** (they revere nature, they posses a sense of beauty in the consciousness; Sephirot Tipharet) **cursed ar they whose iniquities they are in their eyes** (cursed to them who are seen as inadequate; Cursed to them that believe spiritual inadequacy is progress, cursed to them that try to identify with the inadequacy they behold through their ego) **are milstones greater then the earth,** (abominations enormous in proportion) **and from their mowthes rune seas of blud:** (another reference to how bad these things are seen as in the eyes of the ascended, the angels of the West) **their heds are covered with diamond,** (saying they are materialistic or possibly eluding to the diamond eye, the developed third eye chakra indicating these abominable people have awakened their consciousness in the Klipot, for their own emptiness and ego) **and vppon their heds are marble sleus.** (they belong to the Black Lodge) **Happie is he on whome they frown not.** (they care not to associate with the righteous, therefore the liberated of consciousness are happy, not enslaved to the Ego like the Black Tantrists) **For why? The God of righteousness reioyseth in them!** (The Atman, the Master, or the composite Christ Force rejoices for these people; They have incarnated their Master) **Come away, and not your Viols,** (containers; Empty you bodies of their essence for we are only concerned with the righteous *consciousness*, who you are) **for the tyme is such as requireth cumfort.** (Another way to ask for assistance at the closing of the key, the time to progress spiritually is in the here-and-now).

The Tenth Key

The Thunders of Iudgment and Wrath (the beings of Karma) **are numbred** (42 according to what is indoctrinated in modern gnosis) **and are haborowed in the North** (belong to the hierarchies of the North watchtower. These karmic judges rule over those incarnate on Earth, in Malkut/Assiyah. Those ascended above Earthly life are not subject under them because they have paid their karma and are finished) **in the likenes of an oke**, (strong, hard) **whose branches** (paths of working/moving on) **are Nests 22** (study Arcanum 22; Of 22 paths between sephiroth, the “branches” of the *Tree of Life*. The karmic judges deal with all, for all are subjected to the Tree of Life until they absorb back into the absolute, self actualized or not) **of Lamentation and Weeping layd vp for the earth**, (they deal tough punishments and are connected to the paths of the sephirot) **which burn night and day**: (Always. You are constantly being watched. All your deeds are judged. Both Black and White initiates) **and vomit out the heds** (Egos. The esoteric symbolism of dying to the ego is one of decapitation. *John the Baptist* paves the way for the intimate one, the individual's own Christ. To cut off the heads. The first death, to die to oneself. To all the “selves” who compose a legion – everything your true self is not) **of scorpions** (of Scorpio, symbolizes Mankind; The egos of Mankind are expunged by these Karmic effects, eluding to that what is being described has something to do with the abyss, which is the way nature dissolves the ego if we ignore our spiritual duty of doing it on our own) **and live sulphur myngled with poyson**. (burning sulphur is used to purge negativity and negative entities. Archangel Samael is God's poison against the Klipothic selves/ego. They are fought using the sexual generating force of Sephirot Yesod. In Scorpio, it's said his inverted aspect is prominent and he is called “*Blind God*” - this is Yesod inverted. It is mankind's bestial nature (666) to misuse the sexual energy when it encounters the ninth sphere ($6+6+6=18 \rightarrow 8+1=9/\text{Yesod}$). Better said in this particular key, it is up to the Judges of Karma to kill the egos should we fail to do it ourselves and their tool to accomplish this is the abyss!) **These be the Thunders** (Voices spoken into existence from the divine, Karmic beings, Archangels, etc...) **that 5678** (Gematrically this is 8. Study the 8th Arcana. In Gematria, again we see “26”- *Ha-Teva* or “nature” in Hebrew. It is the gematria of natural, animal mankind and the gematria of God refelcted in Man. Understand the difference between *Solar* (Abel) and *Lunar* (Cain) mankind and the reflection of the creator in it/upon it.) **tymes in ye 24th part** (regarding the Enochian “parts of the Earth” reflected into one's mind/sphere of perception.) **of a moment rore with a hundred mighty earthquakes** (“moment” means this action takes place in malkut, Assiyah, the physical dimension because it talks of measuring time. It moves, possibly in context of female polarity/Elohim/divine mother causes and moves it by such terrible divine force) **and a thousand tymes as many surges**. (Basically, just establishing such movement) **which rest not** (always is, continual, constant, moving, feminine, Yin, etc...) **neyther know any echoing tyme here** (above the laws of temporal reality. The echo of these surges are above time. This part or place is obviously above Malkut, in the astral, mental, or causal dimensions. Intuitively I feel it is describing the mind and it's labyrinth of passages from one abstract thing to another. The psyche and mind are moved by terrible negative psychic adjuncts or “Egos” - selves that desire things and cause us to identify with illusions. The mind can be a terrible place.) **One rock bringeth furth 1000, euen as the hart of man doth his thowghts**. (comparing how the mind and egos deceive us. How one negative adjunct moves and a thousand more follow within the psyche. Like cockroaches, if there is one, there are many and they are all connected) (– also interesting that the numerical value of $1+0+0+0$ is still “1.” Aleph: tarot Arcana 1: The Magician (Man itself, it's mind, psyche, and nature) Study the first Arcanum). **Wo, Wo, Wo, Wo, Wo, Wo, yea Wo be to the earth! For her iniquitie is, was and shalbe great!** (We are born under the entropy of natural devolution and will continue because man chooses selfishness over divinity, Satan over Liberation, obeys the Demiurge and Archons over the Being, etc... nothing changes: Is, was, and *shall be*...) **Come awaye: but not your noyses**. (Leave everything you identify with, we are only concerned for your divine verb, your “noises” - the real Being).

* This key seems to be overall eluding to the nature of the mechanisms behind how the 42 Judges of Karma work and how they are somehow supposed to be connected to the Enochian system.

The Eleventh Key

The Mighty Seat (place of divine dwelling/office) **groaned and they were 5 thunders** (Archangels: Michael, Gabriel, Uriel, Samael, and Raphael) **which flew into the East:** (Air element? Watchtower reference) **and the Eagle** (revolution/revolutionary, Aquarius, probably Samael, angel of Mars and whom delivered the message of Aquarius) **spake and cryed with a lowde voyce,** (This particular Arch-angelic force/facet of the divine moved and therefore it was that...) **Come awaye:** (Separate; to bane, to move) **[and they gathered themselues together and became] the howse of death** (many emanations and facets of a same verb joined, and worked together as an opposing force, working towards revolution in a place of “death” meaning change) **of whome it is measured** (given parameter) **and it is as they are, whose number is 31.** - (Study the 4th Arcanum.) (Other possibilities include relating to the fourth planetary power, Mars, of which, Samael is the Angel thereof. Also may elude to 31 chambers/temples of the Spine/Sushumna, Part 31 of the Parts of the Earth, etc...) **Come away,** (Move, obey, bane, separate) **for I haue prepared for you.** (readied) **Moue therfore, and shew your selues: open the Mysteries of your Creation: be frendely vnto me: for I am the servant of ye same yor God, the true wurshipper of the Highest.** (The usual call to move and work with the Evocator).

The Twelfth Key

O you that rayng in the Sowth (Bottom; Underneath, behind, Assiyah/Malkut; Whose office is that of the specific Watchtower, Elemental direction, sub-angle, etc...) **and are 28,** (study Hebrew Gematria for “28” and also the 10th Arcana, Retribution – the struggle of opposites and the Wheel of Reincarnation/Samsara.) **The Lanterns of Sorrow,** (Illuminated Beings that show the path to the monads, essences, and other conscious sparks which lament and must learn of their defects through much suffering) **bynde vp yor girdles and viset vs.** (an invitation/evocation; to take up place in a recognizable vehicle/medium through which one can work with them) **Bring down your trayn 3663** - (Study misc. gematria and 18th Arcana. Also: 18→8+1=9/Yesod. Possible suggestion here) **that the Lord** (Atman/being) **may be magnified,** (Realized and knowledge thereof achieved only through the 9th Sephira, Yesod) **whose name** (Your true name, your HGA, your inner being) **amongst you is Wrath.** (Fight! The wrath of the Divine is your tool against the ego-devil which stops you from attaining your higher being) **Moue, I say, and shew yor selues: open ye Mysteries of yor Creation: be frendely vnto me: for I am the servant of the same yor God, the true wurshipper of the Highest.** (Again, the usual call to move and work with the Evocator).

The Thirteenth Key

O you swords of the Sowth (Spiritual weapons of the specific element and sub-angle) **which haue 42 eyes to styr vp the wrath of synn**, (42 Judges of Karma watch and hand down punishment for “sin”. This again eludes that the forces of this/a particular call have the Judges of Karma at their disposal, and/or work with their spiritual office. Could be talking about Anubis, the head Judge, who has the rest at his disposal or Ma'at/Justice herself having 42 eyes, meaning points of articulation to know/observe through) **making men drunken which are empty**. (The ego of drunkenness and identity with that specific brach of egos causes one to enter the klipot/inverted aspect of the sephirot. This is man's own emptiness.) **Behold** (Realize and experience) **the promise of God and his powre which is called amongst you a Bitter Sting**. (“Karma is a bitch” in other words) **Moue and shew your selues: open the Mysteryes of yor Creation: be frendly vnto me: for I am the servant of ye same yor God, the true wurshipper of the Highest**. (Once more, the usual call at the end for the forces to move and work with the Evocator).

The Fourteenth Key

O you sonns of fury, (Demons, egos of anger, those that create them and sin when identified with them) **the dowgthers of the lust**, (Similar egos of desire and those that create them, and sin when identified with them) **which sit vppon 24 seats**, (possibly inverted aspects of the 24 Seniors, the would be 24 cacodemons) **vexing all creatures of the earth with age**, (So long as you identify with the ego, you are subject to return and re-occurrence, to be born again and again into an animal body which ages and dies, bound to the Wheel of Samsara) **which haue vnder you 1636:(study Arcanum 16) behold the Voyce of God**, (Realize and experience the Being, the divine verb spoken from/emanating a ray out from the creator Logos) **the promys of him which is called amongst you Furye or Extreme Iustice**. (God has made promise to punish and reward, to have it's 42 judges deal Karma or Dharma, depending on the merits of the heart weighed against the feather of Ma'at) **Moue and shew yor selues: open the Mysteries of yor Creation: be frendly vnto me: for I am the servant of the same your God, the true wurshipper of the Highest**. (Again, the usual call to move and work with the Evocator).

The Fifteenth Key

O thow (calling) **the governor of the first flame** (principality or being holding spiritual office under the first Logos, could also be reference to a raised kundalini serpent of the Body of Christ or “golden” astral body, the first of seven serpents assigned to each body of astral, mental, and causal) **vnder whose wyngs** (under which spiritual duty divinely appointed) **are 6739 (You know what to study... Arcanum 7, etc...)** **which weaue the earth wth drynes**: (posses power/ability to affect the earth/Malkut/Assiyah, without using anything as a medium to exact it through) **which knowest the great name Righteousnes** (This entity/entities posses an inner being whose cosmic ray, whose Master/God Name and causal purpose involves being associated with Righteousness or teaching correct spiritual action/behavior; A true Christ, an incarnate master) **and the Seale of Honor**. (Qualified authority) **Moue and shew yor selues: open the Mysteries of yor Creation: be frendly vnto me: for I am the servant of the same your God, the true wurshipper of the High[e]st**. (Once more, the usual call at the end for the forces to move and work with the Evocator).

The Sixteenth Key

O thow second flame, (pertaining to the second Logos, Osiris, the Christ force, etc... could also be reference to another raised kundalini serpent of the superior astral body/Christ body, though this context is not likely) **the howse of Iustice**, (Karmic court) **which hast thy begynning in glory** (originated with sephirot Hod or simply just keeps the glory of divine justice) **and shalt cumfort the iust**: (great are your rewards in the superior planes/"heaven") **which walkest on the eart[h]** (fair beings which are physically incarnate, people that understand Karmic law and it's principles) **with feete 8763** (study 24 in gematria and/or Arcanum 6) **that vnderstand and separate creatures**: (again, those people that understand Karmic law and it's principles) **great art thow in the God of Stretch Furth and Conquere**. (such beings of fair action and Karmic understanding are strong in spirit and their inner being shines through) **Moue and shew yor selues: open the Mysteries of yor Creation: be frendely vnto me: for I am the servant of the same your God, the true wurshipper of the Highest**. (usual call at the end for the forces to move and work with the Evocator).

The Seventeenth Key

O thow third flame (Third Logos or another raised kundalini serpent of a golden body/Body of Christ. Again, the latter not so likely because there's supposed to be seven, not just three.) **whose wyngs are thorns to styre vp vexation** (whose power of consciousness, whose being, who posses divinity to dispel ego, confusion, evil, selfishness, etc...) **and hast 7336** (Study Arcanum 19, etc...) **Lamps Liuing** (Monads, sparks of Consciousness, living words, beings, etc... "living" implies they posses the true Human Soul, completed their Great Work (at least some deal of it) - the incarnation of Atman-Buddhi-Manas, not just a Buhddhata/undeveloped being or the lunar version of consciousness nature gives to us) **going before the[e]**, (Ha-Satan, enemy, adversary, Ego, Demiurge, Archons, etc...) **whose God is Wrath in Angre**, (Our adversary, the internal psychological defects that posses us, are all products of our own selfishness. Whoever has succumbed to the vices the Ego presents, has made the "self" their God. These selves include *Wrath* and *Anger* among a legion of many others.) **gyrd vp thy loynes and harken**. ("*Loins*" - Fortitude; Summon the serpent power, the Christ force) **Moue and shew yor selues: open the Mysteries of yor Creation: be frendely vnto me: for I am the servant of the same your God, the true wurshipper of the Highest**. (inviting the forces to work with the Evocator).

The Eighteenth Key

O thow mighty Light and burning flame of cumfort (In this context it probably refers to an ascended inner being of the White Lodge whose divine ray is one of Compassion, especially because of the following sentence in this key; An archangel of Glory) **which openest the glory of God to the center of the erth**, (An angel of Hod, which has the keys to remove the klippa/shell obscuring true Glory among the people of sleeping consciousness on Earth) **in whome the Secrets of Truth 6332** (Study Arcanum 14 and/or gematria, etc..) **haue their abiding** (realized truth, arrived at it via their own personal gnosis, open the doors of sephirot Da'at), **which is called in thy kingdome Ioye** (Spiritual success with one's work; spiritual achievements) **and not to be measured**: (You can not limit a divine emanation by measuring it and blaspheming it by stating it can even stand up to secular standards, judgments, or measures. If you try, you place your own selfishness over it, you practically invite a klippa to obscure it) **be thow a wyndow of cumfort vnto me**. (Window means to see through something, to look or be able to realize the light at the end of suffering in this context. "*Show me comfort*.") **Moue and shew your selues: open the Mysteries of your Creation: be frendely vnto me: for I am the servant of the same your God, the true wurshipper of the Highest**. (usual call at the end for the forces to move and work with the Evocator).

We see the problem by now, if you've read this far, is that it is one of being confused by so many possible interpretations. This is because when you rely on the intellectual mind, which can never come to actually know anything in truth, you get a maze, a labyrinth if you will, of obscured perspectives and confused theories.

The only way any of this is ever going to matter is if you accomplish the Great Work and evolve the consciousness while at the same time dissolving the identity. The consciousness is the only true part of us that transcends above all else. It exists independently of the mind and its operations carry out beyond the mind. When we can evolve the psyche and incarnate the higher aspects of our own *Being* we can then immediately sort through all the nonsense and intellectual confusion in anything. Your own demons will use your mind against you in this work.

I still affirm that the entire system was originally most likely a ruse or fabricated as a deliberate farce by Edward Kelley who saw Dr. Dee as an opportunity for selfish gain, to satiate his own egos, or to extort money from the Queen through her agent John Dee. The problem is that something/someone actually came through and we are left to sort through the confusion of Kelley's archetypes through our own experience using the system, which in my experience with it, actually does work and produces results...

Ultimately, make the archetypal connections and understand the references I give through your own experience. Understand why it's important to know what kind of psyche E. Kelley possessed, if you're going to approach the Enochian material at all; However, come to know truth on your own, using your consciousness. It does no good to believe you understand what anything means, or to doubt it either just because your pride (which one should rid themselves of) wants to be right. Neither is truly knowing and both are limiting.

As much as I do not like such intellectual work, the purpose of this particular one was aimed to evoke a sense of necessity, in the reader's own sphere of perception, to use their own awareness and consciousness, which is above the mechanisms of the intellect, to gain gnosis directly. Understand that the references I suggest will never be truth unless you consciously arrive at them yourself. Destroy the belief that you even think you know what I'm talking about to begin with...

One of the authors (Van Duzer) had had digital images of the curious maps from Huntington Library HM 83 on his computer for some years, meaning to find an opportunity to study them, when in late 2011 he received an announcement of the conference “Charting the Future and the Unknown in the Middle Ages and Renaissance,” to be held at Barnard College in New York in December of 2012. A proposal to present a paper titled “Mapping the End of the Earth: Apocalyptic *Mappaemundi* in a Fifteenth-Century Manuscript” at the conference was accepted, and it was the research done in preparation for giving that paper, and the positive reception of the paper at the conference, that made him appreciate just how rich and important the Huntington manuscript is. Our thanks to Phillip John Usher for organizing the conference at Barnard.

Our subsequent work together in transcribing and understanding the texts in the manuscript—conducted during long Skype calls between California and Jerusalem—went very smoothly, though it was laced with some choice remarks about the handwriting of the scribes who wrote HM 83. We wish other authors working together as positive and enjoyable a collaborative relationship.

We give our enthusiastic thanks to Laura Smoller, Natalia Lozovsky, Benedicte Gamborg Briså, Amnon Linder, Leonid Chekin, Felicitas Schmieder, and Barry Hinman for reading a draft of this book and giving us their suggestions and comments.

Introduction

In this book we offer a detailed analysis of the maps and some of the text in an unusual and unstudied fifteenth-century manuscript, San Marino, Huntington Library MS HM 83, which contains interrelated texts composed in 1486–88, almost certainly in Lübeck, Germany. The manuscript consists of four parts: a brief geographical treatise illustrated with maps (ff. 1r–8r); a concise account of the Apocalypse, also illustrated with maps (ff. 8v–12v); a somewhat heterogeneous section with material on astronomy and geography, also illustrated with maps (ff. 13r–18r); and a collection of texts on astrological medicine (ff. 19r–25v).

The manuscript is of significance both for the history of cartography and for the history of Apocalypticism. It contains what is by far the largest collection of *mappaemundi* in any one manuscript, and also the earliest sets of thematic maps, or maps that focus on a specific theme. Every study of thematic maps that we have consulted indicates that this genre did not exist before the seventeenth century, but in fact maps that can and should be identified as thematic were produced hundreds of years before that period, as we will show below. The maps in the Huntington manuscript are not the earliest thematic maps, but the manuscript contains the earliest sets of such maps that seem to have been produced in accordance with the modern understanding of the genre, and thus represent a remarkable achievement in the history of mapmaking, albeit one that had a very limited influence. The manuscript also contains a passage about the different functions of maps that is unique in fifteenth-century cartographical writings, and confirms that the anonymous author had an essentially modern understanding of thematic maps as a genre.

There are intriguing connections between the Huntington manuscript and another work produced in Lübeck a few years earlier: the *Rudimentum novitorium*, which was printed by Lucas Brandis in 1475. The *Rudimentum* contains a world map and a map of the Holy Land, both accompanied by extensive descriptive texts. There are many differences between the Huntington manuscript and the *Rudimentum*, most notably differences of purpose and tone, and there are also significant differences between the maps contained in the two works, but there are enough connections—which will be detailed below—to suggest some degree of influence of the printed work on the manuscript one.

The use of maps to illustrate what will happen to the earth during the Last Days in HM 83 not only creates a very distinctive, original, and striking

iconographical program for the Apocalypse,¹ but also involves an unusual melding of the symbolic and cartographic. The author boldly maps the future transformations the world will undergo, including two remarkable maps of the earth devoid of all physical features following the Apocalypse (ff. 11r and 12r). The manuscript is of signal interest for its innovative exploration of what can be done with maps in the fifteenth century. Study of the apocalyptic section of the manuscript reveals the mosaic of different sources that the anonymous author used, and one of his maps is a cartographic interpretation of a passage in the *Compendium theologiae* or *Compendium theologiae veritatis* by Hugh Ripelin of Strasbourg (c. 1205 – c. 1270). There is a strong anti-Islamic strain in the apocalyptic section of the manuscript, and the anonymous author adopts a belief that goes back to John of Damascus (c. 645 or 676–749)² that Muhammad was a precursor of Antichrist. The author also invokes the legend of the Last Emperor, which was initially promulgated in the *Apocalypse* of pseudo-Methodius;³ although the author cites Methodius on f. 9r of the manuscript, he seems to have made little or no direct use of that text. We have not been able to determine the sources of all of the parts of the manuscript's unique chronology of the Apocalypse, but some parts are based on the author's interpretation of references to days in various passages in the Bible as indicating years, no doubt inspired, like so many other interpreters of biblical chronology, by a phrase in 2 Peter 3:8, "With the Lord a day is like a thousand years, and a thousand years are like a day." This book begins with a discussion of the manuscript and its historical context, which is followed by detailed discussion of the geographical sections, together with analysis of their maps.

1 For a detailed list of other manuscripts that contain illustrations of the Apocalypse see Richard Kenneth Emmerson and Suzanne Lewis, "Census and Bibliography of Medieval Manuscripts Containing Apocalypse Illustrations, ca. 800–1500," *Traditio* 40 (1984), pp. 337–379; 41 (1985), pp. 367–409; and 42 (1986), pp. 443–472. For chapters that together form a good discussion of art based on the Apocalypse see Richard K. Emmerson and Bernard McGinn, eds., *The Apocalypse in the Middle Ages* (Ithaca, NY: Cornell University Press, 1992), part 2, pp. 103–289.

2 See John W. Voor his, "John of Damascus on the Moslem Heresy," *The Muslim World* 24.4 (1934), pp. 391–398; Saint John of Damascus, *Writings: The Fount of Knowledge* (New York: Fathers of the Church, 1958) (= *The Fathers of the Church, A New Translation*, vol. 37), p. 153; and Daniel J. Sahas, *John of Damascus on Islam: The 'Heresy of the Ishmaelites'* (Leiden: Brill, 1972), pp. 68–69 and 131–141.

3 For discussion of this legend see Paul J. Alexander, "The Medieval Legend of the Last Roman Emperor and its Messianic Origin," *Journal of the Warburg and Courtauld Institutes* 41 (1978), pp. 1–15. For an edition and translation of Pseudo-Methodius see Pseudo-Methodius, *Apocalypse; An Alexandrian World Chronicle*, ed. and trans. Benjamin Garstad (Cambridge, MA: Harvard University Press, 2012).

Finally there is a full analysis of the apocalyptic treatise and its maps, including transcription, translation, and commentary on the full text of the apocalyptic section.

The authors' hope is that the present work will substantially enrich our understanding of fifteenth-century cartography and Apocalypticism, and also make known the work of a man who was one of the most original cartographers of the period. And perhaps this study will inspire and aid other scholars in undertaking a study of the last section of the manuscript, the collection of texts on astrological medicine.

Description of Huntington HM 83

Huntington Library HM 83 has been described twice before.¹ While relying on those earlier descriptions, we will add a number of details in our description; in particular, we will supply a much more thorough account of the manuscript's contents. The manuscript was bound by Rivière and Son sometime between 1880 and 1940² in blue morocco stamped with decorative ornaments in gold. Codicological analysis shows no evidence that the folios were ever bound with other works. It consists of 25 folios of yellowing paper, measuring 315 × 215 mm (text area 265 × 170 mm), preceded and followed by two flyleaves of modern paper (contemporary with the binding). The text is in one column, with up to 62 lines per page; the ink is dark brown to brown. The ruling, which is often very faint, consists of one and one vertical and one and one horizontal bounding lines. The sequence of the folios shows no discontinuities; the foliation, in pencil, is modern. The manuscript has red rubrics, and the capital letters are marked with red. There are numerous underlinings in blue pencil in the first sixteen folios that signal passages relating to the author, the year of the manuscript's creation, and passages of geographical interest, probably made by a dealer preparing a description of the manuscript. The paper has a watermark (a crown with a tall cross) similar to Briquet's 11807,³ which comes from a book published in Venice in 1487. The manuscript is in very good condition. According to Dutschke et al. in the *Guide to Medieval and Renaissance Manuscripts in the Huntington Library*, the text was written by three scribes, ff. 1–18, 20–21, and 22–25 by the first; ff. 19r–19v (the beginning of the section on

- 1 For previous descriptions of HM 83 see *Bibliotheca americana et philippina* (London: Maggs Bros., 1922–30), part IV (1925), n. 2588, pp. 1–3, with plate 1 following p. 32, which illustrates the map on ff. 6v–7r; and C. W. Dutschke et al., *Guide to Medieval and Renaissance Manuscripts in the Huntington Library* (San Marino, CA: The Library, 1989), vol. 1, pp. 141–143, and vol. 2, fig. 29.
- 2 For other bindings by this company see *Rare Books in Fine Bindings from Robert Rivière & Son of London* (New York: Anderson Galleries, 1916); and *Examples of Bookbinding Executed by Robt. Riviere & Son* (London: R. Riviere & Son, 1920). On the date of the binding implied by the exact name used for the company see Michael Riviere, “The Huguenot Family of Riviere in England,” *Proceedings of the Huguenot Society of London* 21 (1970), pp. 219–240, at 221.
- 3 See Charles-Moïse Briquet, *Les filigranes: dictionnaire historique des marques du papier dès leur apparition vers 1282 jusqu'en 1600; avec 39 figures dans le texte et 16,112 fac-similés de filigranes* (Leipzig: K. W. Hiersemann, 1923; New York: Hacker Art Books, 1985), in vol. 3.

astrological medicine) by the second; and ff. 21r–21v by the third.⁴ All of the text is in a scholarly cursive script; the manuscript is not a luxury production, but was laid out with care. There are no marginal glosses and the corners of the folios are clean, so there is no evidence of heavy use.

The evidence that the manuscript was made in Lübeck consists in the mentions of that city on ff. 4r (transcribed below), 6r (transcribed below), 6v (on a map), 14r (twice, transcribed below), and 15v (twice). The otherwise unexpected prominence of Lübeck in the manuscript makes it natural to conclude that the manuscript was made there. The evidence provided by the prominence of Lübeck on the map on f. 6v is diluted somewhat by the fact that *Brema* (Bremen) is also conspicuous, but nonetheless the aggregate of evidence in support of Lübeck as the place of composition is strong. It was a common practice for medieval cartographers to give prominence to their home cities or regions on their maps.⁵

The author speaks of himself in the first person on ff. 2v, 8v and 12v, passages that will be discussed below in the section on the author, but he does not name himself. With regard to the date of the manuscript, on f. 2v the text refers to *hoc anno Christi 1486*; on f. 9r there are three references to “this year 1486”; and on f. 16r to “this year 1488.” The presence of the hands of three scribes shows that the manuscript we have is a copy, rather than the autograph. The difference in the dates seems more likely due to delays in the composition of the text than in a protracted period of copying just twenty-five folios of text and maps. Thus the dates 1486 and 1488 seem to indicate when the text was composed; the scribes may well have written out HM 83 later, without altering the dates they found in the text, but we see no evidence for assigning the manuscript a date much later than 1488.

The contents of the manuscript are as follows.

4 Dutschke, *Guide to Medieval and Renaissance Manuscripts in the Huntington Library* (see note 1), vol. 1, pp. 141–143.

5 The eleventh-century St-Sever Beatus *mappamundi* (BnF ms lat. 8878, ff. 45 bisv–45 terr) gives a much greater prominence to France, and particularly to the abbey of Saint-Sever sur l'Adour in southwestern France where it was made, than the *mappaemundi* in Beatus manuscripts made in Spain: see François de Dainville, “La Gallia dans la mappemonde de Saint-Sever,” in *Actes du 93e Congrès National des Sociétés Savantes, Tours, 1968* (Paris: Bibliothèque Nationale, 1970), pp. 391–404, esp. 391. On the Ebstorf *mappamundi* of c. 1300 there is a vignette of the church and the graves of the martyrs of Ebstorf, see Hartmut Kugler, *Die Ebstorfer Weltkarte* (Berlin: Akademie Verlag, 2007), vol. 1, pp. 128–129, nos. 50.12 and 50.14, and vol. 2, p. 280, nos. 50.12 and 50.14. And the size of the British Isles is greatly exaggerated on the Evesham *mappamundi* of c. 1400, see Peter Barber, “The Evesham World Map: A Late Medieval English View of God and the World,” *Imago Mundi* 47 (1995), pp. 13–33, esp. 23–24.

1 ff. 1r–8v, The Brief Geographical Treatise

- f. 1r: The treatise opens with a discussion of the three Babylonias, and then addresses the three-fold division of the world among the sons of Noah, illustrated with a *mappamundi* that emphasizes the circumfluent ocean and the Mediterranean.

- f. 1v: Lists the provinces of Greater Asia, including Scythia, Magna Graecia, and Syria, with more detailed descriptions of Egypt and Ethiopia.

- f. 2r: The description of Ethiopia continues, followed by Arabia, Mesopotamia, Chaldea, Hyrcania, Armenia, Parthia, and India. Then follows a list of the oceanic islands that pertain to Greater Asia, and a list of the islands of the Mediterranean.

- f. 2v: A digression on Esther 1:1 which mentions 127 provinces between India and Ethiopia, and then a list of the provinces of Europe, beginning with the oceanic islands that pertain to Europe.⁶

- f. 3r: A map labeled *figura insularum maris oceani*, “map of the islands of the ocean,” with a large circumfluent ocean filled with circular islands whose size is exaggerated for clarity—except in the south, where the cartographer does not locate any islands. Below the map is a list of five of the islands in the Mediterranean that pertain to Europe, from Venice to the Balearics, with a note to see the following figure.

- f. 3v: Two overlapping *mappaemundi*, the upper one emphasizing the five European islands just listed (plus *portugalia*, probably an error for the *portus* said on f. 3r to belong to one of the islands); and the lower one of the Mediterranean islands that pertain to Greater Asia (see the list on f. 2r).

- f. 4r: A list of the provinces of mainland Europe, beginning with a detailed list of the provinces of Germany, then Italy, and then Spain.

- f. 4v: The list of the provinces of Spain continues, followed by those of France. Then there is a list of the provinces of mainland Africa. This is the end of the listing of the world's provinces.

- f. 5r: A generic view of some mountains, followed by a list of the mountains of the Holy Land, and then a list of mountains indicated as being on the edges of the Holy Land (*Montes qui sunt termini terre promissionis sunt hii*), though the list includes mountains as far west as the Pillars of Hercules.

- f. 5v: The list of mountains continues, followed by a short list of the lands of the kings of the Four Kingdoms of the Book of Daniel (Nebuchadnezzar,

⁶ The material about oceanic islands of Europe on f. 2v is transcribed by Axel Anthon Bjørnbo, “Adam af Bremens Nordensopfattelse,” *Aarbøger for Nordisk Oldkyndighed og Historie* 24.2 (1909), pp. 120–244, at 240–241.

Cyrus, Alexander the Great, and Octavian), and a list of the lands in which the twelve Apostles preached (there is a map that shows where the Apostles preached on f. 15r, some distance from this text).⁷

- f. 6r: The list of the lands in which the Apostles preached continues, followed by a map of the most important cities of the ancient world which is based on the discussion of the Four Kingdoms on the preceding folio.

- ff. 6v–7r: A large map labeled *Mappa mundi localis* that combines information from a few of the preceding sections, and thus shows many of the islands in the circumfluent ocean like the map on f. 3r, and also provides more detail about the mainland. The sphere of earth is shown off center in the sphere of water (see Fig. 4.14 below), in accordance with one explanation of how there was land above the waters, despite the fact that the sphere of earth was within the sphere of water.⁸

- ff. 7v–8r: A large map titled *Mappa de Aquis terram irrigantibus* or map of the waters that irrigate the land, which places great emphasis on the four rivers flowing from Paradise and the waters that make up the ‘T’ of a T-O map,⁹ but does not give information about other rivers.

7 A list of the places the Apostles preached also occurs in a context associated with both cartography and the Apocalypse in manuscripts of Beatus of Liébana’s *Commentary on the Apocalypse*, where the list introduces the world map. The list is edited in Beatus of Liébana, *Obras completas de Beato de Liébana*, ed. and trans. Joaquín González Echegaray, Alberto del Campo, and Leslie G. Freeman (Toledo: Estudio Teológico de San Ildefonso; and Madrid: Biblioteca de Autores Cristianos, 1995), pp. 135 and 137. But we do not detect any sign of influence of Beatus’s list in the Huntington manuscript.

8 This explanation goes back to Peter Abelard (1079–1142), *Expositio in Hexameron*, in *Patrologia Latina* 178:748; see W. G. L. Randles, “Classical Models of World Geography and their Transformation Following the Discovery of America,” in Wolfgang Haase and Meyer Reinhold, eds., *The Classical Tradition and the Americas* (Berlin and New York: W. de Gruyter, 1994-), vol. 1, *European Images of America and the Classical Tradition*, part 1, pp. 5–76, at 22, and also see the quotation on this same subject from Paul of Burgos (Pablo de Santa María) in his *Additiones* (written in 1429) to the *Postilla* of Nicholas of Lyra, cited on Randles’s p. 76. Randles’s essay is reprinted in his *Geography, Cartography and Nautical Science in the Renaissance: The Impact of the Great Discoveries* (Aldershot, Hampshire, Great Britain; and Burlington, VT: Ashgate/Variation, 2000). There is a dramatic illustration of this explanation in Lyon, Bibliothèque Municipale, MS 1351, f. 35r, a fourteenth-century manuscript of the *Breviari d’amor*.

9 A T-O map, the most typical medieval *mappamundi*, is so called from the ‘O’ of the circumfluent ocean that surrounds the circle of the lands, and the ‘T’ formed by the bodies of water that divide the land into Asia, Europe, and Africa. Usually the Mediterranean divides Europe and Africa, the Tanais or Don River divides Europe and Asia, and the Nile divides Asia and Africa. As we will see below, the cartographer of the map in ff. 7v–8r identifies the bodies of water that separate the continents differently.

- f. 8v: The geographical treatise ends with an account of the four different functions or themes that a *mappamundi* can have; the treatise on the Apocalypse begins on the lower part of the folio.

2 ff. 8v–12v, The Treatise on the Apocalypse

- f. 8v: The treatise on the Apocalypse begins with a simple map showing the world from the birth of Christ to the year 639, which is when the author holds that Muhammad began his career (though this is not the traditional date).

- f. 9r: A detailed map showing the world from 639 to 1514, particularly illustrating the spread of Islam, which is said to be in all parts of the world except Europe, and Europe is said to be very weak. In the text surrounding the map the author says that it is based on the Book of Revelation from chapter 12 to the beginning of chapter 19.

- f. 9v: A prophecy map showing the world from 1514 to 1570, when Sword of Islam has conquered Europe and reached all the way to the edges of the earth, but not to the islands in the ocean. The author says that the map is based on Revelation 19:5–11.

- f. 10r: A symbolic prophecy map showing the world from 1570 to 1600. The series of small-to-large triangles in the center represent the increase of Antichrist, and the author says that the other spikes that radiate to the edges of the earth represent the ten horns of the beast of Daniel 7—though there are actually eleven spikes depicted. Ten kings (*Rex Egipti*, *Rex indie*, etc.) are indicated at the edge of the map.

- f. 10v: A prophecy map of the world from 1600 to 1606. Antichrist is indicated at the center of the earth, in Jerusalem, and the four peninsulas that jut into the ocean are symbolic geographical representations of the four horns of Antichrist by which he will persuade people to join him (Deceit, Cunning, Cruelty, and Imitation of the Deity). The ten tribes of Israel are shown traveling from their island to Jerusalem to join Antichrist.

- f. 11r: A prophecy map of the world from 1606 to 1661 (though as we will see, the latter date is an error for 1651). The situation has changed completely: the center of the earth is now occupied by the flag and law of Christ, which will be raised and worshipped throughout the world. At the bottom of the folio there is a second map that shows the surface of the earth devoid of features and place names, and the circumfluent ocean empty as well. The text nearby explains that all of the features of the earth have been burned away.

- f. 11v: An illustration of the Last Judgment. The gates of Paradise are at the top, the elect in a curved band just below, then Jesus and the Apostles in the sky; below on the earth is the Mount of Olives, then the damned in a curved band standing above the abyss that leads to Hell. The center of the earth does not coincide with that of the water, as is also the case in the maps in ff. 6v–7r and 7v–8r.

- f. 12r: Description of the Last Judgment, Resurrection, and renewal of the earth. At the bottom of the page there is a map of a featureless earth which the text says represents the world after the Last Judgment.

- f. 12v: A diagram of the relative diameters of the earth and Hell. The text discusses their dimensions, and the crystallization of the earth following the Last Judgment and its role in separating the blessed and the damned. At the bottom of the page there is a passage about the three Babylonias very similar to that on f. 1r.

3 ff. 13r–18r, Heterogeneous Section on Astronomy and Geography

- f. 13r: The cosmos is depicted in a diagram of the spheres labeled *hec figura appellatur ffabrica mundi*, from the sphere of the earth out to the Empyrean.

- f. 13v: Above, a diagram showing the sphere of the earth eccentric with the sphere of water, with an indication of the course of the sun around the earth and discussion of their relative sizes. Below, a diagram of the relative sizes of a star, the earth, and the moon.

- f. 14r: A diagram of ten climatic zones overlaid on a copy of the map of the waters of the earth in ff. 7v–8r. The text lists various places and the climates in which they are located, and also the distances between a few places.

- f. 14v: A diagram of nine climatic zones, with a table supplying the elevation of the North Pole, the length of the longest day, and the width of each climate in German miles.¹⁰

- f. 15r: A map showing seven climatic zones and also the locations in which the Apostles preached (see the list of these places in f. 5v). Below the map,

10 Johannes de Sacrobosco in his *De sphaera*, book 3, supplies the elevation, *dies prolixior*, and measurement in *miliaria* of each climate, but for a seven-climate system, and thus his numbers are very different than those in the Huntington manuscript. It seems that such a table originally accompanied Roger Bacon's *Opus maius*: see Roger Bacon, *The 'Opus majus' of Roger Bacon*, ed. John Henry Bridges (London: Williams and Norgate, 1900), vol. 1, p. 296: *Ostendam etiam cum latitudine cujuslibet climatis quot miliaria quodlibet continet in se, & quot gradus in coelo cuilibet respondeant, & quot horas habet dies prolixior.*

under the heading *Occidens*, there is a list of several regions, islands, and cities, together with indications of which climates they are located in.

- f. 15v: The list of places with their climates continues, with a short discussion of Gog and Noah's Ark.
- f. 16r: A summary of world history, emphasizing the Last Days. History had three parts: the first ended with the Flood, the second coincided with Babylon, and the third with Rome. The birth of Muhammad coincides with the beginning of Rome's decline, and the global rule of Islam will be ended by the Last Roman Emperor and Jesus Christ. Then Antichrist will arise and come to power, gaining followers through Deceit, Cunning, Cruelty, and Imitation of the Deity (see f. 10v). He will rule for 1000 years—a very unusual duration for his reign in the Apocalyptic tradition—with only Enoch and Elias, who will return from Paradise, preaching against him; they then rise to Heaven again. Antichrist promises to do the same and rises above the Mount of Olives, but Jesus kills him and begins his reign.
- f. 16v: Two genealogical tables, one from Adam to Jesus (ignoring the lineage through Nathan), and one from Adam to David.
- f. 17r: Continuation of the second genealogical table, splitting now in two, and tracing on the left, the line from David through Nathan to Heli (and then we are to understand that Mary, who is listed on the right, was the daughter of Heli); and on the right, the line from David through Solomon to Jacob, ending with Jesus.
- ff. 17v–18r: Discussion of the Four Kingdoms of the world,¹¹ with details on symbols in the prophetic books of the Bible.
- f. 18v: blank.

4 ff. 19r–25v, Treatise on Astrological Medicine

- f. 19r: The beginning of the texts on astrological medicine. The section opens with two canons from Bartholomäus Mariensüss.¹² The first is headed *Canon primus de fleubotomia*, “First precept on phlebotomy,” and begins

11 See H. H. Rowley, *Darius the Mede and the Four Empires in the Book of Daniel: A Historical Study of Contemporary Theories* (Cardiff: University of Wales Press Board, 1935); Joseph Ward Swain, “The Theory of the Four Monarchies: Opposition History under the Roman Empire,” *Classical Philology* 35.1 (1940), pp. 1–21; and Janet L. R. Melnyk, “The Four Kingdoms in Daniel 2 and 7: Chapters in the History of Interpretation,” Ph.D. Dissertation, Emory University, 2001.

12 On these canons see David Juste, *Les manuscrits astrologiques latins conservés à la Bayerische Staatsbibliothek de München* (Paris: CNRS éditions, 2011), p. 161; they were printed in

*Notandum primo volens eligere dies aptos pro fleubotomia primo eligat signa ignea que sunt aries et sagittarius....*¹³ The second, which also begins on this folio, is headed *Canon zus de farmacia id est medicina*, and begins *Ypocrates ait Cecus medicus est qui astronomiam nescit nam si dabit medicinam*.¹⁴

- f. 19v: The text on medicine continues from the previous folio.
- ff. 20r–21r: The text begins *Incipit messehallach de coniunctionibus*, and comes from Messahallah's *Epistola Messahalae de rebus eclipsium, et de coniunctionibus planetarum*, translated by Joannes Hispalensis, which was later printed in *Liber quadripartiti Ptholemei* (Venice: Octavianus Scotus, Bonetus Locatellus, 1493), and edited by Joachim Heller in *Messahalae antiquissimi ac laudatissimi inter Arabes astrologi, libri tres* (Nuremberg: Apud Ioannem Montanum & Vlricum Neuberum, 1549), Fiii-Giii verso.¹⁵

Johannes Regiomontanus, *Ephemerides* (Venice: Ratdolt, 1481), on [a8v]–[a9v]. We thank David Juste for these references.

- 13 A text with essentially the same incipit (*Volens eligere dies...*) also appears in Augsburg, Staats- und Stadtbibliothek, 2^o Cod. 208, ff. 2r–10v: see *Handschriftenkataloge der Staat- und Stadtbibliothek Augsburg* (Wiesbaden: O. Harrassowitz, 1974–1993), vol. 3, pp. 209–216, at 211; Vienna, Österreichische Nationalbibliothek, MS 5184, ff. 8v–10r: see Grażyna Rosińska, *Scientific Writings and Astronomical Tables in Cracow: A Census of Manuscript Sources (xivth–xvth Centuries)* (Wrocław: Ossolineum, Polish Academy of Sciences Press, 1984), p. 455, no. 2373; and in Munich, Bayerische Staatsbibliothek, CLM 24865, ff. 25r–28v: see Lynn Thorndike and Pearl Kibre, *A Catalogue of Incipits of Mediaeval Scientific Writings in Latin* (London: Mediaeval Academy of America, 1963), col. 1707F. This manuscript is listed in *Catalogus codicum manu scriptorum Bibliothecae regiae monacensis* (Munich: sumptibus Bibliothecae, prostat in Libraria Palmiana, 1858–2000), vol. 4, part 4, p. 150, no. 1533, as a fifteenth-century manuscript, *Calendarium cum excerptis ex Johanne de Monte regali et aliunde (f. 29 Tabula facta a. 1466 ad meridianum Patauii)*.
- 14 This same text occurs in London, British Library, Harley MS 2269, an astrological compendium from the first half of the sixteenth century, on ff. 91r–91v.
- 15 On Messahallah see David Pingree, “Māshā’allāh,” in Charles Coulston Gillispie, ed., *Dictionary of Scientific Biography* (New York: Scribner, 1970–), vol. 9, pp. 159–162. On the *De rebus eclipsium* see F. J. Carmody, *Arabic Astronomical and Astrological Sciences in Latin Translation: A Critical Bibliography* (Berkeley and Los Angeles, 1956), pp. 30–32; and Lynn Thorndike, “The Latin Translation of Astrological Works by Messahala,” *Osiris* 12 (1956), pp. 49–72, at 62–66, including a list of manuscripts of the work. There is an English translation and discussion of the Hebrew version of the work in B. Goldstein, “The Book of Eclipses of Masha'allah,” *Physis* 6 (1964), pp. 205–213; and in Abraham Ibn Ezra, *The Book of the World: A Parallel Hebrew-English Critical Edition of the Two Versions of the Text*, ed. and trans. Shlomo Sela (Leiden and Boston: Brill, 2010), pp. 240–259. There is an English translation of the Latin version in Benjamin N. Dykes, *Astrology of the World* (Minneapolis: Cazimi Press, 2014), vol. 2, pp. 145–155.

• ff. 21r–21v: The text begins *Miliaria ptholomei de magnitudinibus corporum celestium et distantis orbium sunt hec redacta ad theutonica miliaria secundum quod 60 agri faciunt miliare*, and ends *utrum tam magne sint vel tam distent vide in passionale de ascensione domini Raby moyses dicit ibi et cetera. Sed oportet addiscentem credere*. We have not succeeded in determining the source. Ptolemy does supply the distances between the planetary spheres in his *Planetary Hypotheses*, but this work was unknown during the Middle Ages.¹⁶ The reference to *Raby moyses* is to Moses Maimonides (1135–1204), specifically to a passage about the distances between the planetary orbs in Jacobus de Voragine's *Legenda aurea* that Jacobus attributes to Maimonides.¹⁷ On f. 21r of HM 83 the circumference of the earth is given as *9100 miliaria theutonica*, but on f. 12v our author indicates that it is *8000 miliarium teutonicorum*, which indicates that he is using a different source than in the earlier passage (it is worth mentioning that the two passages were written by different scribes).

• f. 21v: A brief text *De virtute et proprietate planetarum*, “On the virtues and properties of the planets.” We have not been able to determine the source of the text on the first half of the folio; the text on the second half, which begins *Notandum quod 12 sunt signa*, is excerpted and paraphrased from Robert Grosseteste, *De impressionibus aeris seu de prognosticatione*.¹⁸

16 For the Greek text of Book 1 of the *Planetary Hypotheses* with a German translation, and a German translation of Book 2 (which does not exist in Greek, only in Arabic), see J. L. Heiberg, ed., *Claudii Ptolemaei opera quae exstant omnia* (Leipzig: Teubner, 1907), vol. 2, *Opera astronomica minora*, pp. 69–145. For discussion of the work see Noel M. Swerdlow, “Ptolemy’s Theory of the Distance and Sizes of the Planets: A Study of the Scientific Foundations of Medieval Cosmology,” Ph.D. Dissertation, Yale University, 1968; and Albert Van Helden, *Measuring the Universe: Cosmic Dimensions from Aristarchus to Halley* (Chicago: University of Chicago Press, 1985), pp. 21–25. The Arabic version of the text has been translated into English by Bernard R. Goldstein, “The Arabic Version of Ptolemy’s ‘Planetary Hypotheses,’” *Transactions of the American Philosophical Society* 54.4 (1967), pp. 3–55; and into French by Régis Morelon, “La version arabe du *Livre des Hypothèses* de Ptolémée,” *Mélanges Institut Dominicain d’Études Orientales du Caire* 21 (1993), pp. 7–85.

17 See Görg K. Hasselhoff, “Maimonides in the Latin Middle Ages: An Introductory Survey,” *Jewish Studies Quarterly* 9.1 (2002), pp. 1–20, at 11–13; Jacobus de Voragine, *Legenda aurea*, ed. Giovanni Paolo Maggioni (Florence: SISMEL and Edizioni del Galluzzo, 1998), sect. 67, pp. 483–484; and Jacobus de Voragine, *The Golden Legend or Lives of the Saints*, trans. William Caxton, ed. F. S. Ellis (New York: AMS Press, 1973), vol. 1, p. 111.

18 The text of Robert Grosseteste, *De impressionibus aeris seu de prognosticatione*, is supplied in *Die Philosophischen Werke des Robert Grosseteste Bischofs von Lincoln*, ed. Ludwig Baur (Münster: Aschendorff, 1912), pp. 41–51, with the passage in the Huntington manuscript at 42–43. For discussion of the work see Samuel Harrison Thomson, *The Writings of Robert Grosseteste, Bishop of Lincoln, 1235–1253* (Cambridge, England: The University Press, 1940),

• f. 22r: Text and two tables from Robert Grosseteste, *De impressionibus aeris seu de prognosticatione*,¹⁹ together with a circular diagram that indicates which signs of the zodiac correspond to which parts of the body—a diagrammatic rendering of the Zodiac Man.²⁰ This material does not come from this same work by Grosseteste.

• ff. 22v–24v: Text beginning *De divisione corporis humani secundum planetas in natura eorumdem propria et cum egritudinibus sibi propriis*, which consists of excerpts from William of Marseille, *De urina non visa* (1219).²¹

• f. 25r: Text under the heading *De diebus criticis* with a large square diagram for determining one's horoscope; source undetermined.

• f. 25v: Text ends: *...et tristicie nunc aspicit ascendens est quod locorum gaudii saturni, Saturnus enim gaudet in lamentacione planctu et tribulatione*. This text seems to be a paraphrase of a passage in the *De astronomia tractatus x* of Guido Bonatti, the celebrated thirteenth-century astronomer and astrologer.²²

pp. 103–104, which includes a list of manuscripts; to that list should be added Harvard University, Houghton Library, MS Lat 361, ff. 104r–105r, thirteenth century. Also see Ezio Franceschini, “Sulla presunta datazione del ‘De impressionibus aeris’ di Roberto Grossetesta,” *Rivista di filosofia neo-scolastica* 44 (1952), pp. 22–23.

19 This text from Grosseteste's *De impressionibus aeris* is supplied in *Die Philosophischen Werke des Robert Grosseteste Bischofs von Lincoln* (see Ch. 1, n. 18), pp. 43–44.

20 See Charles West Clark, “The Zodiac Man in Medieval Medical Astrology,” Ph.D. Dissertation, University of Colorado at Boulder, 1979; and the same author's “The Zodiac Man in Medieval Medical Astrology,” *Journal of the Rocky Mountain Medieval and Renaissance Association* 3 (1982), pp. 13–38.

21 See William of Marseille, *Guillaume l'Anglais, le frondeur de l'uroscopie médiévale (XIII^e siècle): édition commentée et traduction du ‘De urina non visa’*, ed. and trans. Laurence Moulinier-Brogi (Geneva: Librairie Droz, 2011), pp. 144–148 and 254. The text of this chapter is also supplied in Graziela Frederici Vescovini, “I programmi degli insegnamenti del collegio di medicina, filosofia e astrologia, dello statuto dell'Università di Bologna del 1405,” in Jacqueline Hamesse, ed., *Roma, magistra mundi: itineraria culturae medievalis: mélanges offerts au Père L.E. Boyle à l'occasion de son 75^e anniversaire* (Louvain-la-Neuve: Fédération des Instituts d'Etudes Médiévales, 1998), vol. 3, pp. 193–223, esp. 213–214. For discussions of the work beside the very thorough one offered by Moulinier-Brogi in his introduction see Lynn Thorndike, *A History of Magic and Experimental Science* (New York: Macmillan, 1923–58), vol. 2, pp. 485–487; and Roger French, “Astrology in Medical Practice,” in Luis García Ballester et al., eds., *Practical Medicine from Salerno to the Black Death* (Cambridge and New York: Cambridge University Press, 1994), pp. 30–59, esp. 44–48.

22 See *Guidonis Bonati forliviensis mathematici De astronomia tractatus x. universam quod ad iudiciariam rationem Nativitatum, Aëris, Tempestatum, attinet, comprehendentes* (Basel, 1550), Pars prima, cols. 92–93, “In quibus domibus Planetæ gaudent Cap. xi”; translated

Some aspects of the arrangement of material in the manuscript are difficult to understand. The manuscript has three well-defined parts: the geographical material on ff. 1r–8v, which ends with a discussion of the four different functions of *mappaemundi*; the treatise on the Apocalypse on ff. 8v–12v; and the material on astrological medicine on ff. 19r–25v. The geographical material on ff. 1r–8v may be taken as a sort of preface to the apocalyptic section, describing the world's geography before it underwent dramatic changes in the Last Days, and reviewing the Four Kingdoms of the world (f. 5v) and also the missions of the Apostles (ff. 5v–6r). The role of the heterogeneous section on astronomy and geography on ff. 13r–18r is less clear. On the one hand, the astronomical material makes the section a good transition to the material on astrological medicine, but on the other, there are strong connections between the geographical material in this section and that in ff. 1r–8v: for example, the map of the Ptolemaic climatic zones on f. 14r (see Fig. 4.16) is clearly based on the map of the world's waters on ff. 7v–8r (see Fig. 4.15 below), and the map of the locations where the Apostles preached on f. 15r is closely related to the list of the places that the Apostles preached on ff. 5v–6r. For convenience, in what follows, the geographical material in these two sections will be treated together.

into English in Benjamin N. Dykes, *The Book of Astronomy* (Golden Valley, MN: Cazimi Press, 2007), vol. 1, pp. 140–141. On Bonatti see Cesare Vasoli, “L’astrologo forlivese Guido Bonatti,” *Atti del convegno internazionale di studi danteschi* (Ravenna, 10–12 settembre 1971) (Ravenna: Longo, 1979), pp. 239–260; and Bernhard Dietrich Haage, “Bonatti, Guido,” in Wolfgang Stämmler and Karl Langosch, eds., *Die deutsche Literatur des Mittelalters: Verfasserlexikon* (Berlin and New York: de Gruyter, 1978–), vol. 11, cols. 269–270.

The Historical Context: Lübeck in the Fifteenth Century

The city of Lübeck was founded on an island in the river Trave by Adolf II, Count of Schauenburg and Holstein, in 1143. Its position on the Trave, with easy access to the Baltic, gave it great potential as a center of trade, and that potential was realized through its leadership of the Hanseatic League beginning in the fourteenth century, and its role as a node in the Baltic trade network that stretched from Novgorod in the east to London and Flanders in the west, and included Norway and Sweden to the north. Timber, fur, honey, and grain flowed from east to west, while cloth and manufactured goods flowed east, and copper ore, iron ore, and fish came south.¹

Lübeck was at the peak of its power during the fifteenth century, in the latter part of which (1486–88) the texts in Huntington HM 83 were composed. The city's politicians were widely respected and helped resolve a number of international disputes, and the city's dynamic mayor, Hinrich Castrop (1419–1488), strengthened the city's walls, improved its harbor, and in 1478 organized what was perhaps the most spectacular pageant the city had ever seen to honor the arrival of Albert, Duke of Saxony.²

- 1 On the topography and growth of the city see Manfred Gläser, "The Emergence of Lübeck as a Medieval Metropolis," in Nils Engberg et al., eds., *Archaeology of Medieval Towns in the Baltic and North Sea Area* (Copenhagen: The National Museum, Danish Middle Ages & Renaissance; and Odense: University Press of Southern Denmark, 2009), pp. 79–92. There is a good discussion of the nature of the Hanseatic League and Lübeck's role as its head in Stuart Jenks, "A Capital without a State: Lübeck *caput totius hanze* (to 1474)," *Historical Research* 65.157 (1992), pp. 134–149; for brief discussion of Lübeck in the context of northern European trade see Michael Postan, "The Trade of Medieval Europe: The North," in Edward Miller, Cynthia Postan, and Michael M. Postan, eds., *The Cambridge Economic History of Europe*, vol. 2, *Trade and Industry in the Middle Ages* (Cambridge: Cambridge University Press, 1987), pp. 168–305 *passim* and esp. 237–239 and 277–279. There is an extensive account of Lübeck in the Middle Ages in Erich Hoffmann, "Lübeck in Hoch- und Spätmittelalter: Die große Zeit Lübecks," in Antjekathrin Grassmann, ed., *Lübeckische Geschichte* (3rd edn. Lübeck: Schmidt-Römhild, 1997), pp. 79–340.

Dutton & Co., 1914), pp. 380–383; also see Gerhard Neumann, *Hinrich Castrop: Ein Lübecker Bürgermeister aus der zweiten Hälfte des 15. Jahrhunderts* (Lübeck: Staatsarchiv, 1932) (= Veröffentlichungen zur Geschichte der Freien und Hansestadt Lübeck,

A letter written in about 1453 or a little later by a doctor to a patron on the city council was preserved by the Councilman Simon Batz, who was active from 1457–1464, and offers a glowing description of the city, and it is worth citing the description in full:³

Set hercle unum scio, ut hic locus egregius a divina terrenaque imperiali maiestate plerisque dodatus est muneribus. Hic sunt fluenta limpidissima, aer serenissimus, terra opima, nemora iocundissima, pomeria florentissima, edificia pulcherrima, platee fecibus semper purgate, presul devotissimus, clerus disciplinatus, beneficia grassa, templa politissima, in quibus divine laudes perpetim summo cultu peraguntur, turres altissime que suis aureis fulgoribus intuencium oculis eminus choruscant, cenobia preclara omni religione fulgencia, bibliotece numero librorum ditissime, divini verbi precones disertissimi, mercatores in negociacionibus studiosissimi, cives omnium rerum opulentissimi: Et quod superest, policia reipublice ornatissima, civitas omnibus defensionibus munitissima, totaque gens apprime pacifica. Sed taceo de pulchro femineo sexu, cuius delectabilis intuitus lassata ingenia vires cogit recuperare. Venus enim ac Dyana nostras Lubicensis in pulchritudine antecedunt; illas enim vero morum venustas, personarum proceritas, melliflua eloquia, roseus lilialisque aspectus opulentissime decorant. Sagax quippe natura in earundem nobili creacione penitus in nullo erravit. Porro ut summarie proferam: quidquid boni ac pulchri est hic

Jahrhunderts," in *Bernt Notke. Das Triumphkreuz im Dom zu Lübeck* (Kiel: Ludwig, 2010), pp. 35–48, at 35–36. The English translation here is ours.

splendidus copiosiusque quam in ceteris invenitur locis. Alter quoque paradus non inmerito poterit appellari.

The one thing I know, by Hercules, is that this excellent place is provided by the divine and the earthly imperial majesty with many gifts. Here there are the clearest streams, the brightest air, the best soil, graceful groves, flourishing parks, beautiful buildings, streets always free of filth, a godly bishop, well-ordered clergy and rich benefices, beautiful churches where the praise of God is always sung in the most splendid manner, high towers, whose golden luster shines in the eyes of beholders from afar, and famous monasteries shining with religion, libraries very rich in books, and eloquent preachers of the divine word, merchants very zealous in their businesses, and citizens wealthy in all things. What is more, the state government is highly honored, the city is well protected by ramparts of all kinds, and the population is very peaceful. But I say nothing of the beautiful women, whose delectable appearance causes one's tired spirits to recover energy. Venus and Diana may exceed the women of Lübeck in beauty, but the city's women are abundantly endowed with charming manners, height, mellifluous eloquence, and the aspect of roses and lilies. Indeed, wise Nature made not the slightest error in their noble creation. To sum up: whatever is good and beautiful is present here more splendidly and copiously than in other cities, so that Lübeck can rightly be called a second paradise.

Of course texts praising cities, *laudes urbium*, were a well-established literary genre,⁴ but in the case of Lübeck in the second half of the fifteenth century, the city seems to have merited this praise: so concludes Antjekathrin Grassmann at the end of her article just cited. There is a somewhat less encomiastic, but still enthusiastic description of the city in Hartmann Schedel's *Liber*

4 See J. K. Hyde, "Medieval Descriptions of Cities," *Bulletin of the John Rylands Library* 48 (1965–1966), pp. 308–340; reprinted in J. K. chronicarum of 1493,⁵ and Johannes Schöner in 1515 describes the city as *negociatorio locus celeberrimus*, “a place very well known to the businessman.”⁶

It is interesting that the author of HM 83 would write about the Apocalypse in a city that at the time was a “second paradise.” While plagues and other events such as the fall of Constantinople to the Turks could incline authors to thoughts of the end of time,⁷ authors are not merely the products of their surroundings: for example, although he lived in a time of “plague, famine, extreme weather, earthquakes, a violent civil war, and barbarian invasions,” Andrew of Caesarea (563–637) in his *Commentary on the Apocalypse* concluded that the end of the world was *not* approaching.⁸ It is also worth keeping in mind Bernard McGinn’s observation that “Apocalypticism has always been charac-

terized by an intricate mixture of optimism and pessimism.”⁹ The choice of subject by the author of HM 83 may reflect a pious thinker uninfluenced by his prosperous surroundings; it may also indicate a man with a different life experience than most other citizens of Lübeck, a possibility that will be explored below.

Lübeck did not have a university in the Middle Ages, but printing was established reasonably early in the city, in 1474, four years after the technology had reached Nuremberg, and two years before it reached Rostock and London, for example. One of the first books published in the city was the anonymous *Rudimentum novitiorum*, printed by Lucas Brandis, which contains maps, and which we will discuss in more detail below.¹⁰ The encomium of Lübeck cited above mentions the “rich libraries” of the city’s monasteries, and we do know that there were at least two extensive private libraries in the city. One belonged to Simon Batz, the councilman and humanist who preserved the letter containing the encomium;¹¹ and the other belonged to the vicar Conrad Stenhop: in the Universitätsbibliothek Rostock there are twenty-nine folio incunabula, all of them on juridical subjects, which Stenhop illuminated himself. Given that his library must have included theological works as well, Stenhop had an unusually large collection for the time.¹² Additional information about

libraries in Lübeck in the fifteenth century would certainly be welcome, but it does seem that the author of НМ 83 would have had access to ample bibliographic resources for researching and composing his book.

p. 97. Also see Nilüfer Krüger, *Conradus Stenhop: Geistlicher – Gelehrter – Sammler; Inkunabeln der Universitätsbibliothek Rostock* (Rostock: Universität, 1998).

The Author

The author of the works in HM 83 does not indicate his name, but he does give some clues about his identity. As indicated above, the works in the manuscript seem to have been composed in Lübeck, so we can confine our attention to candidates from that city.¹ Of course the fact that HM 83 includes a substantial and apparently original section on the Apocalypse suggests that the author was a man of the cloth, and this likelihood seems confirmed by his indication of his purpose in writing his book (on f. 12v): *Arbitror ergo quod harum figurarum firma fides et frequens consideratio efficacius hominem retraherent a peccatis quam multa bona verba*, “I believe therefore that a firm faith in and frequent contemplation of these diagrams will more effectively restrain a man from sins than would many good words.” That is, the stated aim of the work is religious edification, while its implicit purpose is preparation for the Last Judgment.

On the same folio (f. 12v), which contains a diagram of the relative diameters of earth and of Hell, the author writes, *Hanc figuram calculavi secundum regulas geometrie ex supposita quantitate ambitus terre 8000 miliarium teutonicorum...*, “I calculated this diagram according to the rules of geometry from the supposed circumference of the earth, 8000 German miles...,” and this statement implies that he had at least some training in mathematics.

The author’s most interesting and revealing statements about himself are on f. 8v, in his discussion of the different purposes of *mappaemundi*. The following passage reveals that the author had experience making maps and had thought about the problems involved, particularly the lack of space for all of the place names; had traveled to the Holy Land; had read at least one travel book; and had studied other *mappaemundi*, including their sources. As the Latin is supplied below, we quote only our English translation here:

1 In our search for the author of the works in HM 83 we consulted Rhiman A. Rotz, “Profiles of Selected Lubeck Citizens, 1360–1450, for Investigations into Political and Social History,” type-written manuscript, on deposit in the Archiv der Hansestadt Lübeck, 1975, Bestand 9.1, Signatur L X III 12_1. Rotz’s work would offer a greater chance of including the author of the works in HM 83 if it extended later into the fifteenth century, but it does include information about the travels of the people listed. We did not find any good candidates among these profiles.

And even if the first painter of a map put the true distance of places, yet <his> successors, one after another, significantly transposed the places and distances, forced by the narrowness of space in the illustrated map, where even one place name written in full would force another to an incorrect location. Because of this I decided to write the whole names of places each opposite to the preceding <one?>, and in the map to write just the beginnings of the names, so that the narrowness in the map will not restrict the names and places because of their position, as may be seen in the map.... I have been in the land of pilgrimage in which there are no such gatherings of monstrous men as are depicted there in maps. Because of this, I argue that such men are only in all other parts of the world, and that consequently, the common *mappamundi* is in that part once again mistaken. However, in certain islands there are monstrous men whom I read in a travel book are born as follows. A woman gave birth to a monstrous female child whom she was ashamed to raise, and she wished to kill her, so she cast her away on a certain deserted island. In another place, another woman gave birth to a male monster, whom for the same reason, by an accident of fortune, she cast away on the same island. Through God's will and care, they were brought up, and when they were adults, they came together and thereupon they generated monstrous men in that island. And the painter of the first illustrated map thus painted monstrous men in that one island, or rather in many islands. To later map painters, such monstrous men and other things still more marvelous painted everywhere in all of the islands in the ocean <and> in the edge of the mainland appeared to be a <mere> decoration of maps. Thinking nothing of the falsehood, they painted them in common maps in the circuit of islands in the ocean.... From the beginning, *mappaemundi* were diversely painted from Holy Scripture, chronicles, and pagan cosmography.

This fascinating passage raises many interesting questions, for example: What were the *mappaemundi* that showed monstrous races in the Holy Land? And what is the travel book that gives this account of the generation of monsters on islands? These and other questions that the passage raises will be discussed below, but suffice it to say here that the passage establishes the author as a man with abundant experience studying *mappaemundi*. It is worth pointing out that the author says that he “was in the land of pilgrimage” (*eram in terra peregrinationis*), but not that he was a pilgrim—though he does not explicitly say that he was not a pilgrim, either.

With regard to the author's journey to the Holy Land, Lübeck was a common stopping point of northern European pilgrims going to Santiago de Compostela in Spain, and in fact a hostel for pilgrims, named for St. Gertrude of Nivelles, patron saint of travelers, was built in the city in 1360.² There was no similar building in Lübeck for pilgrims to the Holy Land, and the expense and difficulties of that voyage to the east entailed that the number of pilgrims traveling there from Germany was not high.³ But we do have records of several residents of Lübeck who made the journey at such a date that it is at least possible that HM 83 was composed by one of them (or by a man that one of them had sent to the Holy Land in his place).⁴ The standard route to the Holy Land from Germany was overland to Venice, and then by ship from Venice to Acre.⁵

Green, 1787), pp. 533–540; Heinrich Asmus, *Leitfaden zur Lübeckischen Geschichte: Nebst einer Sammlung Legenden, Volkssagen, Märchen und kurzer Beschreibungen einiger Merkwürdigkeiten der freien*

We have no additional evidence that would single out any of the men in the preceding list as a candidate for author of HM 83. Moreover, it is possible that the author of HM 83 moved to Lübeck after visiting the Holy Land, in which case he would not appear on this list—and there also might simply be no record of his voyage.

However, there was another man from Lübeck who spent time in the Holy Land and who does seem like a good candidate. In the second half of the fifteenth century, a man from Lübeck named Baptista, a doctor, was in charge of caring for pilgrims at the Franciscan monastery on Mount Zion; he had been appointed to this duty by Pope Pius II.¹³ Baptista was evidently a very capable man, for in addition to his job caring for pilgrims, he supervised repairs to the roof of the Church of Bethlehem.¹⁴ Pius II was Pope from 1458 to 1464, so Baptista was appointed during that interval; he treated Felix Fabri on Mount

Hansestadt Lübeck (Lübeck, 1834), pp. 115–116; Theodore Hach, *Die Anfänge der Renaissance in Lübeck* (Lübeck: H. G. Rahtgens, 1889), pp. 4–5; Emil F. Fehling, *Lübeckische Ratslinie von den Anfängen der Stadt bis auf die Gegenwart* (Lübeck: Max Schmidt-Römhild, 1925), p. 79, no. 551; and Johannes Baltzer, Friedrich Bruns, and Huigo Rathgens, eds., *Die Bau- und Kunstdenkmäler der Freien und Hansestadt Lübeck*, vol. 4, *Die Klöster: die kleineren Gotteshäuser der Stadt; die Kirchen und Kapellen in den Außengebieten; Denk- und Wegekreuze und der Leidensweg Christi* (Lübeck: Nöhring, 1928), pp. 623–627.

- 13 Meinardus, “Mittelalterliche Heilig-Land-Pilger” (see Ch. 3, n. 4), pp. 17–18, relying on Luke Wadding, ed., *Annales Minorum seu trium ordinum a S. Francisco institutorum* (Florence: Quaracchi, 1931–), vol. 14 (covering the years 1472–1491), the section for the year 1478, p. 194, no. 8; and Guido Farris and Albert Storme, *Ceramica e farmacia di San Salvatore a Gerusalemme* (Genoa: Sagep, 1982), p. 22, who write: “Como infermiere del convento, il papa Pio II inviò il frate Battista da Lübeck, che aveva il grado di dottore, e che la cronaca qualifica molto esperto in medicina.” Farris and Storme cite as sources Felix Fabri and Paul Walther (see just below) and a note in *Le Voyage de la sainte cyté de Hierusalem*, which cites Calahorra—see the next note. On Baptista also see Otto F. A. Meinardus, “Die Franziskaner in Bethlehem: Bruder Battista aus Lübeck,” *Zeitschrift des Vereins für Lübeckische Geschichte und Altertumskunde* 71 (1991), pp. 349–351; and Prescott, *Jerusalem Journey* (see Ch. 3, n. 5), pp. 121–122, 144–145, and 202.

- 14 Juan de Calahorra, *Chronica de la provincia de Syria, y Tierra Santa de Gerusalén: contiene los progressos, que en ella ha hecho la religion serafica, desde el año 1219 hasta el de 1632* (Madrid: Por Iuan Garcia Infançon, 1684), pp. 297–298: “No obstante esto era el Soldan muy afecto à los Religiosos; y assi le permitió, que reparasse muy à su satisfacion aquel Santissimo Templo, el qual bolvió à cubrir, como antes estaua, de planchas de plomo, sirviendose de las antiguas, y añadiendo aquellas que fueron necessarias de nuevo. Para todo esto le fue de grande alivio un Religioso Aleman, llamado Fray Baptista de Lubige, Varón muy ingenioso, y en la medicina peritissimo, a qual avia graduado de Doctor, en la dicha facultad, el Pontifice Pio Segundo, y la avia embiado à Tierra Santa para que curasse à los Religiosos.”

Zion in 1482,¹⁵ and also Paul Walther around the same time,¹⁶ so Baptista held his post on Mount Zion for approximately twenty years. Given that HM 83 has a substantial section on medicine, and that the author had been to the Holy Land, Baptista must be considered a strong candidate for the author of the works in the manuscript. Further, it is worth mentioning that Enea Silvio Piccolomini (later Pope Pius II, who appointed Baptista to his post) had a strong interest in geography, and wrote geographical treatises on Europe and Asia.¹⁷ Of course not everyone who knew Pope Pius II wrote about geography, but it is interesting that one of the very few people who we do know was connected with Baptista was a geographer. If Baptista did return home to Lübeck after his years in the Holy Land (which we do not know), and if it was he who composed the works in HM 83, this was a project of his older years.

Two other statements by the author that relate to the Holy Land are particularly illuminating. On f. 2r of the manuscript, we read:

-
- 15 See Felix Fabri, *The Wanderings of Felix Fabri*, in *The Library of the Palestine Pilgrims' Text Society* (London: Palestine Pilgrims' Text Society, 1887; New York: AMS Press, 1971), vols. 7–10, in vol. 9, p. 113.
- 16 See Paulus Walther, *Fratr̃is Pauli Waltheri Guglingensis Itinerarium in Terram Sanctam et ad Sanctam Catharinamm*, ed. M. Sollweck (Tübingen: Litterarischer Verein in Stuttgart, 1892), pp. 136–137: *Post hoc in festo sancti Petri cathedra [22 Febr.], quod erat in sabato sequenti scl. ante Reminiscere, visitavit me dominus misericorditer ex alto cum colica passione, que me tantum torquebat per tres dies et noctes, quod suspicabar me exalare spiritum. Tandem per devotas preces effusas specialiter pro me ab omnibus fratribus recordatus est dominus clementie sue et per suam misericordiam mediante medicina, quam studiose devotus frater Baptista adhibuit, tranatulit a me dominus talem vehementem et horribilem dolorem adiciens vite mee adhuc aliquos dies, ut me emendarem.* On Paul see Kristian Bosselmann-Cyran, "Walther, Paul (von Guglingen)," in Wolfgang Stammeler and Karl Langosch, eds., *Die deutsche Literatur des Mittelalters: Verfasserlexikon* (Berlin and New York: de Gruyter, 1978–), vol. 10, cols. 655–657.
- 17 On Pius II's interest in geography see Alfred Willi Berg, *Enea Silvio de' Piccolomini (Papst Pius II) in seiner Bedeutung als Geograph: Ein Beitrag zur Geschichte der Erdkunde im Quattrocento* (Halle a.S.: Buchdruckerei des Waisenhauses, 1901); Nicola Casella, "Pio II tra geografia e storia: La 'Cosmografia,'" *Archivio della Società Romana di Storia Patria* 95 (1972), pp. 35–112; and Luigi Guerrini, "Un ordine ancora imperfetto. Ricerche sulla genesi degli interessi geografici e storici di Enea Silvio Piccolomini (1430–1445)," in *Un pellegrinaggio secolare: due studi su Enea Silvio Piccolomini* (Rome: Edizioni di storia e letteratura, 2007), pp. 1–109. Piccolomini's geographical works were first published after his death as *Historia rerum ubique gestarum* (Venice: Johann von Köln and Johannes Manthen, 1477); his treatise on Asia has been edited and translated into Spanish by Domingo F. Sanz as *Descripción de Asia, Eneas Silvio Piccolomini (Papa Pío II)* (Madrid: Consejo Superior de Investigaciones Científicas, 2010).

Arbitror principium Indie de terra sancta distare vix 600 miliaribus teutonicis. Et 200 miliaria per indiam ad Insulas oceani maris que etiam per 200 miliaria protrahantur in latum usque ad paradisum.

I judge that the beginning of India is barely 600 German miles <east> from the Holy Land, and <it is> 200 miles across India to the islands of the <Indian> Ocean, which are spread widely for a distance of 200 miles all the way to Paradise.

The author calculates that the distance from the Holy Land to the Terrestrial Paradise was not insurmountable, and it certainly seems that he had contemplated the possibility of a voyage there. It is easy to imagine him on a hill in the Holy Land looking to the east and thinking about means of transport and costs, or else making the calculation after he returned to Lübeck and pondering what might have been. There is a similar passage on f. 6r of the manuscript, though here the author mentions the eastern edge of the world, rather than Paradise:

Nota Jerusalem distat secundum taxationem viatorum et nautarum de lubeck, que est <secunde?> aquilonaris, circa 777 miliaria teutonica, et de lubeck sunt quasi 223 miliaria ad Islandiam, etiam de Jerusalem circuiter mille miliaria ad finem terre. Sed astronomorum minor est computus; potest tamen utrorumque esse verus, quod viatores et naute oblique vadunt, Astronomi vero in aere recte computant vero obstaculum non habent.

Note that according to the estimate of travelers and sailors, Jerusalem is about 777 German miles from Lübeck, which well <to?> the north, and from Lübeck it is about 223 miles to Iceland, and from Jerusalem about 1000 miles to the <eastern> end of the earth. The figures of the astronomers are smaller, but it is possible that both are correct, for travelers and sailors travel with turns, while the astronomers calculate straight lines in the air, and have no obstacle.

That is, the author thought that when he was in the Holy Land, he was not far from being half way to the eastern edge of the world from his starting place in Lübeck. Given that he had read some travel literature, he must have known that reaching Paradise or the eastern edge of the world would have put him

among the boldest travelers of all time, such as Alexander the Great, John Mandeville, Giovanni de' Marignolli, and Johannes Witte de Hese.¹⁸

The author of HM 83, then, was a man of religion, experienced with maps, well read, well traveled, and a bold thinker.

18 On Alexander the Great's interest in reaching the Terrestrial Paradise see M. Esposito, "A Mediaeval Legend of the Terrestrial Paradise," *Folklore* 29.3 (1918), pp. 193–205; Mary Lascelles, "Alexander and the Earthly Paradise in Mediaeval English Writings," *Medium Aevum* 5 (1936), pp. 31–47, 79–104, and 173–188; and Richard Stoneman, *Legends of Alexander the Great* (London and Rutland, VT: J. M. Dent and Charles E. Tuttle, 1994), pp. 67–75. On Mandeville see Iain Macleod Higgins, *Writing East: The 'Travels' of Sir John Mandeville* (Philadelphia: University of Pennsylvania Press, 1997), pp. 203–204; on Giovanni de' Marignolli see Ananda Abeydeera, "In Search of the Garden of Eden: Florentine Friar Giovanni de Marignolli's Travels in Ceylon," *Terrae Incognitae* 25 (1993), pp. 1–23; and on Johannes Witte de Hese see Scott D. Westrem, *Broader Horizons: A Study of Johannes Witte de Hese's 'Itinerarius' and Medieval Travel Narratives* (Cambridge, MA: Medieval Academy of America, 2001), pp. 10, 223, and 272.

The Geographical Sections

The contents of the geographical section (ff. 1r–8v) and the section on astronomy and geography (ff. 13r–18r) in HM 83 have been detailed above. In the first section, after introductory texts on the three Babylonias and the division of the world among the sons of Noah, there is a list of the provinces of Asia, and the islands that pertain to it; then a list of the islands and provinces of Europe; then a list of the provinces of Africa. Next there is a list of the mountains of the Holy Land, and of the mountains beyond the Holy Land; then of the lands of the Four Kingdoms of the Book of Daniel and of a few others, and of the lands in which the twelve Apostles preached. The section ends with an account of the four different functions or themes that a *mappamundi* can have. In all of the lists of provinces and islands, brief descriptive details about each entry are supplied, and this section is illustrated with seven maps and one generic bird's-eye view of mountains.

In the second section (ff. 13r–18r) there are diagrams of the spheres and of the course of the sun around the earth, followed by three climatic maps of the earth, the first overlain on a map of the earth's waters, the second on a simple T-O map, and the third on a map showing where the Apostles preached. There follow a summary of world history, tables of Biblical genealogy, and discussion of the Four Kingdoms of the world.

As indicated above, the maps in these sections are of great importance in the history of cartography for being the earliest known sequence of thematic maps clearly conceived as such. The maps will be discussed below, but here we would like to mention that at first blush there would seem to be a connection between the way the text of the first section (ff. 1r–8v) is divided into sections (mainland provinces, islands, mountains) and the thematic maps. The author might have drawn inspiration for his 'thematic' divisions of the text from any of a number of different sources. For example, Book 14 of Isidore of Seville's *Etymologiae*,¹ the first great medieval encyclopedia, has chapters about Asia (14.3), Europe (14.4), and Africa (14.5) (HM 83 follows this same order), and then about islands (14.6), promontories (14.7), mountains (14.8), and caves and the underworld (14.9). Lambert of Saint-Omer in his *Liber Floridus*, composed

1 For an English translation of the *Etymologiae* see Isidore of Seville, *The Etymologies of Isidore of Seville*, trans. Stephen A. Barney, W. J. Lewis, J. A. Beach, and Oliver Berghof (Cambridge, UK, and New York: Cambridge University Press, 2006).

between 1090 and 1120, has chapters on islands (34) and rivers, springs and lakes (34 and 35).² Bartholomaeus Anglicus in his *De proprietatibus rerum*,³ written c. 1240, similarly discusses the physical world by dividing it into categories, and thus has chapters that list the rivers of the world (13.5–13.13) and the mountains of the world (14.3–14.44), as well as chapters on such specific subjects as fish ponds (13.14), whirlpools (13.17), valleys (14.46), deserts (14.51), and caves (14.52). Examples from other medieval encyclopedias might easily be adduced. The point we wish to make is that while the authors of other treatises employed the same ‘thematic’ division of geographical material, none of them used maps to indicate the locations of those elements—none of them chose to interpret those divisions cartographically. That is precisely the original stroke of the author of HM 83.

In the present work we have chosen to focus on the apocalyptic section of HM 83, as it seems more distinctive and original (to our way of thinking at least) than the other parts of the manuscript. Therefore, we will not provide a full transcription and translation of the geographical sections. However, we now supply transcriptions, translations, and commentary on several excerpts from the geographical sections that will give the reader a fuller understanding of the work than the summary above could do, and will also shed light on the author’s outlook and sources.

In transcribing the text of HM 83 we have altered it as little as possible, but have expanded abbreviations, changed ‘u’ to ‘v’ and ‘i’ to ‘j’ where this would help make the word understandable, and added punctuation where necessary for the sense. Triangular brackets < > are used to indicate words that we supplied that were necessary for the sense; to mark word of whose readings we are not entirely sure, thus: <habet?>; and to indicate lacunae, thus for one missing word: <...>, and thus for two missing words: <... .>. Parentheses are used to mark our occasional explanatory remarks.

2 See Lambert of Saint-Omer, *Lamberti S. Audomari Canonici Liber Floridus: Codex authographus bibliothecae universitatis Gandavensis*, ed. Albertus Derolez (Ghent: In aedibus Story-Scientia, 1968), p. 104, transcribing f. 51v, chapter 33; pp. 104 and 106, transcribing ff. 51v and 52v, chapter 34; and p. 107, transcribing f. 53r, chapter 35.

3 For discussion of Bartholomaeus Anglicus’s *De proprietatibus rerum* see for example Lynn Thorndike, *A History of Magic and Experimental Science* (New York: Macmillan, 1923–58), vol. 2, pp. 401–435; and Heinz Meyer, *Die Enzyklopädie des Bartholomäus Anglicus: Untersuchungen zur Überlieferungs- und Rezeptionsgeschichte von ‘De proprietatibus rerum’* (Munich: Fink, 2000).

Excerpts from the Geographical Section

We translate and transcribe all of the text on f. 1r, piece by piece, beginning from the top:

Nota tres fuerunt babilonie. Una super flumen chobar ubi regnabat Nabuchodonosor in qua fuit turris babel et hic dicitur deserta et distat a nova babilonia 30 dierum. Alia in egipto super nilum sita in qua regnabat pharao distans a nova quinque dierum. Est tertia scilicet nova babilonia que dicitur gair vel kair vel carra que distat ab alexandria tribus dierum per terram sed sex per aquas.

Note that there were three Babylonias, one on the River Khabur where Nebuchadnezzar reigned, in which <city> was the Tower of Babel, and this region is called a desert and it is a thirty-day journey from the New Babylonia. The second was in Egypt, located on the Nile, in which the Pharaoh ruled and it is a five-day journey from the New Babylonia. The third, that is, the new Babylonia, is called Gair or Cairo or Carra, and is a three-day journey from Alexandria by land, but six by water.⁴

The abrupt opening of the treatise gives it the flavor of being the author's notes, or else an abbreviated version of a longer work, rather than a polished discourse; and the remarkable emphasis on Babylon suggests that this question was one of particular interest to the author, not least because he discusses Babylon again later in the treatise. He may have been inspired to assign such importance to the city by the prophecies against Babylon in Isaiah 13 and 14.⁵ With regard to the source of this passage, several earlier authors discuss the three Babylonias,⁶ but the closest to what we have in HM 83 is the account in

4 The new Babylonia by Cairo is depicted on the map of the Holy Land in Bernhard von Breydenbach's *Peregrinatio in terram sanctam* (Mainz: Erhard Reuwich, 1486)—a work almost exactly contemporary with HM 83.

5 For discussion of the prophecies against Babylonia see Seth Erlandsson, *The Burden of Babylon: A Study of Isaiah 13:2–14:23*, trans. George J. Houser (Lund: Gleerup, 1970).

6 The three Babylonias are discussed in the *Narratio de Statu Terrae Sanctae*, published in Sabino de Sandoli, ed., *Itinera Hierosolymitana cruce signatorum: saec. XII–XIII*, vol. 3: *Tempore recuperationis Terrae Sanctae (1187–1244)* (Jerusalem: Franciscan Print. Pr., 1983), pp. 374–391, towards the end of chapter 2, at p. 380; Gerard of Strasbourg, in Arnold of Lübeck, *Chronicon Slavorum*, in *Monumenta Germaniae Historica, Scriptores* 21, ed. G. H. Pertz (Hannover: impensis bibliopolii Hahniani, 1869), pp. 100–250, at 235–241, esp. 237; and by John Poloner, in Titus Tobler, ed., *Descriptiones Terrae Sanctae, ex saeculo VIII. IX. XII. et XV.* (Leipzig: J. C.

the so-called Rothelin Continuation, written in the mid thirteenth century, of the *Historia* of William of Tyre (c. 1130–1186):⁷

But you must know that there are three Babylons. The first is in Mesopotamia; there lay the field of Shinar on which the giants built a tower to reach up to Heaven. That is where languages were created. This Babylon stands on the great river, the Euphrates, which flows from the earthly Paradise and runs through the land of Mesopotamia, and on another river called Chobar. David spoke of them in the psalms, saying *Super flumina Babilonis*. Nebuchadnezzar was lord of this Babylon, as we find when we read the Bible in the Book of Kings. The second Babylon is in Egypt. Some say that when the children of Israel were in Egypt it was known as Memphis. These two Babylons lie destroyed and desolate, no man or woman lives there. In the Babylon in Mesopotamia live huge numbers of serpents, adders and other snakes which dwell in the ruined walls of the tower built by giants, more such creatures than anywhere else on earth. The third Babylon is sometimes called New Babylon. This has the Cairo as its main castle and stands on the River Nile which flows from the earthly Paradise. From New Babylon to Alexandria is three days' journey by land, six by water. From this Babylon to Damietta takes four days. The sultan was lord of this New Babylon, of the whole land of Egypt, of the surrounding country and of a large part of Syria.

There follows in HM 83 a passage on the division of the world among Noah's sons⁸ that in a more conventional work would be the beginning of the geo-

Hinrichs, 1874; Hildesheim and New York: G. Olms, 1974), pp. 225–281, at 279, with an English translation in Joannes Poloner, *John Poloner's Description of the Holy Land (circa 1421 A.D.)*, trans. Aubrey Stewart (London: Palestine Pilgrims' Text Society, 1894), p. 41. Bernhard von Breydenbach in his *Peregrinatio in Terram Sanctam*, which is contemporary with HM 83, has on ff. 115v–116r a chapter “De Babilonia egipti” that offers much more detail than HM 83; by comparison, the interest of the author of HM 83 in this Babylonia seems rather theoretical.

7 The French text is supplied in *Recueil des historiens des croisades, publié par les soins de l'Académie royale des inscriptions et belles-lettres* (Paris: Imprimerie royale, 1841–1906), *Historiens Occidentaux*, vol. 2 (1859), “Continuation de Guillaume de Tyr, de 1229 à 1261, dite du manuscrit de Rothelin,” pp. 489–639, Chapitre 24, “Quantes Babiloinnes sont,” pp. 536–537; and the English here comes from Janet Shirley, trans., *Crusader Syria in the Thirteenth Century: The Rothelin Continuation of the History of William of Tyre with Part of the Eracles or Acre Text* (Aldershot, England, and Brookfield, VT: Ashgate, 1999), p. 44.

8 For discussion of the conjunction between a different text about the division of the world among Noah's sons and *mappaemundi* see Chet Van Duzer and Sandra Sáenz-López Pérez, “*Tres filii Noe dividerunt orbem post diluvium*: The World Map in British Library Add. MS 37049,” *Word & Image* 26.1 (2010), pp. 21–39.

graphical section, rather than the passage about the three Babylonias (still f. 1r):

Orbis autem ut dicit ysidor in libro quinto decimo tripharie est divisus. Nam una pars Asia alia Europa tertia Affrica appellatur. Quas tres partes orbis non equaliter diviserunt. Nam Asia a meridie per orientem usque ad septentrionem pervenit. Europa vero a septentrione usque ad occidentem pertingit. Sed Affrica ab occidente per meridiem se extendit. Sola quoque Asia continet unam partem scilicet habitabilis nostri medietatem. Alie vero partes scilicet Europa et Affrica aliam medietatem sunt sortite. Inter has autem partes ab oceano marem magnum pregreditur easque intersecat. Quapropter si in duas partes orientem et occidentem orbem dividas in una parte erit Asia in alia vero affricam et europam. Sic autem divise sunt postquam diluvium filiis noe inter quos Sem cum posteritate sua Asiam Japhet Europam Cham Affricam possederunt ut dicit glossa super genesis 10 et super librum paralippo 1. Idem dicit Orosius et ysidorus ac plinius.

The world, as Isidore says in his fifteenth book, is divided in three. For one part is called Asia, the second Europe, and the third Africa. These three parts of the lands have not been equally divided. For Asia stretches from the south through the east to the north; but Europe stretches from the north even to the west; while Africa extends itself from the west to the south. And Asia by itself contains half of our habitable land, while the other two parts, namely Europe and Africa, were allocated the other half. But between these two parts the Mediterranean extends from the Ocean and separates them. Therefore, if you divide the world in two parts, east and west, in one part will be Asia, and in the other Africa and Europe. For this was how they were divided after the Flood among the sons of Noah, among whom Sem with his descendants possessed Asia, Japhet possessed Europe, and Cham possessed Africa, as the gloss on Genesis 10 says, and also that on the book 1 of the Paralipomenon (i.e. Chronicles). Orosius, Isidore, and Pliny say the same thing.

The part of this passage about the orientations of the three parts of the world goes back to Augustine, *De civitate Dei*, 16.17, whence it was borrowed by Isidore in his *Etymologiae* (14.2.2–3) and *De natura rerum* (48), and by the Venerable Bede in his *De natura rerum* (51).⁹ But the whole passage is taken from

9 See *The Etymologies of Isidore of Seville*, trans. Stephen A. Barney et al. (Cambridge, UK, and New York: Cambridge University Press, 2006), p. 285; *Patrologia Latina* 83:1017; and *PL* 90:276, respectively. For discussion of cartographic interpretations of this sentence see

Bartholomaeus Anglicus, *De proprietatibus rerum* 15.1,¹⁰ where it stands at the beginning Bartholomaeus's book on geography.¹¹

Following the passage from Bartholomaeus is a *mappamundi* that shows the division of the world among the sons of Noah, which we will discuss below. Then there is a passage composed by the author of HM 83: he proposes that the actual colonization of the parts of the world assigned to Cham (Africa) and Japhet (Europe) only took place following the Plagues of Egypt, which scared people out of the East, a theory we have not seen in other sources.¹² He adds that the 'plagues' of Islam are causing Christians to remember the True God (still f. 1r):

Hanc terram habitabilem noe divisit tribus filiis suis ut patet in figura. Ante diluvium et post usque ad predictas horribiles plagas omnes homines manserunt in oriente. Nemo in aliis quartis habitabat. Sed deus tam horribiliter egiptum plagavit propter oppressionem et retensionem populi sui per unum integrum annum quo sane mente putabant orientem et Asiam prorsus perire et ita timore perterriti transnavigaverunt per mare magnum. Et quod de genere Cham habitabant circa mare magnum e regione Affrice et Japhet e regione Europe. Sic Dei nutu completa est divisio per noe facta quasi ante 900 annos. In Europa et Affrica veri dei per plagas <cogniti?> x quarte populaverunt hodie postquam 3000 annorum

Chet Van Duzer, "A Neglected Type of Medieval *Mappamundi* and its Re-Imaging in the *Mare historiarum* (BnF MS Lat. 4915, f. 26v)," *Viator* 43.2 (2012), pp. 277–301.

10 For an English translation of the passage in Bartholomaeus see Bartholomaeus Anglicus, *On the Properties of Things: John Trevisa's Translation of Bartholomaeus Anglicus De proprietatibus rerum: A Critical Text*, eds. M. C. Seymour et al. (Oxford, Clarendon Press, 1975–88), vol. 2, p. 726.

11 For comments on the influence of Bartholomaeus's Book 15 see Heinz Meyer, "Bartholomäus Anglicus, 'De proprietatibus rerum': Selbstverständnis und Rezeption," *Zeitschrift für deutsches Altertum und deutsche Literatur* 117.4 (1988), pp. 237–274, at p. 262, note 82; and Meyer, *Die Enzyklopädie des Bartholomäus Anglicus* (see Ch. 4, n. 3), pp. 272–273. The same passage from Book 15 is borrowed in the *Eulogium (historiarum sive temporis): Chronicon ab orbe condito usque ad annum Domini M. CCC. LXXI, a monacho quodam Malmesburiensi exaratum*, ed. Frank Scott Haydon (London: Longman, Brown, Green and Longmans, and Roberts, 1853–1863), vol. 2, Book 4, chapter 9, "De orbe," with some discussion of this chapter in vol. 2, pp. xxiv–xxv.

12 For general discussion of the reception of the story of the division of the world among Noah's sons see Benjamin Braude, "The Sons of Noah and the Construction of Ethnic and Geographical Identities in the Medieval and Early Modern Periods," *The William and Mary Quarterly* 54.1 (1997), pp. 103–142.

eiusdem veri dei quasi oblita machometi plage vastavere opprimere et subjugavere donec eiisdem eundem verum deum recognoscas (*sic*).

Noah divided this habitable land among his three sons, as is clear in the map. Before and after the Flood, and until the predicted horrible plagues, all of mankind lived in the East, and no one lived in the other quarters <of the world>. But God so horribly plagued Egypt because of the oppression and holding back of his people for a whole year, that many reasonably thought that the East and Asia would entirely perish, and so terrified by fear, they took ship across the Mediterranean. As a result, the descendants of Cham who lived near the Mediterranean <were from> Africa, and <those of> Japhet <were from> Europe. And thus by the will of God the division made by Noah about 900 years earlier was completed. In Europe and Africa, the people aware of the true God because of plagues lived in the ten quarters. Today, after 3000 years, when they had almost forgotten that same true God, the plagues of Muhammad devastated, oppressed, and subjugated <them> until because of those same plagues they acknowledged that same true God.

Thus the apocalyptic themes that are so important in the second section of the manuscript are hinted at in the beginning of the geographical treatise.

On f. 1v, in his list of the provinces of Asia, the author mentions the Holy Land, and as he had been there, we might hope for some details based on his own experiences, but such is not the case. Some visitors to the Holy Land made side-trips to Egypt, but the description of Egypt also lacks any details that would seem to have come from personal observation. Neither of these passages comes from Bartholomaeus Anglicus. The passage about Egypt supplies evidence of the author's continuing interest in the different cities called Babylonia:

Palestinam qua habet in se Judeam philistinam Samariam galileam inferiorem et superiorem penthapolim hec etiam palestina fuit in terra chananeorum

Palestine, which has within it Judea, Philistina, Samaria, Lower and Upper Galilee, and Pentapolis. This Palestine was in the land of the Canaanites.

Egiptus olim habuit quinque nominatas civitates in honore deorum. Quarum una fuit solis et eius proprium nomen Naia quam alexander

magnus destructam reedificavit et ampliavit et ex suo nomine alexandriam baptisavit que hodie est nominatissima civitas prope mare magnum in egipto. Et alkaria quam idem alexander nominat novam babiloniam quasi in fine egipti versus ortum solis sicut alexandria in fine egipti versus occidentem et circumdatur egiptus desertis ex austro oriente et aqulione mari magno ex occidenti.

Egypt once had five cities named in honor of gods, of which one was of the sun, and its name was Naia,¹³ which Alexander the Great rebuilt and expanded after it was destroyed, and from his own name he called it Alexandria, which today is a very famous city on the Mediterranean coast in Egypt. And Cairo, which is the same that Alexander named New Babylonia, is in the end of Egypt towards the east, just as Alexandria is in the end of Egypt towards the west. Egypt is surrounded by deserts on the south, east, and north, and by the Mediterranean on the west.

On f. 2r, in a passage cited above in the section on the author of HM 83, the author indicates distances from the Holy Land to India, from India to the Indian Ocean, and from mainland Asia to Paradise:

Arbitror principium Indie de terra sancta distare vix 600 miliaribus teutonicis. Et 200 miliaria per indiam ad Insulas oceani maris que etiam per 200 miliaria protrahantur in latum usque ad paradisum

I judge that the beginning of India is barely 600 German miles <east> from the Holy Land, and <it is> 200 miles across India to the islands of the <Indian> Ocean, which are spread widely for a distance of 200 miles all the way to Paradise.

Of course the distances supplied are much smaller than the actual distances. In addition to shedding light on the author and his thoughts about the possibility of traveling to Paradise, this passage may help us learn about the author's sources. It would be interesting to know where the author obtained his

13 We do not know the source of the name Naia for the city that existed on the site of Alexandria before Alexander refounded it; in fact the name of the city was Rhacotis. For discussion see Michel Chauveau, "Alexandrie et Rhakôtis: le point de vue des Égyptiens," in Jean Leclant, ed., *Alexandrie: une mégapole cosmopolite: actes du gème colloque de la Villa Kérylos à Beaulieu-sur-Mer, les 2 & 3 octobre 1998* (Paris: Académie des Inscriptions et Belles-Lettres, 1999), pp. 1–10.

distances. There are not many medieval maps that include a scale of miles and also show the eastern edge of Asia: the ones that come to mind are the Catalan Atlas of 1375,¹⁴ Andreas Walsperger's map of 1448,¹⁵ the so-called Genoese map of 1457,¹⁶ and the Catalan Estense map of c. 1460.¹⁷ In this case, Walsperger's map is the easiest to work with, as his scale is in German miles, which are what the author of HM 83 uses.¹⁸ Walsperger does not indicate the extent of India

- 14 The Catalan Atlas is in Paris, Bibliothèque nationale de France, MS Espagnol 30; it has been published in facsimile several times, for example as *Mapamundi del año 1375 de Cresques Abraham y Jafuda Cresques*, ed. Georges Grosjean (Barcelona: S.A. Ebrisa, 1983); a more recent edition is *El món i els dies: L'Atlas Català* (Barcelona: Enciclopèdia Catalana, 2005); the atlas is also reproduced in Ramon J. Pujades i Bataller, *Les cartes portolanes: la representació medieval d'una mar solcada* (Barcelona: Institut Cartogràfic de Catalunya, 2007), on the accompanying CD, number C16.
- 15 Walsperger's map is in Vatican City, Biblioteca Apostolica Vaticana, MS Pal. Lat. 1362 B; see Konrad Kretschmer, "Eine neue mittelalterliche Weltkarte der vatikanischen Bibliothek," *Zeitschrift der Gesellschaft für Erdkunde* 26 (1891), pp. 371–406 and plate 10, esp. 397, reprinted in *Acta Cartographica* 6 (1969), pp. 237–272. This article includes a large reproduction of the map. There is also a facsimile of the map: *Weltkarte des Andreas Walsperger* (Zurich: Chr. Belser AG, 1981).
- 16 The "Genoese Map" of 1457 is in Florence, Biblioteca Nazionale Centrale, Portolano 1. For discussion see Edward Luther Stevenson, *Genoese World Map, 1457* (New York: American Geographical Society and Hispanic Society of America, 1912), with which a color facsimile of the map was published; and the more recent facsimile edition of the map, with a new transcription and translation of the legends by Angelo Cattaneo, in *Mappa mundi 1457* (Roma: Treccani, 2008). Also see Alberto Capacci, "Planisfero detto 'genovese,'" in Guglielmo Cavallo, ed., *Cristoforo Colombo e l'apertura degli spazi* (Rome: Istituto Poligrafico e Zecca dello Stato, 1992), vol. 1, pp. 491–494; and Gerda Brunnlechner, "The So-Called Genoese World Map of 1457: A Stepping Stone Towards Modern Cartography?" *Peregrinations: Journal of Medieval Art & Architecture* 4.1 (2013), pp. 56–80.
- 17 The Catalan Estense map is in Modena, Biblioteca Estense Universitaria, C. G. A. 1, and has been reproduced in facsimile, with transcription and commentary, in Ernesto Milano and Annalisa Batini, *Mapamundi Catalán Estense, escuela cartográfica mallorquina* (Barcelona: M. Moleiro, 1996); there is a high-resolution digital image of the map on the CD-ROM titled *Antichi planisferi e portolani: Modena, Biblioteca Estense Univesitaria* (Modena: Il Bulino; and Milan: Y. Press, 2004), and a good study of it in Konrad Kretschmer, "Die katalanische Weltkarte der Biblioteca Estense zu Modena," *Zeitschrift der Gesellschaft für Erdkunde zu Berlin* 32 (1897), pp. 65–111 and 191–218.
- 18 Some distances measured on various nautical charts, including the Catalan Atlas, are supplied by A. E. Nordenskiöld, *Periplus: An Essay on the Early History of Charts and Sailing-Directions* (Stockholm: Norstedt, 1897; New York: B. Franklin, 1967), p. 20.

very clearly, but from the Holy Land going as the crow flies¹⁹ he says that it is about 325 German miles to the closest point that might be called India—much less than the figure of 600 miles that the author of HM 83 gives—and about 290 German miles across India to the eastern edge of the continent, rather more than the figure of 200 miles just quoted in HM 83. The total distance from the Holy Land to the eastern edge of Asia on Walsperger's map is about 615 German miles, quite a bit less than the 800 German miles indicated by the author of HM 83. So it seems that the author of HM 83 was using a source quite different from the Walsperger map.

At the same time, the distances on the Walsperger map are much closer to those supplied in HM 83 than those from an itinerary from Paradise to Rome, written in Greek probably in the fourth century, and surviving in a handful of manuscripts from the end of the twelfth century and later. At the end of that brief text, the journey is said to consist of 1425 stages, each of which measures 60 miles, for a total of 85,550 miles.²⁰ Even allowing for the fact that the distance from Paradise to Rome is greater than from Paradise to the Holy Land, and for a different definition of 'mile,' the distance indicated by the itinerary is much greater than that indicated by Walsperger.

Moreover, neither the Walsperger map nor the others just mentioned show Paradise as an island, which seems to be the conception that our author has of it: he says that the islands of the Indian Ocean are spread widely for 200 miles all the way to Paradise. There are several medieval maps that show Paradise as

19 The author indicates a longer distance from the Holy Land to the eastern edge of Asia f. 6r than he does on f. 2r, and on f. 6r says that the distances he gives are travelers' distances, which are longer than the distances indicated by astronomers, which do not include the turns made on a journey, so it is safe to conclude that the distances indicated on f. 6r were measured as the crow flies.

20 The Greek text of this itinerary from Paradise to Rome is supplied in Alfred Klotz, "Ὁδοιπορία ἀπὸ Ἐδέμ τοῦ παραδείσου ἄχρι τῶν Ῥωμαίων," *Rheinisches Museum für Philologie* 65 (1910), pp. 606–616; and with a French translation and notes in Jean Rougé, *Expositio totius mundi et gentium. Introduction, texte critique, traduction, notes et commentaire* (Paris: Éditions du Cerf, 1966) (= Sources Chrétiennes 324), pp. 346–357; there is also discussion of the text and the Greek text of the St. Petersburg manuscript in N. Pigulewskaja, *Byzanz auf den Wegen nach Indien: Aus d. Geschichte d. byzantinischen Handels mit dem Orient vom 4.–6. Jh.* (Berlin: Akademie-Verl.; Amsterdam, Hakkert, 1969), pp. 100–109 and 323–324. For discussion of the calculation of the total distance of the itinerary see Friedrich Pfister, "Die Ὁδοιπορία ἀπὸ Ἐδέμ τοῦ παραδείσου und die Legende von Alexanders Zug nach dem Paradies," *Rheinisches Museum für Philologie* 66 (1911), pp. 458–471, at 470.

an island,²¹ including the Sawley map (c. 1110);²² some maps by Lambert of St. Omer (twelfth century);²³ the Hereford *mappamundi* (c. 1290–1310),²⁴ an anonymous *mappamundi* of c. 1450, once in Olomouc, Czech Republic;²⁵ and the *mappamundi* on the so-called ‘Columbus Map’; a late fifteenth-century nautical chart.²⁶ However, none of these maps places the island of Paradise at a

- 21 On paradise as an island, in addition to the passages cited just below from Alessandro Scafi, *Mapping Paradise: A History of Heaven on Earth* (Chicago: University of Chicago, 2006), see Scafi’s brief article “L’île du Paradis dans la cartographie médiévale,” in Dominique Guillaud, Christian Huetz de Lempis, and Olivier Sevin, eds., *Îles funestes, îles bienheureuses* (Paris: Transboréal, 2004) (=Chemins d’étoiles, 12), pp. 148–156. There is also discussion of the medieval geography and cartography of paradise in Jean Delumeau, “The Earthly Paradise and Medieval Geography,” in his *History of Paradise: The Garden of Eden in Myth and Tradition*, trans. Matthew O’Connell (Urbana: University of Illinois Press, 2000), pp. 39–70.
- 22 The Sawley map is in Cambridge, Corpus Christi College, MS 66, p. 2; for discussion see P. D. A. Harvey, “The Sawley Map and Other World Maps in Twelfth-Century England,” *Imago Mundi* 49 (1997), pp. 33–42; and Scafi, *Mapping Paradise* (see Ch. 4, n. 21), pp. 141–144.
- 23 On Lambert of Saint-Omer’s maps that show paradise on an island see Danielle Lecoq, “La mappemonde du ‘Liber Floridus’ ou la vision du monde de Lambert de Saint-Omer,” *Imago Mundi* 39 (1987), pp. 2 and 9–49, esp. 2, 16, and 17 no. 1 (the map is in Wolfenbüttel, Herzog August Bibliothek, Cod. Gud. lat. 1.2°, ff. 69v–70r); and Scafi, *Mapping Paradise* (see Ch. 4, n. 21), pp. 144, 146, 157, and plate 5b.
- 24 The Hereford *mappamundi* is on permanent display at Hereford Cathedral, and has been reproduced in facsimile as *Mappa Mundi: The Hereford World Map* (London: Folio Society, 2010). Regarding paradise on the map see Scafi, *Mapping Paradise* (see Ch. 4, n. 21), pp. 145–149.
- 25 The anonymous *mappamundi* in question was once in Olmütz, Studienbibliothek MS g/9/155, but was lost after World War II. Its legends and toponyms are transcribed and it is well illustrated in Anton Mayer, *Mittelalterliche Weltkarten aus Olmütz* (Prague: André, 1932) (= *Kartographische Denkmäler der Sudetenländer*, 8); and the map is illustrated and briefly discussed in Scott Westrem, “Against Gog and Magog,” in Sylvia Tomasch and Sealy Gilles, eds., *Text and Territory: Geographical Imagination in the European Middle Ages* (Philadelphia: University of Pennsylvania Press, 1998), pp. 54–75, at 62–65; and Scafi, *Mapping Paradise* (see Ch. 4, n. 21), pp. 214–215 and 248.
- 26 The ‘Columbus Map’ is in Paris, Bibliothèque nationale de France, Rés. Ge AA 562; the *mappamundi* on the chart is conveniently reproduced in Kenneth Nebenzahl, *Atlas of Columbus and the Great Discoveries* (Chicago: Rand McNally, 1990), p. 22; and in Scafi, *Mapping Paradise* (see Ch. 4, n. 21), plate 14 and figs. 8.12a and 8.12b, with discussion on p. 217. The map has been reproduced in facsimile three times, in Charles de La Roncière, *La carte de Christophe Colomb* (Paris: Les Éditions historiques, 1924); *Carte nautique sur vélin de l’Atlantique et de la Méditerranée, attribuée à Christophe Colomb, 1492* (Paris: Bibliothèque Nationale, 1992); and *La carta de Cristobal Colon, Mapamundi, circa 1492*

significant distance from the mainland, and in particular, none shows any islands between the mainland and the island of Paradise.

Giovanni de' Marignolli (fl. 1338–53) in the notes from his voyage to the east locates Paradise on an island near Ceylon, but the travel narrative whose geography of Paradise seems most similar to that in the passage quoted above from HM 83 is Johannes Witte de Hese's *Itinerarius*, which describes an imagined journey to the east that began in Jerusalem in 1389.²⁷ From eastern Asia, Hese sails into the Indian Ocean. He stops on one island, and then continues to the mountain-island where Paradise is located:²⁸

And then, having obtained authorization from Prester John and other lords, we boarded a ship and sailed farther for ten days to a very beautiful, level island, four miles across and full of beautiful trees, with fruits and other kinds of vegetation, and adorned with flowers, and replete with a great many sweetly singing birds. And twelve of us, along with our captain, got off the ship and passed through this island looking at this splendor. And our captain forbade us to take anything away from there. And we were in that place—so it seemed to us—for around three hours, but when we got back to the ship, our shipmates said that we had been in that place for three days and nights. And there was no night there, and indeed I believe that there never has been night there. And this island is called the Root of Paradise.

And sailing farther for twelve days <we came> to Mount Edom. The Earthly Paradise is said to be atop this mountain. And this mountain is extremely high and sheer like a tower, so that there can be no access to that mountain. And around the hour of vespers, when the sun goes down

(Barcelona: Moleiro, 1995). For discussion of the map see Monique Pelletier, "Peut-on encore affirmer que la BN possède la carte de Christophe Colomb?" *Revue de la Bibliothèque Nationale* 45 (1992), pp. 22–25; and Valerie I. J. Flint, "Columbus, 'El Romero' and the So-Called Columbus Map," *Terrae Incognitae* 24 (1992), pp. 19–30.

27 For brief accounts of Johannes Witte de Hese see Bettina Wagner, "Witte, Johannes, de Hese," in Wolfgang Stämmler and Karl Langosch, eds., *Die deutsche Literatur des Mittelalters: Verfasserlexikon* (Berlin and New York: de Gruyter, 1978-), vol. 10, cols. 1276–1278; and Scott D. Westrem, "Witte de Hese, Johannes (Jan Voet) (fl. 1389–1392?)," in John Block Friedman and Kristen Mossler Figg, eds., *Trade, Travel, and Exploration in the Middle Ages: An Encyclopedia* (New York: Garland, 2000), pp. 649–651.

28 Scott D. Westrem, *Broader Horizons: A Study of Johannes Witte de Hese's 'Itinerarius' and Medieval Travel Narratives* (Cambridge, MA: Medieval Academy of America, 2001), pp. 149–150 (Latin) and 223 (English).

and shines on the mountain, the wall of Paradise can be seen in great clarity and beauty, like a star.

While it is an engaging task to speculate about the sources of the distances to India and Paradise in HM 83, there is not enough evidence to be sure whether the author was consulting a map or a travel narrative, or perhaps combining information from both.

A passage on f. 2r about some of the islands of Asia provides further clues about the author's sources:

Amasonia habet duas insulas quarum unam principalem femine regnantes possident, aliam viri qui suarum uxorum famuli non convenientes nisi causa concipiendi

Amazonia has two islands, of which women rule the principle one, and men the other—men who are servants of their wives, and only come together in order to generate children.

The myth of the islands of men and women entered European culture through the travel narrative of Marco Polo,²⁹ and the earliest map they appear on is Fra Mauro's large *mappamundi* of c. 1450.³⁰ Neither Marco Polo nor any other European source that we know of prior to 1486 associates the islands with the Amazons, but there is some sense to the connection, and it seems to have been made by the author of HM 83. He does not show these islands on his maps, but does show the *Regnum Amasonum* as a single island in the northeastern part of the world in the maps on ff. 3r and 6v–7r (see Figs. 4.9 and 4.14). In any case,

29 See Marco Polo, *The Book of Ser Marco Polo, the Venetian: Concerning the Kingdoms and Marvels of the East*, transl. and ed. Henry Yule (3rd edn., London: J. Murray, 1903), vol. 2, pp. 404–405, with Yule's discussion pp. 405–406; also see Domenico Silvestri's *De insulis et earum proprietatibus*, in José Manuel Montesdeoca, *Los islarios de la época del humanismo: el 'De Insulis' de Domenico Silvestri, edición y traducción* (La Laguna: Servicio de Publicaciones Universidad de La Laguna, 2004), s.v. "Feminina insula" and "Masculina insula," pp. 256–257 and 376–377. Paul Pelliot, *Notes on Marco Polo* (Paris: Impr. nationale, 1959–73), vol. 2, pp. 671–725 has a long section on eastern analogues of the tale.

30 Fra Mauro's legend runs: *Queste do' isole sono habitade per christiani. In una de le qual çoè in nebila habita le done e in l'altra dita mangla habita li lor homeni, i qual solamente tre mesi de l'ano stano con le done*; "These two islands are inhabited by Christians. In one of them, called Nebila, live the women; in the other, called Mangla, live the men, who pass only three months a year with the women": see Piero Falchetta, *Fra Mauro's World Map* (Turnhout: Brepols, 2006), p. 175, *6.

the presence of these islands indicates that the author had access to information from Marco Polo, whether directly or indirectly.

Also on f. 2r there are passages about Mediterranean islands, specifically Venice, Rhodes, and Cyprus. We might hope to see first-hand information here from a man who had traveled to the Holy Land, in all probability by way of Venice, but we do not detect any first-hand knowledge in these passages:

Venecia venetorum nunc civitas metropolis provincie venecie in mari magno magna situ et potestate se tenens ad europam habens multas insulas maris

Rodus metropolis cicladum Ciclades enim sunt insule 13 quarum una et maxima est Rodus tenens se hodie <domina?> ad europam sed situ distat <tantum?> per duas dietas navigales a terra sancta

Cyprus insula a cipro civitate in ea, distans una dieta navigali a terra santa et est hodie regnum tenes se ad dominum europe et dicitur hec insula etiam paphorum.

Venice, now the city of the Venetians, is the capital of the province of Venice, a large city in the Mediterranean, by both its location and its power directs itself towards Europe, controlling many islands in the sea.

Rhodes is the capital of the Cyclades, and the Cyclades are thirteen islands, of which the largest is Rhodes, maintaining a position of power with respect to Europe, but by its location it is just two days by ship from the Holy Land.

Cyprus is named from the city on it called Cyprus, and is one day by ship from the Holy Land, and today is a kingdom that directs itself to the power of Europe, and it is said to be the island of the Paphians.

Felix Fabri in his journey to the Holy Land made the crossing from Limasol (Cyprus) to Joppa in one day, but it is worth mentioning that the departure from Cyprus was delayed for two days by contrary winds, and after he arrived in Joppa it was four days before he got ashore.³¹

At the top of f. 2v of HM 83 the author launches into a digression about the number of provinces in Asia that is revealing in terms of his ideas about exploration:

Ad precedentia considera illud hester primo “Assuerus regnavit ab India usque ad ethiopiam super centum viginti septem provincias,” quod

31 See Fabri, *The Wanderings of Felix Fabri* (see Ch. 3, n. 15), vols. 7–10, in vol. 7, pp. 201–222.

utique est in Asia maiori, in qua tota non dumtaxat ab india ad ethiopiam neque 127 provincias taxare, etiam tantum verum est quod divina scriptura ait. Qua ex re etiam nemo hoc anno christi 1486 praesumat certitudinaliter velle et precise describere Asiam et Affricam cum nulli concedatur illas terras videre, cum nec europam alicui europiano liceat explorare. Sed tum universalium potest sagax mens conjecturare. Nec hodie sic terre omnes nominantur. Sed magis ut vides in figura in <qua> dominia moderna describuntur.

Together with the preceding, consider that verse in Esther 1: “Xerxes reigned over a hundred and twenty-seven provinces from India to Ethiopia,” which certainly refers to Greater Asia, in all of which, from India to Ethiopia, there are not so many as 127 provinces: and yet everything that Divine Scripture says is true. Therefore let nobody in this year 1486 presume to wish to describe Asia and Africa certainly and precisely, since it is granted to no one to see those lands, and not even Europe can be <fully> explored by any European—but then a sagacious mind can visualize the whole world. Even today not all of the lands have names. But that you can see better in the map, in <which> the modern kingdoms are written.

The passage quoted is Esther 1:1;³² the reference to the map is probably to that on ff. 6v–7r, which is the most complete and detailed world map in the manuscript (see Fig. 4.14). The number of provinces in Asia indicated by this verse in Esther is high in relation to the figures offered by other sources: a passage in some manuscripts of Nennius’s *Historia Brittonum* which was repeated on a number of *mappaemundi* says that there were fifteen provinces in Asia,³³ and Ptolemy in his *Geography* 8.2 lists 48 provinces in Asia. The author’s suggestion that Asia and Africa are poorly known is very reasonable, but his claim that no one has managed to see those lands is puzzling, as he says that he has read travel literature, and indeed he supplies maps of those regions. We are to understand that the author had a high standard for accuracy in geographical and cartographic knowledge.

32 Esther 1:1: *In diebus Asueri qui regnavit ab India usque Aethiopiam super centum viginti septem provincias*, “In the days of Assuerus, who reigned from India to Ethiopia over a hundred and twenty seven provinces.” The 127 provinces over which Assuerus ruled are also mentioned in Esther 8:9 and 13:1.

33 See Van Duzer and Sáenz-López Pérez, “*Tres filii Noe*” (see Ch. 4, n. 8), pp. 28–32.

On f. 5v there is a list titled *Sequitur de terris in quibus Monarchi residebant et operabant*, and the text makes it clear that the monarchs in question are those of the Four Kingdoms of the Book of Daniel.³⁴ The text explains that the kingdom of the first monarch, Nebuchadnezzar, was confined to Asia, as Africa and Europe were not yet completely populated. The second was Cyrus, king of Persia, who extended his power to the Mediterranean, particularly to Cyprus. The text continues:

Alexander magnus macedo rex macedonum tertius monarcha circa annum mundi 4900 in asia tota tam arida quam insulari Nabuchodonosor et cirus insulas oceani maris non habuerunt quod omnes subiecte erant Alexandro et figurantur Amasona maxima insula et insula X tribuum israeli <etiam?> magna. <ymo?> Alexander personaliter venit usque ad suetiam sed non intravit Romani etiam ex Europa ultra miserunt Alexandro sua munera sed tamen sapiens Alexander non dominabatur eis contentus <vii?> <conuictione?> per munus oblationem et hic alexander in sua monarchia alkariam magnam civitatem in fine egipti ampliat et fortificat et eam novam babiloniam baptisavit. Ecce secundus monarchus Cirus in secunda monarchia antiquam babiloniam in Caldea destruxit et tertius monarchus alexander in tertia monarchia in egipti novam Babiloniam reedificavit et in quarta monarchia Roma antiqua et nova sunt.

Octavianus Romanus Anno mundi 7172 incepit monarchisare et anno mundi 7200 ut <cecidit?> fuit monarchus quartus Asie Affrice et Europe ita ut universum orbem describetur luce ii quod nullus ante eum fecit. Ipse ergo fuit monarchus totius orbis terre.

Alexander the Great, a Macedonian and King of the Macedons, was the third monarch about the year of the world 4900, in both mainland and insular Asia: Nebuchadnezzar and Cyrus did not control the islands of the ocean, but these were all subject to Alexander, and <in the map> are depicted the large island of the Amazons and island of the ten tribes of Israel, which is also large. In fact, Alexander came in person to Sweden but he did not enter it. The Romans even sent their gifts from Europe abroad to Alexander, but he was wise and was not won over by them, content with the demonstration of <...> through the presentation of gifts. And this Alexander during his reign expanded and fortified Cairo, a large city at the edge of Egypt, and named it New Babylon. Note that the

34 For bibliography on the Four Monarchies see Ch. 1, n. 11.

second monarch, Cyrus, in the second monarchy destroyed ancient Babylon in Chaldea, and the third monarch Alexander in the third monarchy rebuilt the New Babylon in Egypt, and ancient and new Rome are in the fourth monarchy.

The Roman Octavian began to rule in the year of the world 7172, and when he died in the year of the world 7200 he was the fourth monarch of Asia, Africa and Europe. <He ordered> “that the whole world should be described” (Luke 2), which no one had done before him. He was therefore the monarch of the whole world.

The reference to Alexander reaching Sweden is probably to be understood in connection with the *Alexander Romance*, according to which Alexander reached the farthest points of the known world in all directions: on the maps on ff. 3r and 6v–7r of HM 83 (see Figs. 4.9 and 4.14), Suetia is represented as an island in the northern ocean that just touches the northern shore of the *orbis terrarum*.

This passage shows the author’s continuing fascination with Babylon, and also that the list of sovereigns on f. 5v was intended to demonstrate that the area one king was able to rule expanded over the centuries to encompass the whole known world by the time of Octavian (Augustus). Given the author’s strong interest in cartography, it is not surprising that the reference to Augustus’s achievement of world rule should inspire him to mention Augustus’s project to map the world. This passage from Luke 2:1,³⁵ and/or material relating to the survey of the world first ordered by Julius Caesar, and completed by Augustus,³⁶ appears in other medieval cartographic contexts. In two manuscripts of Lambert of Saint-Omer’s *Liber floridus*, which contains a rich collection of *mappaemundi*,³⁷ there is an image of Augustus seated on a throne

35 Luke 2:1: *Factum est autem in diebus illis, exiit edictum a Caesare Augusto ut describeretur universus orbis*, translating literally, “And it came to pass, that in those days a decree went out from Caesar Augustus, that the whole world should be described.”

36 For general discussion of the medieval reception of this survey see Claude Nicolet and Patrick Gautier Dalché, “Les ‘quatre sages’ de Jules César et la ‘mesure du monde’ selon Julius Honorius: réalité antique et tradition médiévale,” *Journal des Savants* 4.9 (1987), pp. 157–218.

37 On the *mappaemundi* in manuscripts of the *Liber floridus* see Manuel Francisco de Barros Santarém, *Essai sur l’histoire de la cosmographie et de la cartographie pendant le Moyen-âge* (Paris: Maulde et Renou, 1849–52), vol. 2, pp. 153–204; Youssouf Kamal, *Monumenta cartographica Africae et Aegypti* (Cairo, 1926–51), vol. 3, fasc. 3, ff. 775–784; Marcel Destombes, *Mappemondes, A.D. 1200–1500* (Amsterdam: N. Israel, 1964), pp. 111–116; and Karen de Coene and Philippe de Maeyer, “One World under the Sun: Cosmography and

and holding an orb inscribed with a T-O map, and the passage from Luke is written in the circular border around the image.³⁸ In the lower left corner of the Hereford *mappamundi* there is an illustration of Augustus sending three surveyors out to explore the world, and the passage from Luke is inscribed above his head; the text in the decorative border surrounding the map indicates that the project was begun by Julius Caesar.³⁹ Caesar's project is also briefly mentioned on the Ebstorf *mappamundi*, but without any citation of Luke 2:1.⁴⁰

The list of sovereigns on f. 5v demonstrates the expansion of the area ruled by great kings to encompass the whole known world, and immediately following the list of sovereigns, there is a list of the places that the Apostles preached (ff. 5v–6r), which shows the Word of God reaching across the whole known world (illustrated in a map on f. 15r, see Fig. 4.18), so there is a connection between the two lists. It seems that the author of HM 83 viewed the extension of unified political control to the ends of the earth as a prerequisite to the diffusion of the Word of God to the ends of the earth.

On f. 6r there is a passage quoted above on the distances from Lübeck to Jerusalem and to Iceland, and from Jerusalem to the eastern shore of Asia:

Cartography in the *Liber Floridus*," in Karen de Coene, Martine de Reu, and Philippe de Maeyer, eds., *Liber Floridus n21: The World in a Book* (Lannoo: Tielt, 2011), pp. 90–127 and 172–173.

- 38 The manuscripts of the *Liber floridus* that contain this image of Augustus are in Ghent, Bibliotheek der Rijksuniversiteit, ms 92, f. 138v; and Paris, BnF, ms lat. 8865, f. 45r. For discussion of this image see Santarém, *Essai sur l'histoire de la cosmographie* (see Ch. 4, n. 37), vol. 2, pp. 160–163; and Nicolet and Gautier Dalché, "Les 'quatre sages' de Jules César" (see Ch. 4, n. 36). The BnF image is reproduced in color on the cover and the title page of Destombes's *Mappemondes* (see Ch. 4, n. 37), and in black-and-white in T. P. Wiseman, "Julius Caesar and the Hereford World Map," *History Today* 37.11 (1987), pp. 53–57, at 57; and in T. P. Wiseman's *Talking to Virgil: A Miscellany* (Exeter: University of Exeter Press, 1992), plate 2 following p. 116, illustrating his essay "Julius Caesar and the Mappa Mundi," pp. 22–42.
- 39 Scott D. Westrem, *The Hereford Map: A Transcription and Translation of the Legends with Commentary* (Turnhout: Brepols, 2001), pp. 8–9, no. 12; Wiseman, "Julius Caesar and the Hereford World Map" (see Ch. 4, n. 38), pp. 53–57; Wiseman, "Julius Caesar and the Mappa Mundi," in his *Talking to Virgil: A Miscellany* (see Ch. 4, n. 38), pp. 22–42; and Valerie I. J. Flint, "The Hereford Map: Its Author(s), Two Scenes and a Border," *Transactions of the Royal Historical Society*, Sixth Series, 8 (1998), pp. 19–44.
- 40 See Konrad Miller, *Mappaemundi: Die ältesten Weltkarten* (Stuttgart: J. Roth, 1895–98), vol. 5, p. 5; quoted by Nicolet and Gautier Dalché, "Les 'quatre sages' de Jules César" (see Ch. 4, n. 36), p. 205.

Nota Jerusalem distat secundum taxationem viatorum et nautarum de lubeck, que est <secunde?> aquilonaris, circa 777 miliaria teutonica, et de lubeck sunt quasi 223 miliaria ad Islandiam, etiam de Jerusalem circuiter mille miliaria ad finem terre. Sed astronomorum minor est computus; potest tamen utrorumque esse verus, quod viatores et naute oblique vadunt, Astronomi vero in aere recte computant vero obstaculum non habent.

Note that according to the estimate of travelers and sailors, Jerusalem is about 777 German miles from Lübeck, which is well <to?> the north, and from Lübeck it is about 223 miles to Iceland, and from Jerusalem about 1000 miles to the <eastern> end of the earth. The figures of the astronomers are smaller, but it is possible that both are correct, for travelers and sailors travel with turns, while the astronomers calculate straight lines in the air, and have no obstacle.

Like the similar passage on f. 2r, this passage may offer some clues about the sources the author was using. Here he clearly states that the figures he supplies are travel distances, rather than measurements as the crow flies, and this distinction is helpful, for there is a difference between his figures here and those on f. 2r. In the earlier passage he said that it is 600 German miles from the Holy Land to the beginning of India, and 200 miles across India to the Indian Ocean, or 800 German miles from the Holy Land to the Indian Ocean, whereas here on f. 6r he gives this distance as 1000 German miles.

Returning to the map of Andreas Walsperger, assuming that a traveler went from Lübeck to the Holy Land by way of Venice, measuring in straight lines on the map south from Lübeck to Venice, from Venice southeast to the open Mediterranean, and from there east to Joppa, we get a distance of about 620 German miles, rather less than the 777 German miles that the author of HM 83 indicates. We can try to check our calculation of the distance by consulting two later maps. The route from Lübeck to Venice as indicated on Erhard Etzlaub's 'Romweg' Map of c. 1500 is quite direct,⁴¹ so it does not seem that turns on that part of the journey would have added substantially to the distance. Also, on

41 For discussion of Etzlaub's Romweg map see Herbert Krüger, "Erhard Etzlaub's 'Romweg' Map and Its Dating in the Holy Year of 1500," *Imago Mundi* 8 (1951), pp. 17–26; Tony Campbell, "The Woodcut Map Considered as a Physical Object: A New Look at Erhard Etzlaub's 'Rom Weg' Map of c. 1500," *Imago Mundi* 30 (1978), pp. 79–91, with a postscript in *Imago Mundi* 33 (1981), p. 71; and Brigitte Englisch, "Erhard Etzlaub's Projection and Methods of Mapping," *Imago Mundi* 48 (1996), pp. 103–123.

Martin Waldseemüller's *Carta itineraria Europae* of 1511, which survives in one exemplar of a 1520 printing,⁴² there is a legend indicating that the distance from Venice to Modona (Methoni, Greece) is 870 Italian miles, and from Modona to Joppa 1000 Italian miles, so 1870 Italian miles in all, and four Italian miles equal one German mile,⁴³ so this is 467.5 German miles—quite different from the measurement of this trajectory on Walsperger's map.⁴⁴ So it seems that the author of HM 83 was using a source quite different than Walsperger's map. Walsperger's map does not include Iceland, so we cannot compare the distance to that island supplied in HM 83 with that on the map.

With regard to our author's indication that it is 1000 German miles from Jerusalem to the eastern edge of the earth, if we plot a route on Walsperger's map starting from Jerusalem and going east to near Babel, and then following the Tigris northeast to the *Torre Lapidea*, and then east southeast to the eastern coast of Asia not far from Paradise, the distance would be about 727 German miles, quite a bit less than the figure of 1000 German miles mentioned in HM 83, f. 6r. This confirms that his figures came from a source quite different from Walsperger's map.

The geographical treatise ends on f. 8v with a unique and extremely interesting discourse on the different purposes or functions of *mappaemundi*. In

42 The unique surviving exemplar of Waldseemüller's *Carta itineraria Europae* is in Innsbruck, in the Tiroler Landesmuseum Ferdinandeum. For discussion of the map see Leo Bagrow, "'Carta Itineraria Europae' Martini Ilacomili, 1511," *Imago Mundi* 11 (1954), pp. 149–50; and Peter H. Meurer, *Corpus der älteren Germania-Karten: Ein annotierter Katalog der gedruckten Gesamtkarten des deutschen Raumes von den Anfängen bis um 1650* (Alphen aan den Rijn: Canaletto Uitgeverij, Repro-Holland, 2001), pp. 155–160; the map has been reproduced in facsimile as Martin Waldseemüller, *Carta itineraria Europae* (Bonn: Kirschbaum Verlag, 1972), with an accompanying study by Karl-Heinz Meine, *Erläuterungen zur ersten gedruckten (Strassen-)Wandkarte von Europa, der Carta itineraria Europae der Jahre 1511 bzw. 1520 von Martin Waldseemüller (um 1470 bis etwa 1521), Kostbarkeit des Tiroler Landesmuseum Ferdinandeum, Innsbruck* (Bonn-Bad Godesberg: Kirschbaum, 1971).

43 The equivalence of one German mile to four Italian miles is asserted by Martin Waldseemüller and Matthias Ringmann in their *Cosmographiae introductio* (St-Dié: G. Ludd, 1507), chapter 9; see *The 'Cosmographiae introductio' of Martin Waldseemüller in Facsimile, Followed by the Four Voyages of Amerigo Vespucci, with their Translation into English*, ed. and trans. Joseph Fischer and Franz von Wieser (New York: The United States Catholic Historical Society, 1907), pp. xxxvi (Latin) and 77 (English).

44 There is a legend very similar to that on Waldseemüller's *Carta itineraria Europae* about the distance from Venice to Joppa on the modern map of Greece (*Tabula moderna Bossinae, Serviae, Graeciae, et Sclavoniae*) in the 1522, 1525, 1535, and 1541 editions of Ptolemy's *Geography*.

less than one page the author reveals an understanding of the concept of thematic maps, touches on problems involved in the creation of *mappaemundi*, addresses the transmission of errors in maps, mentions the different types of sources used by cartographers, and discusses the origin of the monstrous peoples (the 'Plinian races'). This passage calls for an extended discussion:

Mappa mundi multipliciter consideratur primo quoad loca terre habitabilis que sunt valles montes et plana flumina silvestria campestria et cetera. Terra habitabilis prout <quod?> est nunc sicut est a deo creata aliqua loca licet pauca sunt submersa. Et si primus mappe pictor veram posuitur distanciam locorum, tamen successores successive valde transposuerunt situm et distanciam coacti artitudine loci in mappa figurali ubi etiam unum nomen loci in extenso scriptum repellit aliud ad extraneam distantiam. Propter quod ego decrevi perfecta nomina locorum <non?> scribere ad contrarium precedentem et in figura principia nominum figurare et <tamen?> artitudo in figura non permisit nomina loca propter situm ut videtur in figura.

Secundo consideratur mappa mundi quoad edificia et culturam terre et cetera terra habitabilis ab olim est multum variata et ubi prius fuerunt deserta ibi nunc cultura et hominum habitacula et <eius verso?>, et consequenter oportetur sepe pingi novam mappam mundi.

Tertio consideratur mappa mundi quoad homines terre habitatores et ego eram in terra peregrinationis in qua nunquam sunt congregati tales homines monstrosi quos figuralis mappa ibi esse significat. Ex quo ego arguo ut in aliis terre saltem omnibus tales esse et per consequens communis mappa mundi pro illa parte iterum est falsa. Sunt tamen in certe insule monstrosi homines quos in quodam peregrino libro legi fore sic exortos. Aliqua femina peperit femellam monstrosam quam verecundabatur educare ut voluit occidere projecit ergo eam ad quandam desertam insulam. Alia alibi peperit masculum monstrosus quem ex eadem causa ex eventu et fortuna projecit in eandem insulam et dei nutu et cura educati et adulti convenerunt et ultra ex se monstrosos homines generaverunt in tali insula. Et prime figuralis mappe pictor sic tamen in illa una vel certe pluribus insulis homines monstrosos depinxit.

Successoribus mappe pictoribus apparuit fore ornatum mapparum tales homines monstrosos & mirabiliores ubique in cunctis oceani maris insulis in circuitu aride esse depictos & falsitatem nichilpendentes sic ut cernitur in mappis communibus in circuitu insulare mare oceani depinxerunt.

Quarto consideratur mappa mundi quoad homines aliis dominantes et cetera. mappe mundi ab exordio possunt diverse depingi ex divina scriptura, cronicis, et gentilium cosmographia.

A *mappamundi* is considered in several ways. First with regard to the places of the habitable land, which are the valleys, mountains, river plains, wooded fields, etc. The habitable land is now just as it was when it was created by God, although some places have been submerged.⁴⁵ And even if the first painter of a map put the true distance of places, yet <his> successors, one after another, significantly transposed the places and distances, forced by the narrowness of space in the illustrated map, where even one place name written in full would force another to an incorrect location. Because of this I decided <not?> to write the whole names of places each opposite to the preceding <one?>, and in the map to write just the beginnings of the names, so that the narrowness in the map will not restrict the names and places because of their position, as may be seen in the map.

Second, a *mappamundi* is considered as far as buildings, farming, etc. For a long time the inhabited lands have been changing, and where there were previously deserts, in those same places there is now farming and human dwellings and <... >, and consequently, it is appropriate to make a new *mappamundi* frequently.

Third, a *mappamundi* is considered with respect to men as inhabitants of the world, and I have been in the land of pilgrimage in which there are no such gatherings of monstrous men as are depicted there in maps. Because of this, I argue that such men are only in all other parts of the world, and that consequently, the common *mappamundi* is in that part once again mistaken. There are, however, monstrous men in certain islands, who I read in a travel book are born as follows. A woman gave birth to a monstrous female child whom she was ashamed to raise, and she wished to kill her, so she cast her away her on a certain deserted island. In another place, another woman gave birth to a monstrous male

45 For a classical discussion of water taking over what was previously land and vice versa see for example Aristotle, *Meteorologica* 351^a–353^a, trans. E. W. Webster, in *The Works of Aristotle*, ed. W. D. Ross (Oxford: Clarendon Press, 1908–52), vol. 3, at 1.14; on this passage and others on the same subject in other classical authors see Adrian J. Desmond, “The Discovery of Marine Transgression and the Explanation of Fossils in Antiquity,” *American Journal of Science* 275 (1975), pp. 692–707; also see Pliny 2.86.200–206 and Rhiannon Evans, “The Cruel Sea?: Ocean as Boundary Marker and Transgressor in Pliny’s Roman Geography,” *Antichthon* 39 (2005), pp. 105–118, esp. 111–114.

child, whom for the same reason, circumstance, and chance, she cast away on the same island. Through God's will and care, they were brought up, and when they were adults, they came together and thereupon they generated monstrous men in that island. And the painter of the first illustrated map thus painted monstrous men in that one island, or rather in many islands.

To later map painters, such monstrous men and other things still more marvelous painted everywhere in all of the islands in the ocean <and> in the edge of the mainland appeared to be a <mere> decoration of maps. Thinking nothing of the falsehood, they painted them just as they saw them in common maps in the circuit of islands in the ocean.

Fourth, a *mappamundi* is considered with regard to men ruling over other men, etc. From the beginning, *mappaemundi* could be diversely painted from Holy Scripture, chronicles, and pagan cosmography.

This discussion of the distinct roles that *mappaemundi* can play, i.e. showing geographical features, the works of human beings, the different races of men, and political relationships, reveals a conception of maps that led naturally to the creation of the thematic maps that accompany the geographical treatise, which will be discussed below. The sophistication of the author's conception of the roles of maps can be appreciated by comparing this passage with some other medieval texts about the roles of maps. The introduction to the *Descriptio mappe mundi*, a text written c. 1130 and convincingly attributed to Hugh of Saint-Victor, emphasizes that the purpose of *mappaemundi* is to make distant and unknown regions known to those who cannot travel to see them:⁴⁶

Sapientes uiri, tam seculari quam ecclesiastica litteratura edocti, in tabula uel pelle solent orbem terrarum depingere, ut incognita scire uolentibus rerum imagines ostendant, quia res ipsas non possunt presentare. Sed nec omnes ualent circuire oceanum, ut positiones uideant insularum, non omnes possunt adire longinquas regiones, ut aspiciant situs, qualitates et diuisiones earum. Inde est, quod eadem descriptio que mappa mundi appellatur, diuersis modis propter rerum diuersitatem coloratur, ut alio quidem mare Magnum, alio mare Rubrum, alio flumina et alio montes colore uestiti, facilius ab inuicem discernantur. Sed et singuiis rebus que in hac mappa mundi depinguntur, titulus scripture

46 The Latin text comes from Patrick Gautier Dalché, *La 'Descriptio mappe mundi' de Hugues de Saint-Victor: texte inédit avec introduction et commentaire* (Paris: Etudes augustiniennes, 1988), p. 133; the English translation is ours.

apponitur, quia rerum incogitarum imagines sine scripture uel sermonis magisterio aut nullatenus aut difficile intelliguntur.

Wise men, both lay people and those learned in ecclesiastical writings, paint the world on wood or on parchment, so that they can show images of things to those who wish to know things that are unknown, because they cannot present the things themselves. For not everyone can sail on the ocean, so that they can see the locations of islands, nor can everyone visit distant regions, so that they can perceive their situations, qualities, and divisions. It is for this reason that such a delineation, which is called a *mappamundi*, is colored in diverse colors because of the diversity of things, so that the Mediterranean is painted one color, the Red Sea another, rivers another, and mountains another, in order that they can be easily distinguished one from another. And for each thing that is painted in such a *mappamundi*, a label is written beside it, for images of unknown things without writing or the guidance of words are difficult or impossible to understand.

Thus for Hugh of Saint-Victor, the purpose of a map is to teach about geography. A very different purpose is ascribed to maps by Fra Paolino Veneto in his “De mapa mundi,” part of his *Compendium, seu Satyrica historia rerum gestarum mundi* (1321):⁴⁷

Incipit prologus in mapa mundi cum trifaria orbis divisione. Sine mapa mundi ea, que dicuntur de filiis ac filiis filiorum Noe et que de IIIIor monarchiis ceterisque regnis atque provinciis tam in divinis quam humanis scripturis, non tam difficile quam impossibile dixerim ymaginari aut mente posse concipere. Requiritur autem mapa duplex, picture ac scripture. Nec unum sine altero putes sufficere, quia pictura sine scriptura provincias seu regna confuse demonstrat, scriptura vero non tamen

47 The Latin text here is from Biblioteca Apostolica Vaticana MS Lat. 1960, f. 13r; it is transcribed and discussed by Anna-Dorothee von den Brincken, “...ut describeretur universus orbis: Zur Universalkartographie des Mittelalters,” in Albert Zimmermann, ed., *Methoden in Wissenschaft und Kunst des Mittelalters* (Berlin: de Gruyter, 1970) (= *Miscellanea Mediaevalia* 7), pp. 249–278, at 261; and the same author’s “‘Quod non vicietur pictura.’ Die Sorge um das rechte Bild in der Kartographie,” in *Fälschungen im Mittelalter: Internationaler Kongress der Monuments Germaniae Historica, München 16–19 Sept. 1986* (Hannover: Hahnsche Buchhandlung, 1988), vol. 1, pp. 587–599, at 590. The English translation is from Van Duzer and Sáenz-López Pérez, “*Tres filii Noe*” (see Ch. 4, n. 8), p. 32.

sufficienter sine adminiculo picture provinciarum confinia per varias partes celi sic determinat, ut quasi ad oculum conspici valeant.

Here begins the prologue to the *mappamundi* with a threefold division of the world. Without a world map, I would say that it is not just difficult, but impossible to picture for oneself or grasp with the mind what is said of the sons and grandsons of Noah, and of the Four Kingdoms (i.e. Babylon, Persia, Greece, Rome) and other nations and provinces in divine and human writings. What is needed is a two-fold map, with both pictures and text. Nor will you think one sufficient without the other, for a picture without text indicates provinces or kingdoms unclearly, and text without the aid of pictures does not show the boundaries of the provinces in all of their parts, so that they can be perceived almost at a glance.

For Fra Paolino, the primary function of a map is to facilitate the understanding of history and the world's political divisions, and he says not a word about geographical features or ethnography, and nothing about a map having multiple functions that might be treated separately in separate maps. The author of HM 83 would certainly agree about the utility of combining maps with explanatory text.

The Catalan Atlas of 1375 includes in its preliminary matter a definition of *mappamundi*, a definition we are to understand as including nautical charts, as the Catalan Atlas itself is a nautical chart. That definition runs:⁴⁸

Mapa mundi vol dir ayant con ymage del món e de les diverses etats del món e de les regions que són sus la terra de diverses maneres de gens qui en ela habiten.

Mappamundi roughly signifies a picture of the world, of the various ages of the world, of the regions of the earth, and of the various kinds of people who live in it.

This definition is very interesting insofar as it indicates three components of a *mappamundi*, historic, geographical, and ethnographic. Though much briefer than the characterization in HM 83, this definition points towards a richness of function of medieval maps similar to that suggested in HM 83.

48 The quotation is from *Mapamundi del año 1375* (see Ch. 4, n. 14), p. 15; the translation is ours.

Andreas Walsperger, in giving an account of his *mappamundi* of 1448, places great emphasis on the mathematical foundations of his work, and on the facility it offers for measuring the distances between places:⁴⁹

Item in hac presenti figura continetur mappa mundi siue descriptio orbis geometrica, facta ex cosmographya ptholomey proportionabiliter secundum longitudes et latitudes et diuisiones climatum. Et cum uera et integra cartha nauigationis marium. Ita quod quilibet clare in ea potest videre quod miliaribus una regio uel prouincia ab alia sit situata, uel ad quam plagam, si ad orientem, occidentem, austrum vel aquilonem extensa. Terra etenim est alba, maria uiridis coloris, flumina dulcia lasurri, montes varii <item?>. Rubra puncta sunt christianorum ciuitates. Nigra uero infidelium in terra marique existentium.

Volens igitur scire in hac presenti figura quot miliaribus una regio seu ciuitas ab alia sit situata, accipe circulum et pone pedem eius ad medietatem puncti cum nomine alicuius ciuitatis in presenti figura signati. Et exiende alium pedem ad punctum alterius ciuitatis ad placitum. Et tunc circulum sic extensum pone super scalam latam: metrum hic inseruit per puncta diuisa et quilibet punctus in praetacta scala cuiusvis sit coloris dat decem miliaria thevtunica. Et nota quod unum miliare theutunicum continent in se decem milia passuum et unus passus duos pedes <inde?>. Facta est hec mappa per manus fratris Andree Walsperger ordinis sancti benedicti de saltzburga. Anno domini 1448 In constantia.

In this diagram is contained a world map or geometric description of the globe, based on the *Cosmography* of Ptolemy, designed proportionally according to longitude, latitude, and the classification of climates. And with the true and precise nautical chart of the seas, in such a way that anyone can clearly see how many miles one region or province is from another, and in which direction it extends, whether to the east, west, south or north. The land is white, the oceans green, the rivers blue, and the mountains various colors. The red dots are cities of the Christians,

49 The Latin text at the bottom of Walsperger's map is transcribed by Konrad Kretschmer, "Eine neue mittelalterliche Weltkarte der vatikanischen Bibliothek," *Zeitschrift der Gesellschaft für Erdkunde* 26 (1891), pp. 371–406, at 376–377; the article is reprinted in *Acta Cartographica* 6 (1969), pp. 237–272. A translation of the passage into German is supplied by Karl-Heinz Meine, "Zur Weltkarte des Andreas Walsperger, Konstanz 1448," in Wolfgang Scharfe, Hans Vollet and Erwin Herrmann, eds., *Vorträge und Berichte: Kartenhistorisches Colloquium Bayreuth '82, 18.–20. März 1982* (Berlin: D. Reimer, 1983), pp. 17–30, at 19. The English translation is ours.

and the black ones are the cities of the unbelievers who live on the land and by the sea.

Thus, if you want to know how many miles a region or city in this diagram is away from another, take a divider and place one leg in the middle of a point marked with the name of a city in this diagram. And then place the other leg in the point marking another city, whichever you wish. Then put the divider, opened to that same amount, on the wide scale. Here it offers a measure divided into sections, and each section of the marked scale, whatever its color, is ten German miles. And notice that one German mile contains ten thousand paces, and one pace two feet, etc. This map was made by the hands of Brother Andreas Walsperger from the Order of Saint Benedict in Salzburg. In the year of our Lord 1448, in Constance.

An indication of the purpose of a map also follows the world map in the *Rudimentum novitiorum*, a world history printed by Lucas Brandis in Lübeck in 1475, a bit more than a decade before HM 83 was composed in the same city. The map (ff. [85]v-[86]r) precedes a long description of the world (ff. [87]r-[117]r), and in the preface to that description, on f. [87]r, there is this account of the map's intended function:⁵⁰

Prepicta igitur figura, tenaci consideratione inspecta, clarebit, audita aliqua regione, evidentissime scriptis in subsequentibus, qua in parte orbis tripartiti sit situata, primo procedendo per regiones asie, deinde afice ac aurope (*sic*) degimus,⁵¹ qua in nos progressu alphabetico, ut diligens lector tenaci memoria valeat apprehendere distancias coniunctionemque regnorum atque regionum. Quibus ignoratis indicatur de veritate hystorie sacre, libris in canonicis, iudicio ceci de colore, quia Io. iii: Si terrena dixi vobis et non creditis, id est apprehendere non valetis, quomodo, si dixerero celestia, credetis, id est comprehendetis.

So the foregoing map, if carefully studied, will make clear, for any given country in the following chapters, in what part of the tripartite world it is

50 This passage about the map's intended function is transcribed and discussed by Michael Herkenhoff, "Das *Rudimentum novitiorum* (1475)," in *Die Darstellung außereuropäischer Welten in Drucken deutscher Offizinen des 15. Jahrhunderts* (Berlin: Akademie Verlag, 1996), pp. 100–111, at 104–105.

51 The word order is incorrect following *aurope*, and we have translated so as to recover what must be the intended sense.

situated—which chapters proceed first through the regions of Asia, then Africa and Europe (in which we live), in alphabetical order—so that a careful reader with a good memory can understand distances and the conjunction between kingdoms and regions. If these things are ignored, the judgment of a blind man about color is likely regarding the truth of sacred history in canonical books, in accordance with John 3:12: “If I have spoken to you earthly things, and you believe not: how will you believe, if I shall speak to you heavenly things?” that is, <how> will you understand?

Thus the purpose of the map is to help the reader understand the spatial context of the places and events described in the following chapters, and thus to comprehend the spiritual significance of what is recounted. A bit more information about the purpose of the two maps (of the world and of the Holy Land) in the *Rudimentum novitiorum* is contained in the printer’s advertisement for the book, which survives.⁵² The part about the maps runs:

Item describit totum orbem tripharium in suis regnis et provinciis cum proprietatibus eorundem. Item terram sanctam ita luculenter expandit omnibus suis in locis, ut diligens lector, habitu acquisito, tocius biblie textum possit localiter scire, versus quemcumque ventum et plagam tocius mundi queque historia tam novi quam veteris testamenti sit peracta, quo ignorato, nemo quantumcumque doctus directe capit silencio transeo textum utriusque testamenti quantum ad circumstantias loci et temporis rei geste.

The book also includes a map of the whole tripartite world with its kingdoms and provinces and the characteristics of those regions. It also shows the Holy Land very clearly in all its parts, so that the serious reader, with practice, can know the whole text of the Bible geographically—towards which cardinal direction and part of the whole world every story of the

52 On the advertisement for the *Rudimentum novitiorum* see A. W. Kazmeier, “Eine bisher unbekannte Buchhändleranzeige und andere frühe Drucke des Lukas Brandis aus einer alten Schloßbibliothek,” *Zentralblatt für Bibliothekswesen* 57 (1940), pp. 292–299, with a reproduction of the advertisement between pp. 292 and 293; Julius Victor Scholderer, “Two Unrecorded Early Book-Advertisements,” *Library*, Series 5, vol. 11 (1956), pp. 114–115; and Hans Michael Winteroll, *Summae innumerae: Die Buchanzeigen der Inkunabelzeit und der Wandel lateinischer Gebrauchstexte im frühen Buchdruck* (Stuttgart: H.-D. Heinz, 1987), with the advertisement reproduced on p. 384 and transcribed on pp. 385–386, with the part about the map on p. 385.

New and Old Testaments took place. Unless this is known, no one, no matter how learned he may be, clearly understands the text of both Testaments with regard to the circumstances of time and place of the occurrence.

The maps of the *Rudimentum novitiorum* are thus intended to facilitate a better understanding of the Bible.⁵³ A similar statement appears on another map of the Holy Land printed by the same printer a few years later in the *Prologus Arminensis in mappam Terraesanctae* (Lübeck: Lucas Brandis, ca. 1478), ff. [11]v-[12]r.⁵⁴

In a passage on f. 12v of HM 83 cited above, the author notes that his maps have a moral purpose, specifically to restrain men from sin,⁵⁵ but his statement occurs at the end of the series of apocalyptic maps, and seems to apply only to those maps, and not necessarily to those in the geographical treatise. In his discourse about the functions of maps on f. 8v, he seems to view maps as tools for understanding the world, particularly by considering different aspects of the world separately. Although he lists the distances between some places on ff. 2r, 6r, and 14r, his maps are not designed to help one determine distances, as

53 Roger Bacon also spoke of a knowledge of geography as being essential to a proper understanding of Scripture: see Roger Bacon, *The 'Opus Majus' of Roger Bacon*, ed. John Henry Bridges (London: Williams and Norgate, 1900), vol. 1, pp. 183–187, esp. 183; this section is translated into English in *The Opus majus of Roger Bacon*, trans. Robert Belle Burke (Philadelphia: University of Pennsylvania Press; and London: H. Milford, Oxford University Press, 1928), vol. 1, pp. 203–208, esp. 204.

54 From the *Prologus Arminensis*, map of the Holy Land, f. 11v: *Assumpto hic tue considerationis loco, civitatis scilicet castelli aut ville aut alio quocumque recurre cum quota eiusdem ad notulam sequentem ad eandem quotam capituli, et ilico occurret desideratus tam novi quam veteris testamentorum per te locus famosus iuxta omnem plagam mundi in situatione sua, quod prevalide unumquenque sacre historie predicatorem juvabit, ac sacre scripture diligentem indagatorem quempiam animabit, quo ignoro audeat nemo feliciter de his quantum ad situm secure fabulari*, “Having chosen here a place for your consideration, take the number beside the city (i.e. the castle) or town, or any other feature, and go to the text following the map, to the chapter with that number, and immediately you will find that place (whether of the New or Old Testament) that is famous throughout the world in its proper place, which will greatly assist every preacher of sacred history, and it will inspire any diligent investigator of Holy Scripture; but no one who does not know these things will be able to successfully talk about Scripture as far as locations.”

55 From f. 12v of HM 83: *Arbitror ergo quod harum figurarum firma fides et frequens consideratio efficacius hominem retraherent a peccatis quam multa bona verba*, “I believe therefore that a firm faith in and frequent contemplation of these diagrams will more effectively restrain a man from sins than would many good words.”

Walsperger's is; nor are they expressly designed to assist readers in understanding the Bible, as are the map of Fra Paolino and the maps in the *Rudimentum novitiorum*, though some of them would certainly be helpful in that enterprise. The author of HM 83 has a broader conception of the possible functions of maps.

In the remainder of his consideration of the first function of *mappaemundi*, the author of HM 83 discusses an important problem in the transmission of maps: in the copying of a map, lack of space can cause one place name to displace another, resulting in errors of location and distance. The author says that he has therefore just written the beginnings of place names on his maps, adding the full names in the accompanying text—though in fact the maps in HM 83 have full place names, which raises the possibility that the maps were smaller in the autograph manuscript. The author's remarks about this issue bespeak considerable experience in making maps; at the same time, other cartographers before him had offered similar warnings. Ptolemy in his *Geography* 1.18.2–3 mentioned the errors introduced during the copying of maps:⁵⁶ "After all, continually transferring <a map> from earlier exemplars to subsequent ones tends to bring about grave distortions in the transcriptions through gradual changes."

The subject is also addressed by Gervase of Tilbury (ca. 1150–ca. 1228) in his *Otia imperialia*, though his complaint is about painters adding their own information to maps rather than about accidental corruption of place names:⁵⁷

Vt autem oculata fide audis mentibus et sitientibus auribus satisfaciamus, in summa naturalem prouinciarum ordinem et situm per tres orbis partes distinctarum in emendatiore picture subiunximus, considerantes quod ipsa pictorum uarietas mendaces effecit de locorum ueritate picturas quas mappam mundi uulgu nominat, plerumque enim pictor, ut

56 J. Lennart Berggren and Alexander Jones, *Ptolemy's Geography: An Annotated Translation of the Theoretical Chapters* (Princeton: Princeton University Press, 2000), p. 80. For a dramatic illustration of errors in the transmission of coordinates in the text of Ptolemy's *Geography* see Alexander Jones "Ptolemy's Geography: A Reform that Failed," in Zur Shalev and Charles Burnett, eds., *Ptolemy's 'Geography' in the Renaissance* (London: Warburg Institute; and Turin: Nino Aragno Editore, 2011), pp. 15–30, at 27–28.

57 Gervase of Tilbury, *Otia imperialia: Recreation for an Emperor*, ed. and trans. S. E. Banks and J. W. Binns (Oxford: Clarendon Press, 2002), Book 2, chapter 25, pp. 526–527. This text is discussed by Anna-Dorothee von den Brincken, "'Quod non vicietur pictura.' Die Sorge um das rechte Bild in der Kartographie," in *Fälschungen im Mittelalter: Internationaler Kongress der Monumenta Germaniae Historica, München 16–19 Sept. 1986* (Hannover: Hahnsche Buchhandlung, 1988), vol. 1, pp. 587–599, at 592–594.

alias testis, cum de suo adicit, partis mendacio totam testimonii seriem decolorat, ut in Decretis, C. tertia, q. .ix., “Pura et simplex.”

It was, then, to satisfy hungry minds and thirsty ears with reliable information that we appended this summary of the natural order and situation of the provinces, as they are distributed through the three parts of the world, so adding to the accuracy of our picture; for we are aware that the very variety of painters has resulted in the production of pictures which depart from the truth of the localities themselves—those pictures which are commonly called *mappae mundi*—since very often the painter, like any kind of witness, mars by the falsity of a part the whole formulation of his evidence, when he adds material of his own, as it says in the Decretum, C. 3 q. 9, “Pure and simple.”

And Fra Paolino Veneto, in his chapter “De mapa mundi” in his *Compendium, seu Satyrica historia rerum gestarum mundi*,⁵⁸ warns: *Quod vero per pictores non vicietur pictura, magna est cautio adhibenda*, “But great caution is to be exercised, lest the map is vitiated by the painters.” Errors by copyists of *mappaemundi* were evidently a widespread and well recognized problem; the author of HM 83 distinguishes himself by focusing on a solution to the problem.

In the second section of his discourse on the purposes of *mappaemundi*, the author of HM 83 addresses the representation of human activities (building, farming, etc.) on maps. In the first section he says that “The habitable land is now just as it was when it was created by God, although some places have been submerged,” but in the second he notes that “the inhabited lands have been changing, and where there were previously deserts, in those same places there is now farming and human dwellings,” so that “it is appropriate to make a new *mappamundi* frequently.” Our author sounds here like a cartographer who works for a governmental Department of Agriculture.

In the third section of his discourse on the functions of maps our author considers ethnography. He speaks of maps that show monstrous peoples in the ‘land of pilgrimage,’ i.e. the Holy Land, and says that he has been to that area and did not see any monstrous races, and again criticizes other mapmakers for

⁵⁸ The text from Fra Paolino Veneto is transcribed and discussed by von den Brincken, “... ut describeretur universus orbis” (see Ch. 4, n. 47), p. 261; and the same author’s “*Quod non vicietur pictura*” (see Ch. 4, n. 47), p. 590.

their errors in this regard.⁵⁹ We do not know of any *mappamundi* that shows monstrous peoples in the Holy Land: indeed, such a map would have to be very large, since on most *mappaemundi* there is not room for more than brief descriptive texts or small images in that region. Nor do we know of a medieval map specifically of the Holy Land that shows monstrous peoples there.⁶⁰ Indeed, near the end of the late twelfth-century epic poem *Herzog Ernst*, the hero brings a few examples of the monstrous peoples to Jerusalem,⁶¹ which tends to confirm that there was no long tradition of monstrous races living in the Holy Land. So the author's source here is mysterious.

Our author then gives an account of the origin of monsters on islands, where he believes they do exist. A woman gives birth to a monstrous female child, and abandons it on a desert island, and a woman bears a male monster and abandons it on the same island, whence a race of monsters was born. This account is alleged to come from a travel narrative, but we have not been able to determine the author's source.⁶² Most other accounts of the origins of monsters are very different. Aristotle and Pliny, for example, hold that Africa

59 Other authors critical of reports of monsters in specific areas include Fra Mauro, who has a legend on his *mappamundi* expressing grave doubt about reports of monsters in Mauritania, see Falchetta, *Fra Mauro's World Map* (see Ch. 4, n. 30), pp. 386–387, *1043; Caspar Vopel, who in a legend off the eastern coast of South America on his world map of 1558 (*Nova et integra universalisque orbis totius ... descriptio*) says that in fact the Spanish have searched the continent from the West, and the Portuguese from the East, and that no cannibals have been found; and Jean de Léry, *Histoire d'un voyage fait en la terre du Bresil, autrement dite Amerique* (La Rochelle: Pour Antoine Chuppin, 1578), chapter 15, pp. 245–246; translated into English in Jean de Léry, *History of a Voyage to the Land of Brazil*, trans. Janet Whatley (Berkeley: University of California Press, 1990), chapter 15, “How the Americans Treat their Prisoners of War,” pp. 126–127.

62 The most similar story we have found—and it is not very similar—is Geoffrey of Monmouth's account of the earliest settling of the British Isles (Albion), according to whom Albina, the daughter of a Greek King, and her sisters murder their husbands and for this crime are set adrift, reach an uninhabited island. The sisters feel lonely and desirous, and are visited by the devil, who copulates with them, and they bear giants who rule the island for hundreds of years. For a summary of the story see Jeffery Jerome Cohen, *Of Giants: Sex, Monsters and the Middle Ages* (Minneapolis: University of Minnesota Press, 1999), pp. 47–50; for discussion see Lisa M. Ruch, “The British Foundation Legend of Albina and her Sisters: Its Sources, Development, and Place in Medieval Literature,” Ph.D. Dissertation, Pennsylvania State University, 2006; and Anke Bernau, “Beginning with Albina: Remem-

produced many monsters because of the shortage of water, which caused different species to meet at water holes and there interbreed.⁶³ Albertus Magnus attributes the production of monsters to problems with the sperm, a superfluity of nutritive fluid in the female, or other problems of impregnation,⁶⁴ while Nicole Oresme attributes monsters to a lack or overabundance of one of the prerequisites to generation.⁶⁵ The anonymous author of the *Rudimentum novitiorum* (f. 59r) cites a text called *De spermate* or *Liber spermatis*, attributed to Galen,⁶⁶ on the generation of monsters, according to which monsters are born when the generative force is weak and allows the planets to influence the nature of a baby. Islands, like distant parts of the world, are separated from the known and familiar, and for that reason are often settings for marvels and monsters,⁶⁷ but we know of no precedent for HM 83's account of this unnamed island as the crucible for the generation of monsters.

For a general discussion of the geography and cartography of monsters from antiquity to the Renaissance see Chet Van Duzer, "Hic sunt dracones: The Geography and Cartography of Monsters," in Asa Mittman and Peter Dendle, eds., *The Ashgate Research*

The author of HM 83 then offers a remarkable explanation for the fact that other cartographers mistakenly placed monstrous peoples in locations other than the few islands on which they had been generated. He says that they mistook the monstrous peoples depicted on the few islands on the first illustrated map (*prime figuralis mappa*), which were in fact scientific illustrations showing where those creatures had developed, for mere decorations, and thus felt free to copy them in other parts of their maps, where those creatures had never lived (still f. 8v):

To later map painters, such monstrous men and other things still more marvelous painted everywhere in all of the islands in the ocean <and> in the edge of the mainland appeared to be a <mere> decoration of maps. Thinking nothing of the falsehood, they painted them in common maps in the circuit of islands in the ocean.

This distinction between scientific and decorative images on maps is extraordinary, and shows our author to have made a very careful study of available *mappaemundi*, considering the sources of the images and the creators' motivations in painting those images. Several decades later, in 1551, Pierre Belon complained about the images of sea monsters on contemporary maps, but his complaint was simply that the images were not naturalistic, and he does not offer such a sophisticated etiology for the incorrect images, suggesting that the artists had imagined the beasts incorrectly based on their misleading names, having never seen them in nature.⁶⁸ Belon's chapter is titled "Qu'on ait grandement abusé en peignant les poissons sur les cartes, & que l'ignorance des hommes soit cause que plusieurs monstres de mer aient esté faulsement portraits sans aucun iugement," that is, "That there has been great abuse in the painting of fish on maps, and that men's ignorance has caused many sea monsters to be falsely portrayed without any judgment." The chapter begins:

L'Euident erreur de plusieurs hommes ignorants l'artifice de nature ne me permet passer outre sans m'esmouuoir, & les toucher de leur

Companion to Monsters and the Monstrous (Farnham, England, and Burlington, VT: Ashgate Variorum, 2012), pp. 387–435.

68 Pierre Belon, *L'histoire naturelle des estranges poissons marins avec la vraie peinture & description du daulphin, & de plusieurs autres de son espece* (Paris: De l'Imprimerie de R. Chaudiere, 1551), Book 1, chapter 30, f. 16v. There is some discussion of this passage in Wes Williams, *Monsters and their Meanings in Early Modern Culture: Mighty Magic* (Oxford and New York: Oxford University Press, 2011), p. 52.

temerité. N'est ce pas une faute digne de reprehension, de les veoir mettre tant de monstres marins en peinture, sans auoir discretion? Inconstants esprits, que ne considerent ils qu'il y a perfection en nature? Voulants donc peindre & représenter les choses naturelles, ne pouez mieuls faire que suyure le naturel. Et si ils ignorent la chose pourquoy la feignent ils? Qui est cause de si grand erreur, sinon leur folie? Qu'on voie les peintures es cartes marines, combien leurs monstres sont esloignez du naturel. O quels estranges poissons marins?

I cannot pass by the evident error of several men ignorant of the artifice of nature without getting upset, and upbraiding them for their temerity. Is not it a reprehensible error, to see them paint so many sea monsters without discretion? Inconstant spirits, who do not consider the perfection there is in nature! Wishing to paint and represent natural things, they could do no better than to follow nature. And if they do not know the thing, why do they feign it? What is the cause of so great an error, if not their lunacy? When one sees the images painted on nautical charts, how far their monsters are from nature! Oh what strange fish!

The differences between the passages about monsters in HM 83 and Belon shed light on the character of our author: he is less rhetorical, certainly, and perhaps we can even say that he is more introverted than Belon.

Many of the monsters on medieval maps were inspired by historical or encyclopedic works, such as Isidore's *Etymologiae*, Orosius's *Historiarum adversum paganos libri vii* and Solinus's *De mirabilibus mundi*, and thus would qualify as scientific according to the division implicit in HM 83. However, there were indeed maps whose monsters were purely decorative, rather than being based on scholarly works. The most impressive example that we know is the mid-fifteenth-century manuscript of Ptolemy's *Geography* in the Biblioteca Nacional de España in Madrid (MS Res. 255), whose maps are decorated with a remarkable number and variety of sea monsters that bear no relation to contemporary scientific texts, and seem to have come from a source like a model book.⁶⁹

In his fourth paragraph on the functions of *mappaemundi*, the author of HM 83 writes:

69 See Chet Van Duzer, "The Sea Monsters in the Madrid Manuscript of Ptolemy's *Geography* (Biblioteca Nacional, MS Res. 255)," *Word & Image* 27.1 (2011), pp. 115–123; and Chet Van Duzer, *Sea Monsters on Medieval and Renaissance Maps* (London: British Library, 2013), pp. 61–65.

Fourth, a *mappamundi* is considered with regard to men ruling over other men, etc. From the beginning, *mappaemundi* were diversely painted from Holy Scripture, chronicles, and pagan cosmography.

The reference to power relations between groups of people points towards the apocalyptic section of the manuscript, in which the relations between Christians and Muslims figure prominently. Our author's concern with the sources of *mappaemundi* again shows his careful analysis of the genre.

One of the many remarkable things the author of HM 83 does on f. 8v is to propose a mythologized early history of cartography. In the first paragraph he says that the first painter of a map (*primus mappae pictor*) placed his toponyms accurately so that the distances between places were indicated correctly, and in the third paragraph, in addressing the question of the monstrous peoples, he says that the painter of the first illustrated map (*prime figuralis mappae pictor*) understood how monsters were generated and painted them on the correct islands. Who was this supremely talented and knowledgeable early creator of *mappaemundi*? We are given no clue. But his primordial map is like Adam and Eve in Paradise before the Fall, perfect and uncorrupted, while later maps mirror the history of humans following their expulsion from Eden, vitiated and in need of a savior, with their toponyms out of place and their monstrous peoples on the wrong islands.

Excerpts from the Section on Astronomy and Geography

Following the section on the Apocalypse (ff. 8v–12v), the author changes perspective entirely, and opens this new section of his work on f. 13r with a diagram of the whole cosmos: the sphere of the earth rising partly out of the sphere of water, which are surrounded by the spheres of air and fire, then the planetary spheres, and the celestial spheres out to the Empyrean. The text on this folio starts to offer an account of the spheres, but is incomplete and need not detain us here. Two brief texts on f. 13v address the relative sizes of the earth, sun, ocean, moon, and the stars, and they do not require transcription and study here.

On f. 14r there is a map that copies the depiction of the world's waterways (see Fig. 4.16 below) from the map on ff. 7v–8r (see Fig. 4.15 below), and adds parallels that define a set of ten *climata*, and the text surrounding the map lists many places and indicates which *climata* they are in. The two columns of the text, which run alongside the northern and southern parts of the map, seem to reflect a geographical division of their contents: the first column, i.e. the text

alongside the northern part of the map (the first paragraph below) includes more places in the north, while the text alongside the southern part of the map (the second paragraph below) includes more places in the central climates, that is, in regions to the south of the places in the first column (though not places in the southern hemisphere). Most of the places in these two lists are in Europe: there are just a few in Asia at the beginning of both lists, and only one place in Africa, *Cepte* (Ceuta), appears in either of the lists. So the emphasis is on the better known parts of the world. Rostock and Wismar, mentioned towards the end of the first list, were, like Lübeck, members of the Hanseatic League; there seems to be some text missing after *wismaria*. In the second list, considerable space is devoted to the Iberian Peninsula, but the reason for this emphasis is not clear.

Amasones insula x tribus Caucasus mons in oriente. Caspias montes Olimpus in macedoniam 7° climate Ethna in cicilia in 4 climate. Rucia extra climata Islandia in fine aquilonaris norwegia extra climata Suecia extra climata Gronlandia circa aquilonem adhuc pagana ignorans evangeliam. Ungaria <magna?> ad huc paga<na> ex quibus exierunt ungari christiani. Dacia in x climate. Bornholm insula intra ix et x climata. Godlandia insula de lubeck 89 miliaribus livonia in asia in 10 climate. Polonia in asia in 9 climate Let<u>ania sub polonia. Ungaria christiana in 7 climate. liptzich in media 8 climate Lubeck in principio novi climate de roma 220 miliaribus Prucia inter 8 et 9 clima partim est asia. Rostig wismaria <...> lucanani ad huc pagani inter ruthenos et suetos qui dicuntur a copmannis de lappen.

Babilonia antiqua in 1° climate circa Eufraten. Babilonia nova in 2° climate circa nilum qui cadit vel verius ascendit in mare magnum per 7 flumina. Babilonia nova et antiqua distant per 36 dietas qui sunt 216 miliaria teutonica. Constantinopolis in fine 6ti climatis. Cecilia in 3° climate. Portugalia in 3° climate. Katalonia in 3° climate. Compostella in 3° climate qua taxatur a viatoribus distare de hamborth 700 miliaribus et totidem de roma. Cepte regnum et 3° climate quod christiani hyspani acquisierunt circa annum christi 1411. Nota castella est regnum et provincia pars hyspanie. Sed Compostella est civitas in qua est cor<p>us san Iacobi in galicia quod etiam est pars hyspanie. Roma in principio 7 climate. Ffrancia in 7 climate et Britannia in fine 7 climate. Anglia in 8 climate et 3100 miliaribus de hamborth. Scotia in 9 cli<mate> in quo etiam hibernia.

The Amazons, the island of the Ten Tribes, and the mountain Caucasus are in the east. The Caspian Mountains <and> Olympus are in Macedonia <in the> seventh climate. Etna in Sicily is in the fourth climate. Russia is outside the climates, Iceland is in the distant north; Norway is outside the climates, Sweden is outside the climates; Greenland is in the north, still pagan and knowing nothing about the Gospel. Greater Hungary is still pagan, <and> from it the Hungarian Christians have departed. Dacia is in the 10th climate. The island of Bornholm sits astride the ninth and tenth climates. The island of Gotland is 89 miles from Lübeck, and Livonia is in Asia in the tenth climate. Poland is in Asia in the ninth climate, and Lithuania is below Poland. Christian Hungary is in the seventh climate. Leipzig is in the middle of the eighth climate. Lübeck is in the beginning of the ninth climate, and is 220 miles from Rome. Prussia sits astride the eighth and ninth climates, and partly in Asia. Rostock Wismar <...>; the Lucanani, still pagans, are between the Russians and the Swedes, and by the copmani (i.e. merchants, cf. Swedish *köpmän*) they are called Lapps.

Ancient Babylonia is in the first climate by the Euphrates. The new Babylon is in the second climate near the Nile, which falls or rather ascends into the Mediterranean through seven channels. The ancient and new Babylonia are separated by a 36-day journey, which is 216 German miles. Constantinople is in the end of the 6th climate. Sicily is in the third climate, Portugal in the third, Catalonia in the third, Santiago de Compostela in the third climate, which travelers estimate to be 700 miles from Hamburg, and the same from Rome. The kingdom of Ceuta is in the third climate, and Spanish Christians took in about the year 1411. Note that Castile is both a kingdom and a province that is part of Spain, but Compostela is a city (in which lies the body of Saint James) in Galicia, which is also a part of Spain. Rome is in the beginning of the seventh climate. France is in the seventh climate and Britain is in the end of the seventh climate. England is in the eighth climate and is 3100 miles from Hamburg. Scotland is in the ninth climate, in which Ireland is also.

On f. 14v there is a map that offers an absolute minimum of geographical details, just the bodies of water of a typical T-O *mappamundi*, but with an extra body of water parallel to and south of the Mediterranean (see Fig. 4.17 below); the surrounding text explains that the extra body of water is the *mare artum* ('narrow sea') or western mouth of the Mediterranean: this separation of the Mediterranean proper and the Strait of Gibraltar into different *climata* is puzzling. On the map are indications of nine climates (the last of which is not numbered), and spread across the map is a table that for each climate gives

elevatio poli artici or elevation of the North Star in each climate, the *dies prolixior* or longest day of each climate, and the width in miles of each climate. The system of climates here is different from that on f. 14r: the system depicted on f. 14r has ten climates, while here he says that modern astronomers do not add any climates beyond the ninth, because night is not distinguished by the setting of the sun in those northern regions. The text above and below the map reads:

Figura hec climatuum astronomorum qui climata distinguunt secundum diversitatem mundi et quod ultra novum clima sol non occidit nec oritur in suis stationibus estivali et hyemali. Ergo novi astronomi non addunt antiquorum climatibus decimum et infra climata quod non cognoscitur ibi nox per solis occasum sed per eius motum in aquilonam plaga<m>.

In hac figura patiatum mare artum in medio tertii climatis et in fine sexti sumatur mare magnum qui hic neglectum est signare

This is a diagram of the climates of the astronomers who divide the climates according to the diversity of the world and because beyond the ninth climate the sun does not set, nor does it rise in its summer and winter stations. Therefore the modern astronomers do not add a tenth climate and beyond those of the ancients, because night is not distinguished there by of the setting of the sun, but by its motion to the northern region.

In this diagram is represented the narrow sea in the middle of the third climate, and at the end of the sixth is included the Mediterranean, which here is not depicted.

The point seems to be that the climates indicated on the map on f. 14r derive from geographical texts, while those on this map on f. 14v derive from astronomers. On f. 15r there is another map with the climates, and the author says that those climates are based on the writings of theologians—and the map indicates the locations where the Apostles preached. So these three maps have three different systems of climates.

The last part of the geographical material in HM 83 that we will transcribe and translate is the summary of world history, with an emphasis on the Last Days, on f. 16r. In this narrative, most of the stages of the Apocalypse are described much as they are illustrated and described in the Apocalyptic section of the manuscript (these connections are indicated in the footnotes below), but the correspondence between the narrative here and that in the Apocalyptic section is certainly not perfect. Moreover, there are significant differences in emphasis between the narrative on f. 16r and in the treatise on the

Apocalypse. In the narrative on f. 16r, the author tells how Antichrist will conquer people through his four-fold method (which corresponds with events depicted in the map on f. 10v), then how Enoch and Elijah will preach against Gog and then rise to Heaven. The map on f. 11r portrays a thorough victory by Christ, with his banner spread over the whole world, with no mention of Enoch and Elijah (they appear in the map on f. 10v, but the text on that folio does not mention them either). Moreover, while the narrative on f. 16r then describes a battle between Christ and Antichrist in the sky above the Mount of Olives, and the map on f. 11v shows the sky above the Mount of Olives, the map on that folio does not depict such a battle, nor does the text there describe it; instead, the focus is on the Last Judgment and the rising of the saved with Jesus and the Apostles, and the descent of the damned into Hell. These differences may indicate that the author was still refining his ideas about the Last Days, or that what we have in HM 83 is an abbreviated version of a fuller account the author had written, and that the process of abbreviation resulted in different emphases in the two different accounts (i.e. that in ff. 8v–11r and that on f. 16r).

There are some unusual and apparently original features in this account of the Last Days. In pseudo-Methodius's influential account of the Last Roman Emperor, who was to lead the fight against Islam,⁷⁰ the Last Emperor lays his crown on the Cross on Golgotha, and then the Cross and crown together are raised to Heaven,⁷¹ while in the narrative on f. 16r in HM 83, the Last Emperor places his crown directly on Jesus's head, "recognizing that that crown is his, and always was his." This is a remarkable politicization of Jesus's reign on earth. As the same time, the author makes absolutely no attempt to connect the Last Roman Emperor with any historical figure, and thus avoids politicizing that figure—something often done by other authors. Another unusual feature of

70 On the idea of the Last Emperor see Marjorie Reeves, "Joachimist Influences on the Idea of a Last World Emperor," *Traditio* 17 (1961), pp. 323–370; Marjorie Reeves, "The Worst Antichrist and the Last Emperor," in her *The Influence of Prophecy in the Later Middle Ages: A Study in Joachimism* (Oxford: Clarendon Press, 1969), pp. 306–319; Paul J. Alexander, "The Medieval Legend of the Last Roman Emperor and Its Messianic Origin," *Journal of the Warburg and Courtauld Institutes* 41 (1978), pp. 1–15; Gerrit J. Reinink, "Pseudo-Methodius und die Legende vom römischen Endkaiser," in Werner Verbeke, Daniel Verhelst, and Andries Welkenhuysen, eds., *The Use and Abuse of Eschatology in the Middle Ages* (Leuven: Leuven University Press, 1988), pp. 82–111; and Hannes Möhring, *Der Weltkaiser der Endzeit: Entstehung, Wandel und Wirkung einer tausendjährigen Weissagung* (Stuttgart: Thorbecke, 2000).

71 See Pseudo-Methodius, *Apocalypse; An Alexandrian World Chronicle*, ed. and trans. Benjamin Garstad (Cambridge, MA: Harvard University Press, 2012), chapter 14, pp. 64–65 and 132–135.

this narrative is that the author says that the reign of Antichrist will be a thousand years, which of course is the duration usually ascribed to the reign of Christ (Revelation 20:1–6), and in fact Revelation 13:5 was widely interpreted as indicating that the reign of Antichrist will be 42 months.⁷² Also, at the end of the narrative the author says that Christ's reign will be 47 years. The ascription of a 1000 year reign to Antichrist could be taken as an instance of Antichrist's 'imitation' of Christ, but the shortening of Christ's reign from 1000 to 47 years, in the face of scriptural authority for the 1000 year figure, is bold indeed. It is noteworthy that the narrative on f. 16r does not include the Resurrection; there is more room on the folio, but there is no way to know whether perhaps the scribe simply did not copy this material, or whether the Resurrection was omitted to create more of a focus on the 'high level' actors in the Apocalyptic drama.

The chronology of this summary of the world's history bears examination. The author says that Muhammad began his career in the year 639—the source of this non-traditional date for the beginning of Muhammad's career is not clear—and that his sect would last 931 years, i.e. to the year 1570, when the Last Roman Emperor would put an end to Islam (and 1570 is the end date of the apocalyptic map on f. 9v, which shows Islam spread throughout the world). The Last Roman Emperor then comes to Jerusalem and gives his crown to Christ, and in that moment, the Roman Empire is said to end. So the Roman Empire is to end in 1570, and the author says that the decline of the Empire would last 931 years, so the decline began in the year 639, i.e. exactly when Muhammad began his activities, well after the year 476, the traditional date of the fall of the Roman Empire.⁷³ The author's setting aside of this traditional date in favor of one based on the chronology of Islam clearly indicates his focus on religion. He says that the Roman Empire was powerful and stable for 639 years, which puts the beginning of that period at the year zero, the year of the birth of Christ—so that what is purportedly a chronology of the Roman Empire is in fact based on religion. Finally the author says that the period when Rome was rising lasted 750 years, which puts the founding of the city at 750 BC. Although 753 BC is the most commonly cited date for the founding of Rome,

72 For assertions that the reign of Antichrist would be three and a half years see for example St. Augustine, *De civitate Dei* 20.23; and St. Jerome, *Commentariorum in Daniele libri III*, ed. F. Glorie, in Jerome's *Opera* (Turnhout: Brepols, 1958-) (= Corpus Christianorum, Series Latina, vol. 75A), p. 849 (2.7.25c).

73 See Brian Croke, "A.D. 476: The Manufacture of a Turning Point," *Chiron* 13 (1983), pp. 81–119, reprinted in his *Christian Chronicles and Byzantine History, 5th–6th Centuries* (Aldershot, Hampshire, Great Britain: Variorum; Brookfield, VT: Ashgate 1992), pp. 81–119; and Giuseppe Zecchini, "Il 476 nella storiografia tardoantica," *Aevum* 59 (1985), pp. 3–23.

Polybius and Diodorus, for example, date the founding of the city to 750/751.⁷⁴ There are numerous grammatical errors in the Latin:

Epilogus totius perituri mundi qui habet tres partes, prima pars terminatur diluvio, 2a pars est duratio babilonie, 3a pars duratio Rome. In qua parte nos sumus hodie quod Roma ad huc presento est. Alie due dudum transierunt et cum dicitur hodie babilonia stat de nova intelligendum est, non de antique. Roma habet tres partes secundum hec Crevit statit et decrescit. Prima pars est crementum et erat 750 annorum, in tot annis crevit a minimo usque ad maximum. Secunda pars est plenitudo et status et erat 639 annorum tot annis imperavit toti mundo. Tertia pars est decrementum et discessio et etiam 931 annorum tot annis decrescit donec nichil sit sicut nichil fuit. Circa primam <partem> natus est Jesus verus Christus. In totali fine Rome nascitur Gog falsus Christus et apparebit in 30 annis prius Rome totalem cassationem. Anno nativitatis Jesu Christi 639 Machometus incepit Romanum imperium cassare et ab illo anno usque in hunc 1488 successive abstraxit quasi totum mundum preter hanc quartam in quam nos sumus.⁷⁵ Quantum Romanorum imperator hodie habeat videmus. Et quando Machometus totum mundum subiciet tunc dominabitur in plena postestate 56 annis in quibus 656 annis Roma nihil habet nisi tantum occultum jus sine omni potestate.⁷⁶ In fine illorum 56 annorum ultimus imperator Romanorum vel per illos absconditus vel nominatus a christianis oppressibus electus exsurgit cum omnibus christianis et Jesu Christo adiutore delebit totam sectam machometicam qui duravit 931 annis.⁷⁷ Quibus deletis imperator

74 Dionysius of Halicarnassus indicates that the Roman Empire lasted from 751 BC to 7 BC, about the period that the author of HM 83 ascribes to the rising of the state to power. See Dionysius of Halicarnassus, *The Roman Antiquities*, trans. Ernest Cary (Cambridge, MA: Harvard University Press; and London: W. Heinemann, 1937–1950), vol. 1, p. 11 (1.3.3–4). It is Dionysius who indicates that Polybius said that the city was founded in 750 BC.

75 See the map on f. 9r, which shows the world from the year 639 to 1514, and shows Europe under the control of the Roman Emperor and the Pope, while much of the rest of the world has fallen to Islam (see Fig. 5.3).

76 See the map on f. 9v, which shows the world from the year 1514 to 1570 (56 years), on which the sword of Muhammad dominates the whole earth (see Fig. 5.5).

77 It was said above that Muhammad began to attack the Roman Empire in the year 639, and adding 931 and 639 we get 1570, and 1570 is the last year represented on the map on f. 9v, which shows the sword of Muhammad controlling the world, and is the first year represented on the map on f. 10r, which shows the increase of Antichrist—and the text here mentions the birth of Antichrist momentarily. Incidentally two ninth-century Islamic

Romanorum cesar ultimus veniet Jerusalem et offert ibi super unam altarem coronam romani regni domino Iesu christo recognoscens illam coronam sui esse et semper fuisse. Et in illa hora qua illa corona offertur expirat Romanum imperium totaliter. In eadem hora verum dicitur: Nunc natus est Gog antichristus sed nemo noscit eum. Ab hora eadem erit regnum Christianorum per totum mundum per 30 annos per 10 reges qui maiorem laborem fecerunt in delendo sectam machometicam. Et gog antichristus educatur et crescit.

Circa finem illorum 30 annorum illi 10 reges incipient litigare quis illorum sit caput omnium. Et apparebit gog antichristus⁷⁸ et subiciet sibi primo 36 reges inde alios 7 et veniet in Jerusalem et dicet se esse verum Christum et illam coronam sibi pertinere, quam sibi ut suam imponet et dicet Jesum esse deceptorem et nequaquam esse Christum. Habet suum regnum initium medium et finem. Initium ipsius gog antichristus 30 annorum erit per quod tempus emittet suos nuntios per totum mundum etiam ad insulas maris oceani qui ducatu spiritus maligni cito venient et probatos tam paucos ut quasi omnes decipiant (i.e. decipiet) quadruplici modo⁷⁹ scilicet Crudelitate per tormentorum illationem etc. superat car-

authors, al-Kindi and Abu Ma'shar al-Balkhi, had made a different estimate of the maximum duration of Islam, namely that it could not last more than 693 years, and this estimate was repeated by Roger Bacon and (from him) by Pierre d'Ailly. See Yahya J. Michot, "Ibn Taymiyya on Astrology: Annotated Translation of Three Fatwas," *Journal of Islamic Studies* 11.2 (2000), pp. 147–208, at 185–187; Pauline Moffitt Watts, "Prophecy and Discovery: On the Spiritual Origins of Christopher Columbus's 'Enterprise of the Indies,'" *American Historical Review* 90.1 (1985), pp. 73–102, at 88–89; Roger Bacon, *The 'Opus majus' of Roger Bacon*, ed. John H. Bridges (Oxford: Williams and Norgate, 1897), vol. 1, p. 266; and Roger Bacon, *The Opus majus of Roger Bacon*, trans. Robert Belle Burke (Philadelphia: University of Pennsylvania Press; London: H. Milford, Oxford University Press, 1928), p. 287. Also see Pierre d'Ailly, *Tractatus de legibus et sectis contra supersticiosos astronomos* ([Rouen]: [Guillaume LeTalleur], 1489), chapter 4, argument 5.

78 The fact that Antichrist begins his activities when he is thirty years old mimics Jesus's beginning his public ministry when he was thirty (see Luke 3:23), and this 'imitation' is a traditional element of the life of Antichrist.

79 See the map on f. 10v, which shows the world from 1606 to 1660, and reveals through symbolic geography the four horns of Antichrist by which he will deceive the people (see Fig. 5.7). For discussion of the source of the four-horn symbolism here see our analysis of the map on f. 10v. As we will show in our discussion of that map, this symbolic interpretation of the four horns of Antichrist comes from Hugh Ripelin of Strasbourg's *Compendium theologicæ veritatis* 7.9, published in Albertus Magnus, *D. Alberti Magni Ratisbonensis episcopi ordinis Praedicatorum Opera omnia*, ed. A. Borgnet (Paris: apud Ludovicum Vivès, 1890–95), vol. 34, pp. 1–306, at 242–243.

nales seipsos amantes. Dolositate per munerum collationem etc. Decipient (i.e. decipiet) carnales avaros. Caliditate per divinie scripture falsam expositionem etc. decipiet inflatos falsa scientia. Sceleritate mentite deitatis per miraculorum operationem qua superat ypocritas seipsos sanctificantes et justificantes. Medium quoque tenet totum mundum in plena potestate est m annorum. Pro illo tempore omnes Jesu Christi confessores sunt in heremo (i.e. eremo) ab antichristi confessoribus incogniti. Tantum enoch et helias audent venire ex paradiso et contra gog predicare a termino mundi ad gog presentiam in Jerusalem⁸⁰ ubi eos occidet qui manebunt insepulti per m diem tunc resurgent et ascendent in celum cunctis videntibus. Et tunc ne cum tali facto superent,⁸¹ vadit super montem oliveti promittens se ascensurum in caelum post illos et ductu dyaboli ascendit in aerem ubi obviabit ei jesus verus christus et occidit eum et cadit cadaver in rupturas monte oliveti quae ibi fiunt quando gog inde pedes elevat⁸² et tunc 12 tribus Israel qui ad gog venerunt tanquam suum Christum diu expectatum convertentur ad verum Christum similiter omnes alii. Et incipiet regnum Jesum Christi per totum 47 annis

80 Enoch and Elijah are not mentioned by name in the Book of Revelation, but they are traditionally identified with the two witnesses chosen to refute the errors of Antichrist (Revelation 11:3–12), particularly as the return of both prophets is predicted in other books of the Bible: see Malachi 4:5, Ecclesiasticus 48:10, Matthew 17:11, and Ecclesiasticus 44:16 (this last on Enoch). On the role of Enoch and Elijah in the Last Days see Hugh Ripelin of Strasbourg's *Compendium theologiae veritatis* 7.12, published in Albertus Magnus, *Opera omnia* (see Ch. 4, n. 79), vol. 34, p. 244. The cycle of illustration of the play *Jour du Jugement* in the fourteenth-century manuscript in Besançon, Bibliothèque Municipale, MS 579, contains a particularly large number of images of the events involving Enoch and Elijah: see Richard K. Emmerson, "Visualizing Performance: The Miniatures of the Besançon MS 579 *Jour du Jugement*," *Exemplaria* 11.2 (1999) pp. 245–284; and Karlyn Marie Griffith, "Illustrating *Antichrist and the Day of Judgment* in the Eighty-Nine Miniatures of Besançon, Bibliothèque Municipale MS 579," MA Thesis, Florida State University, 2008, which reproduces the miniatures in the manuscript, and is available at <<http://diginole.lib.fsu.edu/etd/3956/>>.

81 Given the general correspondence between the narrative here and the sequence of events in the apocalyptic section of the manuscript, it is here that we would expect to have events corresponding to those depicted in the map on f. 11r, that is, the triumph of Christ throughout the earth, and the flattening of the earth to smoothness, as depicted in the smaller map at the bottom of f. 11r (see Fig. 5.8)—but there are no such corresponding events. It is tempting to think that this significant difference between the two narratives indicates that the author continued to revise his work.

82 The topography described here is very similar to that in the map that shows the Last Judgment on f. 11v, but Antichrist is not mentioned in the text on that folio.

quibus finitis omnes beati homines semper sunt parati et exspectant regnum quo mundus dominatur. Impii non credent sicut iis inire finem mundi.

The epilogue of the whole doomed world, which has three parts: the first ended with the Flood, the second coincided with Babylon, and the third with Rome, in which part we now are, because Rome still exists. The other two passed long ago, and that which today is called Babylon is the new one, and must not be understood as the ancient one. Rome has three parts, and they are: it grew, it was stable, and it decreased. The first part is its growth, and it lasted 750 years. Throughout all of these years it grew from minimum to maximum. The second part was its fullness and stability, and it was 639 years, for that period it ruled the whole world. The third part was its decline and division, and indeed for 931 years it decreased until it was nothing, just as it had been nothing originally. During the first <part> Jesus the true Christ was born. At the very end of Rome, Gog the false Christ is born, and he will appear in the thirty years before the complete fall of Rome. In the year 639 after the birth of Christ, Muhammad began to destroy the Roman Empire, and from year until this year of 1488, step by step he conquered the whole world except this quarter in which we are now, which we see the Roman emperor holds today.⁸³ And when Muhammad will control the whole world then he will rule in full power for 56 years, during which 56 years Rome has nothing except for a hidden tradition without any power.⁸⁴ At the end of those 56 years, the last Roman emperor, either hidden or named by them, is elected by the oppressed Christians and rises together with all Christians, and with the help of Jesus Christ will destroy the whole Muhammadan sect, which lasted 931 years.⁸⁵ When it is destroyed, the last Roman emperor will

83 See the map on f. 9r, which shows the world from the year 639 to 1514, and shows Europe under the control of the Roman Emperor and the Pope, while much of the rest of the world has fallen to Islam (see Fig. 5.3).

84 See the map on f. 9v, which shows the world from the year 1514 to 1570 (56 years), on which the sword of Muhammad dominates the whole earth (see Fig. 5.5).

85 It was said above that Muhammad began to attack the Roman Empire in the year 639, and adding 931 and 639 we get 1570, and 1570 is the last year represented on the map on f. 9v, which shows the sword of Muhammad controlling the world, and is the first year represented on the map on f. 10r, which shows the increase of Antichrist—and the text here mentions the birth of Antichrist momentarily. Incidentally two ninth-century Islamic authors, al-Kindi and Abu Ma'shar al-Balkhi, had made a different estimate of the maximum duration of Islam, namely that it could not last more than 693 years, and this

come to Jerusalem and there offer on one altar the crown of the Roman kingdom to Lord Jesus Christ, recognizing that that crown is his, and always was his. And in that very moment when that crown is offered, the Roman Empire expires completely. In the same moment, it will be truthfully said, "Now Gog Antichrist is born," but nobody recognizes him. From that same moment, the kingdom of Christians will exist throughout the whole world for thirty years through ten kings who performed a large task in destroying the Muhammadan sect. And Gog Antichrist is raised and grows.⁸⁶

Around the end of those thirty years, those ten kings will begin to quarrel about which of them is the leader of all of them. And Gog Antichrist will appear⁸⁷ and he will subject to himself first thirty-six kings, and then seven others, and he will come to Jerusalem and say that he is the true Christ, and that that crown is his, which he will put it on his head as his own, and he will say that Jesus is a deceiver, and not at all Christ. His reign has a beginning, middle, and end. The beginning <of the reign> of Gog Antichrist will be a thousand years, during which time he will send his messengers throughout the whole world, even to the islands of the ocean, which through the leadership of an evil spirit will quickly come. The loyal are so few that he will deceive almost everyone by a four-fold method.⁸⁸ That is, by cruelty through the use of tortures, etc., he

estimate was repeated by Roger Bacon and (from him) by Pierre d'Ailly. See Yahya J. Michot, "Ibn Taymiyya on Astrology: Annotated Translation of Three Fatwas," *Journal of Islamic Studies* 11.2 (2000), pp. 147–208, at 185–187; Pauline Moffitt Watts, "Prophecy and Discovery: On the Spiritual Origins of Christopher Columbus's 'Enterprise of the Indies,'" *American Historical Review* 90.1 (1985), pp. 73–102, at 88–89; Roger Bacon, *The 'Opus majus' of Roger Bacon*, ed. John H. Bridges (Oxford: Williams and Norgate, 1897), vol. 1, p. 266; and Roger Bacon, *The Opus majus of Roger Bacon*, trans. Robert Belle Burke (Philadelphia: University of Pennsylvania Press; London: H. Milford, Oxford University Press, 1928), p. 287. Also see Pierre d'Ailly, *Tractatus de legibus et sectis contra superstitiosos astronomos* ([Rouen]: [Guillaume LeTalleur], 1489), chapter 4, argument 5.

- 86 The idea that Antichrist was not known during his youth was traditional: see St. John of Damascus, *An Exact Exposition of the Orthodox Faith*, Book 4, chapter 26, in Saint John of Damascus, *Writings* (New York: Fathers of the Church, 1958) (= The Fathers of the Church, A New Translation, vol. 37), p. 400: he "is brought up unnoticed."
- 87 The fact that Antichrist begins his activities when he is thirty years old mimics Jesus's beginning his public ministry when he was thirty (see Luke 3:23), and this 'imitation' is a traditional element of the life of Antichrist.
- 88 See the map on f. 10v, which shows the world from 1606 to 1660, and reveals through symbolic geography the four horns of Antichrist by which he will deceive the people (see Fig. 5.7). As we will show in our discussion of that map, this symbolic interpretation of the

conquers the carnal people who love themselves; by deceitfulness, through the gathering of gifts, etc., he will deceive the greedy; by cunning, through a false interpretation of the divine scriptures, etc., he will deceive those puffed up with false knowledge; by the wickedness of imitating the deity, through the performance of miracles, by which he conquers hypocrites who sanctify and justify themselves. In the middle of his rule he holds the world in full power for a thousand years. During that time, all of those who accept Jesus Christ are in the desert, unknown to those who accept Antichrist. Only Enoch and Elijah will dare to come out of Paradise and preach against Gog from the end of the world until Gog is present in Jerusalem,⁸⁹ where he (Gog) will kill those who will remain unburied for a thousand days, and then they will rise again and ascend into Heaven, in the sight of all. And then lest they (Enoch and Elijah) triumph through this deed,⁹⁰ he (Gog) will arrive above the Mount of Olives, promising that he will ascend into Heaven after them, and being led by the Devil, he ascends into the air, where the true Jesus Christ will meet him and kill

four horns of Antichrist comes from Hugh Ripelin of Strasbourg's *Compendium theologiae veritatis* 7.9, published in Albertus Magnus, *D. Alberti Magni Ratisbonensis episcopi ordinis Praedicatorum Opera omnia*, ed. A. Borgnet (Paris: apud Ludovicum Vivès, 1890–95), vol. 34, pp. 1–306, at 242–243.

89 Enoch and Elijah are not mentioned by name in the Book of Revelation, but they are traditionally identified with the two witnesses chosen to refute the errors of Antichrist (Revelation 11:3–12), particularly as the return of both prophets is predicted in other books of the Bible: see Malachi 4:5, Ecclesiasticus 48:10, Matthew 17:11, and Ecclesiasticus 44:16 (this last on Enoch). On the role of Enoch and Elijah in the Last Days see Hugh Ripelin of Strasbourg's *Compendium theologiae veritatis* 7.12, published in Albertus Magnus, *Opera omnia* (see Ch. 4, n. 88), vol. 34, pp. 1–306, at 244. The cycle of illustration of the play *Jour du Jugement* in the fourteenth-century manuscript Besançon, Bibliothèque Municipale, MS 579, contains a particularly large number of images of the events involving Enoch and Elijah: see Richard K. Emmerson, "Visualizing Performance: The Miniatures of the Besançon MS 579 *Jour du Jugement*," *Exemplaria* 11.2 (1999) pp. 245–284; and Karlyn Marie Griffith, "Illustrating *Antichrist and the Day of Judgment* in the Eighty-Nine Miniatures of Besançon, Bibliothèque Municipale MS 579," MA Thesis, Florida State University, 2008, which reproduces the miniatures in the manuscript, and is available at <<http://diginole.lib.fsu.edu/etd/3956/>>.

90 Given the general correspondence between the narrative here and the sequence of events in the apocalyptic section of the manuscript, it is here that we would expect to have events corresponding to those depicted in the map on f. 11r, that is, the triumph of Christ throughout the earth, and the flattening of the earth to smoothness, as depicted in the smaller map at the bottom of f. 11r—but there are no such corresponding events. It is tempting to think that this significant difference between the two narratives indicates that the author continued to revise his work.

him, and his body will fall into the ruptures of the Mount of Olives, which were created there when Gog raised his feet from that point.⁹¹ And then the twelve tribes of Israel who had come to Gog as if to their long-awaited Christ will be converted to the true Christ, and similarly all the others. And the reign of Jesus Christ will begin for forty-seven years in a row, and when that time is over, all of the blessed men are always ready and expect the kingdom by which the world will be ruled. The impious will not believe that the end of the world will come for them.

This summary of the Last Days near the end of the astronomical and geographical section of HM 83 (ff. 13r–18r) makes no explicit reference to the earlier Apocalyptic treatise (ff. 8v–12v), and thus, unfortunately, we have no information about the author's conception of the relationship between them, or why the summary of the Last Days was thought necessary.

Links with the *Rudimentum novitiorum*

In 1475, about a decade before the composition of the works in HM 83, Lucas Brandis⁹² printed in Lübeck the *Rudimentum novitiorum* (Handbook for Beginners), a universal history that we have mentioned several times previously.⁹³ This was one of the first books printed in the city,⁹⁴ and contains the first printed edition of Burchard of Mount Sion's *Descriptio Terrae Sanctae*, which occupies ff. 162r–188r, and also contains two maps that have an important

91 The topography described here is very similar to that in the map that shows the Last Judgment on f. 11v (see Fig. 5.9), but Antichrist is not mentioned in the text on that folio.

92 Ursula Altmann, "Die Leistungen der Drucker mit Namen Brandis im Rahmen der Buchgeschichte des 15. Jahrhunderts," Dissertation, Humboldt-Universität Berlin, 1974; and Dieter Lohmeier, "Brandis, Lucas: geb. vor 1450 Delitzsch (Sachsen), gest. nach 1500; Buchdrucker," in Olaf Klose and Eva Rudolph, eds., *Biographisches Lexikon für Schleswig-Holstein und Lübeck* (Neumuenster: Wachholtz, 1970–), vol. 10, pp. 53–56.

93 Andrea Worm, "Rudimentum Novitiorum," in Graeme Dunphy, ed., *Encyclopedia of the Medieval Chronicle* (Leiden: Brill, 2010), vol. 2, pp. 1304–1307; there is some good discussion of the 1475 Latin edition in an article that focuses on the later French translation, namely Edith A. Wright, "La Mer des Hystoires, Paris 1488," *Boston Public Library Quarterly* 11 (1959), pp. 59–74.

94 Gustav Kohfeldt, "Zur Druckgeschichte des Lübecker Rudimentum Novitiorum vom Jahre 1475," *Zentralblatt für Bibliothekswesen* 24 (1907), pp. 26–30; Dieter Lohmeier, "Die Frühzeit des Buchdrucks in Lübeck," in Alken Bruns and Dieter Lohmeier, eds., *Die Lübecker Buchdrucker im 15. und 16. Jahrhundert. Buchdruck für den Ostseeraum* (Heide in Holstein: Boyens, 1994), pp. 11–53.

place in the history of cartography. The first is a world map (ff. 85v–86r) that stands at the beginning of a geographical treatise (ff. 87r–117r) based in part on Isidore and Bartholomaeus Anglicus.⁹⁵ This *mappamundi* is the first detailed printed world map,⁹⁶ and is made in a style similar to that of an early printed *mappamundi* that survives in just a fragment,⁹⁷ and to that of the somewhat later printed maps of Hans Rüst (c. 1480) and Hans Sporer (c. 1480–1500).⁹⁸ There is also a map of the Holy Land (ff. 174v–175r) at the beginning of Burchard's description of the Holy Land, very similar in style to the world map, with each named locality represented by a hill.⁹⁹

The combination of the *Rudimentum novitiorum*'s geographical treatise, maps, interest in the Holy Land, and production in Lübeck suggest the possibility of a connection with HM 83. We have seen above some important

-
- 95 On the dependence of the geographical treatise in the *Rudimentum novitiorum* on Bartholomaeus Anglicus see Anna Dorothea von den Brincken, "Universalkartographie und geographische Schulkenntnisse im Inkunabelzeitalter (Unter besonderer Berücksichtigung des 'Rudimentum Noviciorum' und Hartmann Schedels)," in Bernd Moeller, Hans Patze, and Karl Stackmann, eds., *Studien zum städtischen Bildungswesen des späten Mittelalters und der frühen Neuzeit* (Göttingen: Vandenhoeck & Ruprecht, 1983) (= Abhandlungen der Akademie der Wissenschaften in Göttingen, Philologisch-Historische Klasse, 3. Folge, Nr. 137, 1983), pp. 389–429, at 406–407; and Michael Herkenhoff, "Das *Rudimentum novitiorum* (1475)," in *Die Darstellung außereuropäischer Welten in Drucken deutscher Offizinen des 15. Jahrhunderts* (Berlin: Akademie Verlag, 1996), pp. 100–111, at 106–107. Herkenhoff also says (p. 106) that the descriptions of some of the islands and rivers in the *Rudimentum novitiorum* come from Isidore.
- 96 The earliest surviving printed map is a small schematic *mappamundi* printed in the 1472 Augsburg edition of Isidore's *Etymologiae*: see Tony Campbell, *The Earliest Printed Maps, 1472–1500* (London: British Library, 1987), p. 108 and Fig. 7. For discussion of the world map in the *Rudimentum novitiorum* see Campbell, *The Earliest Printed Maps*, pp. 144–145 with Fig. 26; and Wesley A. Brown, *The World Image Expressed in the Rudimentum novitiorum* (Washington, DC: Geography and Map Division, Library of Congress, 2000).
- 97 On the fragmentary printed *mappamundi* see Campbell, *The Earliest Printed Maps* (see Ch. 4, n. 96), p. 216; and Margriet Hoogvliet, *Pictura et scriptura: textes, images et herméneutiques des Mappae mundi, XIIIe-XVIIe siècles* (Turnhout: Brepols, 2007), p. 212.
- 98 On Rüst and Spörer's maps see Leo Bagrow, "Rüst's and Sporer's World Maps," *Imago Mundi* 7 (1950), pp. 32–36; and Campbell, *The Earliest Printed Maps* (see Ch. 4, n. 96), pp. 79–84 with figs. 29 and 30.
- 99 On the treatise on the Holy Land in the *Rudimentum* see Michael Herkenhoff, "Das Heilige Land im *Rudimentum novitiorum* (1475)," in his *Die Darstellung außereuropäischer Welten* (see Ch. 4, n. 95), pp. 147–156. On the map of the Holy Land in the *Rudimentum* see Campbell, *The Earliest Printed Maps* (see Ch. 4, n. 96), p. 146 with fig. 61; Nebenzahl, *Maps of the Holy Lands* (see Ch. 4, n. 60), pp. 60–62; and Harvey, *Medieval Maps of the Holy Land* (see Ch. 4, n. 60), pp. 146–147.

differences between the *Rudimentum* and HM 83: the authors' descriptions of the purposes of the maps in the two works (*Rudimentum*, f. 87r; HM 83, f. 8v) are very different, as are their accounts of the creation of monsters (*Rudimentum*, f. 59r; HM 83, f. 8v). The tones of the works are also different, and one may find other specific differences between them, cases in which it is clear that the author of HM 83 was not following the earlier work. For example, the description of Babylon in the *Rudimentum* (ff. 88r–88v) comes straight from Bartholomaeus Anglicus 15.22, whereas HM 83 has a few different passages on Babylon (ff. 1r, 1v, 5v, and 12v), the first of which comes from Rothelin Continuation of the History of William of Tyre, and none of which bears any relation to the text from Bartholomaeus.

However, there are some similarities between the two works that make it seem likely that the author of HM 83 was familiar with the *Rudimentum*. First, the description of the three parts of the world on HM 83, f. 1r, comes from Bartholomaeus Anglicus 15.1, as shown above, just like the corresponding passage in the *Rudimentum* (f. 87r). It seems unlikely that two authors in the same city about a decade apart would use the same source for their descriptions of the world unless there was some influence of one on the other. Also, in both books there are complaints about how a lack of space (*artitudo*) on maps can cause problems with place names. As we saw above, the author of HM 83 writes (f. 8v):

... tamen successores successive valde transposuerunt situm et distantiam coacti artitudine loci in mappa figurali ubi etiam unum nomen loci in extenso scriptum repellit aliud ad extraneam distantiam. Propter quod ego decrevi perfecta nomina locorum <non?> scribere ad <contrarium?> precedentem et in figura principia nominum figurare et <tamen?> artitudo in figura non permisit nomina loca propter situm ut videtur in figura.

... yet <his> successors, one after another, significantly transposed the places and distances, forced by the narrowness of space in the illustrated map, where even one place name written in full would force another to an incorrect location. Because of this I decided <not?> to write the whole names of places each opposite to the preceding <one?>, and in the map to write just the beginnings of the names, so that the narrowness in the map will not restrict the names and places because of their position, as may be seen in the map.

The author of the *Rudimentum* writes (f. 87r): *Presens tamen spera non plene omnium nominum, terrarum, regnorum ac regionum propter artitudinem folii fuit capax*, “The present map could not accommodate all of the names, lands, kingdoms and regions because of the narrowness of the page.” There is a similar complaint on the map of the Holy Land in book printed by Lucas Brandis a few years later, the *Prologus Arminensis in mappam Terraesanctae* (Lübeck: Lucas Brandis, ca. 1478), ff. [11]v-[12]r:¹⁰⁰ *Nec plica libri dorsea et folii artitudo sinunt in hac arte impressoria unumquoque castellum directissime suo comprehendatur punctuali locello*, “But in this printer’s art, the inner gutter of the book and the narrowness of the page do not allow each town to be included in its exact location.”

Also, both the *Rudimentum novitiorum* and HM 83 mention the somewhat unusual place name Vinlandia, i.e. Finland.¹⁰¹ in the *Rudimentum* it appears on the world map and is described on f. 102v, and in HM 83 it is mentioned on f. 2v.¹⁰² The chapter on Vinlandia in the *Rudimentum* is copied from Bartholomaeus Anglicus 15.172; but while the author of HM 83 made use of Bartholomaeus elsewhere, his text on Finland comes from a different source that we have not been able to identify. The presence of this unusual place name in two works produced in the same city about a decade apart seems to suggest that the author of HM 83 had consulted the *Rudimentum*, though, as his purposes were rather different with the work he had in mind, he made little use of it.

100 On the map of the Holy Land in the *Prologus Arminensis* see Campbell, *The Earliest Printed Maps* (see Ch. 4, n. 96), p. 121 with fig. 60; Michael Herkenhoff, “Der Prologus Arminensis (ca. 1478),” in his *Der Darstellung aussereuropäischer Welten* (see Ch. 4, n. 95), pp. 156–164; and Harvey, *Medieval Maps of the Holy Land* (see Ch. 4, n. 60), p. 147.

101 For the identification of Vinlandia as Finland see Fridtjof Nansen, *In Northern Mists: Arctic Exploration in Early Times*, trans. Arthur G. Chater (London: W. Heinemann, 1911), vol. 2, pp. 31–32. It is not related to the Vinland of the Norse discoveries in the New World: see Campbell, *The Earliest Printed Maps* (see Ch. 4, n. 96), p. 145.

102 The text in HM 83, f. 2v runs: *Vinlandia que habet extensum spacium, in quibus omnibus degunt christiani specialis ydyomatis, quod extenditur in livoniam*, “Finland, which has much space, in all of which live Christians <who use> special languages, and it extends to Livonia [on the eastern Baltic].” The section about islands on f. 2v, which includes this passage about Vinlandia, is transcribed in Axel Anthon Bjørnbo, “Adam af Bremens Nordensopfattelse,” *Aarbøger for Nordisk Oldkyndighed og Historie* 24.2 (1909), pp. 120–244, at 240–241.

Early Thematic Mapping

In the examination that will follow of the maps in the geographical treatise in HM 83, we will argue that those maps are the earliest set of maps conceived as thematic maps in accordance with a modern understanding of that genre. Arthur Robinson defines thematic maps thus:¹⁰³

In contrast to the general map, the thematic map concentrates on showing the geographical occurrence and variation of a single phenomenon, or at most a very few. Instead of having as its primary function the display of the relative locations of a variety of different features, the pure thematic map focuses on the differences from place to place of one class of feature, that class being the subject or 'theme' of the map. The number of possible themes is nearly unlimited and ranges over the whole gamut of man's interests in the present and past physical, social, and economic world, from geology to religion, and from population to disease.

He proceeds to note:¹⁰⁴

No map which is primarily thematic appears to have been made before the last half of the seventeenth century. To be sure, occasional 'thematic' additions had been entered on otherwise general maps, but the idea of making a map solely for the purpose of showing the geographical structure of one phenomenon seems not to have occurred to anyone.

Robinson is right to mention 'thematic' additions to some maps made before the second half of the seventeenth century, but he does not discuss or mention maps that have those additions, and thus loses an opportunity to show the development in ideas about maps that led to thematic mapping. The other studies of thematic maps that we have consulted do not mention these earlier maps with 'thematic' additions, or give any hint that anything like thematic maps existed before the seventeenth century,¹⁰⁵ except for some articles by

¹⁰³ Arthur Howard Robinson, *Early Thematic Mapping in the History of Cartography* (Chicago: University of Chicago Press, 1982), p. 16.

¹⁰⁴ Robinson, *Early Thematic Mapping* (see Ch. 4, n. 103), p. 17.

MacEachren, "The Evolution of Thematic Cartography: A Research Methodology and Historical Review," *Canadian Cartographer* 16.1 (1979), pp. 17–33; Gilles Palsky, "Origines et evolution de la cartographie thématique (xviiie-xixe siècles)," *Revista da Faculdade de Letras: Geografia* 14 (1998), pp. 39–60; Colette Cauvin,

Petra Svatek in which she discusses thematic elements in some maps by Wolfgang Lazius (1514–1565).¹⁰⁶

In the interest both of creating a fuller understanding of the early history and development of thematic maps, and of contextualizing the maps in HM 83, we will now briefly discuss a few examples—more might be adduced—of pre-seventeenth-century maps that either have thematic additions or that quite simply are thematic maps.

In the city of Haïdra (Roman Ammaedara) in western Tunisia, in a Roman building of uncertain function there is a mosaic of about 30 square meters from the late third or early fourth century AD that is a map of the islands and some coastal cities of the Eastern Mediterranean (Fig. 4.1).¹⁰⁷ The map is cartographically somewhat naïve, as some cities are represented as islands, so that for example there is a representation the city of Idalium (which is on Cyprus) as an island, right beside a representation Cyprus. Nonetheless, its status as a

Lo spazio marittimo del Mediterraneo occidentale: Geografia storica ed economia: Atti del XIV convegno di studio, Sassari, 7–10 dicembre 2000* (Rome: Carocci, 2002), vol. 1, pp. 503–508. There is a very good color image of the mosaic in Aïcha Ben Abed-Ben Khader, Elisabeth de Balanda, and Armando Uribe Echeverría, eds., *Image de pierre: La Tunisie en mosaïque* (Paris: Ars Latina, 2003), fig. 401.

FIGURE 4.1 *A mosaic thematic map of the islands and some coastal cities of the Eastern Mediterranean, about 30 m², late third or early fourth century AD, in Haïdra, western Tunisia, in a Roman building of uncertain function (PHOTO FATHI BEJAOUI, INP, TUNIS).*

thematic map of the islands of the eastern Mediterranean is undeniable.¹⁰⁸ The map has an additional thematic element as well, as the sites it shows are associated with the worship of the goddess Venus.

Zonal *mappaemundi*, many of which illustrate manuscripts of Macrobius's *Commentary on the Dream of Scipio*, and thus are called Macrobian maps, portray the world divided into climatic bands, hot at the equator, temperate north and south of the equator, and cold at the poles, and are certainly to be

¹⁰⁸ The ancients composed books devoted to islands, but not, as far as we can tell, illustrated with maps: see Paola Ceccarelli, "I Nesiotika," *Annali Scuola Normale Superiore di Pisa* 19 (1989), pp. 903–935.

considered thematic climate maps. Macrobius's *Commentary*, written in about A.D. 450, contains clear instructions for the making of this map (2.5.13–14), and the maps appear in manuscripts and printed books from the ninth to the sixteenth centuries.¹⁰⁹

There are several medieval and early Renaissance maps that are based on or include information about road networks, and these maps range from being thematic maps to maps to which thematic information has been added.¹¹⁰ The earliest surviving such map is the Peutinger Map,¹¹¹ which measures about 675 cm long and 34 cm wide, and shows the road network of the Roman Empire from the Atlantic to India; its size makes it clear that it was intended for display rather than practical use by travelers. The map does depict topographical features such as mountains, rivers, and lakes, and it also includes images of cities, but its emphasis is on the road network, and it includes indications of the distances along the roads between many points: it is a thematic map (see Fig. 4.2). The map was made c. 1200, but may ultimately be based on a Roman original

109 On Macrobian and zonal *mappaemundi* see Destombes, *Mappemondes* (see Ch. 4, n. 37), pp. 43–45 and 85–95; Carlos Sanz, *El primer mapa del mundo con la representación de los dos hemisferios concebido por Macrobio: estudio crítico y bibliográfico de su evolución* (Madrid: Impr. Aguirre, 1966), also published in *Boletín de la Real Sociedad Geográfica* 102 (1966), pp. 133–217; David Woodward, “Medieval *Mappaemundi*,” in J. B. Harley and David Woodward, eds., *The History of Cartography* (Chicago: University of Chicago Press, 1987–), vol. 1, *Cartography in Prehistoric, Ancient, and Medieval Europe and the Mediterranean*, pp. 286–370, at 298, 300, and 353–355; Alfred Hiatt “The Map of Macrobius before 1100,” *Imago Mundi* 59.2 (2007), pp. 149–176; and Stefan Schröder, “Die Klimazonenkarte des Petrus Alfonsi. Rezeption und Transformation islamisch-arabischen Wissens im mittelalterlichen Europa,” in Ingrid Baumgärtner, Paul-Gerhard Klumbies, and Franziska Sick, eds., *Raumkonzepte: Disziplinäre Zugänge Unter Mitarbeit von Mareike Kohls* (Göttingen: V&R Unipress, 2009), pp. 257–277.

110 Catherine Delano-Smith, “Milieus of Mobility: Itineraries, Route Maps, and Road Maps,” in James R. Ackerman, ed., *Cartographies of Travel and Navigation* (Chicago: Chicago University Press, 2006), pp. 16–68 and 294–309, offers a good discussion road maps and route maps in relation to itineraries, but seems to entertain a negative view of medieval road and route maps because the surviving exemplars were not designed to be used by travelers. We do not see the fact that a map was designed for use by travelers as something that adds intrinsic value to that map.

111 The Peutinger Map is in Vienna, Österreichische Nationalbibliothek, Codex Vindobonensis 324, and has been reproduced in full several times, for example in *Tabula Peutingeriana: Codex Vindobonensis 324* (Graz: Akademische Druck- u. Verlagsanstalt, 1976); and Luciano Bosio, *La Tabula Peutingeriana: una descrizione pittorica del mondo antico* (Rimini: Maggioli, 1983).

FIGURE 4.2 *Detail of the Peutinger Map, made c. 1200, possibly a copy of an original dating from the fifth century. By both its form and content, the map places great emphasis on the Roman road network (VIENNA, ÖSTERREICHISCHE NATIONAL-BIBLIOTHEK, CODEX VINDOBONENSIS 324, SEGMENT 1, BY PERMISSION OF THE ÖSTERREICHISCHE NATIONALBIBLIOTHEK).*

from the fourth century,¹¹² and thus may provide evidence of this type of thematic map back to classical antiquity.

In about 1250 the English chronicler and monk Matthew Paris made a set of itinerary maps that show the way from London to the coast of England, across the English Channel and then across France and through Italy to Rome, and from Rome south to Otranto. At Otranto we see a boat in the water, and following this segment of the map there is a map of the Holy Land, with the clear implication (from the boats near Acre) that this is the destination of the journey.¹¹³ The maps survive in three manuscript sets and one fragment.¹¹⁴ In the land portions of the journey, the page is divided into two, three, or four vertical strips by a colored framework, and the route to be followed goes straight up the middle of these strips, first up the left strip, and then up next one to the right. The cities along the way are depicted in vignettes. These elaborate maps were

112 Richard J. A. Talbert et al., *Rome's World: The Peutinger Map Reconsidered* (Cambridge: Cambridge University Press, 2010); with valuable additions to the discussion in the review of Talbert's book by Timothy D. Barnes in *Journal of Late Antiquity* 4.2 (2011), pp. 375–378. Benet Salway, "The Nature and Genesis of the Peutinger Map," *Imago Mundi* 57.2 (2005), pp. 119–135, suggests that when the Roman archetype of the map was created, it was without precedent in Roman cartography, and that the archetype was ornamental rather than practical; Emily Albu, "Imperial Geography and the Medieval Peutinger Map," *Imago Mundi* 57.2 (2005), pp. 136–148, argues that the archetype of the Peutinger Map was not Roman, but rather Carolingian.

113 The bibliography on Matthew's maps is substantial; valuable works include Suzanne Lewis, *The Art of Matthew Paris in the 'Chronica majora'* (Berkeley: University of California Press, 1987), pp. 323–364; Daniel K. Connolly, *The Maps of Matthew Paris: Medieval Journeys through Space, Time and Liturgy* (Woodbridge, Suffolk, UK, and Rochester, NY: Boydell Press, 2009); and Salvatore Sansone, *Tra cartografia politica e immaginario figurativo: Matthew Paris e l'Iter de Londinio in Terram Sanctam* (Rome: Istituto storico italiano per il Medio Evo, 2009).

114 The sets are (1) as a preface to a manuscript of Matthew's *Chronica majora* in Cambridge, Corpus Christi College, Parker Library, MS 26, ff. 1r–3r; (2) as a preface to a manuscript of Matthew's *Historia Anglorum*, in London, British Library, MS Royal 14 C VII, ff. 2r–5r; and (3) an abbreviated version in a manuscript of Matthew's *Liber additamentorum*, in London, British Library, MS Cotton Nero D I, ff. 183v–184r. The damaged fragment forms a preface to a manuscript of the *Chronica majora* in Cambridge, Corpus Christi College, Parker Library, MS 16, ff. 2r–2v. Daniel K. Connolly in *The Maps of Matthew Paris* (see previous note), pp. 174–182, and in "Copying Maps by Matthew Paris: Itineraries Fit for a King," in Palmira Johnson Brummett, ed., *The 'Book' of Travels: Genre, Ethnology, and Pilgrimage, 1250–1700* (Leiden and Boston: Brill, 2009), pp. 159–203, argues that the maps in BL MS Royal 14 C VII were made after Matthew died, possibly as late as the 1290s; while Sansone in *Tra cartografia politica e immaginario figurativo* (see previous note) retains the traditional view that Matthew made all four sets.

never intended for practical use, but rather for study and contemplation. The very shape and format of the maps was determined by their focus on the route: they are thematic maps.

The Gough Map of Great Britain, which was made in the fourteenth century,¹¹⁵ has a network of straight red lines drawn from one town to another, with the distances between them indicated in Roman numerals. This information seems to have been on the map from the beginning, and the purpose of the lines and distances, and the question of whether the Gough Map should be considered the first road map of Britain, have generated considerable discussion.¹¹⁶ Many important and well-established roads are not indicated on the map, and thus it is not clear that the lines are intended to represent roads, but the Gough Map is the earliest to include systematic (albeit incomplete) route information with indications of distance, and this information is certainly thematic. Two early sixteenth-century maps that incorporate thematic information about roads are Erhard Etzlaub's 'Romweg' Map of c. 1500, and Martin Waldseemüller's *Carta itineraria Europae* of 1511, which survives in one exemplar of a 1520 printing, mentioned above.¹¹⁷

The earliest medieval island book as such lacks maps,¹¹⁸ but the genre of the *isolario*, or island book illustrated with maps,¹¹⁹ came into being with the *Liber*

115 The Gough Map is usually assigned a date of c. 1360, but recently T. M. Smallwood has argued that it was made c. 1400: see "The Date of the Gough Map," *Imago Mundi* 62.1 (2010), pp. 3–29.

116 See F. M. Stenton, "The Roads on the Gough Map," in E. J. S. Parsons, *Map of Great Britain circa A.D. 1360, Known as the Gough Map: An Introduction to the Facsimile* (Oxford: Bodleian Library, 1958), pp. 16–20; Brian P. Hindle, "The Towns and Roads of the Gough Map," *The Manchester Geographer* 1 (1980), pp. 35–40; and Nick Millea, *The Gough Map: The Earliest Road Map of Great Britain?* (Oxford: Bodleian Library, 2007), esp. 25–32.

117 For details on Erhard Etzlaub's 'Romweg' Map and Waldseemüller's *Carta itineraria Europae* see Ch. 4, n. 41 and Ch. 4, n. 42, respectively.

118 We refer to Domenico Silvestri's *De insulis et earum proprietatibus*, an alphabetical encyclopedia of islands written between 1385 and 1410. For discussion of Silvestri's work see Marica Milanese, "Il *De Insulis et earum proprietatibus* di Domenico Silvestri (1385–1406)," *Geographia Antiqua* 2 (1993), pp. 133–146. The text has been edited twice, first in Domenico Silvestri, *De insulis et earum proprietatibus*, ed. C. Pecoraro = *Atti della Accademia di scienze, lettere e arti di Palermo* 14.2 (1954), pp. 1–319, and in José Manuel Montesdeoca, *Los islarios de la época del humanismo: el 'De Insulis' de Domenico Silvestri, edición y traducción* (La Laguna: Servicio de Publicaciones Universidad de La Laguna, 2004) (CD-ROM edition).

119 For discussion of the *isolario* as a genre see Marziano Guglielminetti, "Per un sottogenere della letteratura di viaggio: gl'isolari fra quattro e cinquecento," in Silvia Benso, ed., *La letteratura di viaggio dal Medioevo al Rinascimento: generi e problemi* (Alessandria:

insularum archipelagi of the Florentine Cristoforo Buondelmonti (c. 1385 – c. 1430), who created four different versions of the work ca. 1418, 1420, 1422, and ca. 1430.¹²⁰ In his book Buondelmonti describes and supplies maps of the islands of the Aegean, and also of Constantinople; the maps are in the style of nautical charts, and the work survives in more than sixty manuscripts. The popularity of Buondelmonti's *Liber* is also attested by the authors who created new isolarii following and expanding on his model: Bartolomeo dalli Sonetti created an isolario that exists in three undated manuscripts and was published in Venice in about 1485;¹²¹ Sonetti's were the first nautical charts to appear in print (see Fig. 4.3). Henricus Martellus, a German cartographer working in Florence in the late fifteenth century, created an isolario that is based on Buondelmonti's and survives in six manuscripts apparently made c. 1490.¹²² Most of these manuscripts bear the title *Insularium illustratum*; Martellus was the first to include islands beyond the Mediterranean, and three surviving

Edizioni dell'Orso, 1989), pp. 107–117; Tarcisio Lancioni, *Viaggio tra gli isolari* (Milan: Edizioni Rovello, Almanacco del Bibliofilo, 1991); and Massimo Donattini, "I libri delle isole," in his *Spazio e modernità: Libri, carte, isolari nell'età delle scoperte* (Bologne: CLUEB, 2000), pp. 167–192.

Autour de Guillaume Fillastre. Actes du Colloque de l'Université de Reims, 18–19 novembre 1999* (Turnhout: Brepols, 2002), pp. 177–217; and Benedetta Bessi, "Cristoforo Buondelmonti: Greek Antiquities in Florentine Humanism," *The Historical Review – La revue historique* 9 (2012), pp. 63–76.
- 121 For discussion of Sonetti's isolario see Wouter Bracke, "Une note sur l'*Isolario* de Bartolomeo da li Sonetti dans le manuscrit de Bruxelles, BR, CP, 17874 (7379)," *Imago Mundi* 53 (2001), pp. 125–129; and Massimo Donattini, "Bartolomeo da li Sonetti, il suo *Isolario* e un viaggio di Giovanni Bembo (1525–1530)," *Geographia Antiqua* 3–4 (1994–95), pp. 211–236. There are two facsimile editions of Sonetti's book: Bartolommeo dalli Sonetti, *Isolario* (Amsterdam: Theatrum Orbis Terrarum Ltd., 1972); and Bartolomeo dalli Sonetti, *Isolario* (Valencia: Vicent García, 2006), the latter of a hand-colored exemplar of the work.
- 122 For general discussion of Martellus's isolario focusing on the manuscript in the James Ford Bell Library see Rushika February Hage, "The Island Book of Henricus Martellus," *The Portolan* 56 (2003), pp. 7–23; while Nathalie Bouloux, "L'*Insularium illustratum* d'Henricus Martellus," *The Historical Review – La revue historique* 9 (2012), pp. 77–94, focuses on the manuscript in the Musée Condé in Chantilly. For discussion of all of the manuscripts of the work see Chet Van Duzer, *Henricus Martellus's World Map at Yale (c. 1491): Multispectral Imaging, Sources, Influence* (forthcoming).

FIGURE 4.3 *The map of Cyprus in Bartolommeo da li Sonetti's Isolario published in Venice c. 1485 (COURTESY OF THE LIBRARY OF CONGRESS).*

manuscripts of his work include a world map.¹²³ The *isolario* reached a truly global scope with Benedetto Bordone's *Libro de tutte l'isole del mondo*, or more fully, *Libro di Benedetto Bordone nel qual si ragiona de tutte l'isole del mondo* (Venice, 1528 and 1532), which was reprinted (1534 and later) under the title *Isolario di Benedetto Bordone*.¹²⁴ The genre continued into the seventeenth century, but there is no need to trace its continuation here; suffice it to say that each *isolario* is clearly a collection of thematic maps.

These examples show that thematic maps did exist prior to the seventeenth century, and also prior to the composition of the texts in HM 83 in 1486–88. The material was certainly available, then, that might have inspired a late fifteenth-century cartographer to expand from one genre of thematic map to several, and create a series of thematic maps that reflect a generalized and fully modern conception of the type. We would also like to mention some other important early thematic maps that may have served as direct inspiration to the cartographer of HM 83.

Earlier we suggested that the thematic arrangement of geographical material in some medieval encyclopedias such as Isidore's *Etymologiae* and Bartholomaeus Anglicus's *De proprietatibus rerum* may have inspired the author of HM 83 in his creation of thematic maps. In fact, the relationship between Bartholomaeus Anglicus and the maps in HM 83 may be closer. By way of preface, it is important to recall that the description of the tripartite division of the world in HM 83, f. 1r, is drawn from Bartholomaeus Anglicus, *De proprietatibus rerum* 15.1, so the author of HM 83 was probably familiar with that work. And there are illustrated manuscripts of Bartholomaeus Anglicus—of the French translation by Jean Corbechon completed in 1372, rather than of the Latin original—that have thematic maps at the beginning of their books.

The manuscript BnF MS fr. 22532, which is of Corbechon's translation of Bartholomaeus Anglicus,¹²⁵ and was made in the third quarter of the fifteenth century, has at the beginning of Book 13 (usually Book 14), on f. 186v, a remarkable unfinished thematic map of the world's mountains, to the exclusion of

125 For discussion of Corbechon's translation see Michel Salvat, "Jean Corbechon, traducteur ou adaptateur de Barthélemy l'Anglais?" in Charles Brucker, ed., *Traduction et adaptation en France à la fin du Moyen Âge et à la Renaissance* (Paris: Honoré Champion, 1997), pp. 35–46; and Bernard Ribémont, "Jean Corbechon, un traducteur encyclopédiste au xive siècle," *Cahiers de recherches médiévales* 6 (1999), pp. 75–97.

FIGURE 4.4 *An unfinished map of the world's mountains in a manuscript of Jean Corbechon's French translation of Bartholomaeus Anglicus's *De proprietatibus rerum* made in the third quarter of the fifteenth century (PARIS, BNF, MS FR. 22532, F. 186V, BY PERMISSION OF THE BIBLIOTHÈQUE NATIONALE DE FRANCE).*

other geographical elements (see Fig. 4.4).¹²⁶ There are a total of 27 named mountains, many of them in the Holy Land, but Etna, the Rhiphaean Mountains in the far north, and Olympus and Parnassus are also depicted. In another manuscript of Corbechon's translation, BnF MS fr. 9140, made c. 1480, there is a

¹²⁶ There is a brief discussion of the illustrations at the beginning of Book 14 in manuscripts of Corbechon's translation of Bartholomaeus Anglicus in Donal Byrne, "The Illustrations to the Early Manuscripts of Jean Corbechon's French Translation of Bartholomaeus Anglicus' *De proprietatibus rerum*: 1372–1420," Ph.D. Dissertation, Cambridge University, 1981, pp. 84–86.

FIGURE 4.5 A map of the world's mountains in a manuscript of Jean Corbechon's French translation of Bartholomaeus Anglicus's *De proprietatibus rerum* made c. 1480 (PARIS, BNF, MS FR. 9140, F. 237V, BY PERMISSION OF THE BIBLIOTHÈQUE NATIONALE DE FRANCE).

FIGURE 4.6 A map of the world's waters in a manuscript of Jean Corbechon's French translation of Bartholomaeus Anglicus's *De proprietatibus rerum* made c. 1480. Compare figs. 4.15 and 4.16 (PARIS, BNF, MS FR. 9140, F. 226V, BY PERMISSION OF THE BIBLIOTHÈQUE NATIONALE DE FRANCE).

bird's-eye view on f. 237v of a large group of generalized mountains—without names in this case—set in a circular *mappamundi*-style frame (Fig. 4.5). Other manuscripts of the same work (BnF MS fr. 136, f. 36v; BnF MS fr. 22533, f. 203v)¹²⁷ present a view of a mountainous countryside similar to the image in HM 83, f. 5r (see Fig. 4.11 below).

Moreover, the maps of the world's waters (with emphasis on the four rivers of Paradise) in HM 83, ff. 7v–8r (Fig. 4.15) and 14r (Fig. 4.16) bear some similarity to a map of the world's rivers in one of the manuscripts of Corbechon's French translation just mentioned, namely BnF MS fr. 9140, f. 226v (see Fig. 4.6). In this same manuscript, the *mappamundi* on f. 243v (see Fig. 4.7) seems to combine information from different parts of Bartholomaeus's work, including information about rivers, mountains, and cities, much the way that the *mappa mundi localis* in HM 83, ff. 6v–7r, does. While the author of HM 83 quotes Bartholomaeus's account of the tripartition of the world in Latin, the *mappaemundi* in manuscripts of Bartholomaeus we have been citing here are all from manuscripts of Corbechon's French translation of the *De proprietatibus rerum*, and we know of no Latin manuscript of the work that has *mappaemundi* similar to these.¹²⁸ On the one hand, it seems likely that the author of HM 83 drew inspiration for his thematic maps from those in a manuscript of Bartholomaeus Anglicus, but on the other, such an influence would entail that our author had access either to both a Latin (for the text) and a French manuscript (for the maps) of Bartholomaeus, or to a Latin manuscript with a more elaborate program of illustration with maps than any Latin manuscript of the work that has come down to us.

The Maps in the Geographical Sections

We will now discuss the maps in the geographical treatise in HM 83, transcribing the toponyms, transcribing and translating legends and descriptive texts, discussing sources where relevant, and also addressing their thematic nature.

127 Images of these folios are available through <<http://mandragore.bnf.fr/html/accueil.html>>. There is a similar view in a printed edition of Corbechon's translation, Bartholomaeus Anglicus, *Le propriétaire des choses* (Lyons: Siber, 1486), at the beginning of Book 14.

128 On illustrated Latin manuscripts and printed editions of Bartholomaeus Anglicus see Heinz Meyer, "Die illustrierten lateinischen Handschriften im Rahmen der Gesamtüberlieferung der Enzyklopädie des Bartholomäus Anglicus," *Frühmittelalterliche Studien* 30 (1996), pp. 368–395; and James Snyder, "The Bellaert Master and *De proprietatibus rerum*," in Sandra Hindman, ed., *The Early Illustrated Book. Essays in Honor of Lessing J. Rosenwald* (Washington, DC: Library of Congress, 1982), pp. 41–62.

FIGURE 4.7 A mappamundi that combines information about rivers, mountains, and cities, much the way that the mappa mundi localis in HM 83, ff. 6v-7r, does (PARIS, BNF, MS FR. 9140, F. 243V, BY PERMISSION OF THE BIBLIOTHÈQUE NATIONALE DE FRANCE).

The Map on f. 1r

This small and relatively undetailed *mappamundi*—oriented, like most medieval *mappaemundi*, with east at the top—should be understood as illustrating

the texts about the tripartition of the world among Noah's sons that precede and follow it (Fig. 4.8). The text above the map to the right reads: *Iste circulus exterior habet mare oceanum. Spatium vero intra nigrum notat terram habitabilem que est quarta pars totius*, "This exterior circle contains the ocean, while the black spaces inside indicate the habitable land, which is a quarter of the whole"; the text written on a curved line paralld to the outer edge of the circumfluent ocean reads: *mare oceanum terram circumdans et dat windes mer*, "The ocean sea, surrounding the land, also the windy sea." Within the map, reading from the top (east) downwards, we have: *India, Asia maior, Sem qui et melchisideck* ("Sem, also known as Melchisideck"),¹²⁹ *mare magnum, egiptus, Europa, Japhet, mare artum, Affrica Cham*.

The map's treatment of the seas is quite different than we find on most other *mappaemundi*. A typical T-O map has the Mediterranean (sometimes called *mare magnum*) dividing Europe and Africa, the Tanais or Don River dividing Europe and Asia, and the Nile dividing Africa and Asia. Here the cartographer distinguishes between the narrow western Mediterranean, which he calls the *mare artum*, no doubt referring specifically to the area around the Strait of Gibraltar; and the more ample eastern Mediterranean, which he calls *mare magnum* (compare the map on f. 3v). He seems to conflate the eastern Mediterranean with the Nile, and shows what is evidently this combination flowing all the way through Africa to the southern part of the circumfluent ocean. On most *mappaemundi* the Tanais is shown flowing north and south, in effect joining the Mediterranean with the northern part of the circumfluent ocean, here there is what seems to be a river flowing northeast and southwest between these two bodies of water. We have not found any text that speaks of the western Mediterranean as a *mare artum*, though Ludolf von Sachsen, in his account of his voyage to the Holy Land written in about 1350, says that people living by the Strait of Gibraltar called it *strictum* or narrow,¹³⁰ and in any case

129 The identification of Melchizedek as Shem is supported by Saint Ephrem the Syrian in his *Commentary on Genesis*, section 11: see his *Selected Prose Works*, trans. Edward G. Mathews, Jr. and Joseph P. Amar, ed. Kathleen McVey (Washington: The Catholic University of America Press, 1994) (= *The Fathers of the Church*, vol. 91), p. 151; and Jerome in his commentary on Genesis 14:18: see his *Liber quaestionum hebraicarum in Genesim* in his *Opera* (Turnhout: Brepols, 1958-) (= *Corpus Christianorum*, Series Latina, 72), p. 19.

130 See Ludolf von Sachsen, *Iter ad Terram Sanctam* (Gouda: Gerard Leeu, 1483–1485), chapter 4, "De barbaria": *Et est notandum quod inter regnum marrochie et hyspanie mare mediterraneum influit ex oceano per brachium latitudinis vix quarte partis unius miliaris. Itaque in una ripa stat mulier cristiana et in alia mulier barbara vestimenta earum lauantes et ad inuicem rixantes, et dicitur illud brachium maris ab incolis strictum, ferit de baltar et alio nomine strictum....* This passage is translated into English in Ludolf von Sachsen,

it is easy to imagine the author of HM 83 inventing this name based on the presence of the Strait of Gibraltar.

The Map on f. 3r

This map (see Fig. 4.9), substantially larger than the preceding, illustrates the list of the oceanic islands pertaining to Asia and Europe on ff. 2r and 2v, respectively, and is labeled *figura insularum maris oceani*, “map of the islands of the ocean.” In this map the width of the circumfluent ocean is increased to accommodate exaggerated representations of the oceanic islands, each shown as a circle with its name inside. Some of the islands are larger than the others, and this seems to be the result of an attempt to reflect the physical sizes of the islands as known in the fifteenth century, with the understanding, evidently, that groups of islands merit larger circles: thus it is that the *fortunate insule 4or* and the *Gor<gon>ides insule* are larger than *Anglia*, for example. The islands on the map, reading from the southeast counterclockwise, are: *Crisse insule auree*,¹³¹ *Thabrona* (Taprobana), *X tribus Israel* (ten tribes of Israel), *Tilos Caucasus*,¹³² *Ungaria magna*,¹³³ *Regnum Amasonum* (the kingdom of the

Ludolph von Suchem's Description of the Holy Land, and of the Way Thither, Written in the Year A.D. 1350, trans. Aubrey Stewart (London: Palestine Pilgrims' Text Society 1895) (= Library of the Palestine Pilgrims' Text Society 12.3), p. 6.

- 131 Chryse, the island of gold, is usually mentioned in conjunction with Argyre, the island of silver; the two islands are described by Pomponius Mela 3.7, Pliny 6.80, Solinus 52.17, and Isidore 14.6.11.
- 132 This Asian island of Thule, not to be confused with the Atlantic Thule, is mentioned by Pliny 6.148, Arrian 7.20.6, Solinus 52.49, and Isidore 14.6.13. For discussion see Vincent H. de P. Cassidy, “The Voyage of an Island,” *Speculum* 38 (1963), pp. 595–602, esp. 597–602.
- 133 The relevant text on HM 83, f. 2v, reads: *Ungaria magna hodie est tributaria duci mustarie et ex illa terra venerunt ungari nostri christiani retinentes idem ydyoma proprium quibus nondum evangelium est predicatum et magis proprie pertinent ad Asiam maiorem utpote supra ubi Sithia superior*, “Greater Hungary nowadays pays tribute to the leader of Moscow, and from that land came our Hungarian Christians, retaining their distinct language, who have not yet been evangelized, and their land pertains more to Greater Asia, like northern Scythia, just mentioned.” The Latin is transcribed by Axel Anthon Bjørnbo, “Adam af Bremens Nordensopfattelse,” *Aarbøger for Nordisk Oldkyndighed og Historie* 24.2 (1909), pp. 120–244, at 240. On Hungaria Magna see Heinrich Dörrie, *Drei Texte zur Geschichte der Ungarn und Mongolen: Die Missionreisen des fr. Julianus O.P. ins Uralgebiet (1234/5) und nach Rußland (1237) und Bericht der Erzbischofs Peter über die Tartaren* (Göttingen: Vandenhoeck & Ruprecht, 1956) (= Nachrichten der Akademie der Wissenschaften in Göttingen. I. Philologisch-Historische Klasse, 6); and A. H. Chalikow, “Auf der Suche nach Magna Hungaria,” *Hungarian Studies* 2 (1986), pp. 189–216. We thank Felicitas Schmieder for the former reference.

Amazons),¹³⁴ *lucanania* (Lapland),¹³⁵ *Islandia* (Iceland), *Suecia* (Sweden), *Norwegia*, *Gronlandia* (Greenland), *Dacia*, *Scotia*, *Hibernia*, *Britannia minor*,¹³⁶ *Anglia*, *Tanatos*,¹³⁷ *Tile* (Thule),¹³⁸ *Fortunate insule 4or*, *Gor<gon>ides insule*, and *Hesperide insule*. There are no islands in the southern ocean, and this reflects the fact that there is no separate list of islands that pertain to Africa in the text. Also absent from the map are islands peculiar to the nautical chart tradition, such as Brasil and Antilia:¹³⁹ the author of HM 83 seems not to have been conversant with nautical charts.

The names on land, reading from east to west, are: *India*, *Asia maior*, *Asia minor*, *Ungaria*, *Jerusalem*, *Etiopia*, *Europa*, *Affrica*, *mauritania*, *hispania*.

The map is clearly—as its title indicates—a thematic map of the world's islands, and in this case, it seems unlikely that the creator of HM 83 drew

134 For discussion see Albrecht Rosenthal, "The Isle of the Amazons: A Marvel of Travellers," *Journal of the Warburg Institute* 1.3 (1938), pp. 257–259.

135 The relevant text on HM 83, f. 2v, reads: *Lucania etiam magis proprie habet se ad Asiam maiorem quam copmanni nominant laplant*, "Lucania pertains to Greater Asia even more, and the Copmanni call it Lapland." The Latin is transcribed by Bjørnbo, "Adam af Bremens Nordensopfattelse" (see Ch. 4, n. 133), p. 240.

136 The relevant text on HM 83, f. 2v, reads: *Anglia et Britannia pro quibus notum quod olim hoc spatium ab hybernia ad thanatos dicabatur brittannia maior et minor et maior habuit xxxiii insulas quarum erant xx deserte et appelebantur iste 33 insule orcade ex quibus saxones expulerunt britones in montem brittanium et maiorem Angliam nominaverunt Adhuc notum quod una 33 insularum dictarum in anglia vocatur Cancia qui magna provincia attingens oceanum britanicum et eius metropolis est cantuaria cuius Archiepiscopus fuit sanctus Thomas*, "England and Britain, for which it is known that in the past this area from Ireland to Thanatos was called Greater Britain and Lesser Britain, and Greater Britain had 33 islands, of which 20 were uninhabited, and these 33 islands were called the Orcades, from which the Saxons expelled the Britons into Mount Britain, and they called the largest island England. Moreover, it is known that one of the 33 just-mentioned islands in England is called Canterbury, which is a large province that reaches to the British Ocean, and its leading city is Canterbury, the archbishop of which was Saint Thomas [Becket]." This passage is transcribed by Bjørnbo, "Adam af Bremens Nordensopfattelse" (see Ch. 4, n. 133), p. 241.

137 On the island of Thanatos see A. R. Burn, "Procopius and the Island of Ghosts," *English Historical Review* 70 (1955), pp. 258–261.

138 On the Atlantic island of Thule see Vincent H. de P. Cassidy, "The Voyage of an Island," *Speculum* 38 (1963), pp. 595–602; Luigi de Anna, *Thule: le fonti e le tradizioni* (Rimini: Il cerchio, 1998); and Monique Mund-Dopchie, *Ultima Thulé: Histoire d'un lieu et genèse d'un mythe* (Geneva: Librairie Droz, 2009).

139 On the islands of Brasil and Antilia see William H. Babcock, *Legendary Islands of the Atlantic: A Study in Medieval Geography* (New York: American Geographical Society, 1922), pp. 50–67 and 144–163, respectively.

FIGURE 4.9 *Huntington MS 83, f. 3r, a mappamundi of the islands of the ocean, an early thematic map* (COURTESY OF THE HUNTINGTON LIBRARY).

inspiration from the text of Bartholomaeus Anglicus. As mentioned above, Bartholomaeus does have a brief chapter (14.6) about islands in general, but we know of no manuscript of his work, either Latin or French, that illustrates this chapter with anything resembling a thematic map of islands. Isidore of Seville has a chapter (14.6) on islands, but again, we know of no manuscript of his encyclopedia that illustrates this chapter with a thematic *mappamundi*. This map seems to be the particular creation of the author of the works in HM 83. As we saw above, there are earlier thematic maps of islands in Buondelmonti's *Liber insularum archipelagi*, which was composed in about 1420, but Buondelmonti does not combine many islands in one map, and this map in HM 83 is the first of this type that we know of. The next maps explicitly devoted to the world's islands were made about forty years later by Benedetto Bordone in his *Libro di Benedetto Bordone nel quale si ragiona de tutte l'isole del mondo* (Venice: per N. d'Aristotle detto Zoppino, 1528), in the three index maps near the beginning of the work. But the genre of thematic maps of islands did not become common until almost four hundred years after the making of HM 83, beginning with John Rapkin's maps titled *A Comparative View of the Principal Waterfalls, Islands, Lakes, Rivers and Mountains, in the Eastern Hemisphere* and *A Comparative View ... in the Western Hemisphere*, and published in *The Illustrated Atlas, and Modern History of the World Geographical, Political, Commercial & Statistical*, ed. R. Montgomery Martin (London and New York: J. & F. Tallis, c. 1851).

The Maps on f. 3v

These two overlapping *mappaemundi* are thematic maps of the islands of the Mediterranean (Fig. 4.10). The upper map illustrates the list on f. 3r of the islands of the Mediterranean that pertain to Europe, and the lower one, which bears the title *ffigura hec est Insularum maris magni respicientium Asiam maiorem*, "This is a map of the Mediterranean islands close to Asia Minor," illustrates the list on f. 2r of the islands of the Mediterranean that pertain to Greater Asia.

The upper map labels the parts of the world *Asia*, *Europa*, and *Affrica*, and like the map on f. 1r, labels the body of water that would be the Nile on other *mappaemundi* as *mare magnum*, and labels the western Mediterranean *mare artum*. Some of the islands in the upper map are represented in a body of water that stretches diagonally to the northeast. At the top of this stretch is the toponym *venecia*, but it is not in a circle like many of the other islands. Given the location of Venice at the top of this body of water, it is tempting to interpret the branch as representing the Adriatic, but this is not confirmed by the other islands in this body of water. East of the body of water is written *Strata*, which we have not been able to identify. Then in circular islands are written from northeast to southwest *geneve*, *cilicia* (i.e. *Cicilia*, Sicily), *portugalia*, *Ebulus* (Ibiza), and *Balearis*. With regard to *geneve*, on f. 3r we read *geneve civitas etiam*

FIGURE 4.10 *Huntington HM 83, f. 3v. Two overlapping mappaemundi, the upper one of five European islands, and the lower one of the Mediterranean islands that pertain to Greater Asia (COURTESY OF THE HUNTINGTON LIBRARY).*

maris portus, which suggests that *portugalia* may be an error for this *portus*, but does not help identify *geneve*.

The lower map labels the parts of the world *Europa* and *Affrica*, labels the Mediterranean *mare magnum*, and the mouth of the Mediterranean in the west the *mare artum*. The islands in the Mediterranean, from left to right, are: *Creta*, *Abibos* (i.e. *Abydos*), *Venecia*, *Rodos*, *Ciprus*, *Tyrus*, *Sydon*, *Sardus*, and *Corsile Insule*.

The Map on f. 5r

As mentioned above, this image is as much a bird's-eye view of some mountains as a map of mountains (Fig. 4.11). It illustrates lists of the mountains of the Holy Land (*Montes terre sancte*, f. 5r) and of other mountains around the Holy Land (*Montes qui sunt termini terre promissionis sunt hii*, ff. 5r–5v); as suggested earlier, this map-view was probably inspired by a similar map-view illustrating Book 14 of John Corbechon's French translation of Bartholomaeus Anglicus's *De proprietatibus rerum*, such as those in BnF MS fr. 136, f. 36v and BnF MS fr. 22533, f. 203v. The next thematic map of mountains that we know of that does not appear in a manuscript of Bartholomaeus Anglicus is Johann Wolfgang von Goethe's famous map *Höhen der alten und der neuen Welt bildlich verglichen*, published in the *Allgemeine Geographische Ephemeriden* 41 (1813), pp. 3–8,¹⁴⁰ which was quickly followed by others, such as Charles Smith's *Comparative View of the Heights of the Principal Mountains &c. in the World* (London: C. Smith, 1816).¹⁴¹ This map does not reproduce well at a small scale, so we illustrate here a slightly later thematic map of the world's mountains, that of F. Humphreys titled *Heights of the Principal Mountains in the World*, published in Henry S. Tanner, *A New Universal Atlas Containing Maps of the Various Empires, Kingdoms, States and Republics of the World* (Philadelphia: H. S. Tanner, 1836) (see Fig. 4.12).¹⁴²

140 On Goethe's thematic map of mountains see Gisela Nickel, "Höhen der alten und der neuen Welt bildlich verglichen": Eine Publikation Goethes im Bertuch Verlag," in Gerhard R. Kaiser and Siegfried Seifert, eds., *Friedrich Justin Bertuch (1747–1822): Verleger, Schriftsteller und Unternehmer im klassischen Weimar* (Tübingen: Niemeyer, 2000), pp. 673–689; and Margrit Wyder, "Vom Brocken zum Himalaja. Goethes 'Höhen der alten und neuen Welt' und ihre Wirkungen," *Goethe-Jahrbuch* 121 (2004), pp. 141–164.

141 A high-resolution image of this map may be consulted on the website of the David Rumsey Map Collection, at <<http://www.davidrumsey.com>>.

142 There is a thematic map of the mountains of Europe and Asia, but in their proper geographical locations, titled *Bergketten in Asien und Europa*, in Heinrich Berghaus, *Dr. Heinrich Berghaus' physikalischer Atlas oder Sammlung von Karten* (Gotha: Justus Perthes, 1845–48). A high-resolution image of this map may be consulted on the website of the David Rumsey Map Collection, at <<http://www.davidrumsey.com>>.

FIGURE 4.11 *Huntington HM 83, f. 5r: A generic view of some mountains, followed by a list of the mountains of the Holy Land, and then a list of mountains outside the Holy Land (COURTESY OF THE HUNTINGTON LIBRARY).*

The Map on f. 6r

This *mappamundi* (Fig. 4.13) lacks designations of the continents; the configuration of the Mediterranean it shows is similar to that in the map on f. 1r, but here the parts of the sea lack the labels *mare magnum* and *mare artum*. The map is surrounded by a text that indicates the distance from Lübeck to Iceland and the Holy Land which was transcribed and translated above (*Nota Jerusalem distat secundum taxationem viatorum et nautarum...*), but there is no relationship between that text and the map; the map rather illustrates the text about the Four Kingdoms of the world on f. 5v.

The map is labeled *figura metropolium mundi*, “Map of the metropolises of the world,” and has the cities *Babilonia*, *Niniue*, *Constantinopolis Romana nova* (Constantinople the new Rome), *ultima erit Jerusalem* (the last will be Jerusalem), *Alkraria Antiqua babilonia* (Cairo, the ancient Babylon), *Roma antiqua*, *Carthago antiqua*. It represents a meditation on and extension of the traditional idea of the Four Kingdoms of the Book of Daniel, an extension that includes not only Carthage (which Orosius 2.1.5 includes in his account of the Four Kingdoms) but also Cairo and Jerusalem, the latter a very sensible addition according to Christian eschatology, as the Heavenly Jerusalem would be the final stopping point in the *translatio imperii*.

The map should be understood as a thematic map of the capitals of the most important empires of world history (the traditional Four Kingdoms, together with the author’s extension of that set); that is, it is a political map that shows how the center of the world’s power moves over time. It is also a historical map, and more than that, a map of the world’s history, and as such, it prefigures the apocalyptic maps in the next section of the manuscript that show what will happen to the world at each stage of the Last Days.

There are earlier examples of historical maps. The Peutinger Map, which was copied c. 1200, was certainly copied in order to preserve and put on display an image of the world past, and thus should be considered a historical map, whether it is a copy of an ancient Roman or of a Carolingian archetype.¹⁴³ The maps in manuscripts and printed editions of Ptolemy’s *Geography*, when unmodified by late medieval and early Renaissance cartographers, were historical maps, as they showed the world as it had been in ancient times—even if they were not originally designed as historical maps. Various medieval and early Renaissance maps of the Holy Land were conceived in part as historical maps: on the one hand, they showed the modern traveler how to reach the Holy Land and the sites within it, but on the other, those sites were chosen precisely for their historical Christian significance, particularly their significance in the Bible and in the life of Christ.¹⁴⁴ Thus there certainly were

¹⁴³ For references on the Peutinger Map see Ch. 4, n. 111 and 112.

¹⁴⁴ On medieval and Renaissance maps of the Holy Land see Nebenzahl, *Maps of the Holy Lands* (see Ch. 4, n. 60); and Harvey, *Medieval Maps of the Holy Land* (see Ch. 4, n. 60).

historical maps before the map on f. 6r in HM 83, but this map is a distinctive early example of this category of thematic map,¹⁴⁵ not only showing the world's history, but also alluding to its future.

The Map on ff. 6v–7r

This large map, which is spread across two folios, is labeled *Mappa mundi localis*, which title seems to indicate that the map offers a greater level of local detail than the other maps in the manuscript (Fig. 4.14). As indicated above in the description of the contents of the manuscript, this map combines information from a few of the preceding sections, and thus shows many of the islands in the circumfluent ocean like the map on f. 3r, and also provides more detail about the mainland. The sphere of earth is shown off center in the sphere of water, in contrast with the map on f. 3r, and in accordance with one explanation of how there was land above the waters, despite the fact that the sphere of earth was within the sphere of water.¹⁴⁶

There are a few texts and indications outside the circle of this map. North is indicated with the word *aquilo* at the right, and south by *Austrum* at the right, and there is a curious set of lines on the northern side of the map that seem intended to indicate the east-west extension of *Sithia*, i.e. Scythia. As the area demarcated by these lines reaches as far west as *Alimania* and *Gallia*, the lines have not been drawn with much care, and we have not seen a similar set of lines on any other medieval map.

145 For discussion of the collection of historical maps in Ortelius's *Parergon* see Peter H. Meurer, "Ortelius as the Father of Historical Cartography," in Marcel van den Broecke, Peter van der Krogt, and Peter Meurer, eds., *Abraham Ortelius and the First Atlas: Essays Commemorating the Quadricentennial of His Death, 1598–1998* (Utrecht: HES Publishers, 1998), pp. 133–159; Liliane Wellens-De Donder, "Un atlas historique: le *Parergon* d'Ortelius," in Robert W. Karrow et al., *Abraham Ortelius (1527–1598): cartographe et humaniste* (Turnhout: Brepols, 1998), pp. 83–92; Walter S. Melion, "Ad ductum itineris et dispositionem mansionum ostendendam: Meditation, Vocation and Sacred History in Abraham Ortelius's *Parergon*," *The Journal of the Walters Art Gallery* 57 (1999), pp. 49–72; and George Tolias, "Glose, contemplation et meditation: Histoire éditoriale et fonctions du *Parergon* d'Abraham Ortelius, 1579–1624," in *Les méditations cosmographiques à la Renaissance* (Paris: PUPS, 2009), pp. 157–186. For additional discussion of the genre of historical maps see Walter Goffart, "When Did Historical Atlases Really Originate?" *Humanities Research Group* 9 (2001), available at <<http://celt.uwindsor.ca/ojs/leddy/index.php/HRG/article/viewFile/268/262>>; Goffart also has a good brief discussion of the *Parergon* in his *Historical Atlases: The First Three Hundred Years, 1570–1870* (Chicago: University of Chicago Press, 2003), pp. 30–35.

146 For references on the non-coincidence of the centers of the spheres of earth and water see Ch. 1, n. 8.

Outside the circle of the map in the south there is a text that reads:

Egyptus ab occidente habet mare magnum ex aliis tribus partibus, deserta
ab oriente desertum arabie ab austro desertum superius ab aquilone
desertum inferius

Egypt has the Mediterranean on the west, and in the other three directions, deserts: on the east it has the desert of Arabia, on the south is has upper desert, and on the north the lower desert.

This confused passage (Egypt has the Mediterranean to the north, not the west) was probably modeled on a passage like Isidore 14.3.27 or Bartholomaeus Anglicus 15.53, where the regions around Egypt are listed, but the cartographer's memory did not serve him well here. In a general way, the depiction of Egypt on the adjoining map agrees with this passage, as it shows Egypt between two deserts (see the transcription of the place names in Africa just below). Just outside of the southern edge of the map near the word *Austrum* there is the brief text *mare magnum sive mediteraneum* to identify the Mediterranean, which is too narrow to bear a place name in the map proper.

The islands on the map, proceeding from the east (top) counterclockwise, are as follows; since this list is almost identical to the list of islands on the map on f. 3r, we refer the reader to that list for notes on the identity of and literature about each island: *Tabrona* (Taprobana), *X tribus Israel*, *Tilos*, *Caucasus*, *regnum Amazonum*, *Ungaria vaga* (Hungaria magna), *lucanania* (Lapland), *Islandia*, *Suecia*, *Norsvegia*, *Gronlandia*, *Dacia*, *Hibernia*, *Scotia*, *Anglia*, *britannia minor*, *Tanatos*, *Tile*, *Fortunate insule*, *Gor<go>nides insule*, *Hesperide insule*.

The place names in Asia, reading from top to bottom and left to right, are: *montana*, (perhaps referring to the location of the Terrestrial Paradise on a mountain), *India*, *Armenia superior*, *Ass< >edia persida*, *parthia*, *<Semaria>*, *Caldea*, *Mesopotamia*, *Arabia*, *Hircania*, *Armenia inferior*, *Capadocia*, *desertum arabie*, *Sicilia* (i.e. Cilicia), *Antiochia*, *Siria*, *Asia minor*, *Jerusalem*, *desertum*, *Egyptus*, *desertum*, *Insulares*, *Inferior Ethiopia*, *Superior Ethiopia*. It should be remarked that while Jerusalem is indicated by a prominent circle near the center of the map, it is not precisely in the center, but somewhat to the north and east.

In Europe: *Rucia*, *Livonia*, *Polonia*, *ungaria*, *Gothia*, *lubeck*, *Roma*, *Brema*, *yitalia*, *Alimania*, *Gallia*. Here the cartographer's reason becomes clear for having the northern river of the T-O structure of his maps flow northeast instead of north as it does on most other *mappaemundi*: he counts Russia, Livonia, and

Poland part of Europe, and has arranged the geography of the river that divides Asia and Europe accordingly.¹⁴⁷

In Africa: *libia cyrenensis*, *yponis* (i.e. Hippo), *pentapolis*, <Ethiopia> *occidentalis hic evangelium non audivit* ("In western <Ethiopia> they have not heard the Gospel"), *visantia* (i.e. Byzacium or Byzacena),¹⁴⁸ *Cepta* (Ceuta), *Tripolis*, *Carthago*, *Getulia*, *Mauritania*, *Numidia*, *Maurochia*. The phrase in southwestern Africa to the effect that Gospel has not reached there clearly reflects the author's interest in the approach of the Apocalypse, as Matthew 24:14 says that the end will come after the Gospel has reached the ends of the earth.¹⁴⁹ Given the cartographer's interest in the Apocalypse, it is interesting that on the map of where the Apostles went to preach on f. 15r (see Fig. 4.18), there is no similar legend about the Gospel not reaching southwestern Africa.

The Map on ff. 7v–8r

A large *mappamundi*, spread over two folios, titled *Mappa de Aquis terram irrigantibus*, showing the world's main rivers. From a castle in the east that represents the Terrestrial Paradise flow the four rivers of Paradise (Fig. 4.15). The rest of the world's hydrography is much as in the map on ff. 6v–7r; also as in that map, the sphere of the earth is represented as having a different center than the sphere of water, but while this disposition of the map and also its large size leave room for islands in the circumfluent ocean, no islands are present. Certainly their absence is intended to place more visual emphasis on the rivers of the world. The text outside the eastern part of the map reads:

Ita isti quattuor fontes paradisi vadunt secundum glossam integram
super 24 ecclesiasticus et sepe perduntur meatibus subterraneis et
nomina mutant.

¹⁴⁷ The geography of northern Europe as indicated on this map is reflected in a remark by the maker of HM 83 on f. 9r: *livonia Polonia ungaria hic angulus tenet se ad huc ad Europam et papam et imperatorum aqualiter*, "Livonia, Poland, Hungary: this angle is loyal to Europe and the Pope also to the Emperor."

¹⁴⁸ On African Byzacium or Byzacena see William Smith, *A Dictionary of Greek and Roman Geography* (London: J. Murray, 1878), vol. 1, p. 461; there is discussion of the difference between Byzacium and Byzantium in Gervase of Tilbury, *Otia imperialia* (see Ch. 4, n. 57), Book 1, chapter 11, pp. 318–319.

¹⁴⁹ For discussion of and bibliography regarding the global scope of the evangelical mission see Chet Van Duzer and Ilya Dines, "The Only *Mappamundi* in a Bestiary Context: Cambridge, MS Fitzwilliam 254," *Imago Mundi* 58.1 (2006), pp. 7–22, at 13–15.

FIGURE 4.15 *Huntington MS 83, ff. 7v-8r. A large map titled Mappa de Aquis terram irrigantibus or map of the waters that irrigate the earth, which places great emphasis on the rivers of Paradise, rotated so that east is at the top (COURTESY OF THE HUNTINGTON LIBRARY).*

Thus these four rivers of Paradise flow according to the ‘integral gloss’ on Ecclesiasticus 24, and they often disappear in underground passages and change their names.

The four rivers flowing westward from Paradise are labeled the *Phison*, *Gyon* and *Nilus*, *Tigris*, and *Euphrates*. The fact that the one river is labeled both the *Gyon* and the *Nilus* is to be taken as reflecting the name change that the

cartographer alludes to in the text outside the map, even though he does not show the river disappearing in subterranean passages.¹⁵⁰ Indeed, the cartographer might have taken advantage of a subterranean passage to have the Nile appear in Africa and debouch into the Mediterranean from Africa, but he does not, and as a result the geography of this river of Paradise on this map is less than satisfying.¹⁵¹ As things stand, in a way the Nile is represented twice on the map, once flowing from Paradise, and also as part of the 'T' of waters that divide the continents on the *mappamundi*. The *Glossa ordinaria* on Ecclesiasticus 24 does discuss the rivers of Paradise,¹⁵² but does not mention

150 For discussion of the rivers of Paradise see Paul Albert Février, "Les quatre fleuves du Paradis," *Rivista di archeologia cristiana* 32.3–4 (1956), pp. 179–199; and S. G. Darian, "The Ganges and the Rivers of Eden," *Asiatische Studien – Études Asiatiques* 31 (1977), pp. 42–54. On the subterranean and suboceanic courses ascribed to the rivers of Paradise by some ancient and medieval authors see Chet Van Duzer, "The Cartography, Geography, and Hydrography of the Southern Ring Continent, 1515–1763," *Orbis Terrarum* 8 (2002), pp. 115–158, esp. 118–121.

151 On Andreas Walsperger's *mappamundi* of 1448 four rivers leave a castle in the East rather like on HM 83, ff. 7v–84; two of the rivers are labeled Ganges and Tigris, and it is reasonable to think that one of the other two was intended to represent the Gyon/Nile, and the Nile does appear in its proper location in Africa, so we are probably to infer a subterranean passage. A different solution to this problem is adopted in an unsigned and undated Venetian copperplate world map of ca. 1485: the Nile arises in Paradise with the other three rivers, and then flows via a land bridge joining Asia to Africa into Africa, and then north to the Mediterranean. For discussion of the map see Erich Woldan, "A Circular, Copper-Engraved, Medieval World Map," *Imago Mundi* 11 (1954), pp. 12–16.

152 The text of the *Glossa ordinaria* on this passage supplied in *Patrologia Latina* 113:1210, is incomplete, and we supply here the text from vol. 2 of the Bible printed in Strasbourg by Adolf Rusch not after 1480: *Quasi Phison. Phison qui et Ganges qui de paradiso exiens vadit ad indiam, et interpretatur caterua quia sic magnis fluminibus impletur. Ganges autem dicitur a gangaro rege indie, et fertur sicut Nilus super Orientis terras exundare. Sicut Tigris. Tigris fluuius mesopotamie qui pergit contra assirios, et post multos circuitus in mare mortuum fluit, et tirgris vocatur quia sicut Tigris bestia velociter fertur. Quasi Euphrates. Euphrates fluuius mesopotamie gemmarum fertilis. Eufrata enim hebraice fertilitas latine. Mesopotamiam namque per loca irrigat, sic nilus alexandriam. Salutius asserit tigrim et eufraten uno fonte in armenia meare sed postea dividuntur maximo inter se spacio. Terraque quae ab ipsis ambitur mesopotamia dicitur. Quasi Gyon. Gyon, hic ethiopiam cingit. sic vocatus quia irrigat terram egypti, ge enim graece terram significat, qui apud aegyptios nilus vocatur propter limum quem trahit, qui fecunditatem efficit, unde et Nilus dictus est.* There is a facsimile edition of this Bible: *Biblia latina cum glossa ordinaria: Facsimile reprint of the Editio Princeps, Adolph Rusch of Strassburg 1480/81*, introd. Karlfried Froelich and Margaret T. Gibson (Turnhout: Brepols, 1992).

any subterranean passages or changes of name, but these characteristics are mentioned in the *Glossa ordinaria* on Genesis 2.¹⁵³

In northeastern Asia, the body of water that flows northeast to the circumfluent ocean, which also appears in the maps on ff. 1r, 3v, and 6r, is finally identified in the legend *Ra flu<v>im fluit per hiberniam*, “The Rha River flows through Iberia”: the Rha River is the Volga, mentioned by the name Rha by Ptolemy (*Geography* 5.9 and 6.14),¹⁵⁴ and *hibernia* is an error for the Asian Iberia.¹⁵⁵ At the center of the map is Jerusalem; and in the western half of the map the various seas are named: the sea to the north is (quite strangely) labeled *mare ori<entails>*, and is perhaps to be identified with the Baltic; the channel that runs between the northern Mediterranean and the western Mediterranean is labeled *Strata* as it is on the map in f. 3v, but remains unidentified; and the body of water that on most *mappaemundi* would be labeled the Nile is here, much as on the map on f. 3v, labeled *mare magnum sive mediteraneum*. In the west, a sea that is perhaps to be identified with the Bay of Biscay is designated the *mare occidentale*, and the western Mediterranean, as on the maps on ff. 1r and 3v, is labeled *mare artum*.

Just outside the circumfluent ocean to the west is a phrase that reads: *Mare oceanum circumdans terram totam <impenetrans?> quartam partem et est mater aquarum*, “The ocean sea encircles all of the land, <penetrating?> the fourth part, and it is the mother of the waters.” The phrase *mater aquarum* is less common than one might suppose, and the one source earlier than HM 83 where we have found it seems unlikely to have been consulted by the author of

153 From the *Glossa ordinaria* on Genesis 2 in the Bible printed in Strasbourg by Adolf Rusch not after 1480: *Ferunt historici tigrin et eufratem et nilum plerisque locis terre absumi: et paulo post emergentia silitum agere cursum.... Haec flumina gentibus per quas fluvunt notissima sunt: duobus vetustas mutavit nomina: Geon enim nilus nunc vocatur. Phison ganges. Tigris et eufrates antiqua nomina servaverunt.*

154 The Rha River appears as the Ras on Giovanni Leardo's world map of 1452 or 1453: see John Kirtland Wright, *The Leardo Map of the World, 1452 or 1453, in the Collections of the American Geographical Society* (New York: American Geographical Society, 1928), p. 33.

155 The name Hibernia is also used for the Asian Iberia by Andrea da Barberino in his chivalric romance *Il Guerrin Meschino*, which he completed in about 1410 and whose geography is based on that of Ptolemy: see Rudolf Peters, “Über die Geographie im Guerino Meschino des Andrea de' Magnabotti,” *Romanische Forschungen* 22.2 (1908), pp. 426–505, at 473. The Asian Iberia is mentioned in Ptolemy 5.11, and see William Smith, *A Dictionary of Greek and Roman Geography* (London: J. Murray, 1857), vol. 2, pp. 9–10.

HM 83,¹⁵⁶ so the phrase seems to have been re-invented here by the author of HM 83.

This map is essentially a thematic map of the world's waters, though its coverage of European rivers, for example, leaves much to be desired. As indicated earlier, the map is quite similar to a map of the world's rivers in one of the manuscripts of Corbechon's French translation of Bartholomaeus Anglicus, namely BnF MS fr. 9140, f. 226v (see Fig. 4.6), which leads one to suspect that this thematic map was inspired by one in a French manuscript of Bartholomaeus. The map is also very similar to a fifteenth-century map in the front flyleaf of Wolfenbüttel, Herzog August Bibliothek, Cod. Guelf. 442 Helmst. (see Fig. 5.12 below).¹⁵⁷ The relationship between the maps in this manuscript in Wolfenbüttel and those in Huntington HM 83 will be explored in more detail below; for the moment, suffice it to say that this map also seems to have some connection with Bartholomaeus Anglicus, as the first part of the legend about the river Dorix or Araxes on the map comes from Bartholomaeus 13.7, and the manuscript contains geographical excerpts from Bartholomaeus on 118r–121r.¹⁵⁸ These connections between the Wolfenbüttel map and Bartholomaeus on the one hand and the map in HM 83, ff. 7v–8r, on the other, tend to confirm a connection between the HM 83 map and Bartholomaeus.

The thematic map of the world's mountains mentioned and illustrated above, F. Humphreys's *Heights of the Principal Mountains in the World*, published in Henry S. Tanner, *A New Universal Atlas Containing Maps of the Various Empires, Kingdoms, States and Republics of the World* (Philadelphia: H. S. Tanner, 1836), is also a thematic map of the world's rivers—see Fig. 4.12—and is one of the earliest nineteenth-century maps of that type. A nineteenth-century thematic map of the rivers in Europe and Asia, titled *Asia-Eüropa; in*

¹⁵⁶ The only such text we found is from the twelfth century, Hermannus de Runa, *Hermani de Runa Sermones festuales*, ed. Edmond Mikkers (Turnhout: Brepols, 1986) (= Corpus Christianorum, Continuatio Mediaevalis, 64), Sermon 87, line 129: *Mare uocatur mater aquarum pro eo quod omnia flumina fluunt in mare et ipsum non redundat.*

¹⁵⁷ On the *mappamundi* on the front flyleaf of Wolfenbüttel, Herzog August Bibliothek, Cod. Guelf. 442 Helmst. see Jörg-Geerd Arentzen, *Imago mundi cartographica: Studien zur Bildlichkeit mittelalterlicher Welt- und Okumenekarten unter besonderer Berücksichtigung des Zusammenwirkens von Text und Bild* (Munich: W. Fink, 1984), pp. 128–129, 212, 276, and plate 36; and Christian Heitzmann, *Europas Weltbild in alten Karten: Globalisierung im Zeitalter der Entdeckungen* (Wiesbaden: Harrassowitz in Kommission, 2006), pp. 36–37.

¹⁵⁸ On the material from Bartholomaeus Anglicus in Wolfenbüttel, Herzog August Bibliothek, Cod. Guelf. 442 Helmst. see Otto von Heinemann, *Die Helmstedter Handschriften* (Frankfurt am Main: Klostermann, 1963–65), vol. 1, pp. 343–345; and Meyer, *Die Enzyklopädie des Bartholomäus Anglicus* (see Ch. 4, n. 3), pp. 132–133 and 272.

Beziehung auf das Fliessende, und seine Vertheilung in Stromgebiete, which shows the rivers in their proper geographical locations, may be found in Heinrich Berghaus, *Dr. Heinrich Berghaus' physikalischer Atlas oder Sammlung von Karten* (Gotha: Justus Perthes, 1845–48).¹⁵⁹

The Diagram on f. 13r

We move on now to the diagrams and maps in HM 83's heterogeneous section on astronomy and geography (ff. 13r–18r). The author opens this section with view of the whole cosmos: on f. 13r there is a diagram of the spheres labeled *hec figura appellatur ffabrica mundi* that shows the sphere of the earth rising partly out of the sphere of water, which are surrounded by the spheres of air and fire, then the planetary spheres, then the *Celum stellarum* or sphere of the stars, then the *Cristallinum*, then the *Primum mobile*, and finally the *Empyreum* or Empyrean.¹⁶⁰ Just one part of this diagram, to which we will return later, requires mention: outside of the spheres, at the very top of the diagram, there is a rectangle containing a grid that seems to be intended to represent the wall surrounding the Heavenly Jerusalem: this interpretation is confirmed by the very similar grid to the right of the gates of Paradise on f. 11v, in the section of the manuscript that addresses the Apocalypse.¹⁶¹ As mentioned earlier, the text on f. 13r is incomplete, and does not discuss this part of the diagram.

The Diagrams on f. 13v

The upper diagram shows the sphere of the earth rising out of the sphere of water, and the text explains that a quarter of the earth is above the water. Around these is a trace of the course of the sun around the earth, and the text supplies information about the relative sizes of the earth, ocean, and sun. The diagram below illustrates the relative sizes of a star, the earth, and the moon.¹⁶² It seems very likely that we are to understand a progression in the images on ff. 13r, 13v, and 14r, from a view of the whole cosmos, to a view of the central part of the cosmos, to a view of the earth. This use of detail maps is unusual in the late Middle Ages, but there is another example in HM 83, namely on f. 11v (see Fig. 5.9), where the view of the Mount of Olives and some other mountains

159 A high-resolution image of this map may be consulted on the website of the David Rumsey Map Collection, at <<http://www.davidrumsey.com>>.

160 There is a good brief history of the idea of the spheres in E. J. Aiton, "Celestial Spheres and Circles," *History of Science* 19 (1981), pp. 75–114.

161 A high-resolution image of HM 83, f. 13r is available via the Digital Scriptorium at <http://dpg.lib.berkeley.edu/webdb/dsheh/heh_brf?Description=&CallNumber=HM+83>.

162 A high-resolution image of HM 83, f. 13v is available via the Digital Scriptorium at <http://dpg.lib.berkeley.edu/webdb/dsheh/heh_brf?Description=&CallNumber=HM+83>.

functions as a detail of the image of the earth below, and we will discuss another example in the world map and map of the Holy Land in the front fly-leaf of Wolfenbüttel, Herzog August Bibliothek, Cod. Guelf. 442 Helmst. (see Fig. 5.12), a manuscript closely related to HM 83.

The Map on f. 14r

This map is the first of three climatic or zonal maps, each with a different climatic system, so that the three maps show a thematic interest in climate. The map on f. 14r (Fig. 4.16) is based on a map of the world's rivers very similar to that in ff. 7v–8r, emphasizing the rivers of paradise, but with fewer place names elsewhere. Overlain on these geographical details are ten parallels that demarcate ten climates. This system is obviously different from the system of five *climata* proposed by Aristotle and used in many Macrobian maps,¹⁶³ or Ptolemy's system of seven *climata*,¹⁶⁴ and seems to be based on another system of *climata* elaborated by Ptolemy in his *Geography* 1.23.¹⁶⁵ The map is puzzling, as there is no connection between the rivers and the system of *climata*, and the map does not include most of the place names whose *climata* are indicated in the surrounding text. So the author generated that text using a different map.

The place names on the map, beginning in the east and moving west, are as follows: *Eufrates*, *Tigris*, *Phison per evilat*,¹⁶⁶ *India*, *Gyon*, *Nilus*, *Etiopia* (repeated), *Egiptus*, *Jerusalem*. The scribe had initially drawn the Tigris with the western course of the Euphrates, but then did his best to remove the erroneous course of the Tigris. The first climate begins at the northern limit of *Etiopia*.

163 See Aristotle *Meteorology* 2.5 (362a32); on Macrobian maps see Destombes, *Mappemondes* (see Ch. 4, n. 37), pp. 43–45 and 85–95; Leonid S. Chekin, *Northern Eurasia in Medieval Cartography: Inventory, Text, Translation, and Commentary* (Turnhout: Brepols, 2006), pp. 95–120; and Alfred Hiatt, “The Map of Macrobius before 1100,” *Imago Mundi* 59.2 (2007), pp. 149–176.

164 Ernst Honigsmann, *Die sieben Klimata und die πόλεις ἐπισήμοι: Eine Untersuchung zur Geschichte der Geographie und Astrologie im Altertum und Mittelalter* (Heidelberg: Winter, 1929); and Dmitriy Shcheglov, “Ptolemy's System of Seven Climata and Eratosthenes' Geography,” *Geographia Antiqua* 13 (2004), pp. 21–38.

165 See Berggren and Jones, *Ptolemy's Geography: An Annotated Translation of the Theoretical Chapters* (see Ch. 4, n. 56), pp. 84–85.

166 The Phison river is said to flow around Evilath in Genesis 2:11, and see Genesis 10:7. For discussion of Evilath see Ivar Hallberg, *L'Extrême Orient dans la littérature et la cartographie de l'Occident des XIII^e, XIV^e, et XV^e siècles; étude sur l'histoire de la géographie* (Göteborg: W. Zachrissons boktryckeri a.-b., 1907), p. 202, s.v. “Evilach”; and Samuel Krauss, “‘Euilat’ in the LXX,” *The Jewish Quarterly Review* 11.4 (July, 1899), pp. 675–679.

FIGURE 4.16 Huntington MS 83, f. 14r. A diagram of ten climatic zones based on geographical texts, overlaid on a copy of the map of the waters of the earth in ff. 7v-8r (COURTESY OF THE HUNTINGTON LIBRARY).

The Map on f. 14v

The climatic diagram on f. 14v includes very little geographical detail (Fig. 4.17), and thus barely qualifies as a map, but it does indicate the bodies of water that create a T-O *mappamundi*, and thus is a *mappamundi*. The map includes an extra body of water parallel to and south of the Mediterranean. The surrounding text explains that the extra body of water is the *mare artum* or western mouth of the Mediterranean: this separation of the Mediterranean proper and the Strait of Gibraltar into different *climata* is puzzling. On the map are indications of nine climates (the last of which is not numbered), and there is a table spread across the map that gives the *elevatio poli artici* or elevation of the North Star in each climate, the *dies prolixior* or longest day of each climate, and the width in miles of each climate.

The latitude of the beginning of the first climate is essentially the same as it is on the map in f. 14r: on that map it marks the northern limit of *Etiopia*; on f. 14v *Etiopia* is not indicated. The table on f. 14v indicates the widths of the *climata* in German miles, with fractions indicated in stadia. The system of *climata* is based on that of Johannes de Sacrobosco's *Tractatus de sphaera*, which was the most popular astronomical work of the Middle Ages and Renaissance,¹⁶⁷ which fits with the author's claim that the *climata* on this map are based on astronomy. The latitudes of the first seven *climata* on f. 14v match perfectly those in Sacrobosco (who only indicates seven *climata*). The author's source for his eighth and ninth *climata*, which are said to be centered on 52°N and 56°N respectively, is not clear: the fact that he does not indicate the width in miles of these last two *climata* suggests that he may have added those two *climata* himself.

Moreover, there are problems with the indicated widths in miles of the *climata*. The width of *climata* should decrease as one moves north, as they do in Sacrobosco, but there are irregularities in this regard in the list on f. 14v. The following table indicates the width of the climatic zones in *miliaria* (Sacrobosco) and German miles (HM 83):

Sacrobosco		HM 83, f. 14v
1.	440	175 and 2 stadia
2.	400	153 and 4 stadia

¹⁶⁷ On the continued popularity of Sacrobosco's *Tractatus de sphaera* see Corinna Ludwig, "Die Karriere eines Bestsellers. Untersuchungen zur Entstehung und Rezeption der *Sphaera* des Johannes de Sacrobosco," *Concilium medii aevi* 13 (2010), pp. 153–185.

FIGURE 4.17 *Huntington MS 83, f. 14v.* A diagram of nine climatic zones based on astronomical texts, with a table supplying the elevation of the North Pole and the length of the longest day in each climate, and the width of each in German miles (COURTESY OF THE HUNTINGTON LIBRARY).

3.	350	132
4.	300	153
5.	255	63
6.	212	88
7.	185	76
8.	[none]	[not supplied]
9.	[none]	[not supplied]

In addition to the errors of calculation or copying evident in the irregular sequence of *climata* widths on f. 14v, it is not clear what type of *miliare* the author of HM 83 thought Sacrobosco was using. The ratio between the measurements of Sacrobosco and those of f. 14v for the first three *climata* (where the sequence of widths on f. 14v seems regular) averages about 2.6, so the author of HM 83 apparently thought that Sacrobosco was using a *miliare* that was about 0.385 (= 1/2.6) the length of the German mile. The definitions of units of measure in the early modern period are difficult to pin down—Andreas Walsperger on his *mappamundi* of 1448, in a passage transcribed and translated above, says that a German mile is 10,000 feet, while Johann Schöner in his *Opusculum geographicum* ([Nuremberg]: [Johann Petrejus], 1533), Part 1, chapter 12, says that a German mile is 5,760 feet—but even given the great variety of definitions, we do not know of a *miliare* that was approximately 0.385 the length of a German mile.

The Map on f. 15r

The third map of the climatic zones in HM 83 is on f. 15r (Fig. 4.18). The presence of three climatic maps with climate systems from three different sources (geographers, astronomers, theologians) again indicates the author's inclination to use maps as tools for comparison, like his use of thematic and historical maps. The map is puzzling, and seems to be a less detailed copy of a more detailed original. The texts in the upper left and right corners of the folio read:

Hec figura 7 climatum secundum theologos qui partem terre climaticam consideraverunt secundum naturalem et convenientem modum habitabilem hominibus.

Vide in hac figura quomodo Apostolorum audita est vox in omni terra climatica.

FIGURE 4.18 Huntington MS 83, f. 15r. A map showing seven climatic zones based on a theological text, and also the location in which each of the Apostles preached, which are listed on f. 5v (COURTESY OF THE HUNTINGTON LIBRARY).

This diagram shows the seven climates according to the theologians, who considered the climate of a part of the world according to its nature and the degree to which it is suitable for human habitation.

See in this diagram how the voice of the Apostles is heard in all of the land divided into climates.

The idea of the map, then, is to show that the Gospel has reached all parts of the earth, and specifically all of the climates of the earth, reflecting the author's interest in the approach of the Apocalypse, as Matthew 24:14 says that the end of the world will come after the Gospel has reached the ends of the earth.¹⁶⁸ However, the map includes indications of only three of the Apostles, namely Matthew, Thomas, and James. Moreover, the text below the map says that several places are located in a particular climate *secundum figuram*, according to the map, but those places do not appear on the map. In addition, these same texts indicate that the author was consulting two climatic maps, one with seven *climata*, and another with eight. For example, the second entry below the map says:

Egiptus in 2° climate secundum figuram 8 climatium. Secundum figuram 7 climatium scilicet secundum theologos partim in 2° et partim in 3°.

Egypt is in the second climate according to the seven-climate map, but according to the eight-climate map, that is, according to the theologians, it is partly in the second climate, and partly in the third.

Some of the other entries in the list below the map, beginning with the sixth entry which is for Ceuta, abbreviate the references to the two maps as *secundum figuram u* and *secundam figuram t*; the 't' probably stands for *theologorum*, but it is not clear what the 'u' stands for. It is puzzling that the entry for Egypt just quoted says that the eight-climate map is that of the theologians, while the text above and to the left of the map says that the map shows the seven climates according to the theologians. The map in fact has seven numbered *climata*, and then a red parallel north of the northern limit of the seventh climate, no doubt to be interpreted as indicating the eighth climate—which

¹⁶⁸ For discussion of and bibliography regarding the global scope of the evangelical mission see Van Duzer and Dines, "The Only *Mappamundi* in a Bestiary Context" (see Ch. 4, n. 149), pp. 13–15.

despite the map's title, the author of HM 83 seems to have been somewhat hesitant about.

The earliest reference that we know to an eight-climate system is that in the *De nuptiis Philologiae et Mercurii* of Martianus Capella (fifth century),¹⁶⁹ but Capella certainly was not a theologian, and none of his maps survives. The Wolfenbüttel manuscript of Lambert of Saint-Omer's *Liber Floridus* (Herzog August Bibliothek, Cod. Guelf. 1 Gud. Lat.) has an inscription indicating that its maps are based on those of Martianus Capella,¹⁷⁰ but Lambert does not use the eight-climate system on his maps, nor does he describe such a system. The theologian that the author of HM 83 is referring to must be Bede the Venerable (672/673–735), who in his *De natura rerum*, chapter 47, adopts an eight-climate model.¹⁷¹ However, while there are climatic diagrams in some manuscripts of Bede's works, the ones that we have seen show the five-climate system, rather than an eight-climate system.¹⁷² The only other map we know besides that in HM 83, f. 15r, that shows eight climates is John of Wallingford's *mappamundi* of

169 See Martianus Capella, *The Marriage of Philology and Mercury*, trans. 171 See Bede the Venerable, *De natura rerum*, chapt. 47 ("De circulis terrae"), in *Patrologia Latina* 190:265–273; and Bede the Venerable, *Bedae Venerabilis Opera* (Turnhout: Brepols, 1955–1980), Pars 1, Opera Didascalica (= Corpus Christianorum, Series Latina 123A, 1975), pp. 189–234, at 229; and Bede the Venerable, *On the Nature of Things, and On Times*, ed. and trans. Calvin B. Kendall and Faith Wallis (Liverpool: Liverpool University Press, 2010), pp. 98 and 162. For discussion of Bede's system of climates in relation to those of Pliny, Ptolemy, Martianus Capella, Isidore of Seville, and Gerbert of Aurillac see Mario Arnaldi, "Orologi solari azimutali medievali: Analisi dei testi e possibili collazioni (seconda parte)," *Gnomonica Italiana* 15 (2008), pp. 31–40, at 36 and 39–40; this material is presented in English in Arnaldi's book *De cursu solis: Medieval Azimuthal Sundials, From the Primitive Idea to the First Structured Prototype* (Somerton: British Sundial Society, 2012), Appendix F, "The Climates."

172 The maps in manuscripts of Bede's works are listed by Destombes, *Mappemondes* (see Ch. 4, n. 37), pp. 35–36, but he does not include zonal diagrams that lack geographical detail. Munich, BSB Clm. 210, f. 132r (ninth century) has five climatic rings; and Paris, BnF Ms lat. 7474, f. 86v (eleventh century) shows the five-climate system.

c. 1250, but there is no basis to think there is any connection between the Huntington map and John of Wallingford's.¹⁷³

The place names and legends on the map are as follows, reading from south to north: *desertum propter nimium calorem* ("Desert because of excessive heat"); *Ethiopia Matheus* (indicating that the Apostle Matthew went to Ethiopia to preach); in the third climate, from east to west, *homines parvi, mediocres, magni*; in the fourth climate, from east to west, *Bestiae grandes, mediocres, parve*, and back in the east of the fourth climate, *Thomas* (the Apostle);¹⁷⁴ *Jerusalem*; *Jacobus*; in the circumfluent ocean in the east, *X tribus Israel*;¹⁷⁵ *Babel*; *Constantinopolis*; *Savianus unus de 7ta <climata?>* ("Savinian one of the seventh climate"); *Francia*; *desertum esset propter nimium frigus si non habunda<r>ent ligna quibus autem fit ut homines habitent usque ad oceanum mare in yslandia* ("This area would be deserted because of the excessive cold if trees did not abound, by whose presence it occurs that men can live all the way to the ocean in Iceland"); *Anglia*; *hibernia*; *dacia*.

Some of the texts on the map require comment. The indication that in the third climate men are small in the east, medium-sized in the central part of the world, and tall in the west (*homines parvi, mediocres, magni*), is extraordinary. We have not identified its source, and the indication of difference between the east and west is unexpected on a climatic map, where we would anticipate descriptions of differences between north and south.¹⁷⁶ This question is ren-

173 The John of Wallingford map is in London, British Library, Cotton MS Julius D. vii, f. 46r, and is reproduced in P. D. A. Harvey, *Medieval Maps* (London: British Library, 1991), p. 20; see also Destombes, *Mappemondes* (see Ch. 4, n. 37), p. 168, #49.7; Anna-Dorothee von den Brincken, *Fines terrae: die Enden der Erde und die vierte Kontinent auf mittelalterlichen Weltkarten* (Hannover: Hahnsche Buchh., 1992), pp. 109–112 and plate 36; Chekin, *North-ern Eurasia* (see Ch. 4, n. 163), pp. 202–203 and plate 15.1; and Alfred Hiatt, *Terra incognita: Mapping the Antipodes before 1600* (Chicago: University of Chicago Press, 2008), pp. 121, 123–124, and 142 note 128. Incidentally the eighth climate is mentioned by Martin Waldseemüller in his *Cosmographiae introductio* of 1507: see *The 'Cosmographiae introductio' of Martin Waldseemüller in Facsimile, Followed by the Four Voyages of Amerigo Vespucci*, ed. and trans. Joseph Fischer and Franz von Wieser (New York: The United States Catholic Historical Society, 1907), chapter 7, pp. xxiv and 62.

174 The Apostle Thomas is located in the far east of the map, in the area that is designated as India in other maps in HM 83, and of course Thomas was thought to have gone to India to preach: see, W. R. Philipps "The Connection of St. Thomas the Apostle with India," *The Indian Antiquary* 32 (1903), pp. 1–15 and 145–160.

175 The island of the Ten Tribes of Israel appears on other maps in HM 83, including those on ff. 3r, 6v–7r, and 10v (see Fig. 4.9, 4.14, and 5.7, respectively).

176 About a century later, Jean Bodin suggested that the differences between the east and west generate differences among the inhabitants of those regions: see Jean Bodin, *Les six*

dered more complicated by the text in the fourth climate, which says that animals are large in the east, and small in the west—the opposite of the situation in the third climate. The fact that the situations are the opposite in the third and fourth climates is puzzling and makes one wonder what the author of HM 83 thought the cause of this difference was (and certainly makes living in the west, where the men are large and the beasts small, sound more appealing than living in the east). Perhaps the author thought that this difference was what explained all of the accounts of monsters in the east.¹⁷⁷

Savianus certainly refers not to the early seventh-century Pope Sabianus or Sabinian, who had nothing to do with France,¹⁷⁸ but to Saint Savinian of Sens (in French, Savinien de Sens), who in the third century was sent from Rome to France and was martyred there.¹⁷⁹ But it is not at all clear why Savinian is on the map rather than one of the Apostles. Perhaps the author had a connection with France.

The legend about the far north, indicating that it is the presence of wood, i.e. wood for fires, that renders the northern regions habitable for humans, comes from neither Sacrobosco nor Bede, and we have not been able to determine the

livres de la République, ed. Christiane Frémont, Marie-Dominique Couzinet, and Henri Rochais (Paris: Fayard, 1986), Book 5, chapter 1, “Du reiglement qu’il faut tenir pour accommoder la forme de Republique à la diversité des homes: et le moyen de cognoistre le naturel des peuples,” p. 44. We thank Leonid Chekin for this reference.

177 There is an excellent account of the monsters of the east in Rudolf Wittkower, “Marvels of the East: A Study in the History of Monsters,” *Journal of the Warburg and Courtauld Institutes* 5 (1942), pp. 159–197, reprinted in his *Allegory and Migration of Symbols* (Boulder, CO: Westview Press, 1977), pp. 45–74. Also see James Romm, “Belief and Other Worlds: Ktesias and the Founding of the ‘Indian Wonders,’” in George E. Slusser and Eric S. Rabkin, eds., *Mindscapes: The Geography of Imagined Worlds* (Carbondale: Southern Illinois University Press, 1989), pp. 121–135; and Andrea Rossi-Reder, “Wonders of the Beast: India in Classical and Medieval Literature,” in Timothy S. Jones and David A. Sprunger, eds., *Marvels, Monsters, and Miracles: Studies in the Medieval and Early Modern Imaginations* (Kalamazoo: Medieval Institute Publications, 2002), pp. 53–66.

179 On Saint Savinian of Sens see Abbé Cornat, “Du rétablissement de l’ancienne légende de saint Savinien, martyr et fondateur de l’église de Sens,” *Bulletin de la Société des Sciences Historiques et Naturelles de l’Yonne* 5 (1851), pp. 435–446; “Vita S. Sabiniani martyris, Trecis in Gallia: Ex codice Reginae Sueciae 80,” *Analecta Bollandiana* 4 (1885), pp. 139–157; and Augustin Fliche, *Les vies de saint Savinien, premier évêque de Sens: étude critique suivie d’une édition de la plus ancienne vita* (Paris: Société Française d’Imprimerie et de Librairie, 1912).

author's source here. It may be the author's own reflection on the practicalities of life in the north.

The place of this map in the manuscript raises questions about the composition of HM 83, and in particular about whether its location reflects the author's original intentions. As indicated above, the separation of the map (which is on f. 15r) from the list of the locations where the Apostles preached (ff. 5v–6r), is puzzling. Given that the purpose of the map is to show that the Gospel has reached all parts of the earth, which is a prerequisite of the Apocalypse, it would seem more natural for this map to precede the treatise on the Apocalypse rather than follow it. On the other hand, it is true that the map on 15r goes well with the other climatic maps on ff. 14r and 14v. One other curious aspect of the map on f. 15r is that while this map suggests (as mentioned earlier), at least through the author's statement of its purpose, the completeness of the Apostles' evangelization, the map on ff. 6v–7r indicates that the evangelization is not complete in a legend that reads <Ethiopia> *occidentalis hic evangelium non audivit*, "In western <Ethiopia> they have not heard the Gospel." But perfect consistency throughout the manuscript is too much to expect.

Finally, a few words should be said about other *mappaemundi* that indicate the locations where the Apostles preached. The best-known maps of this type are of course the *mappaemundi* illustrating manuscripts of Beatus of Liébana's *Commentary on the Apocalypse*. These maps appear in the manuscripts just following a list of the Apostles and the regions they went to evangelize, and Beatus's textual reference to the map (*subiectae formulae pictura demonstrat*) makes it clear that he included a map in the autograph manuscript of his *Commentary*.¹⁸⁰ Another map that indicates where the Apostles preached is Oxford, St. John's College, MS 17, f. 6r, made in about 1110, which has references to four of the Apostles in Asia (from east to west): *Achaia ubi sanctus andreas; Effesus sanctus iohanes predicavit; Cesaria hic Petrus predicavit; Athenas hic*

¹⁸⁰ For discussion of the Beatus maps, and particularly of their illustration of the Apostles' mission, see Manuel Adolfo Baloiira Bertolo, "Doctrina de la dispersión apostólica en Beato," *Compostellanus* 30.3–4 (1985), pp. 289–316; Serafín Moralejo Álvarez, "El mapa de la diáspora apostólica en San Pedro de Rocas: notas para su interpretación y filiación en la tradición cartográfica de los Beatos," *Compostellanus* 31 (1986), pp. 315–340, reprinted in *Patrimonio artístico de Galicia y otros estudios: Homenaje al Prof. Dr. Serafín Moralejo Álvarez* (Santiago de Compostela: Xunta de Galicia, 2004), vol. 2, pp. 65–74; and Sandra Sáenz-López Pérez, *The Beatus Maps: The Revelation of the World in the Middle Ages* (Burgos: Siloé, 2014), pp. 186–195.

Paulus predicavit.¹⁸¹ There is an almost identical *mappamundi*, with the same legends about the Apostles, in the Peterborough Computus of c. 1120 (British Library, Harley MS 3667, f. 8v);¹⁸² and an unfinished earlier version of a very similar map—which includes the legends *Achaia ubi sanctus andreas* and *Cesaria hic Petrus predicauit*—in Cambridge, Corpus Christi College MS 265 (the ‘Commonplace Book’ of Archbishop Wulfstan II of Worcester, which dates to the last quarter of the eleventh century), p. 210.¹⁸³

It is tempting to think that the author of HM 83 was inspired to make the map on f. 15r by an earlier map of the places where the Apostles preached, but if that is the case, that earlier map has not survived.

181 On the map in Oxford, St. John's College, MS 17, see Destombes, *Mappemondes* (see Ch. 4, n. 37), p. 48, no. 25.8; Faith Wallis, “MS Oxford St. John's College 17, a Mediaeval Manuscript in its Context,” Ph.D. Dissertation, University of Toronto, 1985, pp. 219–223; Anna-Dorothee von den Brincken, “Mundus Figura Rotunda,” in Anton Legner, ed., *Ornamenta Ecclesiae: Kunst und Künstler der Romanik in Köln* (Cologne: Schnütgen-Museum, 1985), vol. 1, pp. 99–106, at 103–105; Evelyn Edson, “World Maps and Easter Tables: Medieval Maps in Context,” *Imago Mundi* 48 (1996), pp. 25–42, at 35–37, with a reproduction of the map in Fig. 4.7; Evelyn Edson, *Mapping Space and Time: How Medieval Mapmakers Viewed their World* (London: British Library, 1997), pp. 86–95, with the map reproduced on p. 88; and Chekin, *Northern Eurasia* (see Ch. 4, n. 163), pp. 64–65, with an illustration of the map on p. 365. Updated material about the map from Faith Wallis's dissertation is available on her website devoted to the manuscript, at <<http://digital.library.mcgill.ca/ms-17/>>.

182 The map in BL Harley MS 3667 is not listed by Destombes in his *Mappemondes* (see Ch. 4, n. 37); the best discussion of the map is that by Martin Foys in the article cited in the following note.

183 Martin Foys, “An Unfinished *Mappamundi* from Late Eleventh-Century Worcester,” *Anglo-Saxon England* 35 (2006), pp. 271–284.

The Treatise on the Apocalypse

We turn our attention now to the treatise on the Apocalypse in HM 83, ff. 8v–12v. As indicated above, the geographical material in ff. 1r–8v serves as a preface to the apocalyptic section, describing the world's geography before it underwent dramatic changes in the Last Days, and reviewing the Four Kingdoms of the world (f. 5v) and also the missions of the Apostles (ff. 5v–6r). And it is abundantly clear that the treatise on the Apocalypse was composed by the same author as the geographical material in ff. 1r–8v and 13r–18r: in all of these sections we see the author's strong propensity to illustrate things with maps, and the summary of the Last Days on f. 16r agrees very well (though not in every detail) with the account of the Apocalypse presented on ff. 8v–12v.

The traditions of illustrating narratives of the Apocalypse are varied, and extend over more than a thousand years: we have evidence from the seventh century of an illustrated manuscript of the Book of Revelation,¹ and manuscripts with illustrations of the Apocalypse survive from the early ninth century.² Yet HM 83 is almost unique in its cartographic program of illustration of the Last Days. The author's experience with thematic maps, evident in

1 So James Snyder, "The Reconstruction of an Early Christian Cycle of Illustrations for the Book of Revelation: The Trier Apocalypse," *Vigiliae Christianae* 18.3 (1964), pp. 146–162, at 147, who notes that Bede records in his *Vita sanctorum abbatum monasterii in Wiramutha et Girvum*, in *Patrologia Latina* 94:718, that Benedict Biscop of Wearmouth traveled to Rome in about 672 "to acquire illustrated manuscripts, including a Book of Revelation, to serve as models for church decorations."

2 The earliest is the Trier Apocalypse of c. 800, which is in Trier, Stadtbibliothek, MS 31, and has been reproduced in facsimile as *Trierer Apokalypse: Vollständige Faksimile-Ausg. im Originalformat des Codex 31 der Stadtbibliothek Trier*, with commentary by Richard Laufner and Peter K. Klein (Graz: Akademische Druck- und Verlagsanstalt, 1974–75). For a detailed list of other manuscripts that contain illustrations of the Apocalypse see Emmerson and Lewis, "Census and Bibliography" (see Introduction, n. 1). For chapters that together form a good discussion of art based on the Apocalypse see Richard K. Emmerson and Bernard McGinn, eds., *The Apocalypse in the Middle Ages* (Ithaca, NY: Cornell University Press, 1992), part 2, pp. 103–289. The chapter that addresses the later Middle Ages is Michael Camille, "Visionary Perception and Images of the Apocalypse in the Later Middle Ages," pp. 276–289. Also see Jonathan Alexander, "The Last Things: Representing the Unrepresentable," in Frances Carey, ed., *The Apocalypse and the Shape of Things to Come* (Toronto and Buffalo: University of Toronto Press, 1999), pp. 43–63, with a catalogue by Michael Michael, Jonathan Alexander and Martin Kauffmann, pp. 64–98.

the geographical sections of the manuscript, makes it unsurprising that he would choose to illustrate the Apocalypse with maps, but it is worth exploring another possible source of inspiration of this program, which is the use of map-like images of the world to illustrate the First Days, i.e. the Creation. It seems possible that programs illustrating the Creation with images of the world may have inspired the author's choice to illustrate the events of the Apocalypse with maps.

There are several surviving manuscripts that illustrate the Creation with *mappamundi*-like images, which however cannot be characterized as maps as they do not show any realistic geographical detail.³ One such sequence is in the Lothian Bible of c. 1220 in the Morgan Library (MS M. 791, f. 4v):⁴ in the illustrations of the second, third, fourth, and fifth days of Creation, the world is depicted as a disk of land surrounded by the circumfluent ocean, in the same format as a *mappamundi*, but without geographical details. Three other more elaborate examples date from the late fourteenth century. One of these is in the Padua Bible (Rovigo, Biblioteca dell'Accademia dei Concordi, MS 212, ff. 1r–1v).⁵ The paintings are unfortunately damaged, so that the details of the earth are not clearly visible, but it does not seem that they offer significant

3 Campbell, *The Earliest Printed Maps* (see Ch. 4, n. 96), p. 17, says that in order to qualify as a map, an image “must attempt to convey, in graphic form, information about the real world or some part of it. It must be concerned—however inaccurately or schematically—with direction and the relative distance of one place or feature from others.”

4 Johannes Zählten, *Creatio mundi: Darstellungen der sechs Schöpfungstage und naturwissenschaftliches Weltbild im Mittelalter* (Stuttgart: Klett-Cotta, 1979), pp. 68, 108, 161, and fig. 116. Morgan Library MS M. 791, f. 4v is also reproduced for example in Suzanne Lewis, *The Art of Matthew Paris in the Chronica majora* (Berkeley: University of California Press, 1987), p. 30; and Michael Lieb, Emma Mason, and Jonathan Roberts, eds., *The Oxford Handbook of the Reception History of the Bible* (Oxford: Oxford University Press, 2010), fig. 13.1. Images of the folio are also available via the Morgan's online catalog at <<http://corsair.morganlibrary.org/>>. For a discussion of the manuscript see John Henry Plummer, “The Lothian Morgan Bible: A Study in English Illumination of the Early Thirteenth Century,” Ph.D. Dissertation, Columbia University, 1953.

5 The Padua Bible has been reproduced in facsimile in Gianfranco Folena and Gian Lorenzo Mellini, eds., *Bibbia istoriata padovana della fine del Trecento: Pentateuco, Giosuè, Ruth* (Venice: N. Pozza, 1962); and for a complete study of it see Susan Macmillan Arensberg, “The Padua Bible and the Late Medieval Biblical Picture Book,” Ph.D. Dissertation, Johns Hopkins University, 1986. There is some discussion and illustration of the Bible's Creation sequence in Zählten, *Creatio mundi* (see Ch. 5, n. 4), pp. 70 and 111, and figs. 128–129. Color images of the Creation sequence in this manuscript are available on the internet site of the Istituto Centrale per il Restauro e la Conservazione del Patrimonio Archivistico e Librario, at <<http://www.icpal.beniculturali.it>>.

geographical detail. However, the images of the earth are surrounded by the elemental and celestial spheres and the Zodiac, as some *mappaemundi* are, and in particular, the images bear a very close relationship to the *mappamundi* painted by Giusto de' Menabuoi in the Battistero del Duomo in Padua in 1375–1378⁶—either Menabuoi's map served as a model for the illustrations in the Bible, or they shared a common model. Thus the connection of these Creation images with *mappaemundi* is particularly close.

Another late fourteenth-century manuscript that contains a Creation cycle illustrated with images of the world is the Egerton Genesis Picture Book (London, British Library, Egerton MS 1894). The illustrations of the six days of Creation (ff. 1r–1v) show God seated on a rainbow above images of the world in the style of a *mappamundi*, with the sphere of the air indicated by a circle of clouds, within that the waters, and in the middle of the waters, an island that represents the dry land.⁷ And a late fourteenth-century Missal and Book of Hours, Paris, BnF MS Lat. 757, contains a striking Creation cycle, with each day represented on a full-page image, each in a *mappamundi* format, with the circle of the earth surrounded by the circumfluent ocean and the elemental and celestial spheres, with God either above or within the image, causing each stage to occur.⁸ As the images are full-page, the representations of the earth

6 On the *mappamundi* painted by Menabuoi in the Battistero in Padua see Frank Lestrinant, *Les méditations cosmographiques à la Renaissance* (Paris: PUPS, 2009), pp. 67–68; and Patrick Gautier Dalché, *La Géographie de Ptolémée en Occident (Ive–XVIIe siècle)* (Turnhout: Brepols, 2009), p. 145.

7 The Egerton Genesis Picture Book is reproduced in facsimile in Mary Coker Joslin and Carolyn Coker Joslin Watson, *The Egerton Genesis* (London: British Library, 2001), with the Creation scenes reproduced on plates 3 and 4, and commentary on them on pp. 30–36. There is some discussion and illustration of the manuscript's Creation sequence in Zahlten, *Creatio mundi* (see Ch. 5, n. 4), p. 68, and figs. 114–115; and on the manuscript generally also see John Lowden, "Concerning the Cotton Genesis and Other Illustrated Manuscripts of Genesis," *Gesta* 31 (1992), pp. 40–53, at 43–46 with fig. 6. Color images of the scenes from the Creation sequence are available via the British Library's online Catalogue of Illuminated Manuscripts, at <https://www.bl.uk/catalogues/illuminatedmanuscripts/welcome.htm>.

8 For discussion of BnF MS lat. 757 see Kay Sutton, "The Original Patron of the Lombard Manuscript Latin 757 in the Bibliothèque Nationale, Paris," *Burlington Magazine* 124.947 (1982), pp. 88–94; Edith W. Kirsch, *Five Illuminated Manuscripts of Giangaleazzo Visconti* (University Park, PA: Pennsylvania State University Press, 1991), pp. 13–17 and figs. 13–18; and Giuseppa Z. Zanichelli, *I conti e il minio: codici miniati dei Rossi 1325–1482* (Parma: Università di Parma, Istituto di storia dell'arte, 1996), pp. 53–64. There is some discussion and illustration of the manuscript's Creation sequence in Zahlten, *Creatio mundi* (see Ch. 5, n. 4), p. 76, and fig. 171; and a much more detailed account in Silvana Tassetto, "La

are large, and in addition to the created beings—plants, animals, birds, Adam and Eve—they include geographical details such as islands and inlets of the circumfluent ocean. However, these details bear no relation to the world's actual geography, and seem intended merely to indicate that the earth is geographically varied.

Given that the author of HM 83 made use of text and illustrations from Bartholomaeus Anglicus, it seems likely that if he was inspired to illustrate the Apocalypse with maps by a Creation cycle with images of the world, it would have been by such a cycle in an illustrated manuscript of Bartholomaeus—for some of the manuscripts of the French translation of Bartholomaeus by Jean Corbechon do contain such sequences. These sequences are less elaborate than those just discussed, and the images of the world less map-like, but they might have suggested a series of maps to someone cartographically inclined. These manuscripts of Corbechon's translation of Bartholomaeus include, in approximate chronological order: (1) a manuscript made c. 1390, which was sold at Sotheby's (London) on June 23, 1998, and again at Christie's (London) on July 7, 2010;⁹ (2) Paris, BnF MS fr. 216, f. 13r, c. 1400, whose illustrations follow those of the preceding manuscript closely;¹⁰ (3) Madrid, Fundación Lázaro Galdiano, MS I 15554, f. 16v, c. 1400;¹¹ (4) Brussels, Bibliothèque Royale,

Creazione del mondo. Aspetti iconografici nel Messale-Libro d'Ore lat.757 della Biblioteca Nazionale di Parigi," *Arte lombarda: Rivista di storia dell'arte* 117.2 (1996), pp. 36–44, with an additional colour plate on p. 57, and English abstract on p. 133. Images of the manuscript's Creation scenes are available via <<http://mandragore.bnf.fr>>, and a PDF of the entire manuscript can be downloaded at <<http://gallica.bnf.fr/ark:/12148/btv1b8470209d>>.

FIGURE 5.1

The Creation sequence in a manuscript of Corbechon's French translation of Bartholomaeus Anglicus's De proprietatibus rerum, made c. 1400 (MADRID, FUNDACIÓN LÁZARO GALDIANO, MS I 15554, F. 16V, © FUNDACIÓN LÁZARO GALDIANO).

in a circular space. The last of these images shows part of a landscape rather than an image of the whole world, and none of the images is particularly similar to a *mappamundi*, but such a series could easily have inspired an author interested in maps to portray the Apocalypse using a series of maps.

The narrative of the Last Days in HM 83's treatise on the Apocalypse is brief, choppy, and allusive, and sometimes has the feel of being an abbreviated version of a fuller account. There are elements that are unexplained, or are explained only later: for example, the names of Enoch and Elijah appear on the map on f. 10v, but the accompanying text gives no indication of their role in events, though that role is described in the summary of the events of the Last Days on f. 16v. The way the author handles citations is somewhat sloppy compared with the techniques of contemporary churchmen, for example the work of Johannes von Paltz discussed in the following section. In the text the author frequently refers to the accompanying maps, and it is clear that the text was designed to accompany the maps.

Late Fifteenth-Century German Apocalypticism

The uniqueness of HM 83's treatment of the Last Days can best be brought out by considering other works on the Apocalypse and related subjects produced in Germany, particularly in the second half of the fifteenth century. The Turks' conquest of Constantinople in 1453, and their subsequent conquests of territory in Eastern Europe, spread fear throughout Europe, and gave new impetus and urgency to predictions that the Apocalypse was imminent in the second half of the century and beyond.¹⁶

The Apocalypse was to bring with it vast changes, including powerful punishments of the wicked; as a result, predictions of imminent Apocalypse, with roles in the Apocalyptic drama assigned to specific historical persons, had been popular with reformers for centuries. This was particularly true in fif-

16 See Wolfram Brandes, "Der Fall Konstantinopels als apokalyptisches Ereignis," in Sebastian Kolditz and Ralf C. Müller, eds., *Geschehenes und Geschriebenes: Studien zu Ehren von Günther S. Henrich und Klaus-Peter Matschke* (Leipzig: Eudora-Verlag, 2005), pp. 453–470; and Kaya Şahin, "Constantinople and the End Time: The Ottoman Conquest as a Portent of the Last Hour," *Journal of Early Modern History* 14.4 (2010), pp. 317–354. For a more general discussion of late fifteenth-century German piety see Bernd Moeller, "Frömmigkeit in Deutschland um 1500," *Archiv für Reformationsgeschichte* 56 (1965), pp. 6–30; translated into English as "Piety in Germany around 1500," trans. Joyce Irwin, in Steven E. Ozment, ed., *The Reformation in Medieval Perspective* (Chicago: Quadrangle Books, 1971), pp. 50–75.

teenth-century Germany, on the eve of the Protestant Reformation,¹⁷ which began in 1517, and which grew out of dissatisfactions with the Church and society that had been present and increasing for close to two hundred years.¹⁸ Gian Luca Potestà, in his study of radical apocalyptic movements in the Late Middle Ages, has noted that as these movements in Germany were deemed heretical, they were quickly quashed, and the writings of the fomenters destroyed; as a result, our evidence regarding fifteenth-century German Apocalypticism is incomplete.¹⁹

But brief records, specifically two letters copied in Nürnberg in 1465–66, have survived of the apocalyptic thought of the brothers Janko and Livin of Wirsberg, who predicted that the world would end in the 1460s.²⁰ Their predictions had a strong political component: a messianic figure, the ‘Anointed of the Savior,’ would soon arrive, his advent foretold by a figure similar to St. John the Baptist—evidently this was Janko himself. The messiah, born spiritually from the Virgin and enlightened by God, alone understood the true meaning of the Bible, and would bring the third and final Testament, with a message of

- 17 See J. Rohr, “Die Prophetie im letzten Jahrhundert vor der Reformation,” *Historisches Jahrbuch* 19 (1898), pp. 29–56 and 447–466, esp. 461, who identified three common themes in fifteenth-century prophecy: hostility to Rome, a desire to see Church property confiscated, and a prediction that justice would be meted out to corrupt elements of society by the Turks or an emperor from the north.
- 18 See Alister E. McGrath, *The Intellectual Origins of the European Reformation*, 2nd edn. (Malden, MA: Blackwell Pub., 2004), p. 4: “There has been a growing recognition on the part of Reformation scholars that neither the events nor the ideas of the sixteenth century may be properly understood unless they are seen as the culmination of developments in the fourteenth and fifteenth centuries.” For a very good discussion of late thirteenth- and fourteenth-century predictions of the End of Time in Germany and their political dimensions see Frances Courtney Kneupper, “German Identity and Spiritual Reform at the End of Time: Eschatological Prophecy in Late Medieval Germany,” Ph.D. Dissertation, Northwestern University, 2011; and for example Jennifer Kolpacoff Deane, “The Auffahrtabend Prophecy and Henry of Langenstein: German Adaptation and Transmission of the ‘Visio Fratris Johannis,’” *Viator* 40.1 (2009), pp. 355–386.

Stein, eds., *The Encyclopedia of Apocalypticism* (New York: Continuum, 1998), vol. 2, pp. 110–142, at 130–133; and Gian Luca Potestà, “Radical Apocalyptic Movements in the Late Middle Ages,” in Bernard J. McGinn, John J. Collins, and Stephen J. Stein, eds., *The Continuum History of Apocalypticism* (New York: Continuum, 2003), pp. 299–322, at 314–316.
- 20 The two letters are preserved in Augsburg, Universitätsbibliothek, Cod. II.1.2^o 85, ff. 190r–214r; for discussion of the manuscript see Günter Hägele, *Die Handschriften der Universitätsbibliothek Augsburg: Erste Reihe, Die lateinischen Handschriften* (Wiesbaden: Harrassowitz, 1996–2007), vol. 1, pp. 320–329.

salvation. He would cause the death of Antichrist, who was identified with the pope, and bring about a new social order in which the nobles had to move from their country estates to the city, the clergy were deprived of their lands, and many high nobles and clergy would be killed. We have no record of Janko after 1466, but Livin was condemned for heresy in 1468 and imprisoned in a castle belonging to the Bishop of Regensburg, and he died there in 1468 or 1469.²¹

Sape van der Woude has argued that the interest in involving contemporary political and religious leaders in predictions of Apocalypse is evident in the illustrations of the Book of Revelation in the Cologne Twin Bibles of c. 1478–79.²² These two Bibles, one in Middle Low German and the other in Western Low German, lack indication of a printer, but are generally ascribed to Heinrich Quentell or Bartholomäus von Unckel.²³ In the Bible in Western Low German, the Book of Revelation is illustrated with eight woodcuts, several of which show bishops, cardinals, the pope, and kings falling into Hell,²⁴ a strong criticism of contemporary religious and political leaders.

- 21 On the Wirsberger brothers see Otto Schiff, "Die Wirsberger. Ein Beitrag zur Geschichte der revolutionären Apokalyptik im 15. Jahrhundert," *Historische Vierteljahrschrift* 26 (1931), pp. 776–786, with an English summary in *Social Science Abstracts* 4 (1932), p. 870; Gordon Leff, *Heresy in the Later Middle Ages: The Relation of Heterodoxy to Dissent, c. 1250–c. 1450* (Manchester: Manchester University Press; and New York: Barnes & Noble, 1967), vol. 2, pp. 471–474; Alexander Patschovsky, "Die Wirsberger: Zeugen der Geisteswelt Joachims von Fiore in Deutschland während des 15. Jahrhunderts?" in Gian Luca Potestà, ed., *Il Profetismo gioachimita tra Quattrocento e Cinquecento: atti del III Congresso internazionale di studi gioachimiti: S. Giovanni in Fiore, 17–21 settembre 1989* (Genoa: Marietti, 1991), pp. 225–257; Günter Hägele, "Wirsberger-Prophezeiungen," in Wolfgang Stammeler and Karl Langosch, eds., *Die deutsche Literatur des Mittelalters: Verfasserlexikon* (Berlin and New York: de Gruyter, 1978–), vol. 11, cols. 1672–1681; and Potestà's two articles on "Radical Apocalyptic Movements" (see Ch. 5, n. 19).

Also see the facsimile edition, *Die Kölner Bibel, 1478/1479* (Amsterdam: Buijten & Schipperheijn; and Hamburg: Friedrich Wittig Verlag, 1979).
- 24 One such illustration may be seen in Wilhelm Worringer, *Die Kölner Bibel* (Munich: R. Piper, 1923), plate 26.

In HM 83 there is absolutely nothing of the radical political views implicit in the Wirsbergers' predictions, and in other works on the Apocalypse in fourteenth- and fifteenth-century Germany; indeed, the account of the Apocalypse in HM 83 is totally divorced from contemporary politics.

There is a work on the Apocalypse that it is particularly instructive to compare with HM 83, as it was printed in Germany in 1486, i.e. exactly the same time as the texts in our manuscript were composed, and that is the *Quaestio determinata contra triplicem errorem* of Johannes von Paltz, an Augustinian theologian who lived from 1445 to 1511.²⁵ He was an exponent of what has recently been termed Frömmigkeitstheologie, a theology that aimed to foster the piety of the less educated among the faithful,²⁶ although his *Quaestio determinata* is certainly aimed at an educated readership.²⁷ The three errors against which von Paltz argues in this work are first, attempts to calculate when the Last Day will come; second, claims that Antichrist will not come in person, and that Enoch and Elijah will not come in person, but that Muhammad was the true Antichrist; and third, the conclusions of the book *De cognitione verae*

25 On von Paltz see Marcus Ferdigg, "De vita, operibus et doctrina Joannis de Paltz O.E.S.A. († 1511)," *Analecta Augustiniana* 30 (1967), pp. 210–321, and 31 (1968), pp. 155–318; Adolar Zumkeller, "Paltz, Johann (1445–1511)," in Friedrich Wilhelm Bautz, ed., *Biographisch-bibliographisches Kirchenlexikon* (Hamm: Bautz, 1970–2012), vol. 6, cols. 1473–1476; Berndt Hamm, "Johann von Paltz," in Wolfgang Stämmler and Karl Langosch, eds., *Die deutsche Literatur des Mittelalters: Verfasserlexikon* (Berlin and New York: de Gruyter, 1978–), vol. 4, cols. 698–706; and Berndt Hamm, "Paltz, Johannes von," in Gerhard Krause and Gerhard Müller, eds., *Theologische Realenzyklopädie* (Berlin and New York: W. de Gruyter, 1976–), vol. 25, pp. 606–611.

26 See Berndt Hamm, *Frömmigkeitstheologie am Anfang des 16. Jahrhunderts: Studien zu Johannes von Paltz und seinem Umkreis* (Tübingen: Mohr, 1982); and Berndt Hamm, "Was ist Frömmigkeitstheologie? Überlegungen zum 14. bis 16. Jahrhundert," in Hans-Jörg Niden and Marcel Niden, eds., *Praxis Pietatis. Beiträge zu Theologie und Frömmigkeit in der Frühen Neuzeit. Wolfgang Sommer zum 60. Geburtstag* (Stuttgart: Kohlhammer, 1999), pp. 9–45, esp. 18.

27 The *Quaestio determinata... contra triplicem errorem* was first published without indication of the author in Memmingen by Albrecht Kunne in 1486; the text has been edited by Albert Czogalla in Johannes von Paltz, *Werke*, ed. Berndt Hamm et al. (Berlin and New York: De Gruyter, 1983–89), vol. 3, pp. 37–138. See Ferdigg, "De vita, operibus et doctrina Joannis de Paltz" (see Ch. 5, n. 25), pp. 265–267 on the attribution of the work to von Paltz, and 267–268 for a summary of the work; also see Hamm, *Frömmigkeitstheologie am Anfang des 16. Jahrhunderts* (see Ch. 5, n. 26), pp. 97–99. On the intended scholarly audience of von Paltz's *Quaestio* see Christoph Burger, "Der Antichrist im Straßburger Bildertext (um 1480) und bei Johannes von Paltz (1486)," in Mariano Delgado and Wolker Lepin, eds., *Der Antichrist: Historische und systematische Zugänge* (Fribourg: Academic Press, and Stuttgart: W. Kohlhammer Verlag GmbH, 2011), pp. 241–256.

vitae,²⁸ which argues that Heaven consists in beholding God, and Hell in the absence of that vision, and thus that neither is a physical location, and specifically that Heaven is not in the Empyrean, and Hell is not inside the earth.

This book is very different from the treatise on the Apocalypse in HM 83. In both works Hell is a physical place in the middle of the earth (see HM 83, ff. 11v and 12v, see Figs. 5.9 and 5.11), but while von Paltz argues at length that one should not try to calculate when the Second Coming will occur,²⁹ that is precisely what the author of HM 83 does in great detail. Von Paltz's work is more scholarly and thorough than the treatise in HM 83, and the unusual program of illustration with maps in the treatise in HM 83 may also be seen as suggesting that the author's education and life experience was different from that of most clerics. This difference raises questions about the intended audience of HM 83: it was certainly not intended for an audience of clerics, and while its emphasis on illustration with maps might be taken as indicating an aim at a wider audience, the choppy and allusive nature of the text would impede an attempt to reach a broad public. It may be that what we have in HM 83 is a condensed version of a longer and smoother-flowing work, but the intended audience of the work in its current form is not clear.

It is also instructive to compare HM 83 with another contemporary work that, though it does not involve the Apocalypse as such, does involve apocalyptic themes, namely Johannes Lichtenberger's *Pronosticatio*, which was first published in Heidelberg in 1488—the same year that the works in HM 83 were

28 The *De cognitione verae vitae* was first printed by Peter Schoeffer, probably in Mainz around 1475; and has also been published in *Patrologia Latina* 40:1005–1032. It was often ascribed to Augustine, but is more likely by Honorius Augustodunensis: see for example William M. Clark, "A Thirteenth Century Manuscript of Honorius of Autun's *De cognitione verae vitae*," *Manuscripta* 16 (1972), pp. 112–119.

29 See Johannes von Paltz, *Werke* (see Ch. 5, n. 27), vol. 3, pp. 69–88. For the opinions of some medieval authors on the question of whether it was appropriate to try to calculate the time of the Second Coming see Saint Thomas Aquinas, *The 'Summa Theologica' of St. Thomas Aquinas* (London: Burns, Oates & Washbourne, Ltd., 1913–), Third Part (Supplement), QQ. LXXXVII–XCIX. and Appendices, Question 88, Article 3, "Whether the Time of the Future Judgment is Unknown?" pp. 15–18; Franz Pelster, "Die Quaestio Heinrichs von Harclay über die zweite Ankunft Christi und die Erwartung des baldigen Weltendes zu Anfang des XIV. Jahrhunderts," *Archivio italiano per la storia della pietà* 1 (1951), pp. 26–81, at 12, 31, 44, 45, 56, 57, and 78; there is some discussion of these criticisms of those who wanted to calculate the time of Christ's Second Coming in Heiko Augustinus Oberman, "Fourteenth-Century Religious Thought: A Premature Profile," *Speculum* 53 (1978), pp. 80–93, at 90–91; this article is reprinted in Oberman's *The Dawn of the Reformation: Essays in Late Medieval and Early Reformation Thought* (Edinburgh: T. & T. Clark, 1986), pp. 1–17.

being finished. The *Pronosticatio*, despite its inscrutable structure and eclecticism, was extremely popular, and was printed fifty times, and excerpts of it some twenty-nine times. Lichtenberger, influenced in part by the advances of the Turks, and also by the 'greater conjunction' of Jupiter and Saturn in 1484, believed that he lived in a time when apocalyptic prophecies would be fulfilled, and devotes considerable energy in his book to identifying contemporary leaders (cardinals and popes, kings and princes) with figures mentioned in those prophecies. He believed that two false prophets would soon arise, the second of which he called the *antichristus mixtus*, and that there would be plagues and social upheaval. Yet he was convinced that these difficulties would be followed not by the end of the world, but rather by a time of peace, which would arrive between 1488 and 1499, perhaps inaugurated by Philip I of Castile (1478–1506).³⁰ As we will see later, the works in HM 83 did circulate, but Lichtenberger's work was vastly more popular, perhaps in part because of the author's lively interest in contemporary politics, which (again) the author of HM 83 did not share at all. Lichtenberger's uniting of prophecy and astrology was less successful than combinations of these same fields of knowledge by other fifteenth-century authors; we would argue that the combination of prophecy and cartography in HM 83 is indeed successful: maps are an effective tool for illustrating the Apocalypse.

30 On Lichtenberger and his *Pronosticatio* see Dietrich Kurze, "Johannes Lichtenberger – Leben und Werk eines spätmittelalterlichen Propheten und Astrologen," *Archiv für Kulturgeschichte* 38 (1956), pp. 328–343; Dietrich Kurze, "Prophecy and History: Lichtenberger's Forecasts of Events to Come (from the Fifteenth to the Twentieth Century), Their Reception and Diffusion," *Journal of the Warburg & Courtauld Institutes* 21 (1958), pp. 63–85; Dietrich Kurze, *Johannes Lichtenberger († 1503): Eine Studie zur Geschichte der Prophetie und Astrologie* (Lübeck: Matthiesen, 1960); Dietrich Kurze, "Popular Astrology and Prophecy in the Fifteenth and Sixteenth Centuries: Johannes Lichtenberger," in Paola Zambelli, ed., *'Astrologi hallucinati': Stars and the End of the World in Luther's Time* (Berlin: W. de Gruyter, 1986), pp. 177–193, esp. 181–188; and Laura Ackerman Smoller, "'Teste Albumasare cum Sibylla': Astrology and the Sibyls in Medieval Europe," *Studies in History and Philosophy of Biological and Biomedical Sciences* 41C.2 (2010), pp. 76–89, at 85. A few paragraphs of Lichtenberger's work are translated into English in Bernard McGinn, ed., *Visions of the End: Apocalyptic Traditions in the Middle Ages* (New York: Columbia University Press, 1979, 1998), pp. 272–274. There is an English translation of the section headings of the *Pronosticatio* in Barbara Baert, "Iconographical Notes to the *Prognosticatio* by Johannes Lichtenberger (1488): Using a Copy Printed by Peter Quentel (Cologne, 1526) and Preserved in the Library of the Theology Faculty in Leuven," in Frans Gistelinck and Maurits Sabbe, eds., *Early Sixteenth Century Printed Books, 1501–1540 in the Library of the Leuven Faculty of Theology* (Leuven: Bibliotheek Godgeleerdheid and Uitgeverij Peeters, 1994), pp. 139–168, at 167–168.

HM 83 also bears comparison with a mid-fifteenth-century German work that briefly considers the Apocalypse in terms of geography. This is the *De malis huius saeculi per omnes aetates* by Jacobus de Clusa, also known as Jacobus de Jüterbog, Jacobus Carthusianus, and Jacobus de Paradiso, and in Polish Jakuba z Paradyża. Jacobus was born in Jüterbog, Germany, in 1381, and entered the Cistercian monastery of Paradies, Poland, in 1401, and studied and later was a Professor of Theology at the University of Krakow. In 1441 he entered the Carthusian monastery in Erfurt, and taught at the university there, and died in Erfurt in 1465.³¹ He wrote the *De malis huius saeculi per omnes aetates* in 1447, and the work was popular, as it survives in forty-seven manuscripts.³² The work is motivated by a desire to reform the Church, and a wish that this could be accomplished through a moral renewal of all Christians. Jacobus presents a history of evil, beginning with the Bible, and shows that there has been a continuous process of corruption throughout history—and he holds that the situation is so bad that the Apocalypse must be near.

An essential part of this history is a geographical survey of the state of Christianity throughout the world,³³ which he offers at the end of chapter 14

31 On Jacobus de Clusa see Heinrich Kellner, "Jakobus von Jüterbogk," *Theologische Quartalschrift* 48 (1866), pp. 315–348; Ludger Meier, *Die Werke des Erfurter Kartäusers Jakob von Jüterbog in ihrer handschriftlichen Überlieferung* (Münster: Aschendorff, 1955), pp. 1–8; Dieter Mertens, "Jakob von Paradies," in Wolfgang Stammmler and Karl Langosch, eds., *Die deutsche Literatur des Mittelalters: Verfasserlexikon* (Berlin and New York: de Gruyter, 1978–), vol. 4, cols. 478–487; and Raphael Witkowski, "Some Remarks on Jacobus de Paradiso before his Carthusian Profession," in James Hogg, ed., *'Stand Up To Godwards': Essays in Mystical and Monastic Theology in Honour of the Reverend John Clark on his Sixty-Fifth Birthday* (Salzburg: Institut für Anglistik und Amerikanistik, Universität Salzburg, 2002) (= *Analecta Cartusiana* 204), pp. 301–318, with a very thorough bibliography of earlier works on pp. 301–303; and Paul Wendell Knoll, "Iacobus Carthusiensis (James of Paradise) and Ecclesiastical Reform in Fifteenth-Century Cracow and Erfurt," in Nancy van Deusen, ed., *Procession, Performance, Liturgy, and Ritual: Essays in Honor of Bryan R. Gillingham* (Ottawa: Institute of Mediaeval Music, 2007), pp. 191–202.

32 For a chronology of Jacobus's works see Dieter Mertens, *Iacobus Carthusiensis: Unters. zur Rezeption d. Werke d. Kartäusers Jakob von Paradies: (1381–1465)* (Göttingen: Vandenhoeck und Ruprecht, 1976), pp. 26–46, esp. 36–43. The *De malis huius saeculi per omnes aetates* is published in Jacobus de Clusa, *Wybór tekstów dotyczących reformy kościoła*, ed. Stanisław Andrzej Porębski (Warsaw: Akademia Teologii Katolickiej, 1978), pp. 103–273, from Pelpin, Biblioteka Seminarium Duchownego, MS 287, ff. 121r–223v. On manuscripts of the work see Meier, *Die Werke des Erfurter Kartäusers Jakob von Jüterbog* (see Ch. 5, n. 31), pp. 50–51; and Jacobus de Clusa, *Wybór tekstów dotyczących reformy kościoła*, pp. 103–104.

33 On the *De malis huius saeculi per omnes aetates* see Jan Fijałek, *Mistrz Jakób z Paradyża i uniwersytet krakowski w okresie soboru bazylejskiego* (Kraków: Akademia umiejętności,

and in chapter 15 of the work, which are titled “De apostolis” and “Descriptio partialis terrae fidelium et infidelium,” respectively. The results of his survey would be discouraging to Christian readers, for he notes that several regions that had once been Christian no longer are:³⁴

Iam enim loca sanctissima passionis Christi a gentibus et Saracenis incolluntur, avaritiae suae consulentes per visitationem christianorum ad loca sancta peccatis exigentibus christianorum, ubi sunt Ephesii, Tesselonicenses, Salathae, Colosenses, Philippenses, Macedones, Corinthii et ceteri, quibus olim aureas epistolas Paulus de carceribus Romanis et aliis locis mittebat, potius pro his flendum est quam aliquid scribendum. Quod videlicet tam latitudo immensa et multitudo hominum a principe tenebrarum debet possideri. Et quid dicam de Africa, tertia mundi parte, ubi beatissimus Cyprianus in Carthaginense, ut puto, civitate metropoli et Augustinus post eum in Hypponensi civitate praefuerunt dignissimi praesules perspicuitate vitae et doctrinae suis temporibus refulgentes.

For now, the most holy places of Christ’s Passion are inhabited by heathens and Saracens, who, motivated by their avarice for the visits of Christians to the Holy Places to expiate their sins, where are the Ephesians, the Thessalonicians, the Salathi, the Colossians, the Philippians, the Macedonians, the Corinthians, and the rest, to whom Paul from a Roman prison and other places once sent golden letters—it would be better to weep for them, rather than to write something, because so wide a region and so many men are now under the sway of the Prince of Darkness. And what shall I say of Africa, a third of the world, where the most blessed Cyprian in the metropolis (I suppose) of Carthage, and after him Augustine in the city of Hippo, both eminent prelates, presided, each illustrious in his time for the clarity of his life and doctrine?

1900), vol. 2, pp. 99–101 and 232–235; on the geographical section of the work see Bronisław Geremek, “Geografia i apokalipsa. Pojęcie Europy u Jakuba z Paradyża,” in Helena Chłopocka, ed., *Mente et litteris: O kulturze i społeczeństwie wieków średnich* (Poznań: Wydawn. Nauk. Uniwersytetu im. Adama Mickiewicza w Poznaniu, 1984), pp. 253–261; this same material was published in French a few years later in Bronisław Geremek (trans. Lucjan Grobelak), “Géographie et apocalypse: la notion de l’Europe chez Jacques de Paradyż,” *Acta Poloniae Historica* 56 (1988), pp. 5–17. Also see Adam Krawiec, *Ciekawość świata w średniowiecznej Polsce: studium z dziejów geografii kreacyjnej* (Poznań: Wydawn. Nauk UAM, 2010), pp. 378–383.

34 Jacobus de Clusa, *Wybór tekstów dotyczących reformy kościoła* (see Ch. 5, n. 32), p. 188.

In his survey of the world, Jacobus reaches similar conclusions about other regions, and in the following passage, the sentence he uses to describe the different parts of the world was probably inspired by Isidore, *Etymologiae* (14.2.2–3) or *De natura rerum* (48),³⁵ where it is sometimes illustrated with a *mappamundi*. This text from Isidore text appears with a *mappamundi* on f. 1r of HM 83, which is merely a coincidence, but it seems possible that Jacobus's text was informed by consultation of a *mappamundi*:³⁶

... Asia mediam mundi partem continet, scilicet a meridionali parte per Orientem usque ad Occidentem; Africa a meridie usque ad aliam partem Occidentis; Europa partem occidentalem, in qua nostra foveatur habitatio. Haec nobilissima pars terrae et amplissima, scilicet Asia, quae mediam partem terrae continet, ut creditur, plena est idolis et infidelibus populis, ubi prius sacra vestigia Apostolomun Thomae, Ioannis Evangelistae, Bartholomaei et ceterorum terram ipsam sacro fetu divini verbi irradiaverunt.

... Asia contains half of the world, from the south through the east to the west; Africa from the south to another part of the west, and Europe, in which we live, is in the west. This most noble and ample part of the earth, Asia, which contains the half of the earth, as is believed, is full of idols and unbelievers, where in former times the sacred traces of the Apostle Thomas, John the Evangelist, Bartholomew, and all the others irradiated the very earth with the sacred fruit of the divine word.

Jacobus concludes his survey thus:³⁷

Videsne studiose lector quam parvam immo minimam terrae habitabilis partem Christi fides complectitur et quam amplissimam terrae partem princeps tenebrarum in suo continet principatu et quomodo artati sunt veri christiani, et undique ab infidelibus circumdati?

35 See *The Etymologies of Isidore of Seville*, trans. Stephen A. Barney et al. (Cambridge, UK, and New York: Cambridge University Press, 2006), p. 285; and *Patrologia Latina* 83:1017.

36 Jacobus de Clusa, *Wybór tekstów dotyczących reformy kościoła* (see Ch. 5, n. 32), p. 190. For discussion of the likelihood that Jacobus de Clusa was inspired by a map in writing his global survey of Christianity see Geremek, "Géographie et apocalypse: la notion de l'Europe chez Jacques de Paradyż" (see Ch. 5, n. 33), p. 15.

37 Jacobus de Clusa, *Wybór tekstów dotyczących reformy kościoła* (see Ch. 5, n. 32), p. 192.

Do you see, learned reader, how small a part, indeed minimal, of the inhabitable earth the Christian faith holds, and how ample a part the Prince of Darkness has in his power, and how crowded together the true Christians are, surrounded on all sides by unbelievers?

Jacobus also believes that the Gospel has already been preached to all of the corners of the earth, and thus that the Apocalypse is imminent:³⁸

Puto enim iam tempus illud completum, quod Evangelium Christi in universo orbe est praedicatum in testimonium omnibus gentibus (Mat xxiv), nec est natio, nec insula tam longe et occulte abscondita, quin nomen christianorum ibi sit divulgatum. Recensentes enim omnes historias, non reperimus terrae partem aliquam, in qua fides christiana non sit annuntiata. Iam enim dudum vox apostolica insonuit. Nos sumus, in quos fines saeculorum devenerunt.

For I think that that time is complete, that the Gospel of Christ has been preached in the whole world as a testimony to all nations (Matthew 24), nor is there any nation, nor any island, so far away and secretly hidden that the name of Christians has not reached there. For in examining all of the histories, we do not find any part of the earth in which the Christian faith has not been announced. For a long time now the apostolic voice has resounded. We are those upon whom the ends of the ages have come.

This geographical survey and conclusion that Christianity is confined to a small portion of the earth's surface, together with the deduction that the Apocalypse is imminent, is quite reminiscent of the map on HM 83, f. 9r, which covers the years 639 to 1514, and shows Islam on the ascendant in all parts of the world except Europe, and in Europe, according to the text located in that part of the map, there is much dissension among the sovereigns, and the region will fall to the sword of Muhammad soon. The map on f. 9v, which depicts what is supposed to happen to the world between 1514 and 1570, shows Islam in control throughout the world, and then follows the beginning of the Last Days.

This global survey of Christianity by Jacobus de Clusa shares some striking similarities with the treatise on the Apocalypse in HM 83—and yet the two works coincide only in one part, and it seems very unlikely that the author of HM 83 drew inspiration for the map on f. 9r from Jacobus's survey. There are no verbal echoes of the *De malis huius saeculi per omnes aetates* in HM 83, and the

38 Jacobus de Clusa, *Wybór tekstów dotyczących reformy kościoła* (see Ch. 5, n. 32), p. 192.

other parts of the two works are very different in conception, purpose, and intended audience.

These comparisons of HM 83 with contemporary German works on the Apocalypse bring out the uniqueness of the treatise on the Apocalypse in HM 83: its style is different from that of other contemporary works, the chronology of the Apocalypse it proposes is found nowhere else in all of the literature on the Apocalypse, and its program of illustration using maps is all but unparalleled. This unstudied treatise in this unstudied manuscript is an essential piece of evidence for the development of Apocalyptic thought in the fifteenth century.

The Apocalyptic Maps and Texts

The brief treatise on the Apocalypse in HM 83 (ff. 8v–12v) is a well-defined unit, illustrating the transformations that the earth will undergo from a point sometime around the year 1 to the Last Judgment in 1661 (or rather 1651, if we correct an error in the author's arithmetic) in a series of nine maps, each with accompanying text. The maps are a set of thematic maps showing the world's (future) history, perhaps inspired by a Creation cycle illustrated with images of the earth, but here the illustrations are true maps, whereas in Creation cycles the images generally do not qualify as maps. These maps illustrating the Apocalypse form the earliest sequence of historic (thematic) maps that we know.

Two of the maps, those on f. 10r (which covers the years 1570 to 1600) and f. 10v (which covers the years 1600 to 1606) contain striking examples of what we may term symbolic geography or allegorical geography: in the former, the ten horns of the beast of Daniel 7 are represented as what seem to be mountain ranges reaching to the edges of the earth, and in the latter, the four horns of Antichrist, which represent the four methods by which he will deceive people, are represented by four huge peninsulas that jut out into the circumfluent ocean. Physical features of actors in the Apocalypse have been given geographical interpretation and cartographic representation. Other examples of this type of allegorical geography include the *Libellus de formatione arche*, commonly referred to as *De arca Noe mystica*, of Hugh of St-Victor, written c. 1128, in which Hugh locates Noah's ark, stretched to stupendous dimensions and symbolizing the church, across the whole world, with its bow at Paradise in the East, where history began, and its stern in the West, where the blessed and the damned will be separated at the end of time.³⁹ Another example is supplied by

39 The text of *De arca Noe mystica* is supplied in *Patrologia Latina* 176:682–704, and has been edited by Patrice Sicard in *De arca Noe; Libellus de formatione arche* (Turnhout: Brepols,

the maps of Opicinus de Canistris (1296–c. 1353). These maps are based on nautical charts, but usually represent Europe and North Africa as people, with their heads close at the Strait of Gibraltar. These people have different identities in his different maps: the person in North Africa may represent the spiritual world, and that in Europe, the spiritual church; or Europe may represent the traitor Judas, and North Africa the Church of the People, for example.⁴⁰

The chronology of the Apocalypse proposed in this brief treatise is unique, not only in the year it proposes for the End of Days, but also in the durations it assigns for the different parts of the apocalyptic drama. On the one hand, this reveals something about the author, namely that he was comfortable interpreting various biblical passages about days as years and so forth, and making the necessary calculations himself; on the other, there are almost as many timetables of the Apocalypse⁴¹ as there are authors who were willing to disregard the various warnings against trying to predict when the Second Coming

2001) (= Corpus Christianorum, Continuatio Mediaevalis 176–176A). Also see J. Ehlers, “Arca significat ecclesiam. Ein theologisches Weltmodell aus der ersten Hälfte des 12. Jahrhunderts,” *Frühmittelalterliche Studien* 6 (1972), pp. 171–187. A reconstruction of Hugh’s map is supplied by Sicard, *De archa Noe*, vol. 2, fig. 11; Danielle Lecoq, “La ‘mappemonde’ du *De Arca Noe Mystica* de Hugues de Saint-Victor (1128–1129),” in Monique Pelletier, ed., *Géographie du monde au Moyen Âge et à la Renaissance* (Paris: CTHS, 1989), pp. 9–31, figs. 1 and 2; Conrad Rudolph, *First, I Find the Center Point: Reading the Text of Hugh of Saint Victor’s ‘The Mystic Ark’* (Philadelphia: American Philosophical Society, 2005), figs. 1, 4, 5, and 8; and Rudolph’s *The Mystic Ark: Hugh of Saint Victor, Art, and Thought in the Twelfth Century* (Cambridge and New York: Cambridge University Press, 2014), chapter 1, figs. 1–32.

40 The bibliography on Opicinus is substantial, but see for example Richard G. Salomon, “A Newly Discovered Manuscript of Opicinus de Canistris: A Preliminary Report,” *Journal of the Warburg and Courtauld Institutes* 16.1–2 (1953), pp. 45–57; Michael Camille, “The Image and the Self: Unwriting Medieval Bodies,” in Sarah Kay and Miri Rubin, eds., *Framing Medieval Bodies* (Manchester: Manchester University Press, 1994), pp. 62–99, esp. 87–95; and Karl Whittington, *Body-Worlds: Opicinus de Canistris and the Medieval Cartographic Imagination* (Toronto: Pontifical Institute of Mediaeval Studies, 2014).

41 On the different predicted chronologies of the Apocalypse see David Burr, “Olivi’s Apocalyptic Timetable,” *Journal of Medieval and Renaissance Studies* 11.2 (1981), pp. 237–260; Walter Klaassen, *Living at the End of the Ages: Apocalyptic Expectation in the Radical Reformation* (Lanham, MD: University Press of America; Waterloo, Ontario: Institute for Anabaptist and Mennonite Studies, Conrad Grebel College, 1992), pp. 23–31; and Laura Smoller, “The Alfonsine Tables and the End of the World: Astrology and Apocalyptic Calculation in the Later Middle Ages,” in Alberto Ferreiro, ed., *The Devil, Heresy and Witchcraft in the Middle Ages: Essays in Honor of Jeffrey B. Russell* (Leiden: E. J. Brill, 1998), pp. 211–239.

would take place.⁴² So it is not surprising that the apocalyptic chronology in HM 83 is unique.

Without further ado, we present our transcription, translation, and analysis of the maps and text in the treatise on the Apocalypse in HM 83, folio by folio.

The Map and Text on f. 8v

This folio marks the end of the first geographical section of the treatise (ff. 1r–8v) with a discussion of the different purposes of *mappaemundi*, discussed above. Below that text is a simple *mappamundi* (see Fig. 5.2) that offers even less detail than that on f. 1r. It has the modified T-O structure we have seen in other maps in the manuscript, with the left bar of the ‘T’ veering east, which as the map on ff. 7v–8r (see Fig. 4.15) indicates, is to be identified as the Rha River (i.e. the Volga), rather than the Tanais or Don that forms the straight left bar of the ‘T’ on most *mappaemundi*. The map has just two names on it, and they are names of people rather than of places: *Jesus Christus*, located where we are to understand Jerusalem to be, and *Octavianus* (corrected from *Optavianus*, just as on f. 5v), located where we are to understand Rome to be. From the beginning of the name *Octavianus* a line extends to the southeast to the easternmost point of the inhabited lands, and from the end of the name a line extends to the northeast, crossing the other line and reaching the outer edge of the circumfluent ocean. The purpose of these lines is not clear: nothing similar appears on any of the other maps in the manuscript.

The text to the left of the map reads:

Hec figura est mappa mundi de dominio terre a nativitate jesu christi ad eius annum 639. Romanorum enim imp<er>ator quorum primus verus et principalis fuit Optavianus (i.e. Octavianus) dominabatur tot annis per totum orbem et jesu rex jure divino mundo praesidens.

This figure is a *mappamundi* of the rule of the world from the birth of Jesus Christ to his year 639. Octavian, who was the first true and most important Roman emperor, ruled the whole earth for many years, and Lord Jesus rules the world according to divine law.

The name *Octavianus* had been written as *Optavianus* in the map as well, but there it was corrected. There is no explanation of the year 639 here, but as we learn on f. 16r, the author took this as the year in which Muhammad began to shake the Roman Empire.

42 For warnings against trying to calculate when the Second Coming would take place see Acts 1:7, Mark 13:32, and Matthew 24:36; also see Ch. 5, n. 29.

The Map and Text on f. 9r

The text in the upper left corner of the folio, which we transcribe and translate below, indicates that the map shows the lordships of the world from the year 639 to 1514, that is, from the rise of Muhammad to 26 years after the texts in HM 83 were composed (1488). The message of the map and the surrounding text is very clear: Islam is taking over the world, and while Europe is still Christian, it is weak and will soon fall. The map (see Fig. 5.3) has the same modified T-O structure as the map on f. 8v, but is much larger and more detailed. It is a thematic map in two senses, first insofar as it is a map of the world's religions, and second insofar as it is a historical map, though its role as the latter is not striking, as it covers a period during which the manuscript was made.

We first transcribe and translate the text in the map proper, working generally from east to west (top to bottom), and beginning with the texts in the circumfluent ocean.

X tribus Israel hic degunt montibus caspas et Caucaso incluse et parte australi subsunt Imperatori tartarorum et ex parte Aquilonari regine Amasonum

The ten tribes of Israel remain here confined in the Caspian Mountains and the Caucasus, and in the southern part they are subject to the Emperor of the Tartars, and in the northern part, to the queen of the Amazons.

In the map on f. 3r (see Fig. 4.9), and also that on ff. 6v–7r (see Fig. 4.14), the Ten Lost Tribes of Israel are located on an island in the circumfluent ocean; here the mention of the Caspian Mountains and the Caucasus makes it sound like they are rather on the mainland—but in the map on ff. 6v–7r there is an island labeled *Caucasus*, so the author's intentions with regard to the location of the Ten Lost Tribes are not clear. Proceeding westward in the northern ocean in the map on f. 9r we have: *Regnum Amasonum*; *Ungaria vaga* (i.e. *magna*); *RUSda* (probably for *Russia*); *Scotia*; *Hibernia*; *Anglia*. The Amazons are here placed on an island much as in the map on ff. 6v–7r.

In the body of the map, the legend in the Far East (at the top) reads:

India Hic regnat presbiter Johanes cum patriarcha thoma sub lege Christi et discessit a romano imperio

India. Here reigns Prester John with the Patriarch Thomas in accordance with the law of Christ, and he separated himself from the Roman Empire.

Prester John, a more or less mythical Christian monarch in the East, was often regarded as a potential ally and thus source of hope in the Christian struggle against Mongols or Muslims,⁴³ but the author of HM 83 paints a bleak picture of the situation in Asia, apparently ruling out the possibility of a cooperation between European powers and Prester John by noting that John has dissociated himself from the Roman Empire.

The next legend to the west reads:

Haldarum Hic est regia civitas ad 6 miliare de antiqua Babilonia in qua viget universale lege machometi sub qua hic per totum gubernat imperator tartarorum tam australium quam septentrionalium qui vagantur de loco ad locum.

Chaldea: Here is the royal city, six miles from ancient Babylonia, in which the universal law of Muhammad is in force, and here the emperor of the Tartars governs everywhere according to that law, both in the south and in the north. The Tartars wander from place to place.

Odoric of Pordenone, who wrote in the fourteenth century, makes no mention of the Tartars in his description of Chaldea,⁴⁴ and neither does Fra Mauro on his *mappamundi* of c. 1450. But Marino Sanudo in the fourteenth century said that the Tartars controlled Chaldea,⁴⁵ so there are sources that would support our author's claim here.

Moving to the northwest, in the far north, northwest of the unnamed river which we know from the map on ff. 7v–8r to be the river Rha, are the names *Ru<sia>*, *li<von>ia*, *po<lon>ia*, and *un<garia>*, and the author discusses this 'corner' in the text below the map. To the south of this 'corner' are *Turchia*, *Lex machometi*, and *Constantinopoli*: the phrase *Lex machometi* makes it clear that

43 On Prester John see Charles F. Beckingham and Bernard Hamilton, eds., *Prester John, the Mongols, and the Ten Lost Tribes* (Aldershot, Hampshire; and Brookfield, VT: Variorum, 1996); and Michael E. Brooks, "Prester John: A Reexamination and Compendium of the Mythical Figure Who Helped Spark European Expansion," Ph.D. Dissertation, University of Toledo, 2009. The forged letter allegedly from Prester John that was circulated across Europe in the twelfth century is translated into English in Michael Uebel, *Ecstatic Transformation: On the Uses of Alterity in the Middle Ages* (New York: Palgrave Macmillan, 2005), pp. 155–160.

44 See Henry Yule, ed. and trans., *Cathay and the Way Thither: Being a Collection of Medieval Notices of China*, revised by Henri Cordier (London: The Hakluyt Society, 1913–16), vol. 2, pp. 110–111 (English), 282–283 (Latin), and 339–340 (Italian).

45 Marino Sanudo, *The Book of the Secrets of the Faithful of the Cross*, trans. Peter Lock (Farnham, England; Burlington, VT: Ashgate, 2011), p. 27.

the area is Muslim, and in the text below the map the author alludes to the fall of Constantinople in 1453.

Further south is the legend:

Hic gubernat novi babilonie Soldanus magnus princeps sarracenorum orientalium sub lege machometi per totum spatium ad mare magnum etiam terram sanctam.

Here the great Sultan of New Babylonia (i.e. Cairo), the prince of the eastern Saracens, rules beneath the law of Muhammad all the land to the Mediterranean, including the Holy Land.

On the three different Babylonias see the passages on ff. 1r and 12v. The author's emphasis on Islam's control of much of the world is clear. Just west of the preceding legend is the place name *Alexandria*, and the text to the right of the map, which we transcribe below, indicates that in "Alexandria, which is a great city of Egypt, lives a Patriarch of the Christians beneath a Muslim oppressor," so the emphasis on the pervasiveness of Islam continues.

The text in Europe reads:

Cesar romanus et Papa vicarius christi gubernant hic hodie tantum nomine. In nulla parte mundi est tanta dominorum contraria diversitas sicut in hac quarta. Europa ut sic seipsam debilitet et gladio machometi citius subdatur sicut reliquae partes iam sunt subjectae ut cernis.

The Roman Emperor and the Pope, Vicar of Christ, now govern here only in name. In no <other> part of the world is there so much controversy among sovereigns as there is in this part. As Europe is thus weakening itself, it is quickly falling to the sword of Muhammad, just as the other parts <of the world> have already fallen, as you see.

This prediction about the fall of Europe to Islam is vividly portrayed in the following map. Finally, the text in Africa reads:

Hic per totum dominatur unus magnus rex sarracenorum occidentalium cuius nomen Miramamolón. rex fidelium habens sub se septem reges vicarius machometi sub lege cuius hic regit primus parium regnum cepte quod tenent Christiani hispani ab ano domini Christi 1411 in hunc annum 1486.

In this whole region rules one great king of the western Saracens, whose name is Miramamolin. The king of the faithful, who has under him seven kings, is the vicar of Muhammad, in accordance with whose law he reigns here, the first among equals. The kingdom of Ceuta, which Spanish Christians have held from the year 1411 until this year 1486.

‘Miramamolin’ is the Latin transcription of Amīr al-Mu‘minīn, i.e. ‘Commander of the Believers,’ a title first used by the Almohad king ‘Abd al Mu‘min (1133–1163), who fought important battles in North Africa and the Iberian Peninsula, and subsequently by his successors.⁴⁶ Our author is a little confused about the details of the conquest of Ceuta, which was effected by the Portuguese, not the Spanish, and in 1415, rather than 1411.⁴⁷ This text about Muslims in Africa completes an image of a world in which Christianity is in peril.⁴⁸

There are elements of thematic maps of the world’s religions in some of the more elaborately decorated *mappaemundi* and nautical charts, where Christian cities are indicated with crosses, and Muslim cities with crescents, and Andreas Walsperger on his world map of 1448 writes that *Rubra puncta sunt christianorum ciuitates. Nigra uero infidelium in terra marique existentium*, “The red dots are cities of the Christians, and the black ones are the cities of the unbelievers who live on the land and by the sea.” Martin Waldseemüller used such symbols on his world map of 1507, and describes his use of them in chapter 9 the

46 On this derivation of Miramamolin see Alexander Patschovsky, “Der heilige Kaiser Heinrich der ‘Erste’ als Haupt des apokalyptischen Drachens: Über das Bild des römisch-deutschen Reiches in der Tradition Joachims von Fiore,” *Florensia: Bollettino del Centro Internazionale di Studi Gioachimiti* 12 (1998), pp. 19–52, at 30–31; also see Marco Rainini, *Disegni dei tempi: il ‘Liber figurarum’ e la teologia figurativa di Gioacchino da Fiore* (Roma: Viella, 2006), pp. 119–120.

47 On the taking of Ceuta by the Portuguese see “The Conquest of Ceuta, Being the Chronicle of the King Dom João I,” in Virginia de Castro e Almeida, ed., *Conquests & Discoveries of Henry the Navigator; Being the Chronicles of Azurara*, trans. Bernard Miall (London: G. Allen & Unwin, Ltd., 1936), pp. 29–115; and H. V. Livermore, “On the Conquest of Ceuta,” *Luso-Brazilian Review* 2.1 (1965), pp. 3–13.

48 Warfare between Christians and Muslims is also portrayed on the Borgia *mappamundi* at the Vatican: the map is described in Destombes, *Mappemondes* (see Ch. 4, n. 37), pp. 239–241 and plate 29; and see A. E. Nordenskiöld, “Om ett aftryck från xv:de seklet af den i metall graverade världskarta, som förvarats i kardinal Stephan Borgias museum i Velletri, Med 1 facsimile,” *Ymer* 11 (1891), pp. 83–92, with the reproduction of the map between pp. 130 and 131; for an account of the conflicts depicted on the map see Felicitas Schmieder, “Anspruch auf christliche Weltherrschaft. Die Velletri/Borgia-Karte (15. Jahrhundert) in ihrem ideengeschichtlichen und politischen Kontext,” in Ingrid Baumgärtner and Martina Stercken, eds., *Herrschaft verorten: Politische Kartographie des Mittelalters und der Frühen Neuzeit* (Zurich: Chronos Verlag, 2012), pp. 253–271.

Cosmographiae introductio, printed to accompany the map.⁴⁹ But the map in HM 83 is more purely thematic than the examples just mentioned, and bears comparison with nineteenth-century thematic maps of the world's religions.⁵⁰ William C. Woodbridge in his *Moral and Political Chart of the World, Exhibiting the Prevailing Religion, Government, Degree of Civilization, and Number of Inhabitants of Each Country*, in his *Modern Atlas on a New Plan, to Accompany the System of Universal Geography* (London: Geo. B. Whittaker, 1828), uses symbols to designate regions as Protestant, Catholic, Orthodox, Muslim, or pagan. The depiction is more detailed and the differences indicated with color in the map titled *Verschiedenes zur Anthropographie* in Heinrich Berghaus, *Dr. Heinrich Berghaus' Physikalischer Atlas oder Sammlung von Karten* (Gotha: Justus Perthes, 1845–48) (see Fig. 5.4).

The text around some of the other maps in this sequence is in one column, so that the lines continue from the left of the map to the right, but in this case the text is in two columns, except for some text in one column at the bottom of the page. The text in the left column reads (still f. 9r):

Haec figura est mappa mundi de dominiis terre ab ano christi 639 ad annum 1514 per capituli apocalipsis 12 13 14 15 16 17 18 et primum 19 usque ad punctum “Et vox de throno <exclusiet?>.” Sic enim ut figura ostendit citus discessio ab imperio romano per tot annos et tot tala sucessi<o>ne, et tandem illa discessio complebitur in europe discessu ad quod devenitur nunc anno christi 1486 per sectam machometicam, ut cernis hic in figura que varietatem ostendit resastans (i.e. resistans) per mundum

Rucia verum regit dux muscavie sub lege christi hoc scismaticus ut papam ut imperatorem advertens

49 On the symbols that Waldseemüller uses to indicate different religions on his 1507 map see Ch. 5, n. 59 below.

50 There is a pair of rare eighteenth-century maps that are somewhat limited thematic maps of religion: they are maps of the Christian dioceses in Africa and Asia by Francesco Maria Sassi titled *Limiti delle diocesi in terra ferma* and published around 1740 in the book *Alla Santità di nostro Signore Benedetto Papa XIV. memoriale responsivo alle animadversioni di monsignor Segretario della S. Congregazione de Propaganda Fide sopra la nuova erezione de' Vescovadi nell'Indie Orientali* (Rome, c. 1740), a copy of which was listed for sale by Reiss & Sohn in the catalog for their *Auktion 166, 30.–31. Oktober 2013, Geographie, Reisen, Atlanten, Landkarten, Ansichten, Dekoratives* (Königstein im Taunus: Reiss & Sohn, 2013), pp. 51–52, number 2557. There are exemplars of the maps in Lisbon, Biblioteca Nacional de Portugal, in the map collection, shelfmark C.C. 865 V.; and in Paris, Archives Nationales, shelfmarks NN/181/10/1 and NN/181/10/2.

FIGURE 5.4 Thematic map of the world's religions, a detail of the map Verschiedenes zur Anthropographie, in Heinrich Berghaus, Dr. Heinrich Berghaus' physikalischer Atlas oder Sammlung von Karten (Gotha: Justus Perthes, 1845-48) (BY COURTESY OF THE DAVID RUMSEY MAP COLLECTION).

Ungaria magna gentibus ruthenis tributaria livonia Polonia ungaria hic angulus tenet se ad huc ad Europam et papam et imperatorem aqualiter

Iselandia Norwegia suecia dacia ad Europam

Turkia verum dominatur imperator tartarorum sub lege machometi <tenens?> hodie ab anno christi 1453 totam gretiam cuius metropolis est Constantinopolis

This diagram is the *mappamundi* of the lordships of the world from the year 639 to the year 1514 through Revelation chapters 12, 13, 14, 15, 16, 17, 18, and the first part of 19, to the point “And a voice came out of the throne” (Rev. 19:5). The map shows the rapid disintegration of the Roman Empire across many years and by such a succession, and that disintegration will finally be completed through the disintegration of Europe, which is approaching now in the year 1486 because of the Muhammadan religion, as you see in this map, which shows the variety persisting throughout the world.

The lord of Muscovy rules Russia according to the law of Christ, <and yet> this heretic rejects both the Pope and the <Holy Roman> Emperor.

Greater Hungary pays tribute to the Ruthenian peoples. Livonia, Poland, Hungary: this area is loyal to Europe and the Pope also to the Emperor.

Iceland, Norway, Sweden, Denmark <are loyal> to Europe.

Turkey however is ruled by the emperor of the Tartars according to the law of Muhammad, <and> today from the year 1453 he holds all of Greece, whose capital is Constantinople.

The author says that this map covers the period during which the events of Revelation 12–19:5 will occur, but in fact there is no clear correspondence between the events in those chapters of Revelation and what we see on the map. The remarks about the situation of Christianity in Russia and so on in the latter half of this text read like legends that might have been in a larger version of the map. The text to the right of the map reads:

Nota Alexandriae que est magna civitas Egypti residet patriarcha christianorum sub machometione oppressore qui militi sunt valde boni. Et Soldanus residens in Alkaria que appellatur nova Babilonia veneratur eum muneribus sed non permitit eum communicare romano pontifici ut scripto ut ore eum confitendo. Corde et voluntate nequit prohibere <...>. Similiter et Indi tantum corde possunt romano Papae communicare et subesse. Asiam quoque impedit multitudinem machometorum qui intermediat ut oculatim cernis in hac figura. Sed a gladio rome victi quos

cesar romanus tenet penitus penitus (*sic*) discesserunt corde sicut ore
ymmo illi gladio hodie nichil subest nisi Europa et parvus angulus livonia
polonia ungaria, et quod et quam pauci in eadem parte hodie subsunt
romano cesare nam ignoratur hoc anno 1486.

Note that in Alexandria, which is a great city of Egypt, lives a Patriarch of the Christians beneath a Muslim oppressor; the Muslims are very good soldiers. And the Sultan, who lives in Cairo, which is called New Babylon, honors the patriarch with ceremonies, but does not permit him to communicate with the Roman Pope, nor to acknowledge him either in writing or verbally. <However> he cannot prohibit him in his heart and mind. Similarly the people of India can only communicate with and be subordinate to the Roman Pope in their hearts. The multitude of Muslims also troubles Asia, for they surround it, as you can clearly see in the map. But those defeated by the sword of Rome whom the Roman Emperor holds will thoroughly rebel both in heart and in speech <...>. But in fact today, nothing is subject to that sword except for Europe and a small corner <consisting in> Livonia, Poland, and Hungary, and what and how few in that area are today subject to the Roman Emperor is unknown in this year 1486.

Most of this text is similar in character to the legends on the map. The reference to Livonia, Poland, and Hungary repeats that in the left-hand column of text—evidently the author of HM 83 was very interested in that area. His indication that we do not know how many people in that area are subject to the Roman Emperor recalls his statement near the top of f. 2v that “not even Europe can be <fully> explored by any European.”

The single-column text at the bottom of the page reads:

Machometus in Alchorano dicitur sibi gladium a deo datum quo romanum imperium successionem sibi subiciat quod verum res per multos annos ostendit. Et tandem romam cassat et europam sibi subiciet ut hec sequens figura ostendit et tunc in plena potestate dominabitur 56 annos sicut Methodius dicit finem (or suum) magnam (or magistrum) <in> historie sanctae c 16 genesis et apocalipsis confirmat.

In the Koran it is said that Muhammad <had> a sword that was given to him by God, by which he would gradually bring the Roman Empire under his control, which events over many years show to be true. And at last he caused the fall of Rome and subjugated Europe as this following map shows, and then he will rule in full power for 56 years as Methodius says <...> and Genesis and Apocalypsis confirms.

This last bit of text refers to the map on the next folio, and the author similarly places text on the bottom of one folio that introduces the map on the following folio elsewhere in the treatise on the Apocalypse. The Koran had been translated into Latin well before the fifteenth century,⁵¹ but it says nothing about a sword of Muhammad—in fact the word for sword, *saif*, does not occur in the book. So the reference to the Koran is incorrect, and the author must have taken the reference to the sword of Muhammad from another source. In some accounts Muhammad was said to have acquired the famous sword named *Dhu'l-Faqar* or *Zulfiqar* in the Battle of Badr (624), and according to some accounts, it was the Archangel Gabriel who gave the sword to Muhammad at Badr.⁵² Yet we do not find a medieval Latin account of Muhammad that mentions this sword.⁵³

We do know of two earlier texts that speak of the *gladius Machometi* or 'sword of Muhammad.' Rodrigo Jiménez de Rada (1170–1247) in his *Historia Arabum*, following a long list of provinces all over the world and their capitals, says *Has omnes provincias subiugavit secta et gladius Mahometi*, "All of these provinces the religion and sword of Muhammad subdued."⁵⁴ William of Tripoli (ca. 1220–1277) in his *De statu Sarracenorum* (Treatise on the Condition of the

51 On medieval translations of the Koran see Marie-Thérèse d'Alverny, "Deux traductions latines du Coran au Moyen Âge," *Archives d'histoire littéraire et doctrinale du Moyen Âge* 16 (1947–1948), pp. 69–132; reprinted in Marie-Thérèse d'Alverny, *La connaissance de l'Islam dans l'occident médiéval*, ed. Charles Burnett (Aldershot: Variorum, 1994); Hartmut Bobzin, "Latin Translations of the Koran: A Short Overview," *Der Islam: Zeitschrift für Geschichte und Kultur des islamischen Orients* 70 (1993), pp. 193–206; Thomas E. Burman, "Tafsir and Translation: Traditional Arabic Quran Exegesis and the Latin Qurans of Robert of Ketton and Mark of Toledo," *Speculum* 73 (1998) pp. 703–732; Afnan Fatani, "Translation and the Qur'an," in Oliver Leaman, ed., *The Qur'an: An Encyclopedia* (Oxon: Routledge, 2006), pp. 657–669; and Thomas E. Burman, *Reading the Qur'an in Latin Christendom, 1140–1560* (Philadelphia: University of Pennsylvania Press, 2007).

52 On Muhammad's sword see G. Zawadowski, "Note sur l'origine magique de Dhoū-l-Faqār," *En terre d'Islam*, series 3, vol. 21 (1943), pp. 36–40; and Francesca Bellino, "Dhū l-Faqār," in Kate Fleet, Gudrun Krämer, Denis Matringe, John Nawas, and Everett Rowson, eds., *The Encyclopaedia of Islam, Three* (Leiden and Boston: Brill, 2012), pp. 77–79. On the belief that Muhammad had received the sword from the Archangel Gabriel see Jean Calmard, "Dhū'l-faqar," in Ehsan Yarshater, ed., *Encyclopaedia Iranica* (London and Boston: Routledge & Kegan Paul, 1982–2012), vol. 7, Fasc. 6, pp. 566–568, at 566.

53 For a survey of Latin accounts of the life of Muhammad see John Victor Tolan, "European Accounts of Muhammad's Life," in Jonathan E. Brockopp, ed., *The Cambridge Companion to Muhammad* (New York: Cambridge University Press, 2010), pp. 226–250.

54 Rodrigo Jiménez de Rada, *Historia Arabum*, ed. José Lozano Sánchez (Seville: Publicaciones de la Universidad de Sevilla, 1974), p. 23.

Saracens), chapter 24, writes, *Item unus de articulis credendorum apud eos sic dicit: Sarracenorum fides surrexit per gladium Machometi et carruet per gladium, qui erit Dei, quasi diceret: Per gladium incepit, per gladium desinet*, “One of the articles of belief among them goes this way: ‘The Saracen religion arose through the sword of Muhammad and will fall through the sword which will be God’s,’ that is to say, ‘it began through the sword and through the sword will end.’”⁵⁵ It is possible that the author of HM 83 took up his programmatic interest in the sword of Muhammad from one of these passages, but he also may have been inspired by one of the many medieval accounts of Islam as a religion of the sword.⁵⁶

The vision of the threat to Christianity from Islam on this map, as mentioned above, is very similar to that in Jacobus de Clusa’s *De malis huius saeculi per omnes aetates*, which he wrote in 1447, though it seems unlikely that Jacobus de Clusa influenced our author. There is another similar passage in a later work, namely Erasmus of Rotterdam’s colloquy “On Eating Fish,” of 1526. In the colloquy a butcher reports his impressions upon seeing a world map:⁵⁷

Recently I saw a painting, on a very large canvas, of the whole world. From it I learned how small a portion of the world wholeheartedly and sincerely professes Christianity: part of western Europe, of course; then another part towards the north; a third stretching far away to the south; Poland seemed to be as far as the fourth part went, towards the east. The rest of the world contains either barbarians, not so very different from brutes, or schismatics or heretics, or both.

55 William of Tripoli, *Notitia de Machometo; De statu Sarracenorum*, ed. and trans. Peter Engels (Würzburg: Echter; and Altenberge: Oros, 1992), p. 330; the translation is from Bernard McGinn, ed., *Visions of the End: Apocalyptic Traditions in the Middle Ages* (New York: Columbia University Press, 1979), p. 154.

56 For discussion of passages in medieval authors in which Islam is described as a religion of the sword see Svetlana Luchitskaja, “The Image of Muhammad in Latin Chronography of the Twelfth and Thirteenth Centuries,” *Journal of Medieval History* 26.2 (2000), pp. 115–126.

57 The passage about the map comes from Erasmus of Rotterdam, *Colloquies*, trans. Craig R. Thompson, in *Collected Works of Erasmus* (Toronto: University of Toronto Press, 1974–), vol. 40, p. 686. For another translation of the text see Desiderius Erasmus, *The Essential Erasmus*, trans. John P. Dolan (New York: New American Library, 1964), pp. 271–326, including a good introduction. The passage in Erasmus is cited and briefly discussed in Urs B. Leu, “Textbooks and their Uses—An Insight into the Teaching of Geography in 16th Century Zurich,” in Emidio Campi, Simone De Angelis, Anja-Silvia Goeing, and Anthony T. Grafton, eds., *Scholarly Knowledge: Textbooks in Early Modern Europe* (Geneva: Librairie Droz, 2008), pp. 229–248, at 240.

One wonders about the exact nature of the map Erasmus had in mind, and whether it was real: did it have legends or symbols indicting which religion was predominant in each region,⁵⁸ or was the butcher knowledgeable about these matters, and simply impressed when he saw the maps and realized the relative extents of the territories? The heightened concern about the Apocalypse in fifteenth century Europe went hand in hand with a heightened concern about Islam, but the author of HM 83 was the only author we know of to display the basis for the latter concern cartographically.

The Map and Text on f. 9v

This map (Fig. 5-5) is a stunning example of symbolic cartography: on a full-page *mappamundi* unencumbered by much geographical detail, five graphic representations of the sword of Muhammad reach out to the edges of the earth, indicating the spread of Islam over the whole surface of the *orbis terrarum*, as was predicted on the preceding folio. The focus on the spread of Islam resulted in the omission of indications of countries and cities, in contrast to the situation in the preceding map. Earlier cartographers used other signs to indicate the religious affiliation of cities: on some nautical charts, Christian cities bear crosses while Muslim cities fly the flag of the crescent; and on Andrea Walsperger's *mappamundi* of 1448, he writes that "The red dots are cities of the Christians, and the black ones are the cities of the unbelievers who live on the land and by the sea."⁵⁹ But the use of these swords by the author of HM 83 to indicate the spread of Islam is different: they are used dynamically, to indicate change, and of course the blades have a hostile and sinister symbol-

58 See the description of the symbols used by Martin Waldseemüller on his world map of 1507 to indicate the regions under the control of different religions, described in the following note.

59 Martin Waldseemüller used such symbols on his world map of 1507. In chapter 8 the *Cosmographiae introductio*, printed to accompany the map, he and Matthias Ringmann explain that: "The greater part of Africa and a part of Asia we have distinguished by crescents, which are the emblems of the Sultan of Babylonia, the Lord of all Egypt, and of a part of Asia. The part of Asia called Asia Minor we have surrounded with a saffron-colored cross joined to a branding iron, which is the symbol of the Sultan of the Turks, who rules Scythia this side of the Imaus, the highest mountains of Asia and Sarmatian Scythia. Asiatic Scythia we have marked by anchors, which are the emblems of the great Tartar Khan. A red cross symbolizes Prester John (who rules both eastern and southern India and who resides in Biberith)...." The translation is from Joseph Fischer and Franz von Wieser, *The 'Cosmographiae introductio' of Martin Waldseemüller in Facsimile, Followed by the Four Voyages of Amerigo Vespucci, with their Translation into English* (New York: The United States Catholic Historical Society, 1907), chapter 8, on the back of the diagram between pages 66 and 77.

FIGURE 5.5 *Huntington HM 83, f. 9v. A prophecy map showing the world from 1514 to 1570, when Sword of Islam has conquered Europe and reached all the way to the edges of the earth (COURTESY OF THE HUNTINGTON LIBRARY).*

ism. The text above the map, which we will transcribe and translate below, indicates that the map shows what will happen to the earth from 1514 to 1570.

In the map, the long text in the circumfluent ocean reads:

In mare oceani insulam nullam exercebit machometus potestatem sed tantum in arida. Ergo gladii non sunt tracti extra aridam et tamen visa cuius potestate in arida habitatores insularum ferebunt cum machometione treugas sicut hodie X tribus Israel et etiam Indi in arida hodie habent treugas cum tartare machometione sibi vicinis sicut claretur in figura precedente.

Muhammad will not have power over any island in the ocean, only on the mainland. For this reason, the swords are not extended beyond the mainland. Nonetheless, the inhabitants of the islands, having seen his power on the mainland, will make treaties with the Muslims, just as today the Ten Tribes of Israel, and also some in India in the mainland, make treaties with the Muslim Tartars near them, as is clear in the preceding map.

It is not clear why the author of HM 83 thinks that the Muslims will not conquer the islands of the ocean, but one wonders if he thinks of those islands as at least a temporary refuge from the approaching troubles.

The text in center of the eastern (upper) part of the map reads *Gladius est lex machometi*, “The sword is the law of Muhammad.” And the text in the lower left part of the map, i.e. Europe, reads *Huc in europam gladius extendetur sicut ante gladii alibi iam sunt extensi*, “From here the sword is extended into Europe, just as the swords had already been extended elsewhere.” The swords are labeled *Corrigit*, *Reformat*, *Cassat*, and *Romam*, with the fifth sword in the southeast unlabeled, i.e. “It corrects,” “It reforms,” “It crushes,” and “to Rome,” the last of these located in Europe. A red dot at the center of the map indicates the location of Jerusalem.

The text above the map reads:

Hec figura est mappa mundi de dominio terre ab anno christi 1514 ad annum 1570. In apocalipsis c 19 a puncto et vox de throno exivit usque ad punctum et vidi celum apertum et ecce equus albus. Hec ergo figura est de dominio 56 annorum.

This diagram is a world map of the rule of the earth from the year 1514 to the year 1570. In Revelation chapter 19 from the point “And a voice came out of the throne” (Rev. 19:5) to the point “I saw Heaven standing open

and there before me was a white horse" (Rev. 19:11). This map thus covers a reign of 56 years.

Unfortunately we see no connection whatsoever between the contents of Revelation 19:5–11 and the content of the map, so the citation is obscure. Below this text we read *Figura de machometo*, "Diagram of Muhammad." In the text below the map we read:

Nota verba quae dixit deus Abrahe genesis 12⁶⁰ Semini tuo dabo terram hanc et genesis 13⁶¹ leva oculos tuos in directum. Et vide a loco quo nunc es ad aquilonem et meridiem ad orientem et occidentem omnem terram quam conspicias tibi dabo et semini tuo in sempiternum primum impletum est in david et salamone Secundum in hiis tribus filiis Abrahe.

Ismahel Machometus
Isaac et Gog antichristus
Jacob Dan
 Judas Jhesus Christus
 Sem

In quorum primo hodie oculere usque et tactim expleri videmus si oculos aperire et circumspicere voluimus et ab illo primo dominium terre durabit quod machometus regnabit per orbem et tamen ipse cum sua secta delebitur tunc iam gog est natus ut prius, et eum Jesus interficiet et regnabit post eum hic in terra in sempiternum et etiam 45 annis et inde in eternum sine fine in cunctis orbibus sine contradictione quorumlibet hostium.

Note the words that the God of Abraham said in Genesis 12: ⁶² "I give this land to your descendants" and Genesis 13: ⁶³ "Lift up your eyes from where you are and look north and south, east and west. All the land that you see I will give to you and your descendants forever." The first was fulfilled in David and Solomon, and the second in these three sons of Abraham:

Ismahel Muhammad

60 The passage is Genesis 12:7.

61 The passage is Genesis 13:14–15.

62 The passage is Genesis 12:7.

63 The passage is Genesis 13:14–15.

Isaac and Gog Antichrist	
Jacob	Dan
Judas	Jesus Christ
Sem	

In the first of these, today we see it fulfilled both by sight and by touch, if we are willing to open our eyes and look around. And from the first of these the lordship of the world will last so that Muhammad will reign throughout the world, and yet he with his religion will be destroyed. Then Gog is born as before, and Jesus will kill him and will reign after him both here on the earth forever and 45 years, and from that point forever without end in every world without contradiction from any enemy.

The citation of Genesis 12:7 and 13:14–15 on God's gift of the land of Israel to Abraham should be interpreted as indicating sensitiveness to the fact that according to the diagram, that territory will soon be part of Islamic territory.

The Map and Text on f. 10r

This striking image (Fig. 5.6) hardly seems to be a map at first, but it is another remarkable instance of symbolic cartography. The central set of triangles, ranging from small to large, shows an increase in size, and specifically represents the increasing influence of Antichrist. The eleven-pointed star behind the triangles represents the horns of the beast of Daniel 7:⁶⁴ the surrounding text speaks of ten horns, while there are eleven in the map, but this accords with Daniel 7:8, in which an eleventh horn representing Antichrist arises. These horns separate ten kings in the outer ring of the map. The text above the map says that it shows what will happen to the earth between 1570 and 1600; the cartographic representation of the increasing importance of Antichrist and the beast of Daniel 7 during this period by a series of sharp promontories is extraordinary, and recalls the swords of Muhammad on the previous map. The familiar geography of the earth, the kingdoms of Europe, Africa and Asia, are relegated to the outer ring of the map as the cartographic representation of the apocalyptic drama dominates the center.

The kings in the outer circle of the map, beginning in the lower right and continuing counter-clockwise, are: *Rex Egipti*, *Rex indie ad quem regnum abdicat*, *Rex calcedonie cum media et persida*, *Rex grecie Rusia*, *Rex gotie ad*

64 On the beast in Daniel 7 see Chrys C. Caragounis, "Greek Culture and Jewish Piety: The Clash and the Fourth Beast of Daniel 7," *Ephemerides theologicae Lovanienses* 65.4 (1989), pp. 280–308.

FIGURE 5.6 *Huntington HM 83, f. 10r. A symbolic prophecy map showing the world from 1570 to 1600. The series of small-to-large triangles in the center represent the increase of Antichrist, and the other spikes that radiate to the edges of the earth represent the horns of the beast of Daniel 7 (COURTESY OF THE HUNTINGTON LIBRARY).*

quem Scotia, Rex gallie, Rex ytalie et germanie, Rex hispanie, Rex affrice, and Rex Ethiopie, that is, the King of Egypt; the King of India, whom the kingdom rejects; the King of Calcedonia with Medea and Persia; the King of Greece; Russia; the King of the Goths to whom Scotland; the King of Gaul; the King of Italy and Germany; the King of Spain; the King of Africa; and the King of Ethiopia. Near the bottom of the triangles we read *Antipater sic crescet a minimo in maximum*, “Thus Antipater (perhaps an error for Antichrist) grows

from small to large.” The text higher on the largest of the triangle reads *tocius terre dominium*, “the rule of all of the land.”

The text outside the map is in one column, and so to read much of it one must jump from left to right across the map. This text runs:

Haec figura est mappa mundi de dominiis terre ab anno christi 1570 ad annum 1600. In apocalypsis 19 a puncto et vidi celum apertum ad finem capituli et in capitulum 20 a principio usque ad punctum et cum consummati fuerunt. Haec figura est de dominio annorum 30 quibus finiuntur mille anni Apocalypsis 20. Hii X reges aliquamdiu in 30 annis tenebunt pacem tandem ante finem 30 annorum incipient litigare quis eorum sit dominus omnium et tunc apparebit antichristus et de manu omnium sumet dominum terre. Hec figura ostendit X cornua bestiae terribilis danielis 7 de quorum medio parvulum hoc cornu oritur⁶⁵ signus <antichristi?> et illi X reges erunt in fine romani imperii <... .> in cuius <vivit?> doctores bene intellectum consonant Machomentus romam cassabit apocalypsis 18 et dominabitur per totum 56 annos ut in figura precedente propter quod oppressi sub machometione et in illorum annorum fine imperatorum romanorum ultimus per tot annos absconditus vel novus electus cum X decem (*sic*) regibus sibi adhaerentibus exsurgit et sectam machometicam delebit Inde christo coronam offert in Jerusalem Inde erunt xxx anni pro regno istorum X regum christianorum ut patet in figura.

This diagram is a map of the lordships of the world from the year 1570 to 1600. In Revelation 19 from the point “I saw Heaven standing open” to the end of the chapter, and in chapter 20 from the beginning to the point “And they were consumed by fire.” This diagram is of the lordship of the 30 years in which finish the 1000 years <mentioned in> Revelation 20. Sometime in <those> 30 years these ten kings will have peace, but before the end of the 30 years they will begin to argue about which of them will be lord of all, and then Antichrist will appear, and from the hand of all he will take the lordship of the earth. This diagram shows the ten horns of the terrible beast of Daniel 7, from whose midst this small horn arises, the sign of Antichrist, and those ten kings will appear at the end of the Roman Empire <... .> the learned agree. Muhammad will conquer Rome—Revelation 18—and will rule for all the 56 years as indicated in the

65 See Daniel 7:8, *Considerabam cornua et ecce cornu aliud parvulum ortum est de medio eorum....*

preceding map, and because of this, they will be oppressed by the Muslims. And in the end of those years, the Last Roman Emperor, hidden for so many years, or else newly elected, will arise with 10 kings by his side, and he will destroy the Muslim sect. Then he offers the crown to Christ in Jerusalem. Then there will be thirty years of the rule of those ten Christian kings, as is clear from the diagram.

Again there is little apparent connection between the events depicted in the map or narrated on this folio and the biblical passages the author cites, namely Revelation 19:22–21 and 20:1–9. The ten kings mentioned here and depicted in the map appear in Revelation 17:12, and not the later chapters the author cites. So perhaps he was citing these passages from memory. The role of the Last Roman Emperor in HM 83 was discussed above in the context of his appearance in the summary of the Last Days on f. 16r.

The text at the bottom of the page reads:

Sequente latere figura est mappa mundi de dominio terre ab anno 1600 usque ad annum christum 1606. In apocalypso a puncto capituli 2: Et cum consummati fuerint 1000 anni usque ad

On the next folio, the diagram is a map of the lordship of the earth from the year 1600 to the year 1606. In Revelation chapter 2, from the point “When the thousand years come to an end, until”

The citation of Revelation 2 is an error for Revelation 20, specifically 20:7, *Et cum consummati fuerint mille anni solvetur Satan de carcere suo*, “When the thousand years come to an end, Satan will be let out of his prison.” As on f. 9r, the author uses the bottom of one folio to introduce the material on the next.

The Map and Text on f. 10v

This map (Fig. 5.7) is another remarkable work of symbolic cartography. The huge peninsulas that jut out into the circumfluent ocean represent the four horns of Antichrist, which in turn represent the four methods by which he deceives people into following him, namely cruelty, deceit, craftiness, and imitation of the deity.⁶⁶ So the four peninsulas are in fact cartographic repre-

66 Adso of Montier-en-Der in his *Libellus de Antichristo*, written in the tenth century, indicates that Antichrist will deceive people by three techniques rather than four, namely fear, gifts, and miracles. For an English translation of the *Libellus* see Bernard McGinn, *Apocalyptic Spirituality: Treatises and Letters of Lactantius, Adso of Montier-en-Der,*

FIGURE 5.7 Huntington HM 83, f. 10v. A prophecy map of the world from 1600 to 1606. Antichrist is at the center of the earth, at Jerusalem, and the four peninsulas that jut into the ocean are symbolic, cartographic representations of the four horns of Antichrist (Deceit, Cunning, Cruelty, and Imitation of the Deity) by which he will persuade people to follow him (COURTESY OF THE HUNTINGTON LIBRARY).

sentations of abstractions. These peninsulas go all the way across the circumfluent ocean, in contrast to the swords of Muhammad on the map on f. 9v, indicating the greater power and reach of Antichrist. The prominent island is that of the Ten Tribes of Israel, which appears on other maps in the manuscript, for example those on ff. 3r and 6v–7r (see Figs. 4.9 and 4.14). The orientation of this map is different than that of the others in the manuscript, for it has south at the top rather than east, and the reason for this change is not clear. The text above the map, which is transcribed and translated just below, indicates that the map shows what will happen to the earth during the years 1600 to 1606.

The map includes indications of the cardinal directions, *Auster*, *Oriens*, *Occidens*, and *alquilo* (*sic*), and it is to these directions that the four large peninsulas are oriented. The peninsulas, which represent the four horns of Antichrist and the four methods by which he deceives people into following him, are labeled *Crudelitas*, *Dolositas*, *Calliditas*, and *Mentita deitas*, i.e. cruelty, deceit, craftiness, and imitation of the deity. The island in the lower left and the peninsula that joins it to the *orbis terrarum* is labeled *Et tribus Israhel venient in Jerusalem ad Gog*, “And the tribes of Israel will come to Jerusalem to Gog,” i.e. Antichrist. On the *orbis terrarum* are the names *Enoch* and *Elias*, that is, Enoch and Elijah, and the text at the center of the world says *Jerusalem Antichristus*, so that Antichrist is at Jerusalem, from which his four horns radiate. It is interesting that much of the text on the map is oriented so as to be readable if the map were rotated so that east were at the top, and it is tempting to deduce that that was this map’s original orientation.

The text surrounding the map reads:

Gog antichristus est serpens cornutus habet enim quatuor cornua id est quatuor modos superandi ut patet genisi 49 cum glosa magistrali.⁶⁷ Et ipse in principio sue ostensionis ponet sedem suam in Jerusalem ut patet in figura cornu crudelitatis per tormentorum illationem superabit carnales seipsos amantes quales sunt gulosi et luxuriosi ... Cornu dolositatis per munus collationem quo superat avaros Cornu caliditatis per

Joachim of Fiore, the Franciscan Spirituals, Savonarola (New York: Paulist Press, 1979), pp. 89–96, esp. 92. We thank Laura Smoller for this reference.

67 Genesis 49:17, *fiat Dan coluber in via*. The *Glossa ordinaria* on this passage, from vol. 1 of the Bible printed in Strasbourg by Adolf Rusch not after 1480, reads: *Alii ad antichristum haec transferrunt, quem de tribu dan venturum asserunt.... Qui non solum coluber sed ceras-tes vocatur. Cerasta enim graecae cornua dicuntur, et hic serpens cornutus esse perhibetur, per quem dignae adventus antichristi asseritur, qui contra sanctos morsu pestiferae praedicationis et cornu potestatis armabitur.*

divine scripture falsam expositionem quo superat scientiae inflatos quales sunt capitosi sibi ipsis sapientes ad suum caput retorquentes Cornu mentite deitatis per miraculorum operationem quo superat ypocritas <...> se ipsos iustificantes Quales sunt qui sibi ipsi iusti videntur et gloriam hominum quaerunt.

Gog Antichrist is a horned serpent who has four horns, that is, four methods of conquering, as is clear from Genesis 49 with the magisterial gloss. And in the beginning of his appearance, he places his seat in Jerusalem, as is clear from the diagram. With his horn of cruelty, through the application of tortures, he will conquer carnal people who love themselves, such as those who are gluttonous and luxurious. By his horn of deceit, through the giving of gifts, he will conquer the greedy. By his horn of craftiness, through a false exposition of divine scripture, he conquers those proud of their knowledge, such as the conceited who think themselves wise, looking only at themselves. By his horn of imitating the deity, through the performance of miracles he conquers the hypocrites who justify themselves, such as those who regard themselves as just, and seek the glory of men.

It was not clear where the author of HM 83 got the idea of the swords of Muhammad sweeping across the *orbis terrarum*, but we have determined the source of his account of the four horns of Antichrist, which is the *Compendium theologiae* or *Compendium theologiae veritatis* of Hugh Ripelin of Strasbourg (c. 1205 – c. 1270), a widely-read manual of practical theology.⁶⁸ In Book 7, chapter 9 of the *Compendium* Hugh discusses the four means by which Antichrist will deceive people, and we offer excerpts from that chapter.⁶⁹

68 For discussion of the *Compendium* see Luzian Pfleger, “Der Dominikaner Hugo von Straßburg und das ‘Compendium theologiae veritatis,’” *Zeitschrift für katholische Theologie* 28 (1904), pp. 429–440; Martin Grabmann, “Entscheidung der Autorfrage des ‘Compendium theologiae veritatis,’” *Zeitschrift für katholische Theologie* 45 (1921), pp. 147–153; Georg Steer, *Hugo Ripelin von Straßburg: Zur Rezeptions- und Wirkungsgeschichte des ‘Compendium theologiae veritatis’ im deutschen Spätmittelalter* (Tübingen: Niemeyer, 1981), reviewed by Nigel F. Palmer in *Modern Language Review* 78.2 (1983), pp. 486–487; and Georg Steer, “Hugo Ripelin von Straßburg,” in Wolfgang Stammeler and Karl Langosch, eds., *Die deutsche Literatur des Mittelalters: Verfasserlexikon* (Berlin and New York: de Gruyter, 1978–), vol. 4, cols. 252–266.

69 In the past the *Compendium* was sometimes attributed to Albertus Magnus, and thus it is printed in Albertus Magnus, *D. Alberti Magni Ratisbonensis episcopi ordinis Praedicatorum Opera omnia*, ed. A. Borgnet (Paris: apud Ludovicum Vivès, 1890–95), vol. 34, pp. 1–306;

Merito comparatur Antichristus cerasti qui est serpens cornutus: quia quatuor cornibus armabitur, scilicet callida persuasione, miraculorum operatione, donorum largitione, et tormentorum exhibitione. Primus ergo modus subvertendi homines erit callida persuasio. Praedicabit enim legem novam pravam esse, et legem Christi pro posse destruet. Praedicatores enim sui discurrent per universas partes mundi Secundus modus subvertendi erit per fallacia miracula: quia per artem magicam illa faciet.... Item, per artem magicam simulabit se mortuum, et feretur a daemonibus in aera, quasi ascendat in coelum: et sic putabitur ab hominibus resurrexisse, qui prius mortuus putabatur: et tunc mirabuntur populi, et adorabunt eum, atque laudabunt.... Tertio, decipiet per munera. Ipse namque Antichristus inveniet thesauros absconditos, per quos ad sequendum se inclinabit plurimos: ditabit enim bonis divites hujus saeculi, et tunc eorum falsam felicitatem ad decipiendum alios ostendet. Quarto, compellet per minas, et tormenta, quos aliter vincere non poterit. Tanta vero, sicut ait Dominus, tunc erit tribulatio, ut in errorem inducantur, si fieri potest, etiam electi Antichristus autem sicut erit crudelior omnibus persecutoribus, ita sancti tunc temporis fortiores erunt omnibus retro martyribus.

Antichrist is rightly compared to a *cerastes*, which is a serpent with horns, for he is armed with four horns, namely subtle persuasion, the working of miracles, gifts of presents, and the distribution of tortures. His first method for overthrowing men, then, will be subtle persuasion. For he will proclaim that the new law is wicked, and he will destroy the law of Christ as far as possible. His preachers will run through all parts of the world.... His second method of overturning men will be by false miracles, for he will perform these by means of the magic art.... Likewise, by means of magic he will feign death, and will be carried into the air by demons, and as it were, go up into Heaven: and so he will be thought by men to have been resurrected, who before was thought to be dead: and the people will be amazed, and will bow down before him, and praise him.... Third, he

the Antichrist section of Book VII, "De ultimis temporibus," is on pp. 241–245, and see especially pp. 242–243 on his four methods of deceiving people—the passage quoted comes from this edition. The *Compendium* was also sometimes attributed to St. Bonaventura, and thus this same chapter is also printed in St. Bonaventura, *Compendium theologiae veritatis*, Book 7, chapter 9, in St. Bonaventura, *S. R. E. Cardinalis S. Bonaventurae ... opera omnia Sixti V. pontificis maximi jussu diligentissime emendata* (Paris: Ludovicus Vivès, 1864–71), vol. 8, pp. 232–233.

will deceive through gifts. For Antichrist himself shall find hidden treasures by which he will persuade many to follow him: he will enrich the rich of his era, and then he will show their false happiness in order to deceive others. Fourth, he will compel with threats and tortures those who he was not able to overcome in any other way. So great, in fact, as the Lord says, will the tribulation then be, that even the elect will be led astray, if that is possible But as Antichrist will be more cruel than all persecutors, so the saints of that time will be stronger than all the martyrs of earlier times.

It is difficult to doubt that Hugh Ripelin of Strasbourg's *Compendium* was the source of the ideas underlying the map on f. 10v of HM 83 (or that they shared a common source), though the cartographic interpretation of those ideas is original and unique. There is a similar passage in a sermon by the famous preacher Bertold of Regensburg (c. 1220–1272),⁷⁰ who in his *Rusticanus de Dominicis*, *Sermo sextus*, describes how Antichrist will deceive people. Part of the text near the beginning of this discourse runs:⁷¹

illis enim erit cerastes, qui dicitur serpens cornutus, unde ceraste grece, latine cornua dicuntur. per quem recte Antichristus intelligitur, qui contra nos multis cornibus armabitur, de quibus omnibus nunc non sufficimus enarrare, sed nunc ad presens tantum de quatuor principalibus aliqua breviter dicam, scilicet de callida suasionem et miraculorum operatione et beneficiorum largitione et minarum terrore.

70 There is a good brief discussion of Berthold in Frank G. Banta, "Berthold von Regensburg: Investigations Past and Present," *Traditio* 25 (1969), pp. 472–479; for a more detailed treatment see Georg Steer, "Leben und Wirken des Berthold von Regensburg," in *800 Jahre Franz von Assisi: Franziskanische Kunst und Kultur des Mittelalters: Niederösterreichische Landesausstellung, Krems-Stein, Minoritenkirche 15. Mai – 17. Oktober 1982* (Vienna: Amt der NÖ Landesmuseums, Abt III/2 – Kulturabteilung, 1982), pp. 169–175; and Ariane Czerwon, *Predigt gegen Ketzer: Studien zu den lateinischen Sermones Bertholds von Regensburg* (Tübingen: Mohr Siebeck, 2011). On the manuscripts of Berthold's Latin sermons see Laurentius Casutt, *Die Handschriften mit lateinischen Predigten Bertholds von Regensburg O. Min. ca. 1210–1272* (Freiburg/Schweiz, Universitätsverlag, 1961).

71 See Anton E. Schönback, "Studien zur Geschichte der altdeutsche Predigt: Die Überlieferung der Werke Bertholds von Regensburg, I," *Sitzungsberichte der Philosophisch-Historischen Klasse der Kaiserlichen Akademie der Wissenschaften* 151 (1906), pp. 1–184, *Rusticanus de Dominicis*, *Sermo sextus*, pp. 5–21, esp. 13–17, particularly 13.

For to them he will be a *cerastes*, which is said to be a serpent with horns, whence they are called a *cerastes* in Greek, and *cornua* in Latin, by which Antichrist is rightly understood, who will be armed against us with many horns. There is no time now to describe them all, but for the present I will just say something brief about the four principal ones, namely about subtle persuasion and the working of miracles and gifts of presents and the terror of threats.

Bertold expatiates on these four horns at some length, and the gist of his discourse is similar to Hugh's. Bertold and Hugh were contemporaries, and it does not seem possible to know whether Bertold borrowed from Hugh, or vice versa, but it does seem clear that the author of HM 83 borrowed from Hugh rather than from Bertold, as Hugh and the author of HM 83 speak of tortures, while Bertold speaks of threats.⁷²

The text below the map on f. 10v, which looks ahead to the map on f. 11r, reads:

Hec figura sequens est mappa mundi de dominio terre ab anno christi 1606 ad annum Jhesum Christum 1661 danielis xii in fine et est hec figura de dominio 45 annorum. Gog occiso stabit regnum Jesum Christum hic in terra per 45 annos et erit hoc tempore aureum plenum pace mansiva et omni bono, variis religionibus per machimetum et gog annullatis in figuris precedentibus. Hic vigebit coniugium pro completionem numeri electorum. Ita ut sciam simul plures pueros par<i>unt sicut olim quando exierunt de egipto in terram promissionis ysaye et ita ut dicitur "Angustus

72 This material about Antichrist's four methods, whether from Hugh or from Bertold, appears in one other source contemporary with them, namely the so-called 'Passau Anonymous,' who wrote in the 1260s. See *Vom Antichrist: Eine mittelhochdeutsche Bearbeitung des Passauer Anonymus*, ed. Paul-Gerhard Völker (Munich: W. Fink, 1970), chapter 12, "Qualiter anticristus hominess (*sic*) decipiet," pp. 83–84, at 83: *Das ain sind sein valsche vnd böß rütt, das ander seine zaichen, die er tüt, das dritte, die groß gaub vnd ere, die er git, daz vierd drawe vnd schricke vnd marter; wann gott wirt im verhengent, wen er mit künender rede vnd raut oder mit zaichen oder mit gaub oder mit draw nit überwinden mag, daz er die mit mäniger vnd grülicher schlachte marter tötte*, that is, "The first <thing> are his false and evil counsels, the second his <miraculous> signs that he works, the third the great gift<s> and honor<s> that he gives, the fourth threat<s> and terror and torture, since God will give to him <this>: <that> those whom with skillful speech and counsel or with signs or with gift<s> or with threat<s> he will not be able to overcome, that he kill those with the torture of manifold and horrid battles." We thank Renate Burri for her help with this translation.

est mihi locus fac spatium ubi habitem.” Machometus et antichristus sicut religiones exfinxerunt sic et biblie libros et expositores conbusserunt. Hic tamen biblie reservare usus est ad finem mundi. Tunc ultra ut biblie usus erit. Nec mirere hoc fieri in Europa cum machometus hoc iam complevit pro maiori parte in Asia et affrica. Sicut nunc principalis pars ecclesie est ex gentibus sic tunc principalior pars erunt X tribus Israel sicut multipliciter scriptura divina ostendit. Sequitur figura.

The following diagram is a map of the lordship of the world from the year 1606 to the year 1661—<see> the end of Daniel 12—and this is a diagram of the lordship of those 45 years. Following the death of Gog, the kingdom of Jesus Christ will stand here in the world for 45 years and there will be in this period plenty of gold, with lasting peace and all good, following the destruction of various religions of Muhammad and Gog that we saw in the preceding diagrams. Here marriage will flourish towards the completion of the number of the elect. As I know, many will give birth to children at the same time, just as in the old days when they departed from Egypt to the promised land of Isaiah, and as it is said, “This place is too small for us; give us more space to live in” (Isaiah 49:20). Muhammad and Antichrist, just as they invented religions, so they burned both the books of the Bible and their interpreters. Here <on earth> nonetheless the use of the Bible, which was preserved, will continue till the end of the world, and even afterwards the use of the Bible will continue. Do not marvel that this should happen in Europe, as Muhammad has already done the same in the greater part of Asia and Africa. Just as now, the greatest part of the church consists of non-Jews, then an even larger part will be of the Ten Tribes of Israel, just as Holy Scripture shows many times. Here follows the diagram.

The apocalyptic chronology here involves an error of arithmetic: 1606 plus 45 years is 1651, rather than 1661, the figure that the text gives.⁷³ This passage represents one case in which we can get an idea of how the author of HM 83 arrived at his chronology of the Apocalypse. At the beginning of this passage—which, just to repeat, looks ahead to the map on f. 11r—the author refers to the end of Daniel 12 and to a period of 45 years. Near the end of Daniel 12 we read (12:11–12): “From the time that the daily sacrifice is abolished and the abomina-

73 The arithmetic is correct in the rubric for the map that corresponds to that on f. 11r here in Wolfenbüttel, Herzog August Bibliothek, Cod. Guelf. 442 Helmst., Beilage f. 1r: see below.

tion that causes desolation is set up, there will be 1,290 days. Blessed is the one who waits for and reaches the end of the 1,335 days.” If we take 1335 minus 1290, we get 45. It was certainly from this passage that author of HM 83 arrived at the span of 45 years covered by the map on f. 11r, but his thought process in doing so is not at all clear. Setting aside the fact that Daniel is talking about days rather than years—for this type of change in units of time is common in interpretations of apocalyptic chronology—it is not clear why the author attributed such significance to the numbers in this passage in Daniel, or even why he thought that one of the numbers should be subtracted from the other. It is worth mentioning that Jerome in his commentary on Daniel did not interpret these days as years.⁷⁴

The passage about the Bible being used after the end of the world is a paraphrase of Matthew 24:35, or Mark 13:31, or Luke 21:33: “Heaven and earth will pass away, but my words will never pass away.”

The Map and Text on f. 11r

This folio has two maps (see Fig. 5.8), one large near the top of the page as on the other folios in this section, the other smaller and towards the bottom of the page. The large map, which is introduced by a long paragraph at the bottom of f. 10v, represents a complete change from the situation depicted in the map on f. 10v. There Antichrist was at the center of the world, deceiving people with his four horns while the Ten Tribes of Israel marched towards Jerusalem to support him; here on f. 11r Antichrist, his horns, and his followers have disappeared, and the flag of Christ is at the center of the world, and Christ is said to be worshipped everywhere. There are no geographical details of the earth in the image, but it should still be recognized as a map, for both the format of the image and the texts on it make it clear that it represents the earth. The smaller map is remarkable, for it is completely blank, representing a new earth, from which all familiar geographical details have been wiped away. As the image is explicitly identified as a map in the text, it represents an interesting challenge for anyone attempting to define the word ‘map.’⁷⁵ The text outside the upper

74 Saint Jerome, *Jerome's Commentary on Daniel*, trans. Gleason L. Archer, Jr. (Grand Rapids: Baker Book House, 1958), pp. 150–151. On the interpretation of Biblical days as years also see Robert E. Lerner, “Refreshment of the Saints: The Time after Antichrist as a Station for Earthly Progress in Medieval Thought,” *Traditio* 32 (1976), pp. 97–144, esp. 130–133. We thank Laura Smoller for this latter reference.

75 This image of the world does fulfill the definition of maps as “graphic representations that facilitate a spatial understanding of things, concepts, conditions, processes, or events in the human world,” which is supplied by J. B. Harley and David Woodward, eds., *The History of Cartography* (Chicago: University of Chicago Press, 1987–), vol. 1, p. xvi. For

FIGURE 5.8 Huntington HM 83, f. 11r. A prophecy map of the world from 1606 to 1661 (a mistake for 1651). The situation has changed completely from that in the preceding map: the center of the earth is now occupied by the flag and law of Christ, which we are told will be raised and worshipped throughout the world (COURTESY OF THE HUNTINGTON LIBRARY).

half of the large map applies to that map, while the text outside the lower half of the large map applies to the smaller map below. The text at the bottom of f. 10v, the preceding folio, says that the map shows what will happen to the world from 1606 to 1661 (an error for 1651).

The texts on the large map are as follows. At the center of the world there is a large flag bearing the name *Jesus*, and in the upper border of the flag, the text *Vexillum et lex Jhesu Christi eterni regis*, “The flag and law of Jesus Christ, eternal king”—so the law of Christ has now replaced the law of Muhammad. The text at the top of the map, which is the east, reads *Ab ortu solis usque ad occasum magnum nomen meum Malachi*, “From the rising of the sun to its setting, my name is great (Malachi),” quoting from Malachi 1:11.⁷⁶ In the upper left, *Omnes gentes servient ei*, “All nations shall serve him,” quoting Psalm 71:11,⁷⁷ and in the upper right, *Erit dominus rex super omnem terram*, “The Lord will be the king over all the land,” quoting Zechariah 14:9.⁷⁸ The longer text on the left reads:

Omnes scient eum a minimo usque ad maximum ita que nemo docet proximum suum Ihesum christum. Cessabit ergo tunc evangeli praedictio Jerimiah 31 ad hebraeos 8 sed et uterque sexus prophetabit finem mundi prius finem horum annorum 45, Iohani 2 et 3.

Everyone from the least to the greatest will know him, and so no one will teach his neighbor about Jesus Christ. Therefore the foretelling of the evangelist will cease: Jeremiah 31, Epistle to the Hebrews 8. But men and women will predict the end of the world before the end of these 45 years. Joel 2–3.

additional discussions of the definition of ‘mappamundi’ and map’ see Alessandro Scafi, “Defining *Mappaemundi*,” in P. D. A. Harvey, ed., *The Hereford World Map: Medieval World Maps and Their Context* (London: British Library, 2006), pp. 345–354; and J. H. Andrews, “What Was a Map? The Lexicographer’s Reply,” *Cartographica* 33.4 (1996), pp. 1–11.

76 Malachi 1:11, *Ab ortu enim solis usque ad occasum magnum est nomen meum in gentibus et in omni loco sacrificatur et offertur nomini meo oblatio munda quia magnum nomen meum in gentibus dicit Dominus exercituum.*

77 Psalm 71:11, *Et adorabunt eum omnes reges terrae, omnes gentes servient ei.*

78 Zechariah 14:9, *Et erit Dominus rex super omnem terram in die illa erit Dominus unus et erit nomen eius unum.*

As the author indicates, the first phrase comes from Jeremiah 31:34,⁷⁹ the second from Hebrews 8:11,⁸⁰ and the third from Joel 2:28,⁸¹ though of course Joel does not mention the period of 45 years.

The text in the right-hand part of the map, which refers to the flag of Christ, reads *Elevabitur et colitur per totum orbem terre*, "It will be raised and worshipped throughout the world." The text in the lower right reads *Orietur habundacia pacis*, "There will arise an abundance of peace," and the text at the bottom of the map reads *Ab ortu soli usque ad occasum in omni loco sacrificatur Malachi 1*, "From the rising of the sun to its setting sacrifice is made everywhere (Malachi 1)," citing Malachi 1:11.⁸²

The rubric above and to the right of the map reads *Unum ovile et unus pastor*, "One flock and one shepherd," a quotation from John 10:16,⁸³ pointing to the unification of the world under Christ's leadership implied by the map. The text outside the top half of the map is in one column, i.e. continuous left to right, while the text outside the lower half of the map is in two columns. The text outside the upper half of the map reads:

Finitis 45 annis precedentis sicut nemo ex divina scriptura scit horam qua incipiet actio prima ignis concremationis, Erit tamen certe ante finem seculi illorum et qui ihesum christum triumphare contra Gog viderunt quod ex clamazione totius scripture. illi homines sunt reliquie et illorum vita est seculum ultimum. Iusti enim tunc stant parati ut igne moriantur, quibus omnibus mortuis, quarta pars terre habitata erit campus nudus ut figura sequens ostendit et manebit sic campus nudus usque ad horam resurrectionis generali<s> qua soli deo est notum certe erit ante finem 7000 annorum ab initio mundi.

79 Jeremiah 31:34, *Omnes enim cognoscent me, a minimo eorum usque ad maximum, ait Dominus.*

80 Hebrews 8:11, *Et non docebit unusquisque proximum suum et unusquisque fratrem suum dicens cognosce Dominum quoniam omnes scient me a minore usque ad maiorem eorum.*

81 Joel 2:28, *...et prophetabunt filii vestri et filiae vestrae senes vestri somnia somniabunt et iuvenes vestri visiones videbunt.*

82 Malachi 1:11, *Ab ortu enim solis usque ad occasum, magnum est nomen meum in gentibus, et in omni loco sacrificatur: et offertur nomini meo oblatio munda, quia magnum est nomen meum in gentibus, dicit Dominus exercituum.*

83 John 10:16, *Et alias oves habeo, quæ non sunt ex hoc ovili: et illas oportet me adducere, et vocem meam audient, et fiet unum ovile et unus pastor.* On the importance of this passage in apocalyptic prophecy see Marjorie Reeves, *The Influence of Prophecy in the Later Middle Ages: A Study in Joachimism* (Oxford: Clarendon Press, 1969), pp. 503–504.

After the preceding 45 years, as nobody knows from the Holy Scripture the hour at which the first action of the conflagration will begin, nonetheless it will certainly be before the end of the epoch of those people, and <of> those who will see Jesus Christ triumph over Gog, which <is> the proclamation of all the scripture. Those men remain, and their life is the final epoch. For the just men stand ready to die in the fire, and when they are all dead, one quarter of the inhabited land will be an empty field, as the following diagram shows. And it will remain an empty field until the hour of the general resurrection, which is known for sure only to God, <but> it will certainly come before the end of 7000 years from the beginning of the world.

The doctrine that the world would last 7000 years is a development of the idea that the world would last 6000 years, on analogy with the six days of creation, which goes back to the apocryphal Epistle of Barnabas 15:3–5,⁸⁴ deriving from 2 Peter 3:8, “...one day is with the Lord as a thousand years, and a thousand years as one day.” When the world did not end in Anno Mundi 6000, the chronology was extended another thousand years.⁸⁵

The text outside the lower half of the map, which applies to the small map below, reads:

Hec figura sequens precedentem est mappa mundi prius mortem omnium hominum igne crematorum. A principio cremationis quarta pars terre extra oceanum macer est campus in quo triticum cum palea

84 See Michael W. Holmes, *The Apostolic Fathers in English* (Grand Rapids, MI: Baker Academic, 2006), pp. 172–198, at 193–194: “He speaks of the Sabbath at the beginning of creation: ‘And God made the works of his hands in six days, and finished on the seventh day, and rested on it, and sanctified it.’ Observe, children, what ‘he finished in six days’ means. It means this: that in six thousand years the Lord will bring everything to an end, for with him a day signifies a thousand years. And he himself bears witness when he says, ‘Behold, the day of the Lord will be as a thousand years.’ Therefore, children, in six days—that is, in six thousand years—everything will be brought to an end. ‘And he rested on the seventh day.’ This means: when his son comes, he will destroy the time of the lawless one and will judge the ungodly and will change the sun and the moon and the stars, and then he will truly rest on the seventh day.”

85 For discussion of this chronology see Richard Landes, “Lest the Millennium Be Fulfilled: Apocalyptic Expectations and the Pattern of Western Chronography, 100–800 C.E.,” in Werner Verbeke, Daniel Verhelst, and Andries Welkenhuysen, eds., *The Use and Abuse of Eschatology in the Middle Ages* (Leuven: Leuven University Press, 1988), pp. 137–211; and Smoller, “The Alfonsine Tables and the End of the World” (see Ch. 5, n. 41), p. 214.

pii cum impiis restunt usque ad completum numerum electorum qui tunc est completum in messem mundi. priusquam tamen campus est mundatus quod omnes homines successive ablati sunt et aridatus quod flumina ex bonitate dei campum irrigantia extra naturam, aque post <principii?> tertium diem iam sunt circumscripta (*sic*) <...>. Planatus ut sit simpliciter rotundus sine montibus et vallibus et sine insulis maris oceani quod ex montibus constabant. Omnia enim ista sunt incinerata igne et ex hinc terra extra oceanum non dicitur vel est campus in figura sequente. Nam de campo in messe ad arcam omnia congregantur, et in ea triticum a palea separatur, et triticum infertur horreo palea in ignem, sicut in figura sequente pii ab impiis separantur in celum et in infernum, ut vides in figura.

This diagram, which follows the preceding, is a *mappamundi* before the death of all men burned up by fire. From the beginning of the fire a quarter of the land that is above the ocean is a bare field in which the grain with the chaff—the pious with the impious—will remain until the completion of the number of the elect, which will be complete in the harvest of the world. First however the field is cleaned, insofar as all men have been successively carried away, and dried because the rivers that through the goodness of God irrigated the field beyond nature, <because> the waters after the third day were already confined. <The earth> is flattened so that it is perfectly round without mountains or valleys or islands in the ocean, which are the tops of mountains. All those things have been incinerated by fire, and because of this, the land beyond the ocean is not mentioned, even if it is a field in the following diagram. For in the harvest, everything is gathered together from the field in one place, and in that place, the wheat is separated from the chaff, and the wheat is carried into the barn, and the chaff into the fire, just as in the following diagram, the pious are separated from the impious to Heaven and Hell, as you see in the diagram.

The phrase *quarta pars terre extra oceanum* sounds very much like Isidore's description of a hypothetical southern continent inhabited by the antipodes,⁸⁶ but rather means the fourth part of the earth that is above the level of the

86 Isidore, *Etymologiae* 14.5.17, *Extra tres autem partes orbis quarta pars trans Oceanum interior est in meridie, quae solis ardore incognita nobis est; in cuius finibus Antipodes fabulose inhabitare produntur*. For discussion of this passage see Hiatt, *Terra incognita* (see Ch. 4, n. 173), pp. 78–82.

ocean. Of course the imagery of the harvest as part of the Apocalypse comes from biblical passages such as Matthew 3:12, Luke 3:17, Matthew 14:24–43 (the Parable of the Tares), and Revelation 14:14–16. As we would expect from an author interested in geography and cartography, the account we have here of the transformation the earth undergoes is more detailed than the brief references in Revelation 6:14, “...every mountain and island was removed from its place,” and 16:20, “And every island fled away, and the mountains were not found.”⁸⁷ Our author specifies that the rivers are dried up and that the mountains are flattened so that the earth becomes a perfect sphere, and depicts this state of affairs in a remarkable blank map. To the left of the map are the words *Terra ista <...> sine insulis maris oceani*, “This is the earth without islands in the ocean.” The absence of islands here is to be contrasted with the emphasis on islands in some of the maps in the geographical section of HM 83, particularly those on ff. 3r and 3v (see Figs. 4.9 and 4.10).

The Map and Text on f. 11v

The complex image on this folio (Fig. 5.7) represents what will happen to the earth during the Last Judgment. The date of this event is not indicated, which is surprising given the author's strong interest in apocalyptic chronology, but we are left to believe that it would follow closely the end of the period covered by the map on f. 11r, which the author indicates as 1661, but which should be 1651 according to the figures he supplies. At the bottom of the image is the earth surrounded by the ocean, with the earth is eccentric to the sphere of water, just as in the maps on ff. 6v–7r (Fig. 4.14) and 7v–8r (Fig. 4.15), and an image of the abyss into which the damned will fall. The abyss below the Mount of Olives was perhaps inspired by Zechariah 14:4, in which a rift is said to open beneath the Lord's feet when he is on the Mount of Olives. Above this there is a view of the Mount of Olives and some other mountains, very similar to the image of mountains on f. 5r, and functioning as a detail of the image of the earth below. The device of a detail of a map is unusual in the late Middle Ages, but we saw a closely related idea in the progression of images on ff. 13r, 13v, and 14r, where each image is in effect a detail of the preceding as the cartographer ‘zooms in’ on the earth, and we will discuss another example in the world map and map of the Holy Land on the front flyleaf of Wolfenbüttel, Herzog August Bibliothek, Cod. Guelf. 442 Helmst., a manuscript closely related with HM 83.

87 For discussion of apocalyptic imagery of the flattening of the earth's mountains in the *Oracles of Hystaspes*, fragments of which are preserved in Book 7 of Lactantius's *Divine Institutions*, see Bruce Lincoln, “The Earth Becomes Flat’—A Study of Apocalyptic Imagery,” *Comparative Studies in Society and History* 25.1 (1983), pp. 136–153, at 143–145.

FIGURE 5.9 Huntington HM 83, f. 11v. *The Last Judgment*. The gates of Paradise are at the top, the elect in a curved band just below, then Jesus and the Apostles in the sky; below on the earth is the Mount of Olives, then the damned in a curved band standing above the abyss that leads to Hell (COURTESY OF THE HUNTINGTON LIBRARY).

The presence of the Mount of Olives in the diagram in HM 83, f. 11v is puzzling, given that all of the world's mountains were said to have been flattened on the preceding folio, but certainly the author was inspired to imply that Jesus rose to Heaven from the Mount of Olives after his Second Coming from the fact that he arose from the same mountain after his first sojourn on earth: see Acts 1:9–12. Above the Mount of Olives, Jesus and the Apostles are in the sky, and above them, the elect are in a rainbow-like band across the sky, and are said to be like the stars. Above the elect is their destination, the gates of paradise, elaborately drawn and contrasting with the destination of the damned far below.

The grid to the right of the gates of Paradise is intended to represent the wall surrounding the Heavenly Jerusalem: the walls receive great emphasis in the description of the city in Revelation 21:11–20,⁸⁸ and no doubt the author of HM 83 did not indicate the walls to the left of the gates simply because he needed this space for the text written. On another folio in HM 83 there is another depiction of this wall: on f. 13r there is a diagram of the universe, with the earth at the center, surrounded by the elemental and then celestial spheres, which are labeled out to the *Empyreum*; outside of the Empyrean sphere there are two unlabeled spheres, and beyond these, at the very top of the diagram, there is a rectangle containing a grid that is clearly intended to represent the same object as the grid beside the gates of Paradise on f. 11v: the wall surrounding the Heavenly Jerusalem. The latter part of the text on f. 13r addresses the celestial spheres, but breaks off abruptly before anything is said about Paradise.⁸⁹

With regard to the text on f. 11v, above the Gates of Paradise we read *porta paradisi*, “Gates of Paradise,” and just to the left of the Gates we read:

hoc tempore iudicii totum celum et infernus vacant. hic enim omnes sunt et mali, videntes bonos supra se, clamant illud sapientes “hii sunt quos aliquando habimus in derisi”

At this time of judgment, the whole of Heaven and Hell are empty. However, everyone is here, and the evil ones, seeing the good people

88 For discussion of the iconography of the Heavenly Jerusalem see Stanislaw Kobielski, “La Jérusalem céleste dans l’art médiéval,” in Evelyne Berriot-Salvadore, ed., *Le mythe de Jérusalem du Moyen Âge à la Renaissance* (Saint-Etienne: Publications de l’Université de Saint-Etienne, 1995), pp. 101–121; on earlier traditions see Bianca Kühnel, *From the Earthly to the Heavenly Jerusalem: Representations of the Holy City in Christian Art of the First Millennium* (Freiburg im Breisgau: Herder, 1987).

89 The end of the text on f. 13r reads: *Regio celestis habet tres celos, firmamentum ut celum primum, Cristallinum ut 2m Empyreum et 3m....*

above them, cry out, knowing this: “These are the ones whom we held for some time in derision.”

The quotation at the end is from the apocryphal Book of the Wisdom of Solomon 5:3: *Hi sunt quos habuimus aliquando in derisum*. The rainbow-like curved surface on which the Gates of Paradise rest has text that reads *Sic in aere circumdant electi tamquam Stelle Jhesum iudicem*, “Thus in the air, the chosen surround Jesus Christ like stars,” drawing on Daniel 12:3.⁹⁰ Below the rainbow we have *Jhesus* and the *apostoli* in the sky, and they are labeled *Tribunal Judiciis*, i.e. *Tribunal Judicii*, “Tribunal of Judgment,” and they are above the *mons oliveti*, “Mount of Olives.” Just below the Mount of Olives, and along the top edge of the image of the earth, we read *Dampnati stabunt super hanc rupturam terre immobiles*, “The damned stand immobile above this abyss in the earth.” Above the hole in the earth are the words *Ruptura terre unde cadetur in infernum*, “Abyss in the earth from which one falls into Hell,” and the water in which the earth sits is labeled *mare oceanum*, “The ocean.”

The Map and Text on f. 12r

The penultimate folio (Fig. 5.10) of the treatise on the Apocalypse supplies detailed discussion of the Last Judgment for which the map on the preceding folio left inadequate space; as well as a small map that is essentially the same as the blank map of the earth on f. 11v, but with what looks like a grid of latitude and longitude—but perhaps we are to understand that after the earth is crystallized (as described in the text), its appearance is like that of the wall of the Heavenly Jerusalem, which is depicted as a grid on ff. 11v and 13r. The text runs:

Ruptura terre data in iudicio sententia ut impii incident figuratur et arguitur ex ruptura terre numerorum 16 in quam chore cum suis cecidit nec tamen corpora illorum ruerunt in tophet⁹¹ tunc sed circa superficiem terre manserunt profundius tamen communi in sepulchro, sed prius

90 Daniel 12:3, *Qui autem docti fuerint, fulgebunt quasi splendor firmamenti: et qui ad iustitiam erudiunt multos, quasi stellae in perpetuas aeternitates*.

91 The reference is to the story of Korah in Numbers 16, who rebelled against Moses. See Numbers 16:31–33: “As soon as he finished saying all this, the ground under them split apart and the earth opened its mouth and swallowed them and their households, and all those associated with Korah, together with their possessions. They went down alive into the realm of the dead, with everything they owned; the earth closed over them, and they perished and were gone from the community.” For a good discussion of the episode see John S. Vassar, *Recalling a Story Once Told: An Intertextual Reading of the Psalter and the Pentateuch* (Macon, GA: Mercer University Press, 2007), pp. 45–61.

FIGURE 5.10 *Huntington HM 83, f. 12r. Description of the Last Judgment, Resurrection, and renewal of the earth, with a small map of a featureless earth which the text says represents the world after the Last Judgment (COURTESY OF THE HUNTINGTON LIBRARY).*

resurrectionem novissimam ruent simplum in infernum cum omnibus dampnatis quod tali opere tunc pronunciatum est.

Omnes homines resurgent. Anime cum virtute e celo descendent ad sua corpora adsumenda, quibus resumptis, ascendent obviam christum in aera ad rubeum circulum in tessal (i.e. Thessalonians) 4,⁹² et Anime dampnatorum de inferno ascendent ad resumenda corpora sua, quibus resumptis, stant fixi immobiles super terram, quam nimis inordinate fixe dilexerunt, quorum capud erit gog antichristus. iuxta illud Jeremiah 30. "In capite impiorum."⁹³ Et ne mirere tribunal christi et omnes beatos sic in aere tenere ex figura duorum filiorum chore quos deus tenuit in aere donec corpus patris chore cum omnibus suis in terra conclusus est, sicut scriptura dicit: "factum est grande miraculum quod chore pereunte, filii eius non perirent."⁹⁴ Sic hic erit impii ruent in terram ruptam quod pii vident non ruentes. Etiam deus tenet gravissima elementa aquam terram solem lunam et sidera et totam mundi machinam in nichilo et non cadunt, quo considerate, non mirabere hanc figuram.

"Replete terram" verbum dei ad Adam et Noe de generatione humana,⁹⁵ qua terra habitabilis successive replenda erat, et nunc anno mundi 6684 repleta est, primo ad scripturam intelligi, et secundo prophetice videtur intelligi. dupliciter, primo ut tot erunt dampnandi quod in iudicio terra habitabilis stet plena hominibus impiis, secundo quod in primis eis replebitur, et ut sic "replete" imperatum pro futuro iudicatum, exponitur ut "replebitis," quod sepe in scripturis divinis sit. Et hoc oritur penalissimum dampnatis quod sic infernus replebitur quod ut vertere se <non> possint dampnati.

Nec etiam mirere vocem domini Jesum christi iudice posse audiri tam remote per terram habitabilem ex omni parte orientali occidentali australi et aquilonari quasi per 2000 miliaria teutonica. Venia qui clamat sua mandata promulgando super montem synai circa medium temporis mundi ut plane indicitur per tria miliaria teutonica, etiam potest clamare

92 Both the general idea here and the phrase *obviam christum in aera* come from Thessalonians 4:17: *Deinde nos, qui vivimus, qui relinquimur, simul rapiemur cum illis in nubibus obviam Christo in aëra, et sic semper cum Domino erimus.*

93 See Jeremiah 30:23: *Ecce turbo Domini furor egrediens procella ruens in capite impiorum conquiescet.*

94 Numbers 26:10–11: *Et factum est grande miraculum, ut, Core pereunte, filii illius non perirent.*

95 Genesis 1:28: *Benedixitque illis Deus, et ait: Crescite et multiplicamini, et replete terram...;* and Genesis 9:1: *Benedixitque Deus Noë et filiis ejus. Et dixit ad eos: Crescite, et multiplicamini, et replete terram.*

ut sua sententia contra transgressores suorum mandatorum audiat
clare ab omnibus quantulumque remotis quod eadem est potentia divina
inconsueta.

Beati ad modum huius circuli tribunal cum Iudice et assessoribus est
tante claritate quod celi stelliferi cum sole et planete splendorem superat
Johel 2 et 3.⁹⁶ Et sententia data cum maiori claritate celum intrant quod
splendorem ignis assumpserunt tunc quod dicit Basilius super psalmum
28: "deus dividet tunc calorem ignis a splendore tantum calorem mit-
tendo ad partem dampnatorum ut amplius crucientur et totum
splendorem ad partem beatorum ut amplius jucundentur."⁹⁷

Sententia data dampnatis in terra clausis, erit innovatio mundi ut sit
celum visibile novum et terra nova sic nova ut sequens figura ostendit.⁹⁸
Veniam <et> mundi novitatem impii non videbunt beati autem videbunt
et tum invisibile nunc tunc autem valde visibile intrant. Etiam terra hab-

96 The references to Joel here are a bit surprising. The author seems to be citing Joel 2:10 and 3:15, which speak of the sun and moon being darkened and the stars no longer shining, but that imagery goes a step further than the tribunal simply being brighter than the stars, sun, and planets, to imply that the brightness of the tribunal will obscure the light of those celestial bodies.

97 There are differences in the various manuscripts and editions of St. Basil's *Homiliae in Psalmos*, and the version of the work cited here does not match well with that in the *Patrologia Graeca* 29:298, or with that in St. Basil, *Opera omnia quae extant, vel quae ejus nomine circumferuntur, ad mss. codices gallicanos, vaticanos, florentinos & anglicos, necnon ad antiquiores editiones castigata* (Paris: J. B. Coignard, 1721–30), vol. 1, p. 361, though the version cited here is translated in Saint Basil, *Exegetic Homilies*, trans. Agnes Clare Way (Washington: Catholic University of America Press, 1963), p. 206. However, it does match well the version cited by Jacobus de Voragine (c. 1230–1298) in his *Legenda aurea: vulgo historia Lombardica dicta*, ed. J. G. Théodor Graesse (Dresden and Leipzig: Impensis Librariae Arnoldianae, 1846), chapter 1, "De adventu Domini," p. 8: *Nam secundum Basilium Deus facta mundi purgatione dividet calorem a splendore et totum calorem mittet ad regiones damnatorum, ut amplius crucientur, et totum splendorem ad regionem beatorum, ut amplius jucundentur*; also see Jacobus de Voragine, *The Golden Legend: Readings on the Saints*, trans. William Granger Ryan (Princeton: Princeton University Press, 1993), p. 9: "According to Saint Basil, once the purgation of the world is accomplished, God will separate the heat of the fire from its light and will send all of the heat to the region of the damned to torture them, and all the light to the region of the blessed to their great enjoyment." This version is also cited by St. Thomas Aquinas: see *The 'Summa Theologica' of St. Thomas Aquinas* (London: Burns, Oates & Washbourne, Ltd., 1913–), Third Part (Supplement), QQ. LXXXVII–XCIX. and Appendices, Question 97, Article 4, "Whether the Damned are in Material Darkness," pp. 172–173

98 See Revelation 21:1, *Et vidi caelum novum et terram novam primum enim caelum et prima terra abiit et mare iam non est.*

itabilis a primo usque ad tertium diem erat aquis cooperta. A tertia die ad sextem erat campus seminandus. A sexto die usque ad diluvium campus seminatus. In diluvio campus abluendus ut iterum seminaretur. Inde iterum campus seminatus et campus nudatus. Inde terra crystallisabitur et corpora humana ex ea formata fulgebunt ut sidera.

Sententia data et mali in inferno inclusi terre, reclusa est arca penitus mundata pulcherrime cristallizata et splendore decorata, manet sic in <circulum?> aquis discooperta propter iustos qui super eam ab impiis sunt varie tribulati et eam beatis pedibus calcaverunt, quorum summus et excelsus et maximus est iesus nazarenus, verus deus et homo qui suis divinis pedibus eam calcavit et suo pretioso sanguine de cruce rigavit. Sanctorum etiam corpora in ea etiam requiescerunt. Similiter et dominicum corpus in ea fuit sepultum in tertium diem et corpus dominicum sacramentale in campo mansit.

Hec figura esta mappa mundi post iudicium novissimum mutabit manens pro evum

Arca mundata est speculum dei et homine per evum

In hanc figuram impii in inferno claudentur. juxta illud “Colligite primum zizania,” etc.⁹⁹

The last three lines of the preceding text are beside the small map of the blank earth that has a grid on it. We translate:

The abyss in the earth—the sentence having been given in judgment that the impious should fall—is depicted, and it is based on the abyss in the earth in Numbers 16, into which Korah and his followers fell.¹⁰⁰ However, their bodies will not fall into Hell then, but will remain in the upper parts of the earth, very deep in a common grave, but before the Last Resurrection

99 See Matthew 13:30, *Sinite utraque crescere usque ad messem, et in tempore messis dicam messoribus: Colligite primum zizania, et alligate ea in fasciculos ad comburendum: triticum autem congregate in horreum meum.*

100 The reference is to the story of Korah in Numbers 16, who rebelled against Moses. See Numbers 16:31–33: “As soon as he finished saying all this, the ground under them split apart and the earth opened its mouth and swallowed them and their households, and all those associated with Korah, together with their possessions. They went down alive into the realm of the dead, with everything they owned; the earth closed over them, and they perished and were gone from the community.” For a good discussion of the episode see John S. Vassar, *Recalling a Story Once Told: An Intertextual Reading of the Psalter and the Pentateuch* (Macon, GA: Mercer University Press, 2007), pp. 45–61.

they will fall straight into Hell with all of the damned, as it was declared in that work (i.e. Numbers).

All men will rise again. The souls of the virtuous will descend from Heaven to assume their bodies, and when they have assumed them, they will ascend to meet Christ in the air at the red circle (i.e. rainbow), see Thessalonians 4.¹⁰¹ The souls of the damned will ascend from Hell to assume their bodies, and when they have assumed them, they <will> stand immovably fixed on the earth, which they loved far too much and intently; their chief will be Gog Antichrist. Regarding this, see Jeremiah 30, "On the head of the wicked."¹⁰² And do not marvel that the tribunal of Christ and all the blessed are thus suspended in the air, according to the example of the two sons of Korah, whom God held in the air while the body of their father Korah with all his people was swallowed by the earth, as the Bible says: "A great miracle was performed: although Korah died, his sons survived."¹⁰³ Thus will it be here: the impious will fall into the ruptured earth, which the pious will see, but they will not fall. Indeed, God holds the heaviest elements, namely the water, earth, sun, moon, and stars, and the whole structure of the world up in nothingness, and they do not fall—taking this into consideration, you should not be astonished by this diagram.

"Fill the earth" was God's word to Adam and Noah concerning the generation of men,¹⁰⁴ by which the habitable land was to be successively filled. And now, in the year of the world 6684, it is full. This may be understood first as Scripture, and second as a prophecy, in two senses, first, because there will be so many damned that in the Last Judgment the habitable land will be filled with impious men, and second, because it will be filled with them from the beginning, and thus as the imperative "Fill <the earth>" can be understood as standing for the future tense, meaning "You will fill," as is often the case in the Bible. And hence arises a very severe

101 Both the general idea here and the phrase *obviam christum in aera* come from Thessalonians 4:17: *Deinde nos, qui vivimus, qui relinquimur, simul rapiemur cum illis in nubibus obviam Christo in aëra, et sic semper cum Domino erimus.*

102 See Jeremiah 30:23: *Ecce turbo Domini furor egrediens procella ruens in capite impiorum conquiescet.*

103 Numbers 26:10–11: *Et factum est grande miraculum, ut, Core pereunte, filii illius non perirent.*

104 Genesis 1:28: *Benedixitque illis Deus, et ait: Crescite et multiplicamini, et replete terram...;* and Genesis 9:1: *Benedixitque Deus Noë et filiis ejus. Et dixit ad eos: Crescite, et multiplicamini, et replete terram.*

punishment to the damned, that Hell will be so full that the damned will <not even> be able to turn around.

Do not marvel that the voice of Jesus Christ, as judge, can be heard so far through the habitable earth, in all parts to the East, West, South, and North, as if across two thousand German miles. Clemency who proclaims his orders, promulgating <them> above Mount Sinai around the middle of the earth's history—as is plainly indicated—across three German miles, indeed he can shout so that his sentence against the transgressors of his orders can be clearly heard by everyone, no matter how distant, for so exceptional is the divine power.

The tribunal of this very blessed circle, with the judge and assessors, is of such brilliance that it surpasses the splendor of the star-bearing heavens with the sun and planets: Joel 2 and 3.¹⁰⁵ And after their sentence has been given, with even greater brilliance they enter Heaven so that they can then take up the splendor of fire, as Basil says on Psalm 28: “God will then separate the heat of the fire from the light, sending so much heat to the region of the damned that they will be tortured even more, and all the light to the region of the blessed so that they will have even more joy.”¹⁰⁶

105 The references to Joel here are a bit surprising. The author seems to be citing Joel 2:10 and 3:15, which speak of the sun and moon being darkened and the stars no longer shining, but that imagery goes a step further than the tribunal simply being brighter than the stars, sun, and planets, to imply that the brightness of the tribunal will obscure the light of those celestial bodies.

106 There are differences in the various manuscripts and editions of St. Basil's *Homiliae in Psalmos*, and the version of the work cited here does not match well with that in the *Patrologia Graeca* 29:298, or with that in St. Basil, *Opera omnia quae extant, vel quae ejus nomine circumferuntur, ad mss. codices gallicanos, vaticanos, florentinos & anglicos, nec non ad antiquiores editiones castigata* (Paris: J. B. Coignard, 1721–30), vol. 1, p. 361, though the version cited here is translated in Saint Basil, *Exegetic Homilies*, trans. Agnes Clare Way (Washington: Catholic University of America Press, 1963), p. 206. However, it does match well the version cited by Jacobus de Voragine (c. 1230–1298) in his *Legenda aurea: vulgo historia Lombardica dicta*, ed. J. G. Théodor Graesse (Dresden and Leipzig: Impensis Librariae Arnoldianae, 1846), chapter 1, “De adventu Domini,” p. 8: *Nam secundum Basilium Deus facta mundi purgatione dividet calorem a splendore et totum calorem mittet ad regiones damnatorum, ut amplius crucientur, et totum splendorem ad regionem beatorum, ut amplius jucundentur*; also see Jacobus de Voragine, *The Golden Legend: Readings on the Saints*, trans. William Granger Ryan (Princeton: Princeton University Press, 1993), p. 9: “According to Saint Basil, once the purgation of the world is accomplished, God will separate the heat of the fire from its light and will send all of the heat to the region of the damned to torture them, and all the light to the region of the blessed to their great enjoyment.” This version is also cited by St. Thomas Aquinas: see *The ‘Summa Theologica’ of St.*

After the sentence has been given and the damned are imprisoned in the earth, there will be a renewal of the earth, so that there will be a new Heaven visible and a new earth—new as the following diagram shows.¹⁰⁷ The impious will not see <God's> clemency and renewal of the world, but the blessed will see it, and what is now invisible will then be visible, and they will enter it. Similarly the inhabited lands from the first day to the third day were covered with water, from the third day to the sixth it was a field to be seeded, and from the sixth day until the flood it was a seeded field. At the time of the flood, the field had to be washed so that it could be seeded again. Then the field was seeded again, and <again> denuded. Then the earth will be crystallized, and human bodies formed from it will shine like stars.

After the sentence has been given, and the evildoers are imprisoned inside the earth in Hell, the rainbow (i.e. the renovated earth) is revealed, thoroughly cleaned, beautifully crystallized, and decorated with splendor. It remains thus in a circle, uncovered from the waters for the sake of the just, who suffered tribulations on it at the hands of the impious, and they had walked on it with their blessed feet. Of these just men, the highest, most sublime, and greatest is Jesus of Nazareth, the true God and <true> man who walked on it with his divine feet, and watered it with his precious blood from the cross. For the bodies of the saints will certainly rest in it. Similarly the Lord's body was buried in it on the third day, and the Lord's sacramental body remained in the field.

This diagram is the map of the world after the Last Judgment; the world will change, but remain in place forever.

The spotless rainbow is a mirror of God and man forever.

In this diagram the impious are imprisoned in Hell, in accordance with the phrase "First collect the weeds...", etc.¹⁰⁸

The prominence in this material of Korah, who is mentioned in connection both with the abyss into which the damned will fall, and in connection with the suspension of the tribunal in the air, is surprising. It may simply have been

Thomas Aquinas (London: Burns, Oates & Washbourne, Ltd., 1913-), Third Part (Supplement), QQ. LXXXVII.-XCIX. and Appendices, Question 97, Article 4, "Whether the Damned are in Material Darkness," pp. 172-173.

107 See Revelation 21:1, *Et vidi caelum novum et terram novam primum enim caelum et prima terra abiit et mare iam non est.*

108 See Matthew 13:30, *Sinite utraque crescere usque ad messem, et in tempore messis dicam messoribus: Colligite primum zizania, et alligate ea in fasciculos ad comburendum: triticum autem congregate in horreum meum.*

that Korah's rebellion was of particular personal interest to the author of HM 83, but it is worth mentioning that Korah's rebellion received more attention in rabbinical literature than in medieval Europe, and the prominence of Korah in HM 83 may reflect the time that the author spent in the Holy Land. The author indicates that the Anno Mundi when he wrote was 6684, and he supplies current Anno Domini dates of 1486 and 1488, so we can determine which of the several systems of Anno Mundi dating he was using. $6684 - 1486 = 5198$, so he was using a system in which Jesus was born in about Anno Mundi 5198. Eusebius of Caesarea in his *Chronicon* said that the Creation took place in 5199 BC, and Jerome in his *Chronicon* or *Temporum liber* indicated the same date, so the author of HM 83 was using a chronology in this tradition. The author's suggestion that the earth will be crystallized during the Last Days is unusual, and we do not know its source.

The Map and Text on f. 12v

The detailed description of the Last Judgment on f. 12r seems like it might be the end of the apocalyptic section of the manuscript, but in fact the section is brought to a close on f. 12v, where the author gives a brief account of the size of Hell and also describes the crystallization of the surface of the earth following the Last Judgment, which will insure that the blessed and the damned remain separated. We have not found a source for the idea that the earth is crystallized during the Last Judgment. Very importantly, the author also explains the purpose his apocalyptic maps: "I believe therefore that a firm faith in and frequent contemplation of these diagrams will more effectively restrain a man from sins than would many good words." That is, the cycle of illustration has an explicit moral function. The text ends with material about the three Babylonias that is very similar to that on f. 1r, whose presence here is puzzling.

The text is illustrated with a simple diagram of the relative diameters of earth and of Hell inside it (see Fig. 5.11); the legends on the diagram indicate that the diameter of the earth is 2186 German miles, and its circumference 8000 German miles, while the diameter of Hell is 2000 German miles, and its circumference 6100 German miles. These figures are curious, for while the author says that he calculated them according to the rules of geometry, the two sets of dimensions indicate the use of two different values for π . In a circle, if c is the circumference and d the diameter, $c = \pi d$, so $\pi (= 3.14159\ldots) = c/d$, but the values of π indicated by these numbers, $8000/2186 = 3.66$, and $6100/2000 = 3.05$, are not very close to the true value. So the author's training in geometry was not of a high caliber.

FIGURE 5.11 Huntington HM 83, f. 12v. A diagram of the relative diameters of the earth and Hell. The text discusses their dimensions, the crystallization of the earth following the Last Judgment, and its role in separating the blessed and the damned (COURTESY OF THE HUNTINGTON LIBRARY).

The text runs as follows:

Hanc figuram calculavi secundum regulas geometrie ex supposita quantitate ambitus terre 8000 miliarium teutonicorum et ex universale coniecturacione quod sicut terra habitabilis corporaliter est quarta pars, ita <corrum debeat?> dampnatorum habitatio perpetua extensa ad quartam partem ut vides in figura. Et erit etiam comparatio debita sepulcri infernalis perpetui ad nostra sepulcra temporalia, quod solent fodi terre, simaliter non oblique ad modum fossarum, sicut erit ruptura terre, sententia data, et sicut nostra temporalia sepulcra claudimus cadaveribus impositis, sic tunc unus (i.e. unis) hominibus in tophet lapsis recluditur terra, et eius superficies prius habitata cristallisatur. O quanta tunc lamenta lapsorum et labentium et gaudia in aere retentorum ut cum ihesu cristo ascendant in celum empirreum.

Et manebunt tunc due cristalli fortissime perpetue inter beatos et dampnatos, scilicet superficies terre cristallisata tanquam lapis grandis lacui superpositus, et celum cristallinum celo empirio proximum ut tunc vere et perfecte mali a bonis sint et manerint separati, qui in tunc a exordia mundi semper fuerunt convicti. Arbitror ergo quod harum figurarum firma fides et frequens consideratio efficacius hominem retraherent a peccatis quam multa bona verba.

Nota a convalibus superficie terre ad inferni tophet initium sunt 700 miliaria teutonica vel circiter, et ita limbus primum supremus in quod christus descendit vix distabat a cruce et sepulchro eius 200 miliaribus teutonicis.

Nota quod tres fuerunt babilonie. Una super flumen chobar ubi regnat Nabuchodonossor in qua fuit torris babel et hec deserta et distat a nova babilonia 30 dierum, fuit alexandria in egypto super nilum sita in qua regnavit pharao distans a nova 7 dierum et etiam est destructa. Tertia scilicet nova babilonia que dicitur gair vel kayr vel cana que distat ab Alexandria tribus dierum per terram et sex per aquas.

I calculated this diagram according to the rules of geometry from the supposed circumference of the earth, i.e. 8000 German miles, and from the universal conjecture that just as the inhabited land is physically one quarter <of the earth>, so the <...> perpetual habitation of the damned extends to the fourth part, as you see in the figure. And there will be the obligatory comparison of the perpetual infernal sepulcher to our temporary sepulchers, which are typically dug in the earth, very similarly to ditches, just as there will be an abyss in the earth after the judgment is

delivered. And just as we close our temporary sepulchers by putting cadavers on top, thus at that time when some men have fallen into Hell, the earth is closed up, and its surface, which had been inhabited, is crystallized. Then O how many laments of the fallen and falling, and joy of the saved in the air, when with Jesus Christ they ascend to the Empyrean Heaven.

And then there will remain two crystals, eternal and very strong, between the blessed and the damned, namely the crystallized surface of the earth, like a large stone placed on a lake, and the crystallized Heaven close to the empyrean Heaven, and then the good will be and will remain truly and completely separated from the evil, who from the beginning of the earth until that time had always been convicted. I believe therefore that a firm faith in and frequent contemplation of these diagrams will more effectively restrain a man from sins than would many good words.

Note that from the valleys of the earth's surface to the highest part Hell (*tophet*) it is 700 German miles, or approximately that. And so the first and highest purgatory to which Christ descends is barely 200 German miles from his cross and sepulcher.

Note that there were three Babylonias, one on the river Chobar (i.e. Khabur) where Nebuchadnezzar reigned, in which was the Tower of Babel, and this is <now> deserted, and is a thirty-day journey from the New Babylonia. <The second> was Alexandria in Egypt, located on the Nile, where the Pharaoh reigned, which is a seven-day journey from the New Babylonia, and it is now destroyed. The third, that is, the New Babylonia, is called Gair or Cairo or Cana, and it is three days from Alexandria by land, and six by sea.

The brief treatise on the Apocalypse in HM 83 is distinctive not only for its illustration of the Last Days with maps, but also for its selection of events to be described. Gone from its account are the Lamb of God, the Woman Clothed with the Sun, the Four Horsemen, the Seven Trumpets, the Seven Seals, the marking of people on the forehead, the Whore of Babylon, and any mention of any angel—gone, indeed, are most of the elements that were so popular with the artists of most cycles of Apocalypse illustration. The focus is on the chronology, mechanics, geography, and cartography of the Last Days.

Proof of Circulation: Wolfenbüttel, HAB, Cod. Guelf. 442 Helmst.

The apocalyptic material in HM 83 is very distinctive, previously unstudied, and almost unknown, and we see no evidence of its influence on later works about the Apocalypse. The question arises, then, as to whether the work circulated, or whether perhaps it was a private exercise by the author that remained on his shelf after he composed it. The fact that the texts in HM 83 were written by three scribes indicates that it is not the author's autograph manuscript, and the allusive and disjointed style of some parts of the text create the impression that it could be an abbreviated version of a longer work—all of which implies at least some copying and reworking of the texts.

But in fact excellent evidence that both the texts and maps preserved in HM 83 circulated is provided by a manuscript in Wolfenbüttel, Herzog August Bibliothek, Cod. Guelf. 442 Helmst., which contains some maps that are cruder and also somewhat modified versions of those in HM 83, and also some texts that are very closely related to some of those in HM 83. Moreover, some of these texts in the Wolfenbüttel manuscript have marks indicating the line breaks in the manuscript from which they were copied, and those line breaks do not correspond to those in the texts in HM 83, so the Wolfenbüttel manuscript demonstrates the existence of at least one other manuscript of the works in HM 83 (i.e. a third, beside HM 83 and the Wolfenbüttel manuscript).

Wolfenbüttel, Herzog August Bibliothek, Cod. Guelf. 442 Helmst., is a fifteenth-century miscellaneous manuscript written on paper, with works principally on religious subjects.¹⁰⁹ The manuscript contains several sections that relate to the Apocalypse and some geographical works, including excerpts from Bartholomaeus Anglicus,¹¹⁰ so the subject matter of part of the manuscript is similar to that in HM 83:

- ff. 66v–68v, *Signa tribulationis proxime, qua ecclesia reformabitur ante Gog*
- ff. 86r–86v, *Apocalypsis*
- ff. 87r–89r, *De Gog et Mahometo*

¹⁰⁹ Wolfenbüttel, Herzog August Bibliothek, Cod. Guelf. 442 Helmst. has been digitized and a PDF of the whole manuscript can be downloaded from <<http://diglib.hab.de/mss/442-helmst/start.htm?image=00001>>. It is described by Otto von Heinemann, *Die Helmstedter Handschriften* (Frankfurt am Main: Klostermann, 1963–65), vol. 1, pp. 343–345; and *Die handschriftliche Überlieferung der Werke des heiligen Augustinus*, vol. 5, *Bundesrepublik Deutschland und Westberlin*, ed. R. Kurz (Vienna: H. Böhlau, 1969–), part 2, pp. 511–512 (the latter relying on the former).

¹¹⁰ On the excerpts from Bartholomaeus Anglicus in 442 Helmst. see Meyer, *Die Enzyklopädie des Bartholomäus Anglicus* (see Ch. 4, n. 3), pp. 132–133 and 272.

There are some loose folios kept with the manuscript and written in the same hand as the manuscript, and one of these contains the following inscription:¹¹¹

Ordinationes congregationis provincialis in conventu Cellensi per reverendum patrem fratrem Hennygum Zelen quoad fratres de observantia ordinis minorum provincie Saxonie vicarium provincialem, de consilio et consensu venerabilium patrum diffinitorum anno Domini 1452 pro die virginis gloriose assumptionis celebrate.

Regulations of the provincial congregation in the convent of Celle for the reverend father, brother Hennygum Zelen, provincial vicar of the brothers of the order of Observant Friars Minor of the province of Saxony, published by the advice and consent of the venerable father assessors in the year 1452, for the day of the Assumption of the Blessed Virgin (i.e. August 15).

This inscription indicates a date of 1452 for the loose folios, but below we present strong evidence, in the form of another date on one of the loose folios, that they were written much later in the century, in 1492 or 1494—much closer in time to HM 83. Celle is northeast of Hanover, and about 180 km (112 miles) southwest of Lübeck.

Only three parts of the manuscript have received scholarly attention. Alfonso Margani has studied two of the songs in the manuscript,¹¹² and there is combination of a world map and map of the Holy Land which are drawn on parchment and pasted on the inside of the manuscript's front cover that has

¹¹¹ The inscription is transcribed by von Heinemann, *Die Helmstedter Handschriften* (see Ch. 5, n. 109), p. 345; and by Alfonso Margani, "Ein mittelniederdeutsches Glaubensbekenntnis aus dem 15. Jahrhundert (Helmstedt Hs. 442 der Herzog August Bibliothek Wolfenbüttel)," *La Torre di Babele: Rivista di letteratura e linguistica* 1 (2003), pp. 221–238, at 221.

¹¹² Alfonso Margani, "Eine mittelniederdeutsche Fassung des Hohenliedes aus dem 15. Jahrhundert und ihre lateinische Vorlage: Hs. Helmstedt 442 der Herzog August Bibliothek Wolfenbüttel," *Jahrbuch des Vereins für Niederdeutsche Sprachforschung* 116 (1993), pp. 28–71; and Margani, "Ein mittelniederdeutsches Glaubensbekenntnis" (see Ch. 5, n. 111).

attracted notice,¹¹³ though it has never been carefully studied, and is not discussed in any of the standard works on maps of the Holy Land.¹¹⁴

The map on the pastedown inside the front cover of the manuscript is of considerable interest here, as its depiction of the rivers flowing from Paradise (see Fig. 5.12) is strikingly similar to that on the map of the world's bodies of water on ff. 7v–8r in MS 83, and also to the depiction in the map on f. 14r (see Figs. 4.15 and 4.16). This map in the Wolfenbüttel manuscript thus merits a detailed discussion.

The map is in two parts, a map of the Holy Land at the top of the page, and a *mappamundi* below it. The map of the Holy Land quite remarkably functions as a detail of the world map: a miniature version of the former can be seen at the center of the latter. One puzzling feature of the map of the Holy Land, which is repeated in its miniature version in the world map, where the orientation is clear, is that the Red Sea (represented by a red rectangle) is located in the northern part of the Holy Land, rather than the south—and despite the fact that the Tigris, which flows into the Mediterranean south of the Holy Land, is labeled *hic vocatur mare rubrum*, “Here it is called the Red Sea.” Even in a map with confused geography like this one, the error about the Red Sea is surprising.

The central part of the map of the Holy Land is labeled *terrasancta*, and the black rectangle at the top of the map is labeled 140 stadia in its long dimension, and 40 in its short dimension: these are the dimensions ascribed to the Sea of Galilee by Hegesippus, who was thought to be the author of a fourth-century Latin adaptation of Josephus's *The Jewish War*, which bears the title *De bello Judaico et excidio urbis Hierosolymitanae*, in book 3, chapter 26.¹¹⁵ As the

113 On the map on the inside cover of 442 Helmst. see Richard Uhden, “Zur Herkunft und Systematik der mittelalterlichen Weltkarten,” *Geographische Zeitschrift* 37.6 (1931), pp. 321–340, at 335 and 340, no. 39; Destombes, *Mappemondes* (see Ch. 4, n. 37), p. 189, no. 51.39 (where the manuscript is mis-dated to the fourteenth century); Arentzen, *Imago mundi cartographica* (see Ch. 4, n. 157), pp. 128–129, 212, 276, and plate 36; and Heitzmann, *Europas Weltbild in alten Karten* (see Ch. 4, n. 157), pp. 36–37, which includes a color illustration of the map.

114 Nebenzahl, *Maps of the Holy Lands* (see Ch. 4, n. 60); Harvey, *Medieval Maps of the Holy Land* (see Ch. 4, n. 60).

115 See *Patrologia Latina* 15:2199, where the work is attributed to St. Ambrose and carries the title *De excidio urbis Hierosolymitanae libri quinque*, and the passage reads: *Namque lacus ipsius, velut quodam maris ambitu sinus amplissimus, in longitudinem centum quadraginta extenditur stadia, latitudine quadraginta diffunditur crispantibus aquis auram de seipso excitans*. For discussion of the textual tradition of Hegesippus see Vincenzo Ussani, “Un ignoto codice cassinese del così detto Egesippo e i suoi affini,” in *Casinensia*

FIGURE 5.12 A map of the Holy Land and of the world; the depiction of the world's rivers is very similar to that in HM 83, ff. 7v-8r and 14r—compare Figs. 4.15 and 4.16 (WOLFENBÜTTEL, HERZOG AUGUST BIBLIOTHEK, COD. GUELF. 442 HELMST., VORDERSEITE, BY PERMISSION OF THE HERZOG AUGUST BIBLIOTHEK).

dimensions identify the body of water as the Sea of Galilee (and also reveal one of the sources the cartographer was using), we can deduce that the river to the right of this body of water is the Jordan River, and the body of water to the right of the Jordan is the Dead Sea. The depiction of islands in the Dead Sea is of interest, as is the bridge indicated over the Jordan,¹¹⁶ as we do not know of any other depiction of a bridge over the Jordan in a medieval map. The city of Jerusalem is indicated with some abstract symbols near the Jordan, and the port of Acre seems to be indicated by a red triangle in the lower part of the map. The two rivers to the left of the Sea of Galilee probably represent the Jor and Dan,¹¹⁷ and then we have—very strangely—the Red Sea, with the black line across it indicating the path that the Tribes of Israel took while fleeing from the Pharaoh. This path is indicated similarly on many nautical charts and some *mappaemundi*, such as the Hereford map. To the left in the map of the Holy Land there is a legend that reads:

secundo lapide a iericho est mons quarentana ubi christus ieiuavit et temptatus est. Et sub illo monte fluit rivulus fontis quem sanavit heliseus. Secundo miliario a quarentana stat mons thabor distat de ierusalem iiii diebus.

At the second milestone from Jericho is Mount Quarentana where Christ fasted and was tempted. And at the foot of that mountain flows the stream from the spring that Elisha restored. At the second milestone from Quarentana is Mount Tabor which is four days distant from Jerusalem.

(Montecassino: ex Typographia Casinensii, 1929), vol. 2, pp. 601–614; reprinted in his *Scritti di filologia e umanità* (Naples: Ricciardi, 1942), pp. 250–265; for discussion of the work also see Albert A. Bell, “Josephus and pseudo-Hegesippus,” in Louis H. Feldman and Gohei Hata, eds., *Josephus, Judaism, and Christianity* (Detroit: Wayne State University Press, 1987), pp. 349–361; and Neil Wright, “Twelfth-Century Receptions of a Text: Anglo-Norman Historians and Hegesippus,” *Anglo-Norman Studies* 31 (2009), pp. 177–195.

116 There were two bridges over the Jordan between the Sea of Galilee and the Dead Sea in the Middle Ages, the Umm al-Qanāṭir and the Jisr al-Mujamiyya: see Andrew Petersen, “Medieval Bridges of Palestine,” in Urbain Vermeulen and Kristof d’Hulster, eds., *Egypt and Syria in the Fatimid, Ayyubid and Mamluk Eras, 6: Proceedings of the 14th and 15th International Colloquium Organized at the Katholieke Universiteit Leuven in May 2005 and May 2006* (Leuven: Uitgeverij Peeters, 2010), pp. 291–306, at 300 and 302, but there does not seem to be any way to determine which is depicted on this map.

117 On these two rivers see for example Isidore, *Etymologiae* 13.21.18.

Similar material appears in an earlier text, namely pseudo-Eugesippus's *Tractatus de distantiiis locorum Terrae Sanctae*,¹¹⁸ but the source seems to be Rorgo Fretellus's *Descriptio de locis sanctis*, composed in the twelfth century.¹¹⁹ We see that the cartographer—or the creator of the map he was copying—devoted considerable research to his work.

As mentioned above, the disposition of the rivers of Paradise on the *map-pamundi* on the inside cover of Helmst. 442 is very similar to that on the maps in HM 83 ff. 7v–8r and 14r (Figs. 4.15 and 4.16), and given how unusual this disposition is, we can be certain that these maps shared a source. The disposition of the rivers on f. 14r is more similar to that in the Wolfenbüttel manuscript, particularly in the way the Nile dips south into Ethiopia, and the sharpness of the turn in the course of the Tigris; also, these two maps share the red line that runs across Asia indicating the border of India. Outside the map to the south east is the following text:

dorix flumen in armenia ex eodem monte quo eufrates vel tygris oritur et dicitur alio nomine araxes aut arapsses a rapacitate qua omnia prosternit et interpretatur dorix medicamentum generationis et est brachium vel eufrates vel tygris vel utrumque isti <jereoi?> fluvii in <Armenia?> <incipiunt?> <...> caldeam

The Dorix River rises in Armenia from the same mountain as the Euphrates or Tigris, and is also called the Araxes or Arapsses from the 'rapacity' with which it overthrows all things, and 'dorix' means a repro-

118 The work of pseudo-Eugesippus is printed in *Patrologia Graeca* 133:991–1004, with the relevant passage on col. 1003.

119 See Rorgo Fretellus, *Rorgo Fretellus de Nazareth et sa Description de la Terre Sainte: histoire et édition du texte*, ed. P. C. Boeren (Amsterdam and New York: North-Holland Pub. Co., 1980), p. 41, chapter 73: *Secundo lapide ab Ihericho ad sinistram locus in deserto, quod Quarantena vocatur. In qua Ihesus quadraginta dierum totidemque noctium ieiunium complevit, eius ieiunio ieiunium nostrum consecrans et designans.... Secundo miliario a Quarantena contra Galyleam mons excelsus ille, diabolus in quo Ihesum iterum temptavit, ostendens ei omnia regna mundi et dicens: Si cadens adoraveris me, hec omnia tibi dabo. Sub Quarantena fontis illius rivulus, quem beatus Helyseus sanctificans sale conspersurn, eius sanata sterilitate de amaro potabilem reddidit.* On Mount Quarantena see the chapter in Bernhard von Breydenbach, *Peregrinatio in Terram Sanctam* (Mainz: Erhard Reuwich, 1486), f. [53v]; and Bernardino Dinali, *La Jerosolomitana peregrinatione' del mercante milanese Bernardino Dinali (1492): dal codice della Biblioteca statale di Lucca*, ed. Ilaria Sabbatini (Lucca: Maria Pacini Fazzi, 2009), pp. 132–133.

ductive medicine, and it is a branch of the Euphrates or the Tigris or of both. Those rivers <...> Chaldea.

Most of this is taken from Bartholomaeus Anglicus, *De proprietatibus rerum* 13.7, his chapter on the Dorix, but it seems that the last part comes from a different source, as Bartholomaeus does not mention Chaldea in that chapter.

Within the *mappamundi*, from east (top) to west (bottom), are: *Eufrates*, *Tigris*, *Gyon*, *Phison*; the name *India* along the red line that indicates that region's western edge; *Armenie* just outside that line; and *Babilon* along the Euphrates. As mentioned above, the part of the Tigris closest to Jerusalem bears the legend *hic vocatur mare rubrum*, "Here it is called the Red Sea," which complicates matters as the Red Sea is also depicted to the north of Jerusalem. On the northeastern Mediterranean shore is *bisantium*,¹²⁰ but the place name by the miniature version of the map of the Holy Land in the middle of the *mappamundi* is illegible. The miniature version of the map of the Holy Land reproduces many details of the larger one, including the bridge over the Jordan. The mouth of the *Gyon* is labeled the *Nilus*, and the identity of the river is also confirmed by the depiction of its delta. The region through which a southern bend of the river flows is labeled *Etiopia*.

The *mappamundi* includes the same branch of water cutting diagonally across southeastern Europe that is labeled *Strata* on HM 83, ff. 7v–8r, and appears without label on other maps in that manuscript. In addition, the left-hand part of the 'T' of the T-O structure of the map is completed by a river that cuts off to the northeast rather than continuing directly north as the Tanais does on most *mappaemundi*, and it is tempting to identify this river with the Rha or Volga, which is how the corresponding river is identified on the map in HM 83, ff. 7v–8r. The northern part of the Wolfenbüttel map contains some

120 The use of the place name *bisantium* rather than *Constantinopolis* is very unusual. Chekin, *Northern Eurasia in Medieval Cartography* (see Ch. 4, n. 163), lists a few maps that use the place name Byzantium or variants thereof, namely the *mappaemundi* in Naples, Biblioteca Nazionale, MS IV F 43, f. 33v, eleventh century; Munich, Bayerische Staatsbibliothek, CLM 14731, f. 83v, made between 1145 and 1152 at the monastery of St. Emmeram in Regensburg; Paris, Bibliothèque nationale, MS lat. 6813, f. 2r, made at the end of the twelfth century, probably in Germany; and Dublin, Trinity College, MS 367, f. 85v, made in England in the first half of the thirteenth century: see Chekin's pp. 46–51 with the plates on pp. 353–356. Also see Chekin's "Die 'Warägischen Grenzpfähle' und andere Rätsel einer Regensburger Karte aus der Mitte des 12. Jahrhunderts," in Hermann Beyer-Thoma, ed., *Bayern und Osteuropa: aus der Geschichte der Beziehungen Bayerns, Frankens und Schwabens mit Russland, der Ukraine und Weissrussland* (Wiesbaden: Harrasowitz, 2000), pp. 95–116, esp. 107–110.

puzzling and inscrutable designs, and from this region a large river system flows southwest into Europe, making the North Pole a source of waters similar to Paradise in the East. None of these northern details appear on the maps in HM 83. Finally, Africa on the Wolfenbüttel map is, like Europe, devoid of toponyms, but it does contain this legend:

hec quarta Affrica communiter dicitur barbaria maior et in Hispania
parum homini de ea imperio (*sic*) Augustinus fuit in ypon<e> praesul
reor hanc quartam fore maledictam cum suo primo domino cham

This quarter of Africa is commonly called Barbaria Major, and in Spain there are few men from this kingdom. Augustine was praesul in Hippo. I believe that this quarter will be cursed along with its first ruler, Ham.

The place name *barbaria maior* is very rare;¹²¹ the ‘Curse of Ham,’ on the other hand, was a medieval commonplace.¹²²

While this map in the Wolfenbüttel manuscript is different in several significant ways from the maps in HM 83, ff. 7v–8r and 14r, particularly with regard to the long legends and the depiction of the far north, the similarities in their unusual river systems are so strong that we must conclude that the maps shared a common model. Even though the map on the inside of the cover of the Wolfenbüttel manuscript was evidently pasted in from elsewhere, it would seem to have come from the same source as other materials in the manuscript, which are also very closely connected with HM 83.

Beilage f. 1r

One of the leaves associated with 442 Helmst., which in the digitized version of the manuscript is designated image 275, and has now been assigned the designation Beilage f. 1r, has four crude maps (see Fig. 5.13) that are intimately related to some of the apocalyptic maps in HM 83, though there are differences between them. The largest of these four maps, which is to the left on the page, is like a combination of the map on HM 83, f. 9r, which shows the world from

121 One text in which the place name *barbaria maior* appears is in Ramon Llull's *De fine* 2.3: see Ramon Llull, *Raimundi Lulli Opera Latina* (Turnhout: Brepols, 1975–1989), vol. 9 (120–122: in Monte Pessulano anno 1305 composita) (= *Corpus Christianorum Continuatio Mediaevalis* 35), p. 277, *Et sic Andalusia acquisita bellator rex cum suo exercitu ampliato ad Maiorem Barbariam poterit ultra ire, primo uidelicet ad regnum Cepte, quoniam de mari nisi per septem miliaria illud distat.*

122 See Benjamin Braude, “Cham et Noé. Race et esclavage entre judaïsme, christianisme et Islam,” *Annales* 57.1 (2002), pp. 93–125.

FIGURE 5.13

Different versions of four of the apocalyptic mappae mundi in Huntington HM 83—compare Figs. 5.3, 5.6, 5.7, and 5.8 (WOLFEN-

BÜTTEL, HERZOG AUGUST BIBLIOTHEK, COD. GUELF. 442 HELMST., BEILAGE F. 1R, BY PERMISSION OF THE HERZOG AUGUST BIBLIOTHEK).

639–1514, and that on f. 9v, which shows the world from 1514–1570: it has a geographical configuration similar to that of the earlier map, albeit with fewer details, but it uses the device of the swords of Muhammad to indicate the threat to Christendom. And here the swords, rather than pointing out towards the edges of the earth as they do in HM 83 f. 9v, point menacingly at Europe, and from the tip of each of them a line is drawn across Europe, evidently indicating the path it will take. Within Europe, the dissention among Christian leaders that on HM 83 f. 9r is described verbally, is here represented symbolically, by pairs of Christian swords (with crosses in their pommels) set against each other.

The text outside this map in the upper left corner of the folio reads *ab anno christi 600 ad eius annum 1570 <...> Machamet*, “From the year of Christ 600 to his year 1570 <...> Muhammad.” In HM 83 the first turning-point year indicated in the treatise on the Apocalypse was 639, when Muhammad came to power, and the reference to the year 600 here would seem to indicate some sloppiness in copying information from the source manuscript. But 1570 is indeed one of the turning-point years in HM 83, the endpoint of the map on f. 9v, and the starting point of the map on f. 10r (see Figs. 5.5 and 5.6). Looking at the details of the map in Beilage f. 1r, *paradisus* is indicated by a red rectangle at the top of the map, outside the ‘O’ of the circumfluent ocean; Paradise is discussed in HM 83, and is also represented by a castle from which the four rivers of Paradise flow in the maps on ff. 7v–8r and 14r (see Figs. 4.15 and 4.16). In the circumfluent ocean, reading from east (top) to west (bottom), we have: *X tribus Israel, Amazonas, lucanania* (Lapland), *yslandia, norwegia, Suecia, dacia, Scotia, Anglia, britania*. The islands indicated are very similar to those on the maps on HM 83, ff. 3r and 6v–7r (see Figs. 4.9 and 4.14), and to a lesser extent to those on f. 9r (see Fig. 5.3), the prophecy map for the years 639–1514, so this map in Wolfenbüttel represents a recombination of information about islands available on the maps in HM 83. Within the *orbis terrarum*, reading from east to west, we have: *India, Tartaria, Soldanus*. On the map in HM 83 f. 9r, this same segment of the map is occupied by the Chaldeans. The *Soldanus* is the *babilonie soldanus* of the map in HM 83 f. 9r, i.e. the Sultan of Egypt.

In the central part of the Wolfenbüttel map we read *ante annum christi 1514 sic 5 gladii intrant europam*, “Before the year of Christ 1514 five swords thus enter Europe.” There are also five swords on the map in HM 83, f. 9v, but on that map only one of them enters Europe. Just to the left of this legend there is a red vertical line with no evident function, but there is a vertical line in exactly the same position on the map in HM 83, f. 9v. The red capital ‘T’ to the left of this line in the Wolfenbüttel map stands for *Turkia*, as we can gather both from the key to the map to the left of Paradise, where *Turkia* is written with a red ‘T’ and

the rest of the word in black ink, and by analogy with the map in HM 93, f. 9v. The same key indicates that the small red rectangle at the center of the map stands for *Jerusalem*, and the same analogy indicates that the 'C' on the Wolfenbüttel map represents *Constantinopolis*.

In the southern (right-hand) part of the map, a line cuts east and west across Asia, Africa, and the circumfluent ocean, and just north of the line is the phrase *i machamethii*, "The Muslims." The implication seems to be that there are no Muslims south of that line, and this is not a feature shared by any of the maps in HM 83. In Africa there is the name *myramamolon*, i.e. Miramamolin, who was mentioned on the map in HM 83 f. 9v;¹²³ and the place name *Affrica*.

The hilts of the non-Christian swords are beside some of the names on the map, and it seems that we are to understand that one of the swords represents the Turks, another the Tartars, another the Sultan of Egypt, and another Miramamolin; there is no name associated with one of the swords in the north. The line emanating from the sword of the Sultan of Egypt passes right through Jerusalem, with clear implications. The lines emanating from the swords of Miramamolin, the Sultan of Egypt, and the anonymous sword intersect in one point, and it is tempting to think that that point is supposed to represent Rome.

To the right of the lower part of the large map on Beilage f. 1r is a map that is a crude rendering of the situation illustrated in the map on HM 83, f. 10r (see Fig. 5.6), which shows the years from 1570 to 1600, and depicts the ten horns of the Beast of Daniel 7, with Antichrist rising in the middle represented by a series of nested triangles. The rubric to the left of the map reads *regnum Christi per 30 annos vel...*, "The kingdom of Christ for thirty years or..." The reference to thirty years indicates that the map shows the same time period as that on HM 83, f. 10r (1570–1600), and also recalls a phrase on f. 16r of that manuscript, *Ab hora eadem erit regnum Christianorum per totum mundum per 30 annos per 10 reges qui maiorem laborem fecerunt in delendo sectam machometicam. Et gog antichristus educatur et crescit*, "From that same moment, the kingdom of Christians will exist throughout the whole world for thirty years through ten kings who performed a large task in destroying the Muhammadan sect. And Gog Antichrist is raised and grows." In the map on Wolfenbüttel Beilage f. 1r, it is possible to read the word *rex* written between some of the horns of the Beast of Daniel 7, just as in HM 83 f. 10r, but the names of their countries are not legible, except for *Indie* (without *rex*) in the lower left.

Above this map on Beilage f. 1r is a map very similar to that on HM 83 f. 10v (see Fig. 5.7), which covers the years 1600 to 1606 and depicts the four horns of Antichrist, which are depicted as huge peninsulas in the circumfluent ocean,

123 For bibliography on Miramamolin see Ch. 5, n. 46.

and represent the four ways he deceives people. The rubric to the right reads, *Signum Gog Antichristi 6 annis ab anno chrsiti 1600 ad eius annum 1606*, “The sign of Antichrist <will last> six years, from the year of Christ 1600 to 1606,” specifying the same span of year as the map in HM 83, f. 10v. At the center of the map is *Gog*, much as *Antichristus* is at the center of HM 83 f. 10v; the upper peninsula is labeled *Calliditas*, that to the left *cornu dolositatis*, that to the right *Cornu mentite deitatis*, and that at the bottom *Crudelitatis*: the horns are the same as in HM 83 f. 10v. But this map on Beilage f. 1r adds something not present on HM 83 f. 10v: inverted horns that point inward in between the horns of Antichrist that seem intended to counteract them. The ‘counterhorn’ on the upper right lacks an identifier, and the identifier of the one on the upper left is illegible, but the one on the lower right reads *Cornu vere deitatis*, “Horn of the True God,” and that on the lower left reads *constantie et victorie*, “<Horn> of perseverance and victory.” There is no hint of these ‘counterhorns’ anywhere in HM 83.

Finally, there is a small map on the far right of Beilage f. 1r that is a crude and less detailed rendering of the information presented in the map on HM 83, f. 11r, which covers the years 1606–1661 (an error for 1651), and shows the flag of Christ triumphant in the middle of the world. The rubric below the Wolfenbüttel map reads *Regnum iesum christi 45 annis hic in terra et infra ubique sine fine ab anno christi 1606 ad eius annum 1651 finit <...> libri celestis*, “The kingdom of Christ <will endure> 45 years here on the earth and below and everywhere without end from the year of Christ 1606 to 1651; it ends <...> of the heavenly book.” There is a contradiction here in the idea that the kingdom of Christ will end after 45 years, on the one hand, and that it is *sine fine*, on the other, but perhaps the author just got carried away by enthusiasm. It is noteworthy that here the arithmetic of $1606 + 45 = 1651$ is correct, whereas in HM 83 the author arrived at the incorrect sum of 1661.

The similarities between the maps on Wolfenbüttel, Cod. Guelf. 442 Helmst., Beilage f. 1r, and the apocalyptic maps in HM 83 are overwhelming, and it cannot be doubted that they derive from a common model. At the same time, the differences between the maps point to a process of revision, though without other versions of the work we have no way of knowing how extensive or protracted those revisions may have been.

Beilage f. 2r

The largest map on the leaf on Beilage f. 1r, as we saw, is very similar to that on HM 83, f. 9r, and the Wolfenbüttel manuscript has a second leaf, image 277 in the digitized version of the manuscript, now designated Beilage f. 2r (see Fig. 5.14) with a map very similar to that on HM 83, f. 9r (see Fig. 5.3)—which is

FIGURE 5.14 A mappaemundi very similar to Huntington HM 83, f. 9r, the prophecy map illustrating the spread of Islam—compare Fig. 5.3 (WOLFENBÜTTEL, HERZOG AUGUST BIBLIOTHEK, COD. GUELF. 442 HELMST., BEILAGE F. 2R, BY PERMISSION OF THE HERZOG AUGUST BIBLIOTHEK).

better executed than that on Beilage f. 1r. As this map is very similar to that on Beilage f. 1r, we need only briefly point out the more important differences and remark on a few other points. Where the large map on Beilage f. 1r has *Tartaria*, the map on Beilage f. 2r has *Imperator tartarorum vagorum et stabilium*, “Emperor of the Tartars, both the nomads and those who live in one place,” and includes in this region *Baldacum*, i.e. Baghdad. On Beilage f. 1r it was not clear what group was associated with one of the swords that was going to attack Europe, but here we see that two of the swords will come from the Tartars, one

from the nomad Tartars, and one from the Tartars who live in one place. This map includes *Livonia* in the far north, and like the map on Beilage f. 1r, has a key, according to which 'C' stands for *Constantinopolis*, and the red rectangle represents Jerusalem. On this map, the name *Machametus*, which indicates that Muslims live north of the line in the south, is crossed out.

Beilage f. 2v

Beilage f. 1r has a map very similar to that on HM f. 10r, the prophecy map covering the years 1570–1600, and there is another leaf associated with the manuscript that has a similar map, that numbered image 278 in the digitized version of the manuscript, now designated Beilage f. 2v (see Fig. 5.15), which again is a more detailed version of the map on Beilage f. 1r. As the map is familiar, we can run through the details quickly. The rubric outside the map reads: *Regnum iesum christi hic in terra per 45 annos, inde suum iudicium et regnum ubique sine fine*, "The kingdom of Jesus Christ here in the earth <will last> 45 years; from that time his judgment and kingdom <will be> everywhere without end." Just beside this text we read *Jerusalem metropolis mundi*, but it is not clear that Jerusalem is represented on the map. The kingdoms listed between the horns on the map, reading first the left side top to bottom, are *Rex gallie*, *Rex ytalie*, *Rex hispanie*, *Rex Affrice*, and *Rex ethiope*; and on the right side top to bottom, *Rex gotie et Suecie*, *Rex grecie et Ruizie*, *Rex caldee medie et perside*, *Rex Indie et Iuddie*, and *Rex egipti*. In the middle of the nested central triangles we read *Gog anthichristus*, and in the other triangles, *Sic crescit sub 14 regibus quos subiicit antequam 30 annum*, "Thus he grows beneath the fourteen kings whom he subjected before the thirtieth year."

Beilage f. 3r

This folio, crowded with text, contains two numbered genealogies from Adam to Jesus with abundant annotation; they recall those on HM 83, ff. 16v and 17r. Such genealogies are not at all rare, so their presence in the two manuscripts cannot be taken as strong evidence connecting them, but it is minor corroborating evidence. It is worth remarking that both on the left on Beilage f. 3r and in the genealogy on HM 83, f. 16v, the scribe had problems in assigning the numbers of the list to the correct individuals, and in both cases these mistakes were corrected with short lines joining the correct number to the correct individual. These problems do not occur at the same points in the list, but it is tempting to think that the correspondence between numbers and names was not very clear in the models from which both scribes were working.

they were copied, and as these line breaks differ from those in the corresponding texts in HM 83, the Wolfenbüttel manuscript supplies clear evidence of the existence of a third manuscript of the works in HM 83, and thus further evidence of their diffusion.

The presence of what seems to be a rainbow at the top of the Wolfenbüttel page and two large concentric circles in the lower part of the page suggest that it is laid out as a combination of elements from HM 83, f. 11v (see Fig. 5.9), the image of the Last Judgment with the elect on a rainbow between the earth and Paradise, and f. 12v (see Fig. 5.11), the diagram indicating the relative diameters of the earth and Hell—and several of the texts on the folio in the Wolfenbüttel manuscript correspond with texts on the folio between these two in HM 83, i.e. f. 12r, which describes the Last Judgment and the changes the earth will undergo at the end of history. Moreover, some of the texts on the Wolfenbüttel page confirm the correspondence of these features. The text in the rainbow on Wolfenbüttel Beilage f. 3v reads:

Hic semicirculus ymaginandus est admodum supporte (or sperre) <...> super quartam partem terre habitam ab hominibus a principio mundi ad finem, qui in medio dividitur in duos circuitus <sua?> <suei?> 25 sub beatorum qui sic in <athere?> <...>quam stelle circumdant Jesum iudicem, et dampnatorum qui fixi immobiles stant super quartam partem terre quam nimis inordinate dilexerunt (*sic*) quasi et replent scilicet hanc usque ad vocem qua iudex eos sententiat: 'ite maledicti.'¹²⁴ Ad quam vocem hac quarta pars terre rumpetur et cadent in tophet et infernum <...>.

This semicircle is to be imagined like the support (or sphere) <...> above the quarter of the earth inhabited by men from the beginning of the world to the end, which is divided in the middle into two parts <....> the blessed who thus in the heavens are gathered like stars around Jesus the judge, and the damned stand immovably fixed on the quarter of the earth that they loved far too much and intently, and they fill it, namely this <circle>, until that utterance by which the judge will sentence them: "Go, evildoers." At which utterance, this quarter of the earth will break and they will fall into Tophet and Hell....

¹²⁴ The phrase *Ite maledicte* is a rare variant in Matthew 25:41, which usually reads *Discedite a me maledicti in ignem æternum*.

FIGURE 5.16 This page contains several elements familiar from HM 83: the rainbow of HM 83, f. 1v; the diagram of the diameters of earth and Hell similar to that in f. 12v, and texts that appear on f. 12r (WOLFENBÜTTEL, HERZOG AUGUST BIBLIOTHEK, COD. GUELPH. 442 HELMST., BEILAGE F. 3V, BY PERMISSION OF THE HERZOG AUGUST BIBLIOTHEK).

The similarity to the text in the rainbow on HM 83, f. 11v (*Sic in aere circumdant electi tamquam Stelle Jhesum judicem*, “Thus in the air, the chosen surround Jesus Christ like stars”) is clear, and the phrase *dampnatorum qui fixi immobiles stant super quartam partem terre quam nimis inordinate dilexerunt* (*sic*) is very similar to one on HM 83, f. 12r: *dampnatorum...stant fixi immobiles super terram, quam nimis inordinate fixe dilexerunt*.

The texts along the concentric circles in the lower part of the Wolfenbüttel page indicate that the diagram shows the relative diameters of the earth and Hell, just like the diagram on HM 83, f. 12v. The text just inside the right-hand part of the larger circle on the Wolfenbüttel page reads:

Hic circulus est ambitus et circuitus terre 8000 miliarium teutonicorum quarum 2000 miliaria teutonica sunt quarta pars que est terra. Notatur in hac figura per spatium inter duas lineas rectas A et B intus spatii medio Jesum Christum est scriptum

This circle is the outer limit and circumference of the earth, which measures 8000 German miles, of which 2000 German miles is one quarter, which is the known earth. The known earth is indicated in this diagram by the space between the two straight lines A and B, and in the middle of that space, ‘Jesus Christ’ is written.

The lines marked A and B are vertical lines tangential to the inner circle: it is interesting that the author thus indicates that the extent of the known part of the world coincides with the diameter of Hell. The text just inside the right-hand part of the inner circle on the Wolfenbüttel page reads:

Hic circulus est ambitus et circuitus inferni 6100 miliariarum teutonicorum ut ‘in circuitu impii ambulent’ psalmo 11.

This circle is the outer limit and circumference of Hell, which is 6100 German miles—as Psalm 11 says, “The wicked walk all around.”

The quotation is from Psalm 11:9; the figures of 8000 and 6100 for the circumferences are the same as those given in the diagram in HM 83, f. 12v. In the middle of the upper part of the inner circle on the Wolfenbüttel page there is a text written vertically that reads:

Diameter totius terre 2856 miliarium teutonicorum de quibus 2000 miliaria sunt diameter huius inferni tophet perpetui.

The diameter of the whole earth is 2856 German miles, of which 2000 miles are the diameter of this perpetual Hell, Tophet.

This figure agrees with the number supplied in exactly the corresponding position in the diagram in HM 83, f. 12r.

The preceding texts show a close similarity in layout and content of Wolfenbüttel Beilage f. 3v, on the one hand, and HM 83, ff. 11v and 12v on the other. In addition, several of the texts on the Wolfenbüttel page are very similar to texts on HM 83, ff. 12r–12v. Working down from the top of Beilage f. 3v, the first text that is similar to one in HM 83 is in the largish, irregularly shaped text box just to the left of center near the top of the page. The text in HM 83 to which it is similar, which is on f. 12r, reads:

Nec etiam mirere vocem domini Jesum christi iudice posse audiri tam remote per terram habitabilem ex omni parte orientali occidentali australi et aquilonari quasi per 2000 miliaria teutonica. Venia qui clamat sua mandata promulgando super montem synai circa medium temporis mundi ut plane indicitur per tria miliaria teutonica, etiam potest clamare ut sua sententia contra transgressores suorum mandatorum audiatur clare ab omnibus quantulumque remotoris quod eadem est potentia divina inconsueta.

The text near the top of the Wolfenbüttel page reads as follows; its close similarity to the passage in HM 83, f. 12r is immediately obvious, and we mark in italics the phrases that differ significantly from the corresponding ones in f. 12r:

Nec mirere vocem domini Jesum christi posse audiri tam remote per terram habitabilem ex omni parte orientali occidentali australi et aquilonari quasi per 2000 miliaria teutonica. Venia qui clamat sua mandata promulgando super montem synay circa medium temporis mundi ut plane indicitur per tria miliaria teutonica, *in <rerum?> sententia <...> eiusdem montis quod sic summatur ad 9 miliaria teutonica etiam potest clamare ut sua sententia contra transgressores suorum mandatorum item per eorum omnibus variationibus audiatur clare quantulumque remotis ab omnibus quia utrubique eadem est dei potentia inconsueta que miraculum dicitur et est.*

The text just to the right of center at the top of Beilage f. 3v is very similar to another passage on HM 83, f. 12r. The text in the Huntington manuscript runs:

Et ne mirere tribunal christi et omnes beatos sic in aere tenere ex figura duorum filiorum chore quos deus tenuit in aere donec corpus patris chore cum omnibus suis in terra conclusus est, sicut scriptura dicit: "factum est grande miraculum quod chore pereunte, filii eius non perirent." sic hic erit impii ruent in terram ruptam quod pii vident non ruentes. Etiam deus tenet gravissima elementa aquam terram solem lunam et sidera et totam mundi machinam in nichilo et non cadunt, quo considerate, non mirabere hanc figuram.

The text to the right of center at the top of Beilage f. 3v runs as follows, with significant differences indicated in italics:

Ne mirere tribunal christi et omnes beatos sic in aere tenere ex figura duorum filiorum chore quos *adhuc mortales* deus tenuit in aere donec corpus patris chore cum omnibus suis in terra conclusus est, sicut *scriptum est*: "factum est grande miraculum quod chore *cum suis pereuntibus duo eius* filii non perirent." sic hic erit impii ruent in terram ruptam quod pii vident non ruentes. Etiam deus tenet gravissima elementa Aquam *et* terram solem lunam et Sydera et totam mundi machinam in nichilo et non cadunt, quo considerate, non mirare hanc figuram.

Also, in the lower part of Beilage f. 3v, the text between the two large circles at about 11 o'clock is very similar to text in HM 83, f. 12r. The text in the Huntington manuscript runs:

"Replete terram" verbum dei ad Adam et Noe de generatione humana, qua terra habitabilis successive replenda erat, et nunc anno mundi 6684 repleta est, primo ad scripturam intelligi, et secundo prophetice videtur intelligi. dupliciter, primo ut tot erunt dampnandi quod in iudicio terra habitabilis stet plena hominibus impiis, secundo quod in primis eis replebitur, et ut sic "replete" imperatum pro futuro iudicatum, exponitur ut "replebitis," quod sepe in scripturis divinis sit. et hoc oritur penalissimum dampnatis quod sic infernus replebitur quod ut vertere se possint dampnati.

The text on Beilage f. 3v between the two large circles at about 11 o'clock runs as follows, with significant differences of words indicated in italics, and in addition, the order of the second and third thirds of the text is reversed:

“Replete terram” verbum dei ad Adam et Noe de generatione humana, qua terra habitabilis successive replenda erat, et nunc anno mundi 6690 repleta est, primo ad scripturam *intelligitur sic* secundo intelligitur prophetice *exponiendo* verbum imperatum moda pro futuro indicatum ut replete id est replebitis quod sepe sit in divinis scripturis. Ait “*Solvite templum hoc*,¹²⁵ *id est solvetis repletum* (i.e. templum) *et sic capitur dupliciter, primo quod tot erunt homines dampnandi quod in iudicio hoc extremo terra singulis hominibus.*

The difference in the *anno mundi* between the two texts is important. If we assume that the difference is not simply the result of scribal error, then the texts on these folios associated with the Wolfenbüttel manuscript were written six years after those in HM 83, i.e. in 1492 or 1494.

Also, in the lower part of Beilage f. 3v, inside the inner circle, on the left side, beginning on line 14 from the top, there is a text very similar to text in HM 83, f. 12r. The text in the Huntington manuscript runs:

Omnes homines resurgent. Anime cum virtute e celo descendunt ad sua corpora adsumenda, quibus resumptis, ascendent obviam christum in aera ad rubeum circulum in tessal 4, et Anime dampnatorum de inferno ascendent ad resumenda corpora sua, quibus resumptis, stant fixi immobiles super terram, quam nimis inordinate fixe dilexerunt, quorum capud erit gog antichristus.

The text on Beilage f. 3v on the left side of the inner circle, beginning at line 14, runs as follows, with the significant differences indicated in italics:

Nota omnes homines resurgent. *Omnes enim* anime virtute *de* celo descendunt *et resument* sua corpora et ascendent obviam iesum christum in aera in thessa 4 ad circulum rubeum. Anime dampnate de inferno ascendent ad resumenda sua corpora, quibus stant fixe immobiles <...> <rederi?> *sursum levare nequeant* super terram quam inordinate dilexerunt, quorum caput erit gog antichristus.

Further down in the same text on the left-hand side of the inner circle, there is some text that begins just to the left of the word ‘Tophet’ in the center of the diagram that is very similar to text in HM 83, f. 12r. Here is the passage in the Huntington manuscript:

¹²⁵ John 2:19.

Ruptura terre data in iudicio sententia ut impii incident figuratur et arguitur ex ruptura terre numerorum 16 in quam chore cum suis cecidit nec tamen corpora illorum ruerunt in tophet tunc sed circa superficiem terre manserunt profundius tamen communi in sepulchro, sed prius resurrectionem novissimam ruent simplum in infernum cum omnibus dampnatis quod tali opere tunc pronunciatum est.

And here is the text on Beilage f. 3v on the left side of the inner circle, beginning just to the left of the word 'Tophet' at the center of the diagram, with the significant differences indicated in italics. There is some damage to the folio in this area, and the lacunae have been supplied by comparison with HM 83, f. 12r:

Ruptura terre data in iudicio sententia <ut> impii incident figuratur et arguitur ex ruptura terre <numerorum 16> In quam chore cum suis cecidit Nec tamen cor<pora illorum> ruerunt *tunc in hunc Infernum* sed circa superfi<ciem ter>re manserunt profundius tamen communi sepulchra <sedeant?> <hec?> *sententia data. Ita ruit* simplum in infernum hanc tophet cum omnibus dampnatis quod tali tunc horrible opera pronunciatum est.

And finally, a passage from lower in the left-hand side of the inner circle in Beilage f. 3v, beginning eight lines from the bottom, is very similar to a passage on HM 83, f. 12v. Here is the passage in the Huntington manuscript:

Et manebunt tunc due cristalli fortissime perpetue inter beatos et dampnatos, scilicet superficies terre cristallisata tanquam lapis grandis lacui superpositus, et celum cristallinum celo empirio proximum ut tunc vere et perfecte mali a bonis sint et manerint separati, qui in tunc a exordia mundi semper fuerunt convicti. Arbitror ergo quod harum figurarum firma fides et frequens consideratio efficacius hominem retraherent a peccatis quam multa bona verba.

The text on Beilage f. 3v on the left side of the inner circle, beginning eight lines from the bottom, runs as follows, with the significant differences indicated in italics:

Et *erunt* tunc due cristalli fortissime perpetue inter beatos et dampnatos, scilicet superficies terre cristallisata tanquam lapis grandis lacui superpositus, et celum cristallinum celo empirio proximum. O <quanta?> <...>

lamenta lapsorum et labentium et gaudia in aeris retentorum ut cum <boni?> ascendent in celum empirium. Arbitror ergo quod harum figure firma fides et frequens aspectus plus retraherent hominem a peccatis quam multa bona verba.

These passages show not only that the works in HM 83 circulated, but also that they continued to be redacted for some time. The verbal differences in the passages just cited demonstrate revision, but it is impossible to know the process the author's texts underwent before reaching the forms in which we see them in HM 83 and Wolfenbüttel 442 Helmst. Are the texts in HM 83 earlier, more concise drafts which the author later expanded into the form we find in the Wolfenbüttel manuscript? The later date of the Wolfenbüttel pages (*anno mundi* 6690 for the Wolfenbüttel pages, versus 6684 for the Huntington manuscript) would seem to favor the suggestion that the texts underwent expansion, and the images of the swords in the *mappaemundi* on Beilage ff. 1r and 2r seem to be the result of a development from what we see on HM 83, f. 9v, as do the 'counterhorns' on Beilage f. 1r versus what we see in HM 83, f. 10v. But it is also at least possible that what we have in the Huntington manuscript is the result of a paring down of a longer, earlier version of the works.

The layout of Beilage ff. 3r and 3v of the Wolfenbüttel manuscript is much less elegant than the corresponding pages in the Huntington manuscript: the Wolfenbüttel pages are closer to an author's working copy of the work, while the Huntington manuscript seems designed for presentation.

Another question presented by the loose folios associated with the Wolfenbüttel manuscript is the relationship between the smaller folios with the maps (Beilage ff. 1r, 2r, 2v) and the large folios dominated by text (Beilage ff. 3r and 3v). The diagram in the lower half of Beilage f. 3v indicates the relative diameters of Hell and the earth, and is similar to the diagram in HM 83, f. 12v (with which it shares a text). The large size of the diagram indicates that the scribe was willing to draw the maps large. Yet the maps on Beilage ff. 1r, 2r, and 2v are small, and it is at least possible that the small maps come from one redaction of the work, and the larger pages (Beilage f. 3) from another.

Other Attempts to Map the Apocalypse

The focus on geography and cartography in the apocalyptic material in HM 83 and Wolfenbüttel 442 Helmst. is unique among illustrated accounts of the Apocalypse, despite the great variety of programs illustrating the Last Days

that were created over the centuries.¹²⁶ However, there are other cases in which maps are part of these programs, and some words about these maps are necessary as they shed light on the program in HM 83 and 442 Helmst. by way of contrast, and demonstrate more completely the independence and originality of the programs in these two manuscripts.

The Revelation of St. John describes many transformations of the earth: the islands and mountains are twice said to move, the sea turns to blood, a star falls to earth, and indeed the earth and Heaven are entirely remade (Revelation 21:1). It seems reasonable to expect that the global scale of some of these changes would have inspired medieval artists to use multiple *mappaemundi* or images of the world in cycles illustrating the Apocalypse, but in fact there is only one passage that is often illustrated with a *mappamundi*. That passage is Revelation 7:1, and the reference to the four corners of the earth in that text naturally lends itself to illustration with a map:

After this I saw four angels standing at the four corners of the earth, holding back the four winds of the earth to prevent any wind from blowing on the land or on the sea or on any tree.

A number of the manuscripts of Beatus of Liébana's *Commentary on the Apocalypse*, which was composed in the eighth century, are illustrated with detailed *mappaemundi* that illustrate the parts of the earth assigned to the Apostles to evangelize.¹²⁷ But several manuscripts are also illustrated with simpler *mappaemundi* that specifically illustrate Revelation 7:1. The earliest surviving illustrated manuscript of the work, New York, Morgan Library, MS M.644, which dates from c. 940–945, has a well-known *mappamundi* on ff. 33v–35r, and a less detailed *mappamundi* illustrating Revelation 7:1–3 on

¹²⁶ For a detailed list of other manuscripts that contain illustrations of the Apocalypse see Richard Emmerson and Lewis, "Census and Bibliography" (see Introduction, n. 1).

¹²⁷ The literature on Beatus *mappaemundi* is very large; see for example Gonzalo Menéndez-Pidal, "Mozárabes y asturianos en la cultura de la Alta Edad Media en relación especial con la historia de los conocimientos geográficos," *Boletín de la Real Academia de la Historia* 134 (1954), pp. 137–291; Ingrid Baumgärtner, "Visualisierte Weltenräume. Tradition und Innovation in den Weltkarten der Beatus-tradition des 10. bis 13. Jahrhunderts," in Hans-Joachim Schmidt, ed., *Tradition, Innovation, Invention. Fortschrittsverweigerung und Fortschrittsbewußtsein im Mittelalter* (Berlin and New York: Walter de Gruyter, 2005), pp. 231–276; and Sandra Sáenz-López Pérez, *The Beatus Maps: The Revelation of the World in the Middle Ages* (Burgos: Siloé, 2014).

f. 115r.¹²⁸ In the four corners of a rectangular frame, four angels, rather than restraining the winds, blow at the earth, each labeled *ventus*. Another angel enters at the top of the composition, its feet covered with the sun, and holding a scepter topped with a cross in one hand; this is the angel of Revelation 7:2–3 who comes from the rising of the sun bearing the sign of the living God with which to mark the foreheads of the servants of God. Around the edge of the image is the circumfluent ocean, here labeled *mare*, and in the middle the oblong disk of the earth. On the earth are the servants of God, and several trees, those which the winds are to be prevented from damaging. This *mappamundi*, rather than supplying geographical details of the earth, presents it as a stage for the playing out of Christian history.¹²⁹

There are corresponding illustrations in several other manuscripts of Beatus's *Commentary*.¹³⁰ For example, in the late eleventh-century St-Sever Beatus (Paris, Bibliothèque nationale de France, MS lat. 8878), in addition to its oft-reproduced *mappamundi* on ff. 45bisv–45terv, has an illustration of Revelation 7:1–3 on f. 119r (Fig. 5.17).¹³¹ Many of the elements are similar to those in the Morgan illustration just described, but here the *orbis terrarum* is circular rather than oblong; the angels at the corners of the earth hold the heads of personified winds, two of which they restrain, and one of which is at

128 This *mappamundi* in Morgan MS M.644, f. 115r, is reproduced in John Williams, *The Illustrated Beatus: A Corpus of the Illustrations of the Commentary on the Apocalypse* (London: Harvey Miller, 1994–2003), vol. 2, fig. 49. There are reproductions of all of the manuscript's miniatures in Beatus of Liébana, *El Beato de San Miguel de Escalada: manuscrito 644 de la Pierpont Morgan Library de Nueva York* (Madrid: Casariego, 1991); there is also a facsimile of the manuscript, Beatus of Liébana, *Apocalipsis de San Juan* (Valencia: Scriptorium, 2000–2001).

129 This image of the world does fulfill the definition of 'map' supplied by Harley and Woodward in *The History of Cartography* (Chicago: University of Chicago Press, 1987–), vol. 1, p. xvi (see Ch. 5, n. 75 for the text of their definition). On medieval maps as stages for the playing out of Christian history see Anna-Dorothee von den Brincken, "Mappa mundi und Chronographia: Studien zur 'Imago mundi' des abendländischen Mittelalters," *Deutsches Archiv für Erforschung des Mittelalters* 24 (1968), pp. 118–186; and Harley and Woodward *The History of Cartography*, vol. 1, p. 334.

130 There are some general remarks on these illustrations in Peter K. Klein, "La tradición pictórica de los Beatos," in *Actas del Simposio para el estudio del los códices del 'Comentario al Apocalipsis' de Beato de Liébana* (Madrid: Joyas Bibliográficas, 1980), vol. 2, pp. 83–106, at 92–93.

131 The *mappamundi* in BnF MS lat. 8878, f. 119r, is reproduced in Williams, *The Illustrated Beatus* (see Ch. 5, n. 128), vol. 3, fig. 406; the manuscript has been reproduced in facsimile as *Comentarios al Apocalipsis y al Libro de Daniel = Commentaires sur l'Apocalypse et le Livre de Daniel* (Madrid: Edilán, 1984).

FIGURE 5.17 A mappamundi illustrating Revelation 7:1–3, the restraining of the winds at the four corners of the earth, in a manuscript of Beatus of Liébana's Commentary on the Apocalypse, late eleventh century (PARIS, BNF, MS LAT. 8878, F. 119R, BY PERMISSION OF THE BIBLIOTHÈQUE NATIONALE DE FRANCE).

least diverted; and there are more explanatory texts incorporated into the image. While some of the Beatus manuscripts thus use a *mappamundi* to illustrate Revelation 7:1–3, they do not employ *mappaemundi* to illustrate any other part of the Apocalypse.

Some English Apocalypse manuscripts use *mappaemundi* to illustrate Revelation 7:1–3.¹³² One such image in which the *mappamundi* is more elaborate than in others is that on Douce Apocalypse, made c. 1270 (Oxford, Bodleian Library, MS Douce 180).¹³³ Here, as in corresponding images in other English manuscripts of the Apocalypse, the servants of God are not represented. In the lower right, St. John looks on while an angel descends from the heavens towards earth; we expect this angel to be carrying the sign of the Living God, but his hands are empty. The image of the earth is on the left; the *orbis terrarum* is square, surrounded by the circumfluent ocean which has fish swimming in it, and on the four corners stand four angels, each looking toward the descending angel, and holding in his hands a winged wind-head, with his hand over the wind-head's mouth. On the earth there are trees, rivers, buildings at least some of which are churches, a bull, and some sheep. There are similar images in other thirteenth-century English Apocalypse manuscripts, such as Lambeth Apocalypse,¹³⁴ the Gulbenkian Apocalypse,¹³⁵ and a closely related early

132 For general discussion of illustrated English manuscripts of the Apocalypse see Suzanne Lewis, *Reading Images: Narrative Discourse and Reception in the Thirteenth-Century Illuminated Apocalypse* (Cambridge and New York: Cambridge University Press, 1995). For discussion of the illustrations of Revelation 7:1 see Sammye Lee Justice, "The Illustrated Anglo-Norman Metrical Apocalypse in England," Ph.D. Dissertation, Princeton University, 1993, pp. 231–233, and p. 418 for a list of the folios on which this scene occurs in the manuscripts the author considers.

133 The Douce Apocalypse has been reproduced in facsimile as *Vollständige Faksimile-Ausgabe im Originalformat der Handschrift Ms. Douce 180, Apokalypse, aus dem Besitz der Bodleian Library, Oxford* (Graz: Akademische Druck- u. Verlagsanstalt; Paris: Club du Livre, 1981), with a volume of commentary by Peter Klein. This material (facsimile and commentary) is published in one volume in Peter Klein, *Endzeiterwartung und Ritterideologie: die englischen Bilderapokalypsen der Frühgotik und MS Douce 180* (Graz: Akademische Druck- u. Verlagsanstalt, 1983), which was reviewed by Yves Christe, "Apocalypses anglaises du XIII^e siècle," *Journal des savants* 1984.1–2 (1985), pp. 79–91. There is also a version of the 1981 facsimile published in Spain with commentary by Jean Grosjean, Yves Christe, and Montague Rhodes James as *Apocalipsis: manuscrito Douce 180* (Madrid: Ediciones de Arte y Bibliofilia, 1982). The manuscript has been studied more recently by Nigel J. Morgan in *The Douce Apocalypse: Picturing the End of the World in the Middle Ages* (Oxford: Bodleian Library, 2006), but Morgan offers no detailed discussion of the illustration of Revelation 7:1–3.

134 The image is in London, Lambeth Palace Library, MS. Lat. 209, f. 7v; the manuscript is reproduced in facsimile as Nigel J. Morgan, *The Lambeth Apocalypse: Manuscript 209 in Lambeth Palace Library* (London: Harvey Miller, 1990).

135 The image is in Lisbon, Museu Calouste Gulbenkian, MS LA 139, f. 13v; the manuscript is reproduced in facsimile as *Apocalipsis Gulbenkian* (Barcelona: M. Moleiro, 2001), and the image is discussed on p. 263 of the accompanying commentary volume.

fourteenth-century manuscript, the Cloisters Apocalypse.¹³⁶ But as with the manuscripts of Beatus's *Commentary*, none of these English manuscripts uses maps to illustrate other phases of the apocalyptic drama. The artists were content to illustrate with a map the one scene where the text suggested this, and did not explore other ways in which maps might be used to illustrate the narrative. It is worth emphasizing that there is no map illustrating Revelation 7:1–3 in either HM 83 or Wolfenbüttel 442 Helmst.: the cartographic program of illustration in those manuscripts is based on a completely fresh consideration of how to illustrate the apocalyptic narrative.

Mappaemundi are also used to illustrate Revelation 7:1–3 on some late medieval Central and Eastern European icons of the Last Judgment,¹³⁷ and for example in a hand-colored German block-book of c. 1470,¹³⁸ but again in these cases, only the one scene is illustrated with a *mappamundi*.

There are also medieval maps that incorporate elements of the Last Days, rather than being themselves part of a program illustrating the Apocalypse; these works show clearly how some medieval maps are as much about the

136 The image is in New York, The Cloisters Collection, 1968 (68.174), f. 10v. The manuscript is reproduced and discussed in Florens Deuchler, Jeffrey Hoffeld, and Helmut Nickel, *The Cloisters Apocalypse* (New York: Metropolitan Museum of Art, 1971).

137 See John-Paul Himka, *Last Judgement Iconography in the Carpathians* (Toronto and Buffalo: University of Toronto Press, 2009), pp. 57–58; *Novgorod Icons, 12th–17th Century*, trans. Kathleen Cook (Leningrad: Aurora Art Publishers, 1980), plate 72 with pp. 293–294, on a mid-fifteenth-century icon of the Last Judgment in Moscow, Tretyakov Gallery, Inv. No. 12874; Luidmila Miliayeva, *The Ukrainian Icon* (Bournemouth, England: Parkstone Publishers; and St. Petersburg: Aurora Art Publishers, 1996), p. 120, fig. 112, with p. 233, icon of the Last Judgment, late fifteenth- or early sixteenth-century, Lvov, National Museum, Inv. No. И–13, КП–53403/13. The authors have not been able to see Liliya Berezhnaya and John-Paul Himka's book *The World to Come: Ukrainian Images of the Last Judgment*, forthcoming from Harvard University Press.

138 The book is titled *Apocalypsis Sancti Johannis*, and the hand-colored copy which is in the Rosenwald Collection at the Library of Congress has been digitized and is available at <<http://hdl.loc.gov/loc.rbc/rosenwald.0023>>, where the image illustrating Revelation 7:1–3 is number 21 in the sequence. For discussion of the sources of the imagery in block-books of the Apocalypse see Gertrud Bing, "The Apocalypse Block-Books and Their Manuscript Models," *Journal of the Warburg and Courtauld Institutes* 5 (1942), pp. 143–158, esp. the chart following p. 146, no. 4, and p. 147 note 7.

playing out of Christian history as they are about geography. One map that places a particular emphasis on the Last Days is the Hereford *mappamundi* of c. 1300. In the far northeast of the map, on a peninsula that juts into the circumfluent ocean, and which is separated from the *orbis terrarum* proper by a wall, there is a long legend that relates to Gog and Magog, evil peoples who in medieval accounts were thought to have been confined by Alexander the Great, and who will burst forth in the Last Days to ravage the earth before their final destruction (Ezekiel 38:1–39:16; Revelation 20:7–10).¹³⁹ The legend continues on the mainland. The legend does not refer to the confined peoples by the names Gog and Magog, but we can be certain of their identity through the similar location and description of Gog and Magog on other maps.¹⁴⁰ That legend runs:¹⁴¹

Omnia horribilia plus quam credi potest. Frigus intollerabile, omni tempore ventus acerimus a montibus, quem incole 'bizo' vocant. Hic sont homines truculenti nimis, humanis carnibus vescentes, cruorem potantes, filii Caim maledicti. Hos inclusit Dominus per magnum Alexandrum, nam terre motu facto in conspectu principis montes super montes in circuitu eorum ceciderunt. Ubi montes deerant, ipse eos muro insolubili cinxit.

Isti inclusi esse creduntur qui a Solino 'Antropophagi' dicuntur, inter quos et Essedones numerantur; nam tempore antichristi Erupturi, et omni mundo persecucionem illaturi.

¹³⁹ On Gog and Magog see Andrew Runni Anderson, *Alexander's Gate, Gog and Magog, and the Inclosed Nations* (Cambridge, MA: Medieval Academy of America, 1932); Raoul Manselli, "I popoli immaginari: Gog e Magog," in *Popoli e paesi nella cultura altomedievale: settimane di studio del Centro Italiano di Studi sull'Alto Medioevo, Spoleto, 23–29 aprile 1981* (Spoleto: Centro Italiano di Studi sull'Alto Medioevo, 1983), vol. 2, pp. 487–521; and Debra Higgs Strickland, *Saracens, Demons, & Jews: Making Monsters in Medieval Art* (Princeton, NJ: Princeton University Press, 2003), pp. 228–239.

¹⁴¹ Westrem, *The Hereford Map* (see Ch. 4, n. 39), pp. 69–71, nos. 141 and 142. On the sources of the legends see Westrem, pp. 68 and 70, and Naomi Reed Kline, "Alexander Interpreted on the Hereford Mappamundi," in P. D. A. Harvey, ed., *The Hereford World Map: Medieval World Maps and their Context* (London: British Library, 2006), pp. 167–183, at 176 and 179.

<Here are> all kinds of horrors, more than can be imagined: intolerable cold, a constant blasting wind from the mountains, which the inhabitants call 'bizo'. Here are exceedingly savage people who eat human flesh and drink blood, the accursed sons of Cain. The Lord used Alexander the Great to close them off, for within sight of the king an earthquake occurred, and mountains tumbled upon mountains all around them. Where there were no mountains, Alexander hemmed them in with an indestructible wall.

These enclosed <people> are believed to be the same <ones> who were named Anthropophagi by Solinus, among whom are to be numbered the Essedones. Indeed, at the time of Antichrist they will be bursting forth and inflicting persecution on the whole world.

At the top of the map is an image of the Last Judgment, with Christ in the clouds looking on as the elect, to his right, rise from their graves and an angel leads them to Heaven, while a demon holds the damned together with a rope and leads them to Hell.¹⁴² The prominent position of the scene clearly indicates that it was important to the creator of the map, and we are to understand a connection between that scene and the letters M-O-R-S ('death') that encircle the earth.¹⁴³ The artist wants the viewer to remember that the things of this world and the world itself are transient, and to think of his or her soul and the fate that awaits it. Thus the map's intended function is not so different from that of the apocalyptic maps in HM 83: on f. 12v, the author declared "I believe therefore that a firm faith in and frequent contemplation of these diagrams will more effectively restrain a man from sins than would many good words."

The Catalan Atlas of 1375, one of the most elaborately decorated medieval nautical charts that survives, prominently features elements related to the Last Days: these elements, painted at a large scale, occupy much of northeastern Asia (see Fig. 5.18).¹⁴⁴ That whole part of the continent is cordoned off by a mountain chain, and mountains surround this area along the coast as well, and

¹⁴² The depiction of the Last Judgment on the Hereford map is discussed by Alessandro Scafi, "Mapping the End: The Apocalypse in Medieval Cartography," *Literature & Theology* 26.4 (2012), pp. 400–416. The Hereford map has been reproduced in facsimile as *The Hereford World Map: Mappa Mundi* (London: The Folio Society, 2010).

¹⁴³ On the word *MORS* on the Hereford *mappamundi* see Westrem, *The Hereford Map* (see Ch. 4, n. 39), pp. 4–5.

¹⁴⁴ For bibliography on the Catalan Atlas see Ch. 4, n. 14. For discussion of the elements on the map that are related to the Last Days see Sandra Sáenz-López Pérez, "La representación de Gog y Magog y la imagen del Anticristo en las cartas náuticas bajomedievales," *Archivo Español de Arte* 78 (2005), pp. 263–276.

FIGURE 5.18 *Northeastern Asia (oriented with south at the top) on the Catalan Atlas of 1375, showing Antichrist, Gog and Magog, Alexander the Great directing a demon to enclose them, and the two metal trumpeters (PARIS, BNF, MS ESPAGNOL 30, BY PERMISSION OF THE BIBLIOTHÈQUE NATIONALE DE FRANCE).*

also divide the area into two parts. Just outside the mountains there is a long legend about them, which runs:¹⁴⁵

Muntanyes de Caspis dins les quals Allexandri viu arbres ten alts que les saines tohaven a les nuus e aquí cuidà morir, sinó que Setanat l'en gità per la sua art e per la sua art endoy aquí los tartres Gog e Magog e per els féu les ·II· images de matall, los demunt scrits. Ítem encloy aquí molts

¹⁴⁵ The transcription comes from *Mapamundi del año 1375* (see Ch. 4, n. 14), p. 81; the translation is ours.

diverses generacions de gens qui no dupten a manjar tota carn crua, e aquesta és la generació ab què vendrà Antichrist e la lur fi serà foc qui avalar<à> del cel qui-ls confondrà.

The Caspian Mountains in which Alexander <the Great> saw trees so tall that their tops touched the clouds. He was close to death here, except that Satan got him out of there with his power, and by his power he enclosed here the Tartars Gog and Magog and for them had made the two metal figures drawn above. He also enclosed here very diverse peoples who do not hesitate to eat all kinds of raw meat: for this is the people from which Antichrist will come, and their end will be caused by fire that will fall from Heaven and confound them.

The two metal figures mentioned here are a pair of trumpeters depicted on the map, just to the right of the gap between the two panels in Fig. 5.18, and just outside the mountains that enclose Gog and Magog and Antichrist. They were intended to play trumpet blasts when the winds blew, and thus convince Gog and Magog that an army was on the far side of the mountains, discouraging any attempt to break free.¹⁴⁶ Near the trumpeters is an image of Alexander the Great directing a demon to compete the construction of the barrier that will enclose the evil forces to the north of the Caspian Mountains.

In the northern section of the area surrounded by the Caspian Mountains there is a king riding a horse and closely surrounded by his followers, who are drawn on a much smaller scale. The text beside him reads, *Lo gran senyor princep de Gog e de Magog. Aquest exirà en temps d'Antechrist ab molta gent*, "The great lord, prince of Gog and Magog. He will appear in the time of Antichrist with many people."¹⁴⁷ In the southern section of the area cordoned off by the Caspian Mountains there is a large image of Antichrist deceiving people with false miracles.¹⁴⁸ The accompanying legend reads:¹⁴⁹

Antechrist. Aquest serà nudrit en Goraym de Galilea e con haura .xxx. anys començarà a preicar en Jherusalem e contra tota veritat dirà que ell és Christ fill de Déu viu. e diu-se que rehedificarà lo Temple.

¹⁴⁶ See Anderson, *Alexander's Gate, Gog and Magog* (see Ch. 5, n. 139), pp. 82–85.

¹⁴⁷ The transcription comes from *Mapamundi del año 1375* (see Ch. 4, n. 14), p. 87; the translation is ours.

¹⁴⁸ For discussion of the image of Antichrist on the Catalan Atlas see Sáenz-López Pérez, "La representación de Gog y Magog" (see Ch. 5, n. 144).

¹⁴⁹ The transcription comes from *Mapamundi del año 1375* (see Ch. 4, n. 14), p. 87; the translation is ours.

Antichrist. He will be raised in Chorazin in Galilee, and when he is thirty years old he will begin to preach in Jerusalem, and contrary to the truth he will proclaim that he is Christ, Son of the Living God, and he will say that he will rebuild the Temple.

The Catalan Atlas thus devotes considerable attention to important actors in the Apocalypse, but there is no explicit moral message associated with these figures, no urging of the viewer to think upon the fleeting nature of worldly things, or the state of his or her soul, and we do not detect any such implicit message either, as there is on the Hereford *mappamundi*. The presence of Gog, Magog, and Antichrist on the Catalan Atlas seems to be supplied purely for informational purposes.

Gog and Magog appear on many medieval and Renaissance maps,¹⁵⁰ and there is a legend about Antichrist on the so-called Genoese world map of 1457.¹⁵¹ consciousness of the world's apocalyptic future is indicated on many of the more elaborate *mappaemundi* and nautical charts. But the Hereford *mappamundi* and the Catalan Atlas have the most detailed depictions of the actors of the Last Days of any surviving medieval maps—aside from those in HM 83 and Wolfenbüttel 442 Helmst.

We have record of another medieval map, unfortunately no longer extant, that contained a particularly detailed image of the playing out of Christian history, namely a map made by Hugh of Saint-Victor, the mystical theologian active in the twelfth century.¹⁵² Although the map itself has not come down to us, Hugh described it in his *De Arca Noe Mystica* or *Libellus de formatione*

¹⁵⁰ For bibliography about Gog and Magog on maps see Ch. 5, n. 140.

¹⁵¹ The 'Genoese' map is in Florence, Biblioteca Nazionale Centrale, Portolano 1; the legend about Antichrist runs *De hac gente, hoc est ex tribu Dan nascetur is est anticristus qui magica arte montes istos apperens ad christocolas subvertendos accedet*, "From this race, that is, from the tribe of Dan, Antichrist is to be born, who, opening these mountains by magic art, will come to overthrow the worshipers of Christ." The legend is transcribed and translated into English by Stevenson, *Genoese World Map, 1457* (see Ch. 4, n. 16), p. 38. For additional bibliography on the map see Ch. 4, n. 16.

¹⁵² On Hugh of Saint-Victor generally see F. Vernet, "Hugues de Saint-Victor," in Alfred Vacant, Eugène Mangenot, and Emile Anriann, eds., *Dictionnaire de théologie catholique* (Paris: Librairie Letouzey et Ané, 1903–50), vol. 7, no. 1, cols. 240–308; F. E. Croydon, "Notes on the Life of Hugh of St. Victor," *The Journal of Theological Studies* 40 (1939), pp. 232–253; Michael J. Gorman, "Hugh of St. Victor," in Jorge J. E. Gracia and Timothy B. Noone, eds., *A Companion to Philosophy in the Middle Ages* (Malden, MA: Blackwell, 2003), pp. 320–325; and George L. Scheper, "Hugh of Saint Victor (End of Eleventh Century–1141)," in George Thomas Kurian et al., eds., *The Encyclopedia of Christian Literature* (Lanham, MD: Scarecrow Press, 2010), vol. 2, pp. 375–378.

arche.¹⁵³ The map was a grandly conceived and complex diagrammatization of history, structured on the rectangular framework of Noah's Ark, superimposed on a *mappamundi*, with its stern in the east, and its prow in the west (see Fig. 5.19). In many medieval *mappaemundi*, the role of the image of the earth as a stage for the playing out of Christian history is almost as important as the geographical information they convey, but the elaborate image Hugh created was certainly one of the fullest geographical interpretations of history ever produced.¹⁵⁴ Hugh envisioned a progression of history from east to west:¹⁵⁵ Adam and Eve were created in Eden in the east, and then fell there. The six ages of human history are depicted successively down the middle of the image, with Christ, the Second Adam, at the very center, who effected the salvation of humankind. At the far western edge of the world, the Last Judgment will take place, bringing history of a close.

At the end of the *De Arca Noe mystica* or *Libellus de formatione arche*, Hugh indicates the effect he intends the image he just described to have:¹⁵⁶

-
- 153 The *De Arca Noe mystica* or *Libellus de formatione arche* is published in *Patrologia Latina* 176.681–702, and in Hugh of Saint-Victor, *Hugonis de Sancto Victore De archa Noe; Libellus de formatione arche*, ed. Patrice Sicard (Turnhout: Brepols, 2001) (= Corpus Christianorum Continuatio Mediaevalis, 176, 176A), vol. 1, pp. 119–162. It is translated into English by Jessica Weiss as “A Little Book about Constructing Noah's Ark” in Mary Carruthers and Jan M. Ziolkowski, eds., *The Medieval Craft of Memory: An Anthology of Texts and Pictures* (Philadelphia: University of Pennsylvania Press, 2002), pp. 41–70. A new English translation is supplied by Conrad Rudolph, *The Mystic Ark: Hugh of Saint Victor, Art, and Thought in the Twelfth Century* (Cambridge and New York: Cambridge University Press, 2014), pp. 393–502.
- 154 For discussion of Hugh's image of the Ark superimposed on a *mappamundi* see Barbara Obrist, “Image et prophétie au XII^e siècle: Hugues de Saint-Victor et Joachim de Flore,” *Mélanges de l'Ecole française de Rome. Moyen-Age, Temps modernes* 98.1 (1986), pp. 35–63, esp. 35–49; Marcia Kupfer, “Medieval World Maps: Embedded Images, Interpretive Frames,” *Word and Image* 10 (1994), pp. 262–288, esp. 269–271; and Patrick Gautier Dalché, “‘Réalité’ et ‘symbole’ dans la géographie de Hugues de Saint-Victor,” in *Ugo di San Vittore. Atti del XLVII Convegno storico internazionale, Todi, 10–12 ottobre 2010* (Spoleto: Fondazione Centro italiano di studi sull'alto Medioevo, 2011), pp. 359–382.
- 155 For discussion see Stephen McKenzie, “The Westward Progression of History on Medieval Mappaemundi: an Investigation of the Evidence,” in P. D. A. Harvey, ed., *The Hereford World Map: Medieval World Maps and their Context* (London: The British Library, 2006), pp. 335–344.
- 156 *Patrologia Latina* 176:702; the translation is our own, relying on those of Weiss, “A Little Book about Constructing Noah's Ark” (see Ch. 5, n. 153), p. 70; and Rudolph, *The Mystic Ark* (see Ch. 5, n. 153), pp. 501–502.

FIGURE 5.19 A reconstruction by Conrad Rudolph of the image of the world described by Hugh of Saint-Victor in his *De Arca Noe Mystica*: an image of the Ark is superimposed on a mappamundi oriented with east at the top that shows history progressing from Eden at the top to the Last Judgment at the bottom (BY PERMISSION OF CONRAD RUDOLPH).

Haec de arcae nostrae figuratione dicimus, ut si cuilibet decoram domus Domini, et mirabilia ejus (quorum non est numerus) intueri, hoc interim exemplari affectum suum provocet.

We have said these things about the representation of our Ark, so that if anyone might wish to contemplate the elegance of the Lord's house and its wonders, which are without number, he might rouse his emotion for a time with this exemplar.

The image is intended, then, to provide spiritual inspiration to the viewer. In Hugh's *De Arca Noe morali* he encourages the reader to create a dwelling for

God within himself that is modeled after the Ark.¹⁵⁷ There is a passage near the beginning of that work in which Hugh indicates his purpose, and it seems plausible that Hugh intended some of this same effect for the image of the world and Ark he describes in the *Libellus de formatione arche*.¹⁵⁸

Hujus vero spiritualis aedificii exemplar tibi dabo arcam Noe, quam foris videbit oculus tuus, ut ad ejus similitudinem intus fabricetur animus tuus. Videbis ibi colores quosdam, formas et figuras, quae delectent visum. Sed scire debes, ideo haec posita esse, ut in eis discas sapientiam, disciplinam atque virtutem, quae exornent animum tuum.

Now the figure of this spiritual building which I am going to present to you is Noah's ark. This your eye shall see outwardly, so that your soul may be fashioned to its likeness inwardly. You will see there certain colors, shapes, and figures which will be pleasant to behold. But you must understand that these are put there, that from them you may learn wisdom, instruction, and virtue, to adorn your soul.

The elaborate *mappamundi* in the *Libellus* is certainly intended to provide spiritual inspiration, and probably also moral instruction. The maps in HM 83, as the author declares on f. 12v, were intended to dissuade the viewer from sin: in both cases the purpose of the maps is moral, but the emphasis is different: Hugh seeks to inspire, while the author of HM 83 seeks to restrain.

Hugh described his image of the world in detail so that it could be recreated by others as a tool for religious instruction, and though many manuscripts of Hugh's work survive, none of them includes even a reduced or simplified image of his map. However, four different scholars, Joachim Ehlers, Danielle Lecoq, Patrice Sicard, and Conrad Rudolph, have reconstructed Hugh's map from his writings.¹⁵⁹ Both Hugh's description of his image and these recreations of it

¹⁵⁷ The text of the *De Arca Noe morali* is supplied in *Patrologia Latina* 176.617–680, and an English translation is available in *Hugh of Saint-Victor: Selected Spiritual Writings* (New York: Harper & Row, 1962), pp. 45–153.

¹⁵⁸ *Patrologia Latina* 176.617, and in *Hugh of Saint-Victor: Selected Spiritual Writings* (see Ch. 5, n. 157), p. 52. This passage is cited in J. A. H. Lewis, "History and Everlastingness in Hugh of St Victor's Figures of Noah's Ark," in Gerhard Jaritz and Gerson Moreno-Riaño, eds., *Time and Eternity: The Medieval Discourse* (Turnhout: Brepols, 2003), pp. 203–222, at 206.

¹⁵⁹ See Joachim Ehlers, "Arca significat ecclesiam. Ein theologisches Weltmodell aus der ersten Hälfte des 12. Jahrhunderts," *Frühmittelalterliche Studien* 6 (1972), pp. 171–187; Lecoq, "La 'mappemonde' du *De Arca Noe Mystica*" (see Ch. 5, n. 39); Patrice Sicard, *Diagrammes médiévaux et exégèse visuelle: le 'Libellus de formatione arche' de Hugues de*

have many more details than we have space to explore here, but we would argue that the maps in the treatise on the Apocalypse in HM 83 are a more imaginatively cartographic interpretation of the drama of salvation than Hugh's. Hugh superimposes the progression of history on a static *mappamundi*, but the author of HM 83 shows how the drama of the Last Days changes the configuration of the world in a series of maps, each showing the shape of the world during a precise date range. The maps in HM 83 are certainly one of the most elaborate and important fusions of cartography and religious history that survives from the Middle Ages.

Saint-Victor (Turnhout: Brepols, 1993), plates 7 and 8; Hugh of Saint-Victor, *Hugonis de Sancto Victore De archa Noe; Libellus de formatione arche*, ed. Patrice Sicard (Turnhout: Brepols, 2001), in volume 2; Conrad Rudolph, 'First, I Find the Center Point': Reading the Text of Hugh of Saint Victor's 'The Mystic Ark,' (Philadelphia: American Philosophical Society, 2004) (= *Transactions of the American Philosophical Society* 94.4); and Rudolph's *The Mystic Ark* (see Ch. 5, n. 153).

Conclusions

The maps illustrating the folios on geography in Huntington Library MS HM 83 are works of startling originality. While the anonymous author probably drew inspiration for his maps from those that illustrate the thematic books of Bartholomaeus Anglicus's *De proprietatibus rerum*, his thematic maps give the impression of having been created by someone who understood the genre, rather than by artists who happened to illustrate some manuscripts of Bartholomaeus using maps. The thematic maps in HM 83 seem to have been created with a programmatic intention, and while they had no influence on other cartographers, they are a fascinating case study in the cartographic developments that were possible in the late fifteenth century in the hands of a brilliant mapmaker.

We see the same originality in the use of maps to illustrate the Apocalypse. In other programs illustrating the Last Days, Revelation 7:1–2 is sometimes illustrated with a *mappamundi*, but in HM 83 the whole sequence of changes to the earth wrought by the end of history is illustrated with maps, a wonderfully creative solution to the artistic problem of how to portray those cataclysmic events. The apocalyptic maps not only show again the author's firm grasp of the value of thematic maps, but also represent an early systematic use of historical maps, and contain bold examples of symbolic cartography. What the anonymous author in fact created is the most cartographically pioneering fusion of cartography and religious history that survives from the Middle Ages.

The author's distinct character is also on display in other aspects of his treatise on the Apocalypse. While other works of fifteenth-century German Apocalypticism focus on political interpretations that identify the principal actors of the drama of the Last Days with contemporary leaders of the Church and nation-states, the author of HM 83 chooses not to indulge in partisan fantasies of that nature. We see in his treatise none of the anti-clerical fervor of several other contemporary works on the Apocalypse; we find instead a more dispassionate and analytic approach to the Apocalypse.

Perhaps in part because of its very originality and its lack of engagement with contemporary politics, the treatise in the Apocalypse in HM 83 had no significant influence on later German discussions on the Apocalypse, but evidence from Wolfenbüttel, Herzog August Bibliothek, Cod. Guelf. 442 Helmst. demonstrates both that the treatise continued to undergo revision, and that it did circulate.

The best candidate we have found for the author of the remarkable works in HM 83 is Baptista, a man from Lübeck who was appointed by Pope Pius II to

care for pilgrims at the Franciscan monastery on Mount Zion between 1458 and 1464 (when Pius II was Pope), and apparently served there through at least 1482, when he attended to the traveler Felix Fabri. We have precious little information about Baptista, and more would be very welcome, as it might confirm or disprove that Baptista was the author of these works, and if he was, provide additional insights about one of the most original cartographers of the fifteenth century.

Notes on Contributors	xv
 Introduction: Intellectual History and the Identity of John Dee	 1
1. Nicholas H. Clulee – John Dee’s Natural Philosophy Revisited	 23
 PART ONE: ASTRONOMY AND ASTROLOGY	
2. Robert Goulding – Wings (or Stairs) to the Heavens: The Parallactic Treatises of John Dee and Thomas Digges	 41
3. Stephen Johnston – Like Father, Like Son? John Dee, Thomas Digges and the Identity of the Mathematician	 65
4. Richard Dunn – John Dee and Astrology in Elizabethan England	 85
 PART TWO: DEE AND MARITIME AFFAIRS	
5. Robert Baldwin – John Dee’s Interest in the Application of Nautical Science, Mathematics and Law to English Naval Affairs	 97
6. William H. Sherman – John Dee’s Columbian Encounter	131
 PART THREE: DEE AND THE OCCULT SCIENCES	
7. Karen De Léon-Jones – John Dee and the Kabbalah	143
8. Federico Cavallaro – The Alchemical Significance of John Dee’s <i>Monas Hieroglyphica</i>	 159
9. Jim Reeds – John Dee and the Magic Tables in the <i>Book of Soyga</i>	 177
 PART FOUR: DEE’S CONVERSATION WITH ANGELS	
10. György E. Szönyi – Paracelsus, Scrying and the <i>Lingua Adamica</i> : Contexts For John Dee’s Angel Magic	 207
11. Stephen Clucas – John Dee’s Angelic Conversations and the <i>Ars Notoria</i> : Renaissance Magic and Mediaeval Theurgy	 231

12. Deborah E. Harkness – The Nexus of Angelology, Eschatology and Natural Philosophy in John Dee’s Angel Conversations and Library	275
PART FIVE: DEE AND KELLEY	
13. Susan Bassnett – Absent Presences: Edward Kelley’s Family in the Writings of John Dee	285
14. Jan Bäcklund – In the Footsteps of Edward Kelley: Some Manuscript References at the Royal Library in Copenhagen Concerning an Alchemical Circle around John Dee and Edward Kelley	295
PART SIX: LIBRARY CATALOGUE AND BIBLIOGRAPHY	
15. Julian Roberts – Additions and Corrections to “John Dee’s Library Catalogue”	333
16. Stephen Clucas – Recent works on John Dee (1988-2005): A Select Bibliography	345
Index	351

NOTES ON CONTRIBUTORS

Jan Bäcklund gained his PhD in Cultural Studies from Aarhus University, Denmark in 1992. He was research fellow at the Center for Cultural Research, Aarhus 1992-2002, and has been Associate Lector at the Department of Art theory at the Royal Academy of Fine Arts in Copenhagen since 2002. He has published a number of essays (in Danish) on art theory and related subjects, and is co-editor of a forth-coming volume on Art and Alchemy.

Robert Baldwin has published widely in the history of navigation and maritime exploration. He has contributed extensively to exhibition planning for the Museum of London, the National Maritime Museum and the Canadian Museum of Civilisation. Since 1997 he has been working on a number of archival projects mostly related to civil engineering. Together with Sir Peter Baldwin he has edited *The Motorway Achievement* (2004) and *Visions of Reconstruction, 1940-1948* (2005).

Susan Bassnett is Professor in the Centre for Translation and Comparative Cultural Studies at the University of Warwick. Recent publications include *Sylvia Plath: An Introduction to the Poetry* (2004), *Constructing Cultures* (1998) written with André Lefevere, and *Post-Colonial Translation* (1999), co-edited with Harish Trivedi. Besides her academic research, Susan Bassnett writes poetry. Her latest collection is *Exchanging Lives* (2002).

Federico Cavallaro was born in Rome in 1941. He studied Natural Science and then Theology and History of Religion. In 1986 he gained a PhD with a thesis on "Time, Planetary Symbols and the Journeys of the Soul". Presently he is engaged in a study of alchemical symbolism in the Arthurian romances of Chretien de Troyes.

Stephen Clucas is Senior Lecturer in English and Humanities at Birkbeck, University of London. He has published widely in the field of Early Modern intellectual history. Recent publications include *The Wizard Earl's Advices to his Son* (2002) and *A Princely Brave Woman: Essays on Margaret Cavendish, Duchess of Newcastle* (2003). He is currently editing Thomas Hobbes's *De Corpore* (with Timothy J. Raylor) for the Clarendon Edition of Hobbes.

Nicholas H. Clulee is currently professor and chair of history at Frostburg State University in Frostburg, Maryland, and studied at Hobart College and the University of Chicago. He is author of *John Dee's Natural Philosophy: Between Science and Religion* (1988).

Karen de Léon-Jones is currently an independent scholar in Religious Studies. Formerly she was a member of research institutes in the Centre National de Recherche Scientifique and the École Pratique des Hautes Études in Paris. She is author of *Giordano Bruno and the Kabbalah* (1997), as well as other publications on Kabbalah and spirituality in Early Modern thought. She contributes to the Pico Pro-

ject, a joint collaboration between Brown University and L'Università di Bologna; as well as collaborating on theatre productions and conferences.

Richard Dunn completed his doctoral thesis "The Status of Astrology in Elizabethan England" at the University of Cambridge in 1992. He is currently Curator of the History of Navigation at the National Maritime Museum.

Robert Goulding is assistant professor in the Program in History and Philosophy of Science at the University of Notre Dame. His research interests include the history of optics and the history of magic. He is currently completing a monograph on Renaissance histories of mathematics.

Deborah E. Harkness is associate professor of history at the University of Southern California. She is the author of *John Dee's Conversations with Angels: Cabala, Alchemy, and the End of Nature* (Cambridge University Press, 1999) and is currently completing a study of science, medicine, and technology in Elizabethan London for Yale University Press entitled *The Jewel House of Art and Nature: Elizabethan London and the Social Foundations of the Scientific Revolution*.

Stephen Johnston is Assistant Keeper at the Museum of the History of Science, University of Oxford. He researches and teaches the history of scientific instruments and has published on sixteenth-century mathematical practitioners and nineteenth-century calculation. He has also co-authored *The Geometry of War, 1500-1750* (Oxford, 1996) and *Solomon's House in Oxford: New Finds from the First Museum* (Oxford, 2000), and was associate editor of *Instruments of Science: an Historical Encyclopedia* (New York, 1998).

Jim Reeds is a professional cryptographer with an interest in the history of his subject. He has published on the solution to the cipher in Book III of Johannes Trithemius's *Steganographia* (*Cryptologia*, 1998) and on the Voynich Manuscript. He lives in Princeton, New Jersey.

Julian Roberts retired in 1997 as Deputy Librarian of the Bodleian Library Oxford, and is an Emeritus Fellow of Wolfson College. Apart from his joint-editorship of *John Dee's Library Catalogue* (1990) he has published other articles on Dee and on the history of the English book-trade and the history of libraries.

William H. Sherman is Professor of English and Co-Director of the Centre for Renaissance and Early Modern Studies at the University of York, and Associate Editor of *Shakespeare Quarterly*. He is the author of *John Dee: The Politics of Reading and Writing in the English Renaissance* (1995) and of articles on Renaissance drama, Elizabethan travel writing, and the history of reading; and the editor of several plays and essay collections.

György E. Szönyi is the director of the Institute of English at the University of Szeged, Hungary. He is a cultural- and literary historian with special interest in the Renaissance, the role of the occult in early modern culture and contemporary literature and in cultural theory, especially the relationship of words and images.

Recent publications include: *Gli Angeli di John Dee* (Rome: Tre Editori, 2004); *Pictura & Scriptura* (in Hungarian, Szeged, 2004); *John Dee's Occultism: Magical Exaltation Through Powerful Signs* (Albany: SUNY Press, 2005). He has also edited among others: *European Iconography East & West* (Leiden, 1996); *The Iconography of Power* (with R. Wymer, Szeged, 2000); *The Iconography of the Fantastic* (with A. Kiss and M. Baróti-Gaál, Szeged, 2002).

ROBERT GOULDING

WINGS (OR STAIRS) TO THE HEAVENS

The Parallactic Treatises of John Dee and Thomas Digges

A NEW STAR

In November 1572, a new object appeared in the night sky over Europe. A contemporary observer, Bartolomaeus Raisacher of Vienna, recorded a detailed description:

The apparition is some kind of brilliant luminous body, in brightness equalling the stars of the first magnitude – even outshining some of them. It has a bright, yellowish-gold light so that it resembles Jupiter, yet its glow is rather reddish, resembling in a certain way Mars at its acronychal appearance. It has been visible for some months now, in the northern part of the sky, circling each night around the north celestial pole in the constellation of Cassiopeia. It has only a single motion – the diurnal motion – and always maintains the same distance from the surrounding stars; in itself it is immobile as it is revolved around the pole.¹

The New Star in fact took seventeen months to disappear entirely from sight. It was, as we now know, a supernova – the catastrophic explosion of a star that had, until then, been invisible to the naked eye.² Astrologers predicted dire consequences would result from the marvel, for they knew that comets – the only phenomena in their experience even remotely comparable to the New Star – were sure portents of ill fortune. But although many astronomers feared the star was as ominous as a comet, most recognized that it differed from a comet in several ways. Most noticeably, it had no tail, and thus resembled more closely a planet or fixed star. And, as Raisacher noted (indeed, as was clear to all who observed the star), it had no motion of its own. It remained, night after night, in the same position relative to the stars surrounding it, unlike the comets which astronomers were used to tracking across the sky. These obvious differences led many observers to wonder whether the star might in fact be entirely new, and unrelated to comets in any way.

Aristotle had defined a comet as the ignition of a dry terrestrial exhalation in the upper sphere of air.³ Thus comets alone among all the other bright objects in the sky resided below the sphere of the moon, within the terrestrial world of change and decay. In this sense, the *location* of a comet was practically its defining characteristic. So, in order to determine whether the New Star was the same sort of thing as a comet, contemporary astronomers saw there could be only one deciding factor: the location of the New Star in the universe or, more specifically, its distance from the earth.

Astronomers had a technique for measuring celestial distances that promised to solve the problem, based on parallax, or the apparent change in position of a nearby object when observed from different angles. This paper will examine the ways in which contemporary European astronomers, chief among them Thomas Digges and John Dee, adapted the ancient method of parallactic observation to the problem of the New Star. In doing so, we shall see that Digges and Dee were already familiar with the uses of parallax, and in fact had long cherished an ambitious programme of reforming the whole of astronomy on the basis of the technique. The fortuitous appearance of the New Star in 1572, and the consequent revival of interest in parallax, as we shall see, forced the two astronomers to make public, somewhat prematurely, their unfinished project. While their work actually had little specific relevance to the appearance of the New Star, nevertheless we shall see from their texts that their mastery of parallax far exceeded that of any of their contemporaries.

THE TECHNIQUE OF PARALLACTIC OBSERVATION

Understanding of parallax dates back at least to the second century BC, when the Greek astronomer Hipparchus wrote a treatise on parallaxes, and used parallax to find a value for the distances from the earth of both the sun and the moon.⁴ Ptolemy employed Hipparchus's work in his own treatment of the same problem, recorded in the fifth book of the *Almagest*, where he established a value for the distance of the moon from the earth that was remarkably accurate.⁵

Figure 1. Based on Regiomontanus, *De cometis*, Problem 1

The principle behind parallax is simple. In Figure 1. the small circle with radius EH represents the earth, while the larger circle, radius EA , is the celestial sphere. The object being observed is at G . Most astronomical observations assume that the earth is a point in comparison with the celestial sphere, that the radius of the earth is negligible in comparison with celestial distances, and that the observer can thus be assumed to be at the centre of the earth. The position of the body G is given by the line through E , the centre of the earth, and G , which meets the celestial sphere at B . This is the 'true position' of the body. Parallax arises when the body is so close to

the earth that the assumption that the earth's radius is negligible no longer holds. In such a situation, if the observer is at H , then the line of sight to the object is HG , and the object will appear against the celestial sphere at C , the object's 'apparent position'. If our theory predicts that the true position of the object is B , then the difference between the true, predicted position and the apparent position is the parallax, angle BGC , or, more conveniently, the corresponding angle BEK , at the centre of the earth.

Brief consideration of this diagram reveals the following basic facts about parallax:

- Parallax causes a body to appear lower in the sky than it actually is.
- The closer an object is to earth, the greater is its parallax.
- At the observer's zenith (A) the parallax of an object is zero, and it increases as the object gets closer to the local horizon, where it is at a maximum.

More precisely, since the alternate angles BEK and HGE are equal, we find that:

$$\frac{EG}{EH} = \frac{\sin(EHG)}{\sin(parallax)}$$

where EHG is the apparent angular distance of the object from the zenith. Knowing the radius of the earth, then, one discovers the distance of the object from the earth.⁶

This method does require us to have an idea of where the object *should* be, in that we determine the parallax of an object by measuring the deviation of its observed position from its expected position. In the case of the moon, Ptolemy's method was to measure the position of the moon first when it crossed the meridian at the closest possible point to the zenith. The effect of parallax here is negligible, and from this observation he could determine what the moon's distance from the zenith *should* be – if there were no parallax – when it reached a point on its cycle such that its distance from the zenith was greatest. It is precisely at this point, however, that the moon is most affected by parallax. For this reason the deviation from the expected position is large and relatively easy to measure, and in this way Ptolemy could calculate the distance of the moon from the earth.⁷

In measuring the lunar parallax, Ptolemy had centuries of observation of the moon's regular behaviour to draw upon, so that he was able to determine, very accurately, the exact moment when the moon reached its expected position, and its parallax was at a maximum. It was more difficult to see how to apply the technique to a comet (or, indeed, to the New Star). In the case of such an ephemeral phenomenon, the astronomer had no way to predict when the object's parallax would be at a maximum and a minimum. In general, and this was the crux of the problem, there did not appear to be any theoretical means for locating the true position of the phenomenon, against which its observed position could be compared, and its parallax determined.

REGIOMONTANUS ON THE PARALLAX OF COMETS

The solution came in 1531, with the posthumous publication of a work, *On Comets*, by the Nuremberg astronomer Johannes Regiomontanus (1436-76).⁸ Regiomontanus proposed and solved sixteen problems on comets, demonstrating that it was possible to find the parallax of an object even though its true position might be unknown at the outset. We need only concern ourselves here with the problems that deal directly with parallax.⁹ Problem III is typical in its requirements and method:

The altitude of the comet and its azimuth arc are taken either before or after meridian, and the exact time of this observation is noted, together with the exact time that the comet passes the meridian. This is easily done through observation of any fixed star having a known place.¹⁰

Two observations of the comet are required, one on the meridian and one at any other point. The exact time, taken from a reference star, of each observation is noted, as is the altitude and azimuth of the second observation. This provides enough information to solve a single spherical triangle, of which one of the ‘unknowns’ is the true position of the comet at the second observation. Having established the true position in this way, the astronomer can then take the difference between this true position and the observed position, and determine the parallax.¹¹

Although the complexity of the constructions and the dryness of his presentation obscure his method somewhat, Regiomontanus takes essentially the same approach in all of his problems: in effect, he takes one observation and then works out, using the simple principles of the celestial sphere, where the comet *should* appear in the second observation if it were not affected by parallax. Sometimes, as in Problem III, this can be done very straightforwardly. In other problems – especially those that analyse observations taken *anywhere* in the celestial sphere – the process is much more difficult, requiring the solution of as many as four spherical triangles. While each problem may ask for a different type of observation, all require two observations and an accurate measure of the time between them. As we shall see a little later on, the difficulty of satisfying the last requirement was precisely what inspired Thomas Digges to search for new methods of determining parallax.

REGIOMONTANUS’S METHODS APPLIED TO THE NEW STAR

Most contemporary astronomers were content to use Regiomontanus’s method of determining parallax, in spite of its many difficulties. Tadeáš Hájek, the imperial physician and close friend of Tycho Brahe, for example, wrote one of the most competent accounts of the star. He used Regiomontanus’s third problem to establish that the star had no observable parallax.¹² Once he had shown that there was no parallax, he demonstrated how this could be discovered even more easily, by taking two observations on the meridian and finding that the star was the same distance from the celestial pole at upper and lower meridian crossings.¹³

Since, in the latitudes of Europe, the New Star was circumpolar and could be observed crossing the meridian twice in a night, several astronomers opted for this simple test of its parallax. Instead of attempting to improve on Regiomontanus, most astronomers considered that there were more direct ways to demonstrate the New Star's immunity to parallax than his complex parallax problems with their multitudes of spherical triangles. While these might be useful in some circumstances, the star's fortunate position, high in the sky, and within a bright, well-defined constellation, offered more direct methods for observing it. Michael Maestlin, for example, showed that the star lacked parallax by lining it up with pairs of fixed stars using a thread held taut above his head.¹⁴

DIGGES AND DEE ON THE NEW STAR

Thus we see that most astronomers confronting the phenomenon of the New Star in the first few years after its appearance either applied old and familiar mathematical methods to explain its appearance; or used even simpler techniques. They did not develop the theory of parallax beyond the level to which Regiomontanus had brought it, nor, more importantly, did they feel the need to do so. Early in 1573, however, Thomas Digges and John Dee each published a treatise in response to the appearance of the New Star; both works were quite different from the tracts of Hájek and other contemporaries that we have just examined.¹⁵ Unlike these earlier authors, the two English astronomers presented fully worked-out mathematical treatises on the theory of parallax, including new methods for measuring parallax that avoided the necessity of measuring time (the major, and most difficult, requirement of Regiomontanus's method).

Digges and Dee produced these innovative works, moreover, within just four months of the New Star's appearance. There can be no question that the two astronomers had been working on the problem of parallax for some time before this event. Indeed, one of the more curious aspects of both treatises is the way that the very fact of the New Star's existence seems to have been incompletely incorporated into the exposition of the mathematical theorems. We must conclude that they had been pursuing this theoretical work without any reference to the New Star, but that it was its appearance in the sky that spurred them into publication.

While the opinions of Digges and Dee on the New Star are of interest, they appear to be independent of their theoretical work on parallax. In Digges's case, he seems to think that parallax will be *really* useful as a means for determining the exact distances of the planets, and thus establishing the Copernican world system. In fact, so great is his interest in the Copernican system that he even turns his discussion of the nature of the New Star into a further proof of the system. Dee, by contrast, finds parallax most useful as a way to establish his naturalistic, physically-grounded astrology. His treatise does not even consider the nature of the New Star, although we do have information on his views from other sources, which will be explored below.

DIGGES ON PARALLAX

The theoretical core of Digges's *Alae* is a series of twenty-one "Problems" on parallax. The title he gave to his geometrical constructions was clearly meant to recall the cometary "Problems" of Regiomontanus; but Digges was determined to overcome what he saw as flaws in his predecessor's method, principally the need to measure the time elapsed between the two observations.¹⁶ Yet while it is true that Digges's parallactic Problems do not require the measurement of time, they are by no means free from defects.

The first nine Problems are preliminary results in arithmetic and in plane and spherical trigonometry. In the remaining twelve Problems Digges presents his new methods of parallactic observation. In order to assess his work, it will be useful to examine some representative examples of these Problems, and consider whether through them he achieved what he had hoped.

Regiomontanus's third Problem requires the astronomer to take one observation (of altitude and azimuth) of a comet on the meridian, and another when the comet was at any other point in the sky. In addition, of course, the astronomer had to make a record of the time elapsed between the two observations using, as Regiomontanus suggests, a reference star. He also assumes that the astronomer knows his local terrestrial latitude, a basic astronomical fact. Digges reworks Regiomontanus's method in his Problem XVIII. He too requires two observations of the object (again, altitude and azimuth), one on the meridian and another anywhere else on the celestial sphere. But he does *not* require the time between the two observations — imposing instead a bewildering array of *other* measurements that have to be made simultaneously when the astronomer observes the object: the angular distance of the object from two fixed stars, the angular separation of the two fixed stars, and the altitudes and azimuths of each of the stars at each of the moments of observation. As something of a consolation, he finds that he can dispense with the local latitude, and does not require the astronomer to know the celestial coordinates of the two fixed stars.

This is hardly an improvement on Regiomontanus, who had required eight "crucial" measurements: four to find the altitude and azimuth of the phenomenon at two instances, and four to find the same coordinates of a reference star (in order to measure the elapsed time). In addition, Regiomontanus's method called for three data that could be determined at leisure: the local latitude, and the longitude and latitude of the reference star, all of which an astronomer would most probably have had at hand in any case. In contrast, Digges demands sixteen crucial measurements: the same four altitude and azimuth observations of the phenomenon, eight more to obtain the same coordinates of the stars, and the distance of the phenomenon from each of the stars at each moment of observation. There is only one datum that can be determined at any time: the angular distance between the two fixed stars.

Although Digges was anxious to avoid any explicit measurement of time, in effect he replaced that requirement with something far more complicated, as Tycho

Brahe recognized in the large section of his *Astronomiae instauratae progymnasmata* that is devoted to a critique of Digges's work.¹⁷ Tycho considered Digges's measurement of the position of the New Star to be among the most accurate,¹⁸ but it is Digges's new methods that are of the most interest to him. He delivers a terse judgement on this Problem: "The eighteenth Problem is complicated by more prerequisites than it is reasonable to demand, which cannot easily be provided without any suspicion of error."¹⁹

Other Problems require less data, but are beset with difficulties of their own. The fourteenth Problem, for instance, appears to ask only for a single observation: the altitude of the phenomenon at its maximum azimuth. In order to determine when this moment will be, however, the astronomer must first have taken an altitude measurement of the star on the meridian, as well as repeated azimuth measurements of the star until its azimuth equals its polar distance on the meridian. Indeed, the astronomer would have great difficulty finding the precise moment to make his observation unless he used a reference star, which is, in effect, a measurement of time. Even apart from these difficulties, the Problem has a more fundamental flaw. Digges requires the altitude of the object at the very moment that the altitude is most affected by the diurnal rotation of the heavens and most difficult to measure accurately – and he then hopes to find the parallax from a tiny discrepancy in the object's expected altitude. Tycho, as one might expect, criticizes this infelicity.²⁰ Even Digges, in his own summary of the Problems, is forced to admit that this Problem is not his best: "It is completely unsuitable for practical use, although the geometrical construction is quite perfect."²¹

In fact, Digges considers that Problems 10 to 14 are all difficult to put into practice. He is much more enthusiastic about Problems 15 to 21, claiming that they will "very precisely and simply reveal true parallaxes."²² These latter problems all require the astronomer to measure the separation of the phenomenon from one or more fixed stars. Digges used only a cross-staff in observation,²³ an instrument admirably suited to the measurement of stellar separations, but far less reliable for making even simple altitude measurements in the meridian. This no doubt explains Digges's preference for the later Problems. Tycho, on the other hand, considered these Problems to be needlessly complicated. He could recommend only Problem 10, ironically one of those that Digges rejected as ill-suited for practical observation. All this Problem requires are the altitudes of the phenomenon at its two, upper and lower, meridian transits. The data are easy to obtain if one uses a quadrant, as Tycho did, rather than a staff; it is a trivial matter, moreover, to analyse the data and obtain the parallax. This is the method that Tycho himself preferred; Tadeáš Hájek recommended the method, and both the Landgrave of Hessen-Kassel and Paul Hainzel had used it to show that the star had no parallax.²⁴

Although Digges's Problems are flawed, they nevertheless show great ingenuity in their attempt to overcome the infelicities in Regiomontanus's methods. As a work of theoretical astronomy, and as examples of the geometer's art, they are quite the equal of Regiomontanus's constructions. It is interesting to note, however – as Tycho

did several times in his critique – that Digges provides no numerical examples based on actual observation of the New Star.

Digges, indeed, recognized this failing himself, pleading that lack of time and the pressure of other commitments had not allowed him to provide practical examples for any of the Problems.²⁵ It seems unlikely, however, that Digges *had* any examples based on observations of the New Star. Despite the wealth of complex observational possibilities that he had opened up in his Problems, his own method of observing the New Star was much simpler.

Using the rule of the staff, he says, line the New Star up with two fixed stars in the same vertical circle. Some hours later, line the staff up again with the two fixed stars. If the New Star appears again on the line joining the two fixed stars, then it is unaffected by parallax.²⁶

By this means, on many nights, I noted that the miraculous Phenomenon always appeared in a straight line with the small star in the knee of Cassiopeia and the other star beneath the belt of Cepheus on the right-hand side.²⁷

In this solitary description of his observational practice, Digges reveals that he did not use the battery of methods he had developed in the Problems. What, after all, would be the point when the supra-lunar nature of the star could be demonstrated so directly? Indeed, the complexity and number of the constructions suggest that they were devised over a period of time far longer than the few weeks since the star had appeared in the sky. It does appear, then, that the Problems were not in fact invented for the analysis of the New Star. Presumably the interest in parallax that the New Star aroused encouraged Digges to publish his results, and inform other astronomers of the improvements he had made to the older parallax methods that they were still using. But if the new techniques were not developed specifically for the New Star, perhaps Digges had another purpose in mind. He himself suggests what this purpose might be; but before we examine this, it will be useful to pause and consider Digges's view of the New Star. For, although his treatment of it stands separate from his parallax theories, we shall see that ultimately both contribute to a larger project.

DIGGES ON THE NEW STAR

Digges wrote two prefaces to his book, the first entitled *Praefatio authoris*, and the second, *Proemium*.²⁸ It is only in these two passages that he gives a detailed exposition of his opinions on the New Star; and even here, there are some inconsistencies between the two accounts.

In the *Praefatio authoris*, Digges condemns the “common opinion” that the star is a comet located in the upper atmosphere. He promises instead that

whoever wears these Platonic or – to use a more accurate expression – Mathematical Wings and heads upwards into the ethereal realm, leaving behind entirely the elemental regions, will see that [the star] is much further away than the place of the comets.²⁹

As we have seen, Digges found no parallax in the New Star. It was this, together with the fact that the apparition lacked a tail, that convinced him that it was not a comet but an entirely different phenomenon. To establish just what it was, Digges used some curious Aristotelian reasoning to arrive at a very un-Aristotelian conclusion.

Digges sets out to reconcile the mathematically proven fact that the New Star was a phenomenon located in the celestial sphere with the Aristotelian physical principle that the appearance of something new – indeed, change of any sort – is impossible in that part of the universe. He considers, and rejects, the possibility that the star could be composed of cometary matter somehow carried up into the celestial realm: Aristotle had shown that terrestrial matter could never stray outside its own, sublunar sphere. In the end, Digges asserts, there can be no natural cause for such an enormous phenomenon (and seeing how very bright it burns, and at such a distance from the earth, Digges knows it to be very large – in fact, “bigger than Europe”). Therefore, he concludes, the star must be a special creation of God.

Digges does have another contribution to make concerning the star, however. In the months after its first brilliant appearance, the star had grown noticeably dimmer (it was eventually to fade away altogether). He again uses an unorthodox line of Aristotelian reasoning to explain the apparent change in the new celestial object. He accepts, as he did in the previous argument, that no alteration can occur in the celestial realm, and extends this dictum to apply to the star as well. If the star is not subject to change, then the alteration in its light must be due to an increase in the distance between it and the earth – and in the *Praefatio* he attributes this increase to the Copernican motion of the earth around the sun. He writes:

A handhold has been provided, a particularly opportune chance to test whether the motion of the earth assumed in the planetary theories of Copernicus is the sole reason why the star has been diminishing in apparent magnitude.³⁰

If the star should reach its minimum brightness at the spring equinox,³¹ and then gradually recover its brightness over the next few months, once again reaching a maximum at the autumnal equinox, then, Digges says, we can confidently conclude that the earth moves in an annual orbit about the sun. This is a lot to hope for and, needless to say, nothing of the sort did happen. Digges’s reasoning is, in any case, open to criticism. As Tycho argued, if a New Star could appear in the sky against all known physical laws, then there was no reason why it could not also change in brightness, in contravention of these same laws.³²

But it is here that Digges presents an alternative use – perhaps the originally intended one – for the parallax Problems that we have examined above. His suggestion that the star could be a test-case for the Copernican system is part of a larger argument developed in the *Praefatio*. Digges sets out an ambitious plan to reform astronomy, and criticizes the Ptolemaic system both for the methodological error of arguing from theory to reality, rather than following the natural order of reality to theory, and for the clumsy *ad hoc* planetary models that arise from this

inverted procedure. He declares that the key to the reform of astronomy may be found in his new parallax methods:

I perceived that the ancients had proceeded in inverted order: from their invented planetary theories they sought the true distances and parallaxes. But they should have instead proceeded the other way around, starting with observed and known parallaxes, and then considering the planetary theories.³³

Towards the end of the *Praefatio*, Digges promises:

I have attempted, and succeeded, in the various Problems to determine demonstratively, practically and precisely the parallax of this Phenomenon and also of any other. Although the parallaxes of Saturn, Jupiter and Mars are so small as to be hardly discernible by our weak senses, if they can be truly detected by any method, then I would dare to say that they can be found by means of the following Problems of mine, or by no geometric method at all.³⁴

In the Ptolemaic system, the distances of the planets from the earth can be set at any arbitrary values.³⁵ The Copernican system, on the other hand, relies on relative motions to explain astronomical phenomena. The distances of the planets to one another are thus integral to the Copernican system, and Digges praises this harmonious arrangement, in contrast to the ill-assorted jumble of arbitrarily sized eccentrics and epicycles that made up the Ptolemaic system.³⁶ The ancients, according to Digges, had constructed planetary models, and then used the positions predicted by these models to calculate parallax. His programme is to work in the opposite direction, finding the absolute distances empirically and individually, using the new parallax techniques, and then constructing planetary hypotheses from these physical facts. The result, he believes, will be the Copernican system.³⁷

Digges was interested in parallax, therefore, because he thought he could use it to determine the exact distances of the planets from one another and, in doing so, establish the Copernican system on physical data. One assumes that when Digges turned to the question of the New Star, he hoped to find even more direct proof of an earth in motion around the sun, by finding annual parallax in the phenomenon.³⁸ Since, however, he could detect no parallax of any variety in the New Star, he came up with another argument, namely, the change in its brightness, that allowed the star to be used as proof of the Copernican system.

It seems, then, that Digges's complex parallax techniques were not originally developed for the investigation of the New Star. His opinion that the star was supralunar was based on very simple parallax observations and more general considerations of its appearance. He hoped to use both the New Star and the parallactic techniques, however, as proofs of the Copernican system. Although the parallax techniques were most probably developed before the New Star even appeared, in Digges's mind there seems to have been a link between them.

DIGGES'S ALTERNATIVE VIEW OF THE NEW STAR

In the *Proemium* that follows the *Praefatio authoris*, Digges appears to contradict the arguments he set out in his previous preface, namely that if the star appears to

change in brightness, it must be because the earth is moving away from it, in its annual circuit around the sun. In the *Proemium*, he seems to maintain that while the diminution of the star's brightness is still due to an increase in the distance between it and the earth, the motion is that of the star, and not of the earth:

This marvellous new Phenomenon which appears in the seat of Cassiopeia seems to turn so uniformly around the pole with the other fixed stars that in each revolution it returns to shine in exactly the same place, without any discernible discrepancy. In that short period of time it is not found to have any motion of its own. I have no doubt, however, that this Phenomenon is further from the earth than it was at its first appearance; but this recession is so slow and minute that it cannot be detected in a single revolution. If you wish to observe other phenomena that do have a sensible motion in a single revolution, then you can very easily use arithmetical calculations to adjust for the movement in any part of a daily revolution.³⁹

The context of Digges's remarks is the suitability of the New Star for parallax observation. Bodies that have a large motion of their own in a single night present the astronomer with a special difficulty. Digges stresses that the star does not have any significant, measurable motion that the astronomer would have to take account of during a night's observation. The star does have, however, a very slow motion away from the earth. It might be argued that, by "recession" from the earth, Digges again means the Copernican motion of the earth itself. The context of the passage, however, on the allowances that must be made for the proper motions of bodies, makes it more likely that Digges does mean that the star itself is receding, very slowly, from the earth. In contrast with the stress laid on the Copernican system in the *Praefatio*, elsewhere in the *Proemium* he says that the choice of world-system is irrelevant to the question of the star's proper motion.

This inconsistency between the two prefaces is difficult to explain away as a "development" in Digges's thought, since the *Praefatio* and the *Proemium* seem to be contemporaneous, both written shortly before the publication of the *Alae*. One explanation, however, may be that while the statements in Digges's *Proemium* are directly contradictory to those of his *Praefatio*, they correspond quite closely to the thoughts on the star expressed by his "mathematical father", John Dee.

DEE ON THE NEW STAR

Dee's treatise on the New Star, entitled *Parallaticae commentationis praxeosque nucleus quidam*, is less substantial than Digges's work, both in size and mathematical ambition.⁴⁰ In his short preface to the *Nucleus*, Dee expresses no opinion on the nature of the New Star; his ideas about it can, however, be reconstructed from other sources. There is, for instance, an account and critique of Dee's theory in the works of Tycho Brahe.⁴¹ Tycho, in his *Progymnasmata*, recounts a letter he received from Christoph Rothmann, the court astronomer of the Landgrave of Hessen-Kassel. Rothmann had met Dee when the latter passed through the Landgrave's court at Kassel on his return to England in 1589. Rothmann was familiar with Dee and Digges's works on parallax, and naturally he asked Dee his opinion of the New Star. Rothmann reported to Tycho that in Dee's opinion, the New Star was certainly "within the ambit of the universe" – that is, below the fixed

stars, or among the planetary orbs. It had not, however, always maintained the same distance from the earth. Dee believed that the star had moved in a straight line, slowly and gradually, from a lower position to a higher one. This is the same theory, of course, that Digges put forward in his *Proemium*.

Tycho notes that Cornelius Gemma (the son of Dee's old Louvain friend, Gemma Frisius) had arrived at a very similar model, but that neither Gemma's model nor Dee's seems very convincing to him. While he concurs in the Aristotelian objection to rectilinear motion in the celestial realm, he finds even stronger astronomical reasons to reject both men's theories. Dee's assertion should have been supported by parallactic observation; that is, only if he had found that the parallax of the star steadily decreased during its period of visibility, says Tycho, could he have argued that the star was moving away from the earth. But in fact no parallax had ever been observed in the star. Instead, Dee had made the case for the star's movement away from the earth on the grounds that it had diminished in brightness over time.

To refute this claim, Tycho refers the reader to his criticism of Cornelius Gemma.⁴² He assumes that Dee's theory is similar to that of Gemma, who had argued that the star first appeared above the sphere of Saturn, among the fixed stars, and was then drawn up through the ninth and tenth spheres – the “empty” spheres that were the supposed causes of the diurnal motion and the precession of the equinoxes. Tycho pointed out that, if the star had been reduced from the first magnitude to invisibility solely by rectilinear movement, it would have had to travel far beyond the eighth sphere – over a distance many times that between the earth and the eighth sphere. This would extend the size of the universe far beyond its usually accepted dimensions. When arguing against Dee, Tycho repeats the objection, saying that in order to explain the reduction of the star's brightness from the first magnitude to even the sixth, given its starting point above the sphere of Saturn, the star would have had to travel 300,000 earth diameters out into space. (He does not specify his method of calculation.) This makes the universe too large even to contemplate.⁴³

A few other pieces of evidence for Dee's views on the nature of the star remain, more trustworthy than Tycho's second-hand report. In his *Compendious Rehearsal*, Dee lists the title of another book he wrote on the New Star, which he says he composed in 1573 (this book is now lost):

On the marvellous star in Cassiopeia, sent down from heaven all the way to the sphere of Venus, and then drawn up again perpendicularly into the depths of the heavens sixteen months after its first appearance.⁴⁴

From its title alone we can tell that the book could not have been completed in 1573. Dee refers to the disappearance of the star “sixteen months after its first appearance”, that is, in 1574, and this is the more likely year of composition. The title reaffirms Dee's opinion that the star disappeared because it moved rectilinearly away from the earth. This is further supported by information given by William Camden:

I do not know whether it is worthwhile to rehearse what all the historians of our age have recorded, that in November [of 1572] a New Star or, if you prefer, a Phenomenon

was seen in the throne of Cassiopeia [...] carried about by the diurnal motion of the sky, it remained in the same place for sixteen months. It was in the celestial region, not elemental, as those noble mathematicians of our land John Dee and Thomas Digges have learnedly demonstrated by the parallactic doctrine; they were of the opinion that it gradually disappeared by ascending. Indeed, after the eighth month everyone noticed that it was gradually weakening.⁴⁵

Dee mentions, in the *Compendious Rehearsal*, another book of his which surely concerned the New Star: a pamphlet entitled *Hipparchus redivivus* – “Hipparchus reborn” – and also written in 1573.⁴⁶ As Calder has argued, Dee is perhaps alluding in the title to the ancient tradition that Hipparchus had seen a new star appear in the heavens; Dee’s book would thus be another account of the nature of the New Star.⁴⁷ It may equally be an allusion to Hipparchus’s invention of parallax techniques and his measurement of the distances of the sun and moon from the earth, which would suggest that Dee’s lost work concerned the use of parallax. On either interpretation, the book dealt with something promised by, but missing from, the published *Nucleus*.

DEE ON PARALLAX

Dee’s *Nucleus*, like Digges’s *Alae*, purports to treat the subject of the New Star. We have already seen, however, that Dee’s preface barely mentions the New Star at all, and that his opinion of it has to be deduced from other sources. The body of Dee’s tract likewise has little specific to say on the subject of the New Star. As with Digges, Dee seems to be in a rush to publish older research, directed towards a different practical goal, with promises to treat the New Star more specifically, at a later date.

The work opens with a short preface by Digges, which we shall examine below. Dee follows with his own preface, which explains the method employed in the work as well as his reasons for publishing it. Parallax problems are necessary, he says, because the ideal situation enjoyed by Ptolemy in his measurement of the moon’s parallax cannot usually be obtained. But, he argues, despite the difficulty in measuring the parallax of other phenomena, they can all in fact be reduced to two basic cases: either the sum, or the difference, of the parallaxes from two observations is known; in both cases, the astronomer must then discover the individual value of each of the two parallaxes.⁴⁸

In the body of the *Nucleus*, Dee does indeed proceed on the assumption that all attempts to measure parallax concern either the sum or the difference of two parallaxes derived from two distinct observations. He shows how the astronomer, having determined this combined parallax (by unspecified means), should then go about distinguishing the values of the individual parallaxes.

After two preliminary theorems, of little interest, Dee produces the centrepiece of his parallax method in the third and final theorem:

In any two different parallaxes of the same star or similar phenomenon (provided that it is perceived to be moved only by the daily motion of the universe), the ratio of the sine

of the greater parallax to the sine of the smaller will be as the ratio of the sine of the greater apparent angular distance from the zenith to the sine of the smaller.⁴⁹

Figure 1.

Figure 1, then, where A is the centre of the earth, B the observer, C and D the two observations of the star, and E the zenith, Dee shows that:

$$\frac{\sin ACB}{\sin ADB} = \frac{\sin EBC}{\sin EBD}$$

As Dee points out at the end of his proof, it is not necessary to make the two sightings in the same vertical circle. One can, therefore, take two observations of the zenith distance of the phenomenon anywhere in the heavens, and obtain the proportion of the parallaxes.

In the second “porism” to this theorem, Dee provides the method of separating “combined parallax” that he promised in the preface. If, he says, the astronomer knows the ratio of the parallaxes (which, as we have seen, he can obtain from the zenith distances) and, somehow, the *sum* of the parallaxes, then the individual parallaxes can be found. He takes his method from Regiomontanus’s *De triangulis omnimodis* IV, 21, which itself is a version of the second lemma in Ptolemy, *Almagest* I.10. This trigonometrical theorem shows how to divide a single arc of a circle into two arcs, the sines of which are in a given ratio.

Dee thus gives a very general account of parallax. Whereas Digges lays down certain observational conditions, and provides a specific parallactic construction, Dee is concerned with the general principles,⁵⁰ and leaves the specifics to a later date:

Likewise, from the properties that have been demonstrated in this way, I shall more fully explain what other kinds of Theorems and Problems, necessary to my project, can be advanced and proven, in the book that we have decided to write, God willing, on this marvellous Phenomenon.⁵¹

Here is the same curious omission that we noticed in Digges. There is no application of the parallactic methods to the New Star. Dee, like Digges, pleads occupation with too many other matters to write up his results on the star and, as we have seen, promises a book on the subject.⁵² Again, it appears that Dee had developed the

parallactic methods for another purpose – and below we shall argue that they represent part of Dee's attempt to establish a mathematically precise, naturalistic science of astrology, specifically, by establishing the correct distances from the earth to celestial and terrestrial objects.

DEE'S ASTROLOGICAL PHYSICS

Dee had first expressed an interest in the problem of celestial distances some fifteen years earlier, in his *Propaedeumata Aphoristica*.⁵³ In this very obscure work, he tries to find exact mathematical, and naturalistic, principles on which to build a theory of astrological influences.⁵⁴ When in Louvain in 1548-9, Mercator and others had asked Dee to move beyond the common study of astrological effects and to consider the causes of these effects.⁵⁵ Dee found his solution in medieval optical writings, particularly those of Roger Bacon and Robert Grosseteste.

It was clear to Dee that the influence of heavenly bodies over the earth was propagated in straight lines, in a manner identical to the transmission of light. Although a planet emitted occult rays uniformly in all directions, only a part of these reached any one observer. Following Bacon, Dee reasoned that only those rays that reached the observer's eye would have any influence. These were the rays circumscribed in the volume of a cone whose apex was at the observer P (see Figure 2), and whose base was the portion of the planet visible from P.

Figure 2.

Every point P on earth would form the apex of a collection of cones extending from the planets and other bodies, whose shape and size would be unique for that location and moment in time. This seemed the perfect mechanism for explaining astrological influence and its manifold effects throughout the world. To find the precise astrological influences operating at a particular time and place, the astrologer therefore had to measure the cones of influence.⁵⁶ Dee spelled out in two aphorisms what was required:

XXX. The true sizes not only of the terrestrial globe but also of the planets and all the fixed stars ought to be known to the astrologer.

XXXI. The true distances of the fixed stars and each of the planets from the centre of the earth at any given time should be determined by the astrologer, as also the varying altitudes of clouds or the thicker air above the earth.⁵⁷

Dee does not specifically mention parallax in the *Propaedeumata*, but it is clear that the precise measurement of planetary distances and dimensions he demands would have required parallactic observation. In fact, in his preface to the *Propaedeumata*, he lists several books that he intended to publish when he had the time; among them is a work whose title suggests that, at this early date, Dee was not only interested in celestial distances, but had worked on the mathematical techniques needed to measure them:

Concerning the distances of planets, fixed stars and clouds from the centre of the earth, and concerning the discovery of the true magnitudes of all the stars: a [mathematical] demonstration in two books.⁵⁸

In both aphorism XXXI and in the title of his unpublished book, Dee mentions the distances of ‘clouds’ (*nubes*). In his effort to find a mathematically precise description of celestial influences, he may be intending to take into account the atmospheric obstructions to the planetary rays. Alternatively, by the word *nubes* he may be referring to that most portentous of meteorological phenomena: comets.

It is clear, then, that Dee had been working on the problem of celestial distances from the 1550s, or even the late 1540s. His interest was directly linked to his ambitious programme to set astrology upon a solid, naturalistic foundation, in which it would be essential to know the true distances and sizes of the planets, stars and other celestial objects. There is evidence, moreover, that Dee’s interest in celestial distances lasted long after the first publication of the *Propaedeumata*. In 1568 he revised and republished the work; and in his *Mathematicall Praeface* to Henry Billingsley’s 1570 English translation of Euclid, Dee expressed some views on astronomy and astrology closely related to his ideas in the *Propaedeumata*.

In the *Praeface* Dee classified astronomy and astrology as part of the series of auxiliary, practical sciences. The highest rank in this group he gave to perspective. This is hardly surprising since he extended the definition of perspective far beyond its usual ambit. It embraces not only the ancient science of optics, as we might expect, but also “catoptrics”, or the study of lenses and mirrors. Both study the propagation of light in straight lines, and the effects produced by these beams either naturally or artificially. But this is not the limit of Dee’s “perspective”:

It concerneth all Creatures, all Actions, and passions, by Emanation of beames perfourmed. Beames, or naturall lines, (here) I mean, not of light onely, or of colour [...] but also of other *Formes*, both *Substantiall* and *Accidentall*.⁵⁹

Dee’s definition of astronomy is equally idiosyncratic. Most contemporary astronomers divided astronomy into two component disciplines: the elementary grounding of the “sphere”, which accounted for the diurnal movements of the heavens, the rising and setting of the sun and stars, the seasons and so forth; and (the main pre-occupation of astronomers) the theory of the planets, which used “hypotheses” of circular motions to account for the observed progressions and retrogressions of the planets. While Dee’s definition overlapped with the common understanding of

astronomy in several places, there was an element that was distinctively his, and which recalls his insistence in the *Propaedeumata* that scholars should establish the proper sizes and distances of celestial bodies.

Astronomie is an Arte Mathematicall, which demonstrateth the distance, magnitudes, and all naturall motions, apparences, and passions propre to the Planets and fixed Sterres [...]. By this Arte we are certified of the distance of the Starry Skye, and of eche Planete from the Centre of the Earth: and of the greatnes of any Fixed starre sene, or Planete, in respect of the Earthes greatnes.⁶⁰

While other astronomers might consider parallax to be a useful tool in certain situations – especially during the appearance of a comet – Dee makes it practically the foundation and central concern of astronomy.

He considers astrology separately from astronomy, not as an art inferior to or derivative of astronomy, but as a great discipline founded on the mastery of many sciences. Expertise in astronomy is, of course, required; but the astrologer must also be an adept of perspective, cosmography, natural philosophy and more. It is not enough to learn the conventional meanings of planetary configurations. Dee cites with approval the opinion of the philosophers that the astrologer must investigate and discover the impressions which the celestial bodies make upon all earthly things. But even this is not sufficient; the astrologer should consider

Not only (by *Apotelesmes*), το οτι but by Naturall and Mathematicall demonstration το διοτι.⁶¹ Whereunto, what Sciences are requisite (without exception) I partly haue here warned: And in my *Propaedeumes* (besides other matter there disclosed) I haue Mathematically furnished vp the whole Method [...]. I was (for 21 yeares ago)⁶² by certaine earnest disputations, of the Learned *Gerardus Mercator*, and *Antonius Gogaua* (and other,) therto so prouoked: and (by my constant and inuincible zeal to the veritie) in obseruations of Heauenly Influencies (to the Minute of time) than, so diligent.⁶³

Here Dee explicitly links his programme for astrology with that presented in the *Propaedeumata*. Astrology, in short, is not only the study of the effects of the planets upon the earth; it is the investigation of the *causes* of these influences, using the tools of astronomy, natural philosophy and perspective.

In the *Mathematicall Praeface*, Dee stresses the interrelationship of perspective, astronomy and astrology. Perspective is the study of all influences that propagate in straight lines: not only light, but also the occult “substantial” and “accidental forms”. Astronomy is a science founded on perspective and is principally about parallaxic measurement. Astrology, finally, draws upon astronomy and perspective (as defined in Dee’s peculiar sense) to discover the causes and mechanisms of celestial influence. Dee is restating, for a popular audience, his arguments for a naturalistic astrology, which he had first presented in the *Propaedeumata* of 1558, and had restated in the revised edition of this work only two years previously.

It seems, then, that Dee retained his preoccupations with astrology and celestial distances into the 1570s – and this is confirmed by the postscript to the *Nucleus*. He marvels at the aid that Nature herself, in the form of the diameter of the earth, has provided for the investigation of the heavens. But the use of the parallaxic method is not limited to the investigation of the New Star:

If you are willing to apply yourself to this [method] with concentration, care and love for the truth, then you will be able to join me in bearing unassailable witness to students of the truth, of how incredible is the situation and nature of this celestial phenomenon; moreover, you will also become much more informed in discovering innumerable other facts about the causes, locations, distances, magnitudes, stations and motions of all celestial and subcelestial phenomena. I would hope that this most beautiful part of philosophy will be complete before all the predicted consequences of this marvellous herald (which seems to me to portend in a variety of ways) are unfolded into actual events.⁶⁴

The parallax techniques, then, were to be used as the principal tool of investigation of the heavenly bodies. Recall Dee's concern in the *Propaedeumata* and in the *Mathematicall Praeface* that the correct distances of the planets be established; also recall from the former work, and from his unpublished treatise on parallax, that *nubes* – meaning either obstacles to the celestial influences, or comets – were to be investigated. Perhaps he included these under the rubric of “subcelestial phenomena.” In any case, there is no doubt that the parallax techniques that Dee presented in the *Nucleus* had a pedigree that long predated the appearance of the New Star.

DEE AND DIGGES IN COLLABORATION

How, finally, did the two astronomers come to publish their works together?⁶⁵ In his preface to the *Nucleus*, Dee explains why he was publishing his pamphlet on parallax in tandem with Digges's weightier contribution. Before Digges had ever mentioned his own treatise (and, one presumes, long before the appearance of the New Star), Dee says that he and his “mathematical heir” had met frequently at Dee's house and discussed the development of new methods for the measurement of parallax. Dee was surprised, however, when at the end of February 1573, Digges arrived at his house with the finished text of his *Alae* ready for the printer. Digges was filled with confidence in the value of his treatise, as Dee describes:

[Digges] added that he had good reason for publishing his book: he would free me from the burden of writing anything on this subject; furthermore, he would send out in advance works that would shed light, by his own industry, on my more dense writings on this and similar subjects. Finally, his writings would create more, and more trustworthy, observers, since [his readers] would be taught to observe this unprecedented spectacle (which still shines in the heavens) methodically, with an educated and mathematical eye.⁶⁶

It is most interesting that Digges, at least in an attempt to gain Dee's interest, maintains that the purpose of his *Alae* was to illuminate Dee's more obscure writings on parallax. Dee had not published anything specifically on parallax techniques: there were only his references to the measurement of celestial distances in the *Propaedeumata*, the work that Digges is surely referring to here. We might presume, then, that the discussions on parallax that the two men had held at Dee's house were stimulated by Dee's continuing interest in a naturalistic physics of astrological influences. Whether Digges shared this interest is another question, but we should not be surprised that Dee should have asked his mathematical heir to consider methods to find the correct distances of the planets. It appears that Dee's interest in

planetary distance coincided, by chance, with Digges's preoccupation with the same subject on quite different grounds, namely, the establishment of Copernicanism.

There seems to be an element of gentle mockery in Dee's description of his young collaborator's self-confidence. Dee writes that he does not want to seem merely one who praises another's accomplishments, and that he therefore revealed to Digges that he too had been working on parallax theorems of his own, which would be of great value in educating the public:

I was unwilling to keep these Theorems locked up any longer in our study (where they had recently been conceived). Instead, I wanted to publish them immediately, although they are extracted from a certain book of mine that is not yet finished. In this way they might be useful to mathematicians, at least until our other writings in this philosophical genre are ready to appear.⁶⁷

This unfinished work, from which the Theorems of the *Nucleus* were extracted, could be any of the unfinished works on parallax that Dee has mentioned – either the *De planetarum [...] distantiiis* of the early 1550s, or the work that, perhaps, recorded Dee's latest thoughts on parallax, the *Hipparchus redivivus*.⁶⁸

Dee's account of their collaboration in the *Nucleus* contradicts the version of the same events given in Digges's preface to Dee's tract. There, Digges says that he had allowed Dee to publish the *Nucleus* as an appendix to the *Alae*. Dee's Theorem III, he says, provides nothing new for the reader of the *Alae*, and indeed can be derived from Digges's eleventh problem. However, Digges concedes, it would be against natural justice if Dee should publish his work at a later date (recalling that the Theorems were extracted from a larger, unfinished work), only to find that the public presumed they were plagiarised from Digges. Besides, Digges adds, Dee's Theorem is suitable for novices who cannot yet grasp the Problems.⁶⁹

Although the master and his protégé engaged in this good-natured rivalry, there was no doubt that it had been left to Dee to write the final account of the New Star. In the *Alae*, Digges frequently mentions Dee's intention to publish their observations and conclusions on the star, and often uses this to excuse himself for saying so little on the subject. In the *Praefatio authoris*, for example, he stops himself from getting too carried away with his theories on the phenomenon:

But I have resolved not to write anything more on the history of this star, because that extraordinary man John Dee – most learned in these studies and a prodigy in the rest of philosophy, whom I esteem as my second Mathematical Father – has taken on the task of expounding this material, and I have no doubt that it will soon be published.⁷⁰

It is to our frustration that Digges had such confidence in Dee's intentions to publish their material.

NOTES

¹ Bartolomaeus Raisacherus, *De mirabili Novae ac splendidissimae Stellae [...] Phaenomeno* (Vienna, 1573), sig. A3^{r-v} (from the *prooemium*): “Est igitur apparentia illa corpus quoddam luminosum splendidum, quantitate stellas primae magnitudinis adaequans, aliquas etiam exuperans, calore ex candido ac aureo fulvescenti Iovem, subrutilanti autem Martem Chronicum quodammodo referens, in parte illa septentrionali, et circa polum arcticum in imagine Cassiopaeae, singulis noctibus, ab aliquot nunc mensibus sese ostendens, motu autem saltem unico, eoque diurno, in eadem cum reliquis stellis circumstantibus semper distantia, per sese autem immobile, circum polum se revolvens.”

² The remnants of the event are detectable today as X-ray source Oep. XR-1, or “Tycho’s Supernova”.

³ Aristotle, *Meteora*, 344a9-344b18. See Clarisse Doris Hellman, *The Comet of 1577: Its Place in the History of Astronomy*, Studies in History, Economics and Public Law, 510 (New York: Columbia University Press, 1944), 19-23.

⁴ Otto Neugebauer, *History of Ancient Mathematical Astronomy* (Berlin: Springer Verlag, 1975), 322-9.

⁵ Neugebauer, 100-112. See also Janice Adrienne Henderson, *On the Distances between the Sun, Moon and Earth according to Ptolemy, Copernicus and Reinhold* (Leiden: E.J. Brill, 1991).

⁶ See Henderson, *On the Distances*, 17-18. The term ‘parallax’ should perhaps be qualified as *diurnal* parallax, to distinguish it from *annual* parallax, used by modern astronomers, which describes the apparent change of position of a star owing to the annual motion of the earth.

⁷ This is a simplification; because he did not have an accurate way of dealing with refraction, Ptolemy avoided the absolute lowest point of the moon’s cycle. A full exposition of Ptolemy’s method is in Henderson, *On the Distances*, 21-6.

⁸ Johannes Regiomontanus, *De cometarum magnitudine, longitudineque ac de loco eius vero, problemata XVI* (Nuremberg, 1531). A second edition was published as part of the *Scripta clarissimi mathematici M. Ioannis Regiomontani* (Nuremberg, 1544). A translation and commentary on this work is given in Jane L. Jervis, *Cometary Theory in Fifteenth-Century Europe* (Dordrecht: D. Reidel, 1985).

⁹ Regiomontanus’s first problem states the general principle of diurnal parallax, in much the same terms as we have expressed it above. Problems II to V directly concern the measurement of cometary parallax; Problems VI to VIII consider the effect of parallax in various coordinate systems; Problems IX to XVI are a miscellany, dealing with observational techniques (including a description of the cross-staff) and the analysis of parallactic data to find the distance of a comet from the earth and thence its true length and even its volume.

¹⁰ Regiomontanus, *De cometis* (1531), fol. 3^r: “Notanda est altitudo Cometarum antemeridiana vel postmeridiana cum arcu azimuth eius, instansque huiusmodi observationis animadvertendum est, sed et instans quo Cometa ipse meridianum possidet non est negligendum, quod facile fiet per observationem cuiuspiam stellae fixae locum notum habentis.” Translation by Jane L. Jervis, *Cometary Theory*, 100, with facsimile of the original at 179.

¹⁵ *Alae; Parallaticae*. For reasons that we shall see below, the two works were published together, and are usually bound into a single volume. Digges refers to Dee’s work in the prefatory material to his own volume, and provided a brief preface to Dee’s treatise. On both works see *JDEP*, 667-71.

¹⁶ He criticizes Regiomontanus several times in the work (at, for instance, sigs A3^v, H3^v, L2^r, but especially at B2^r, where he identifies the principal problem as the measurement of time. The use of clocks is not even worth considering, so inaccurate are they; and even the measurement of time by reference stars is rejected because of the necessity of making several simultaneous observations.

¹⁷ Brahe, “*Astronomiae*”, III, 167-203.

¹⁸ Brahe, “*Astronomiae*”, III, 169.

¹⁹ Brahe, “*Astronomiae*”, III, 201: “Decimum octavum, iusto pluribus praesuppositis intrincatur, quae non facile absque omni erroris suspitione offeruntur.”

²⁰ Brahe, “*Astronomiae*”, III, 200-201.

²¹ *Alae*, sig. L1^r: “Omnino Praxi non convenit, quamvis Demonstratio perfectissima sit.”

²² *Alae*, sig. L1^v: “perfectissime et liquidissime veras Parallaxeis enucleabunt.”

²³ See his notes on observation at *Alae*, sig. II^r-4^r.

²⁴ Brahe, “*Astronomiae*”, 200; Hagecius, *Dialexis* 66-72.

²⁵ *Alae*, sig. K4^r.

²⁶ He adds that, if it is no longer on the same line, then the amount of parallax can be determined by his sixteenth Problem. But since the New Star *always* appeared in the same line, this is in fact superfluous.

²⁷ *Alae*, sig. K3^v: “Hac ratione plurimis noctibus animadverti Phaenomenon istud mirabile, in una apparere recta linea cum ea stellula quae in genu Cassiopeae, et altera quae in latere dextro Cephei sub Cingulo est.”

²⁸ *Alae*, sigs A1^r-B1^r and B1^v-B3^r.

²⁹ *Alae*, sig. A1^v: “At qui Platonis, seu ut verius loquar Mathematicis istis instructus Alis, sursum in Aethera contendat, Elementaribusque prorsus Regionibus traiectis, longe remotiorem Cometae locis esse perspexerit.”

³⁰ *Alae*, sig. A3^r: “ansam oblatam esse, et occasionem maxime opportunam experiendi an Terrae motus in Copernici Theoricis suppositus, sola causa siet [*sic*] cur haec stella magnitudine apparante minuat.”

³¹ The star was situated very close to the great circle through the spring equinox and the celestial poles. When the sun is at the spring equinox, according to the Copernican theory, the earth is at the vernal equinox, and thus at its maximum distance from the spring equinox. The *Praefatio* is dated February 1573, a month before the equinox.

³² Brahe, “*Astronomiae*”, III, 172.

³³ *Alae*, sig. A2^v: “Praepostere etiam Antiquos progredi perspexi ex Theoricis scilicet fictis Parallaxeis et distantias venari veras, cum inverso ordine procedere potius debuissent, et ex Parallaxibus observatis et cognitis, Theoricis examinare.”

³⁴ *Alae*, sig. A4^r: “Conatus igitur sum et assequutus, variis Problematibus demonstrative, et practice exactissime Parallaxin huius Phaenomeni et cuiusvis etiam alterius concludere, licet Saturni, Iovis, et Martis, Parallaxeis adeo sint exiguae, ut sensuum imbecillitate vix discerni possint, Si tamen ulla arte vere animadverti queant (hoc ausim dicere) aut his nostris sequentibus problematibus, aut nullis penitus praeceptis Geometricis inveniri possint.”

³⁵ Values were known for the distance of the moon and the sun. For each of the other planets, the deferent, or principal circle was scaled so that the uppermost extent of one planet’s epicycle coincided with the lowermost extent of the next highest planet’s epicycle. In effect, the planetary mechanisms were fitted like layers of an onion between and around the layers of the sun and moon. It is important to note that this arrangement was entirely arbitrary, and the same planetary motions would be observed whatever the scale chosen for the deferents and epicycles. An account of the origins of this arrangement can be found in Olaf Pedersen, *A Survey of the Almagest* (Odense: Odense Universitetsforlag, 1974), 391-7.

³⁶ *Alae*, sigs A2^v-A3^r. See Henderson, *On the Distances*, 93-9; also 4-5 on the different role of the solar distance in the Ptolemaic and Copernican systems.

³⁷ *Alae*, sig. A4^v,

³⁸ Although annual parallax is not mentioned in the *Praefatio authoris*, it was clearly on Digges’s mind at the time, as he makes clear in a passage towards the end of the volume: “Concerning these matters [sc. diurnal parallaxes] and others hitherto unheard of, and about an easy method of investigating them with a new kind of instrument, I shall, God willing, perhaps expound more fully at a later date, if these first writings meet with approval. I shall also expound upon other parallaxes, which no one to this date has discussed, and which few know of, or even believe in. I mean those parallaxes which occur not because of the distance of our place of observation from the centre of the earth, but which happen through the different positions of the centre of the earth itself.” (*Alae*, sig. K4^r: “De his autem aliisque hactenus inauditis, facillima ratione per Instrumentum novum perscrutandis, fusius forsitan posthac, si ista exordia placere intellexerimus, Deo annuente, disseremus. Deque Parallaxibus aliis hactenus a nemine tractatis, a paucissimis cognitis aut saltem creditis; iis scilicet, quae contingunt non propter visus nostri a Terrae centro deviationem, sed per varios ipsius centri situs.”).

³⁹ *Alae*, sigs B1^v-B2^r: “Phaenomenon admirabile novum in Cassiopaea sede conspicuum, adeo uniformiter circa Polum volvi cum caeteris fixis videtur, ut singulis revolutionibus ad eadem loca absque ulla differentia sensibili quam exactissime ardeat, neque ullum motum peculiarem tantulo tempore habere

cernitur. Nihil tamen dubito remotius esse istud Phaenomenon a terra quam prima apparitione fuerat, sed haec elongatio adeo lenta et exigua est ut unica revolutione omnino non sentiat. Et si Phaenomena alia observare volueris quae motum sensibilem unica revolutione habeant, ea animadversa, poterit facillime Arithmeticis supputationibus, ad partem revolutionis quamcunque accommodari.”

⁴⁰ By “nucleus”, Dee means to suggest that he has broken through the “hard shell” of parallax, and now presents the reader with the essential, digestible kernel: *Parallatica*, sig. Aiii^v; Digges gives a similar explanation in his preface to *Parallatica*, at sig. Aii^f.

⁴¹ Brahe, “Astronomiae”, III, 204-5.

⁴² Tycho’s critique of Gemma is at Brahe, “Astronomiae”, III, 67-87; esp. 77-9, on the decrease of the star’s brilliance.

⁴³ Johnson and Larkey have argued, on the other hand, that it might be the very immensity of the movement required to reduce the star’s great brilliance that inspired Digges’s conception of the infinite universe. See F. R. Johnson and S. V. Larkey, “Thomas Digges, the Copernican System, and the Idea of the Infinity of the universe in 1576,” *The Huntington Library Bulletin*, 5 (1934): 69-117, esp. 113.

⁴⁴ J. Crossley, *Autobiographical Tracts of Dr John Dee* (Manchester, 1851), 25: “11: De stella admiranda in Cassiopeiae asterismo, coelitus demissa ad orbem usque Veneris, iterumque in coeli penetralia perpendiculariter retracta, post decimum sextum suae apparitionis mensem. Lib. 3. A. 1573.” See also *NP*, 287, n.2. Dee may have chosen the sphere of Venus for the star’s location because of the physical resemblance of the New Star to the planet Venus at its first appearance; Cornelius Gemma, for instance, named it “Phosphorus alter”.

⁴⁵ William Camden, *Rerum Anglicarum et Hibernicarum Annales* (Oxford, 1717), 272: “Nescio an operae pretium sit memorare, quod historici nostri temporis omnes memorarunt, mense Novembri novam stellam, aut, si mavis, Phaenomenum conspectum fuisse in Cathedra Asterismi Cassiopeae [...] eodem loco diurno coeli motu circumlata, totos sedecim menses haesit. In coelesti, non elementari regione exstitisse, ex Parallaxica doctrina Thomas Digseius et Joannes Deius, nobiles apud nos Mathematici, erudite demonstrarunt, sensimque ascendendo disparere opinati sunt. Post octavum sane mensem paulatim extenuari omnes senserunt.”

⁴⁶ Crossley, *Autobiographical Tracts*, 25: “12: Hipparchus redivivus, tractatulus, 1573.”

⁴⁷ *JDEP*, 671.

⁴⁸ *Parallatica*, sig. Aii^v. Compare the similar approach of Hagecius’s meridian method, where the two observations on the meridian are used to find the combined parallaxes, which are then separated by an approximate method, using a table. See Hagecius, *Dialexis*, 65-73.

⁴⁹ *Parallatica*, sig. Biii^f: “In duabus quibuscunque diversis, eiusdem Stellae similisve Phaenomeni, Parallaxibus (modo interea, diurno Totius solum ferri concipiatur motu) eadem ratio erit sinus recti maioris Parallaxeos, ad sinum rectum minoris, quae est sinus recti maioris a vertice distantiae apparentis, ad minoris distantiae apparentis sinum rectum.”

⁵⁰ It is interesting to note that a seventeenth-century writer saw, and made use of, this complementarity between the two works. Richard Holland used Digges’s Problems for specific observational conditions; instead of following the whole of Digges’s procedure, however, Holland used his construction only until the sum or difference of the parallaxes could be found. He then used Dee’s theorem to separate the parallaxes. See Richard Holland, *Notes shewing how to get the angle of Parallax of a comet or other Phaenomenon, at two observations; To be taken in any one Station or Place of the Earth, and thereby the distance from the Earth* (Oxford, 1668).

⁵¹ *Parallatica*, sig. Diii^f: “Similiter, ex proprietatibus hisce sic [...] demonstratis qualia inferri, demonstrarique alia possint, tum Theoremata, tum Problemata (ad nostrum institutum necessaria) fusius explicabimus in eo, quem (Deo favente) de Phaenomeno isto mirabili, edere statuimus libro.”

⁵² *Parallatica*, sig. Diii^f.

⁵³ *PA*.

⁵⁴ The central significance of the *Propaedeumata* in Dee’s philosophy, and its connection with medieval optical theory is demonstrated in Nicholas H. Clulee, “Astrology, Magic and Optics: Facets of John Dee’s Early Natural Philosophy”, *Renaissance Quarterly*, 30 (1977): 632-80; and *NP*, esp. 39-73.

⁵⁵ *MP*, sig. biii^v

⁵⁶ Because of a discrepancy in his sources (Bacon and Grosseteste) for this idea, however, Dee was unclear whether a short, stout cone or a long narrow one represented a stronger planetary influence. See *NP*, 49-50.

⁵⁷ “XXX. Magnitudines verae non solum terrestri globi, sed & planetarum fixarumque omnium stellarum, astrologo debent esse notae. XXXI. Distantiae verae tam fixarum, quam singulorum planetarum a centro terrae quocunque proposito tempore, astrologo constare debent: sicut & nubium, sive crassioris aëris, variae a terra altitudines.” *PA*, 136-7.

⁵⁸ “De Planetarum, Inerrantium stellarum, Nubiumque a centro terrae distantis: & stellarum omnium veris inveniendis magnitudinibus, lib. 2. demonstr.” *PA*, 116-117.

⁵⁹ *MP*, sig. bi^r. Clulee identifies the “Formes, both Substantiall and Accidentall” as synonymous with occult influences, in Clulee, “Astrology, Magic and Optics”, 654.

⁶⁰ *MP*, sig. bi^v-ii^r. Dee furnishes the example of the ancient measurement of the distances and sizes of the sun and moon.

⁶¹ “το οτι” – “the fact that”, or effects, “το διοτι” – “the why”, or causes. These are standard logical terms, taken from Aristotle’s *Posterior Analytics*, 89b24.

⁶² Comment printed in the margin: “Anno 1548 and 1549 in Louayn.”

⁶³ *MP*, sig. biii^v-iiii^r.

⁶⁴ *Parallatice*, sig. Diiii^v: “Cui si, de caetero, accurate, caute, et φιλαληθως, incumbere velitis: non solum Coelestis huius Phaenomeni, quam sit incredibilis Dispositio, Conditioque, una mecum veritatis studiosis, testatissimum reddere poteritis: Sed, ad quam plurima eruenda alia, circa Coelestium quorumcumque vel Subcoelestium Phaenomenorum Causas, Loca, Distantias, Magnitudines, Stationes, Motionesve, longe instructiores evadetis. Quam pulcherrimam Philosophiae partem (mortalibus summe necessariam) omnibus suis numeris, ante, absolvendam fore speramus, quam universa huius admirandi Prodromi (quae vario nobis videtur innuere modo) rebus ipsis, explicata pendentur Apotelesmata.”

⁶⁵ The works were actually published by two different printers: Digges’s work by Thomas Marsh, in late February 1573; and Dee’s by John Daye, in March 1573. These were the usual printers of the men’s tracts. The references in the prefatory material and in the body of the works to each other’s writings do imply, however, that the two tracts were meant to appear in a single volume. See *JDEP*, 668.

⁶⁶ *Parallatice*, sig. Aiii^r: “adieciturque editionis suae haud minimam esse causam, ut ea me liberaret (huiusmodi scribendi) molestia: illaque praemitteret, quae, pressius a me scriptis (de istis, similibusve rebus) lucem aliquam, hac sua adferrent industria: et quo plures, interea, instruerentur, redderentur testes, maiori fide digni: cum et ipsi, doctioribus et Mathematicis oculis, istud artificiose observare docerentur, quod caelo adhuc fulget, rarissimum Spectaculum.”

⁶⁷ *Parallatice*, sig. Aiii^r: “nostro proinde diutius inclusa ergastulo (ubi nuper nata sunt) haec nolui detinere Theoremata: sed ex quodam nostro (nondum absoluto) selecta libro, actutum potius, in publicum emittere: ut fructum haud parvum Mathematicis reportent, donec alia nostra (in hoc Philosophandi genere) scripta, tempore sunt proditura opportuno.”

⁶⁸ See intra, 53.

⁶⁹ *Parallatice*, sig. Aii^r.

⁷⁰ *Alae*, sig. A2^r: “Sed plura de huius stellae historia scribere non decrevi, quia eximius vir Iohannes Dee (quum in reliqua philosophia admirandus, tum harum scientiarum peritissimus, quem tanquam mihi Parentem alterum Mathematicum veneror...) hanc sibi tractandam assumpserit materiam, quam ita absoluturam esse, ut in Dei optimi maximi gloriam, et Mathematicarum artium studiosorum delectationum, utilitatem et admirationem summam, brevi prodeat, nihil dubito.”

STEPHEN JOHNSTON

LIKE FATHER, LIKE SON?

John Dee, Thomas Digges and the Identity of the Mathematician

In early 1573 two English mathematical books were being prepared for the press. Though produced by different printers they were issued as a pair and today are usually found bound together. John Dee's *Parallatice commentationis praxeosque nucleus quidam* and Thomas Digges's *Alae seu scalae mathematicae* were both prompted by the new star of 1572. The material fact of their joint publication neatly echoes the sentiments of familiarity expressed by the two authors. Digges supplied a preface to Dee's work, explaining the extent to which the two texts had been composed independently, while also praising Dee's learning and the benefits of their collaboration and discussion. Both Dee and Digges further specified their relationship in the prefaces to their own works. The bond between them was avowedly close, indeed paternal: for Dee, Digges was "my most worthy mathematical heir", while Digges repeatedly referred to Dee as a "revered second mathematical father" and acknowledged the pleasure of their intellectual intimacy.¹

These comments have often been noted and, in light of Thomas Digges's Copernicanism, occasionally been incorporated in attempts to establish Dee's views on heliocentric cosmology.² Nevertheless, Digges has not figured prominently in studies of Dee – no doubt because the scarcity of additional evidence has seemed to preclude any extended analysis of their association. Yet the relationship was more than simply a passing alliance inflamed by the excitement of the new star. In his all too brief comments in the preface and proemium to *Alae*, Digges indicated that the connection with Dee stretched back much further. Thomas recorded that his mathematical education had been begun by his father Leonard, himself a mathematician in his own right and the author of two popular vernacular texts published in the 1550s. But according to Thomas, Leonard had only been able to plant certain seeds of elementary mathematical learning in his son, and after his death it was left to Dee to cultivate and supplement these with further instruction.³

The mutually acknowledged paternal relationship between John Dee and Thomas Digges therefore gives us a remarkable window onto Dee's work and significance. Digges certainly provides an opportunity to assess Dee's role in forming the next generation of mathematicians. I argue that Dee offered the youthful Digges not only specific mathematical instruction but that he also supported his pupil's vision of the character and value of mathematics. In particular, I suggest that Dee's prior investigations underlie the studies embodied in Digges's first mathematical publication, in 1571. Moreover, Dee's early career in the 1550s as a mathematical client in noble

households provided an exemplar for emulation as Digges first fashioned his own role in the early 1570s.

As well as illuminating the issue of Dee's contemporary influence, Digges can also be used to examine Dee's own mathematical values and commitments. Over the course of the 1570s and 1580s, Digges reworked the terms of his mathematical identity, shifting away from a commitment to advanced and novel topics and prioritising instead the active service of prince and commonwealth. However, rather than representing a break with the pattern of Dee's career, I suggest that Digges's civic turn helps us to understand the changing character of Dee's own role as he advocated and practised a vernacular ethic of mathematical service in the 1570s.

While seeking to emphasise the importance of this series of connections between the careers of Dee and Digges, I do not conclude that they pursued identical ambitions. Digges never followed Dee's broadest conceptions of the terrain of mathematics and its relationship to other areas of learning. I examine the significance of this difference through the lens of Copernicanism and argue that the different responses of master and pupil reflect a fundamental divergence in their respective conceptions of the identity of the mathematician.

Mathematics has long been crucial to evaluations of Dee's work. Since E.G.R. Taylor's *Tudor Geography* of 1930, Dee's conception and practice of the mathematical arts have been a touchstone for those seeking to rescue his reputation, whether in order to proclaim his significance within Elizabethan culture or to instate him in the pantheon of the Scientific Revolution. Conversely, Dee has also been enrolled in the arguments of those sceptical of the positive impact of occult philosophies in the late Renaissance. Querying Dee's attainments as a mathematician has provided one means of undermining claims for Neoplatonism, Hermeticism and related magical traditions. At the extremes, these approaches become indiscriminating apology on the one hand and dismissive anachronism on the other, in either case blurring the possibility of a critical evaluation of Dee himself. By using Digges as a constant point of comparison, we can establish a perspective on Dee that is distanced and yet close to contemporary categories, in which we seek to recover the integrity of Dee's own enterprise while retaining a sensitivity to its differences and distinctions.

The obvious place to begin is Dee's *Mathematicall Praeface* to Euclid of 1570. Now probably his most frequently cited work, this text integrates a philosophical account of mathematics with a richly ramified classification of the various mathematical arts and sciences, elaborated and combined to create a mathematical manifesto whose claims are both disciplinary and yet personal to Dee. But despite its seeming timeliness – Digges's first publication is dated from the following year – I do not want to take this apparently obvious route.

Although Digges recorded Dee's mathematical instruction in print he gave no details or dates. Julian Roberts and Andrew Watson have recorded a small but vital fragment of independent evidence which suggests that Dee became Thomas's mathematical master soon after Leonard's death, which most likely occurred in 1559

when Thomas was only about 13 years old. Dee had signed his copy of the 1544 Basel edition of Archimedes's *Opera* on 1 January 1550 but, in addition to Dee's signature, the title page also carries the revealing note "Thomas Diggius 1559".⁴ The striking coincidence of dates hints strongly that Dee assumed the mantle of tutor immediately after Leonard's death. Certainly, the language of fatherhood which both Dee and Thomas Digges used in 1573 would be most readily explicable if there was little interruption in paternal role between Leonard Digges and Dee. Given this probability that Thomas had first studied with Dee at the end of the 1550s, we therefore cannot be sure that Dee's *Praeface* to the 1570 Euclid is the most appropriate or relevant text for understanding Digges's early work. Rather than Dee, Digges himself can serve more securely as our starting point.

Thomas Digges (c.1546-1595) is most familiar within the history of science as the first advocate of Copernicanism in England.⁵ However he appears in many more narratives than that of Renaissance astronomy and cosmology. He is to be found in accounts of navigation, ballistics, surveying and harbour engineering, as well as military strategy and administration, and parliamentary politics.⁶ In many of these accounts he is portrayed as a key figure in the development of the tradition of mathematical practice in England.

Digges's first publication was *Pantometria* (1571). At first sight this text appears to link him more closely with the outlook of his natural father rather than his "second mathematical father". *Pantometria* was actually written by Leonard Digges as a "geometrical practise" divided into three books, dealing respectively with the reckoning of heights and distances, areas, and volumes. This treatment of instrumental and computational techniques for surveying and mensuration was justified in terms of civic and military utility as well as personal pleasure. In securing the posthumous publication of his father's most important extant work, Thomas was undoubtedly exercising the duties of filial responsibility. But he did more than rescue his father's practical geometry from oblivion. At the end of *Pantometria*, Thomas appended a vernacular text of his own, a *Mathematicall Discourse of Geometricall Solids*.

Digges's *Mathematicall Discourse* provides us with the best witness to his earliest mathematical commitments and values. Although his editorial work saved Leonard's *Pantometria* from obscurity, Thomas's own contribution to the volume has been entirely forgotten. Yet it is a remarkable text, with a range and ambition quite unlike any other English mathematical work published in the sixteenth century. The *Mathematicall Discourse* proclaims the value of advanced mathematical study not just in the realm of lofty rhetoric but through the disciplined endeavour of elaborating hundreds of new theorems. There is no evidence that Leonard Digges had grappled with the kind of mathematical material that here engaged his son; we should look instead to John Dee for the origins and motivation of Thomas Digges's efforts.

The *Mathematicall Discourse* is primarily concerned with the properties, dimensions, and interrelations of the five regular (Platonic) solids. Its text gives several hundred theorems dealing with such topics as the mutual inscription and

circumscription of these solids. The final section of the text investigates similar questions but does so by studying five ‘transformed’ bodies – semi-regular Archimedean solids generated by the metamorphosis of each of the five Platonic solids. The *Mathematicall Discourse* covers its subject in just over one hundred pages, but its brevity is deceptive. The amount of labour invested in its preparation is disguised by Digges’s decision to omit proofs of his mass of theorems for the sake of brevity.⁷

John Dee was one of the few people – if not indeed the only person – in Elizabethan England who could have helped to set the agenda of this work and inform its detailed choices. Although Dee is nowhere named or referred to (Digges cites only Euclid), there are a number of significant points of overlap with his mathematical interests and style. Firstly, there is Digges’s principal concern with solid geometry; this was the area of Euclid’s *Elements* on which Dee focused his published annotations.⁸ Digges does however begin with some preparatory material on the plane geometry of polygons and circles, and their mutual inscription and circumscription. Dee had already taken up this topic, as well as having given specific attention to the solid geometry of inscribing the Platonic solids in a sphere.⁹

Although both Dee and Digges tackled and sought to extend the Euclidean corpus, neither was bound by the demonstrative form of the *Elements*. Dee was often interested in finding ‘useful’ mechanical techniques rather than rigorous proofs.¹⁰ Even in his more formal mathematical work he rarely sought to prove geometrical properties; rather, as Marshall Clagett has characterised Dee’s work on conics, he typically propounded his propositions as problems in which a given magnitude is the starting point from which another magnitude is sought.¹¹ Such numerically formulated ‘data problems’ also make up the staple content of Digges’s *Mathematical Discourse*. Moreover, this stylistic affinity is complemented by a parallel concern with identifying and classifying irrational magnitudes in the terms of Euclid’s *Elements* book X.¹²

These detailed connections strongly suggest the extent to which Digges’s early mathematical endeavours were rooted in Dee’s prior concerns, and probably derive from problems which had occupied Dee at the end of the 1550s. Only through the support of a figure such as Dee could Digges have believed that there was in England an audience for his studies of polyhedra, which were expressly intended for “the satisfaction also of such as delighting in matters only new, rare and difficult, seek to reach above the common sort”.¹³

If the content and character of Digges’s *Mathematicall Discourse* indicates the significance of his formative period with Dee at the end of the 1550s, so does a consideration of his early role as a mathematician. Digges differed from Dee in both birth and upbringing: he appears not to have attended university and, rather than a scholar, was a gentleman who inherited substantial holdings of land and property.¹⁴ Though he had no need to seek preferment to a living or court office, his relationships with patrons in the early 1570s nevertheless echo the noble and courtly service of Dee’s early career.

Dee acted as tutor and consultant to a succession of patrons in the late 1540s and 1550s, with mathematics as his key vehicle for credit. While at Louvain, Dee tutored Sir William Pickering in arithmetic and mathematical instruments. Back in England, he successfully dedicated texts of 1550 and 1551 on the celestial globe and on the distances and magnitudes of planets and stars to Edward VI. When Dee entered household service with William Herbert, the Earl of Pembroke, in February 1552 it was presumably as a *mathematicus*. Certainly, the basis of Dee's subsequent service with the Northumberland family was mathematical. Dee gave advice on the voyage to Cathay of 1553, an enterprise in which the Duke of Northumberland was heavily involved. Dee also wrote vernacular tracts on mathematical topics for the Duchess, one on "The Philosophicall and Poeticall Original occasions, of the Configurations, and names of the heavenly Asterismes" and the other on "The true cause, and account (not vulgar) of Fluds and Ebbs", a title whose emphasis presages Digges's early concern to reach beyond the common sort.¹⁵ These poetic and philosophical considerations were balanced by the tuition in military mathematics that was offered to Northumberland's son John, Duke of Warwick and which Dee would subsequently mention in the *Mathematicall Praeface*.¹⁶

Digges's principal patron of the early 1570s was William Cecil, elevated to the title of Lord Burghley in 1571 and created Lord Treasurer in 1572. Burghley received the dedication of *Alae seu scalae mathematicae* and he had also privately solicited advice from Digges about the new star. But while Digges's published work dealt with the mathematical determination of place, distance, and magnitude, Burghley's concern was with the astrological meaning of the exceptional event.¹⁷ In 1574 Digges designed a polyhedral garden sundial for Burghley and also presented him with a manuscript text to accompany his "Frame Astronomical", a celestial ceiling with mechanical sun installed in Burghley's newly built house of Theobalds.¹⁸ Digges's lost treatise included tables to determine the positions of stars in relation to the horizon, meridian, sun, and moon, "whereupon sundry conclusions both pleasant for variety of knowledge and necessary for common use are grounded. Whereof I have in 50 conclusions digested the greater part, with their Histories Poetical and Judgements Astronomical." This work was clearly similar in genre and style to Dee's 1553 text on the constellations for the Duchess of Northumberland.

A generation apart, both Dee and Digges studied and published on deliberately elevated and novel mathematical matters, far exceeding the reach of 'the common sort'. But Digges recapitulated broader elements of Dee's early mathematical role. Just as Dee served the Northumberland family and other patrons in the 1550s, so Digges provided mathematical services for Lord Burghley in the early 1570s. Noble service revolved around advice on the patron's interests, the provision of texts and ingenious devices, and probably some household tutoring. Dee thus seems to stand behind not only the topic and detailed form of Digges's earliest mathematical work but also Digges's earliest fashioning of his identity as a mathematician.

Dee may also have prompted Digges to investigate matters beyond the purely mathematical. For example, an alchemical manuscript passed through Digges's hands in which he wrote out Walter Haddon's poem in praise of Thomas Norton and digested or copied alchemical schemata and classifications.¹⁹ Digges displayed no

other sign of interest in alchemy and this otherwise puzzling evidence may be a trace of his close relationship with Dee.

When presenting the *Mathematicall Discourse* in 1571 Digges clearly expressed the values which sustained his investigation of polyhedra. While the edition of his father's *Pantometria* was portrayed as a work embodying the practical virtues of utility, the defence of the *Mathematicall Discourse* was rhetorically constructed around intellectual elevation. Digges feigned to ignore those who might castigate his advanced study of polyhedra as "a fond toy, a mere curious trifle, serving to no use or commodity". Unless a detractor genuinely valued the study of "hard and difficult" matters, persuasion would be useless. Digges rounded on potential critics as "two-footed moles and toads whom destiny and nature hath ordained to crawl within the earth, and suck upon the muck"; such men "may not possibly by any vehement exhortation be reduced or moved to taste or savour any whit of virtue, science, or any such celestial influence".²⁰ Digges's robust language enforced a stark division of men into either virtuous followers of Euclid, Archimedes, and Apollonius or ignorant acolytes of Epicurus and Midas, content with the realm of lucre and mere worldly pleasure. The *Mathematicall Discourse* embodied mathematics not as a useful or vocational pursuit adapted to military or civic ends but as the work of a gentleman who primarily prized intellectual nobility.

Yet the terms of this seemingly forceful apology for advanced mathematics were not to be sustained by Digges. In his later career he substantially redefined his identity and public persona as a mathematician. This self-conscious shift is most vividly displayed in *Stratoticos* (1579), a text on military mathematics. Digges there offered some autobiographical reflections on his work of the early 1570s and confessed that "the strange variety of inventions in the more subtle part of these mathematical demonstrations did breed in me for a time a singular delectation". However, with maturer judgement, he had turned from subtlety and delight to practicality and utility. Digges stated that he had latterly "spent many of my years in reducing the Sciences Mathematical from Demonstrative Contemplations to Experimental Actions, for the Service of my Prince and Country".²¹

This advertisement of reformed commitments was no mere rhetorical flourish; Digges's subsequent activities show him immersed in the *vita activa* – as a so-called 'man of business' in the House of Commons, as an engineering advisor, and as an administrator in the Earl of Leicester's 1585 expeditionary force to the Netherlands. Yet these civic and military commitments did not represent an abandonment of mathematics by Digges: in the early 1590s he was still advocating the study of ballistics and artillery as a high mathematical art with immediate relevance to the nation's security.²²

Was this a turn away from the example of Dee? Certainly, Dee did not actively pursue the particular forms of military and technical service in which Digges distinguished himself. But there are nevertheless significant resonances between the new values of mathematical practice espoused by Digges and those of his erstwhile mentor. Digges's efforts to articulate an identity more as mathematical practitioner than *mathematicus* direct us towards the civic turn in Dee's own career. Rather than

a shift away from Dee, Digges's later work can be interpreted as a move in the same direction, for the 1570s were the crucial decade for Dee's promotion of the civic values of mathematics.

During this decade, Dee's published claims for the value of mathematics were expanded to embrace a new rhetoric beyond that of its philosophical significance and demonstrative certainty. In both the *Mathematicall Praeface* (1570) and the *General and Rare Memorials* (1577) Dee presented himself in vernacular form as a benefactor of the commonwealth through the medium of useful mathematics.

Dee's two main publications before 1570 were the *Propaedeumata Aphoristica* (1558 and 1568) and the *Monas Hieroglyphica* (1564); both were Latin texts dealing with relatively recondite topics and expressed in often obscure aphoristic form. Dee had of course been involved in a range of practical activities prior to the 1570s, his navigational consultations of the 1550s being perhaps the most prominent instance. But these were private transactions and it was only in the 1570s that Dee articulated such activity in a self-conscious effort to shape his public image. Much of this self-fashioning was conducted through his personal apologetics, where Dee sought to defend himself firstly from the charge of conjuring and latterly from the accusation that he was unwilling to share the results of his labours with his countrymen.²³

Though his name was removed from subsequent editions, the branding of Dee as a conjuror in Foxe's *Book of Martyrs* permanently marked him as a suspect figure.²⁴ Moreover, his protestations of legitimacy and innocence are not merely symptoms of over-sensitivity or paranoia; it is possible to identify a surprising number of individuals whom Dee considered had slandered or falsely accused him.²⁵ Dee had a well-rehearsed defence against such adversaries for, prior to his own 'Digression Apologeticall' in the *Mathematicall Praeface*, he had composed an *apologia* for Roger Bacon in the 1550s, in which he defended Bacon from the vulgar sort who believed that he had acted with the help of demons.²⁶ Dee himself sought to shake off the charge of conjuror by asserting that he proceeded only by natural and lawful means. The lengthy recitation of the mathematical arts which occupies so much of the *Mathematicall Praeface* bolsters this claim by displaying the wide-ranging powers and effectiveness of mathematics. Yet though the manifold benefits of practical mathematics served the commonwealth, Dee's role was to furnish the 'groundplat' for the work of others rather than to personally devote himself to that end. Rather than duty to the commonwealth, Dee assigned himself prime responsibility to God and the attainment of divine wisdom. His self-defence in 1570 therefore declared his Christian piety and ardent desire for truth as a means of rebutting the slanders that had impugned his good name.²⁷

By the time Dee published the *General and Rare Memorials* in 1577 a second charge also required his urgent attention, namely that he had deliberately withheld material from his countrymen. Dee had genuine work to do here to clear his reputation. Although he had listed the names of various of his works in the *Propaedeumata Aphoristica*, twenty years later none of these had yet been published.²⁸ Moreover, Dee had openly doubted the wisdom of spreading his ideas too widely. The second edition of the *Propaedeumata Aphoristica* cautioned the reader

against letting the work fall into the wrong hands: “you must not reveal [it] openly to unworthy and profane persons [...] lest, to your shame and mine, it should be turned to great harm”. Dee expressed similarly wary sentiments in his letter to the printer Sylvius at the beginning of the *Monas Hieroglyphica*.²⁹

Dee’s supposed reticence was not just the object of anonymous carping but of specific accusations and incitements. In the *General and Rare Memorials* Dee cited the case of an unnamed scholar who had apparently agitated for Dee’s banishment on the grounds that “to no Man of this Realm, he did at any tyme, or yet doth, or will, communicate any part, of his learned Talent, by word or writing: But is wholly addicted, to his priuate commodity only avancing, by his own Studies and practises very secret”.³⁰ Although he had subsequently secured a recantation from his accuser, Dee used the opportunity of publication to proclaim his status as a dutiful citizen.

Dee now made it clear that he served more than only a divine calling to knowledge, when he referred to his “faythfull enterprises: vndertaken chiefly, for the Advancement of the wonderfull Veritie Philosophicall: And also, for the State Publik of this Brytish Monarchie, to become flourishing, in Honor, Wealth, and Strength”.³¹ Indeed, if it were not for the parenthetical restriction of his comments to worldly matters, Dee would seem to be claiming that all endeavours should be subordinate to the needs of the commonwealth: “All true Subjects, their Chief Intent, and principall purpose, (in all their worldly affayres, Artes, Sciences, and Studyes, &c.) ought to be, the procuring, furthering, mainteyning and encreasing of the weal and Commodity Publik, so much as in them lyeth, and as, they decently and dutifully may”.³² This theme was elaborated and reiterated, as Dee sought to reinterpret all of his prior labours under the heading of public service. Dee considered that he should “receyve great publick thanks, comfort, and ayde of the whole Brytish state, to the honour, welfare, and preservation wherof (next unto his duty doing unto God) he hath directed all the course of his manifold studies, great travailes, and incredible costs”.³³ Whatever the plausibility of this highly charged retrospective verdict, Dee’s memorandum on the navy and his proposed volumes on navigation were meant as further proof of his earnest service.³⁴

Dee’s civic turn may have been motivated by highly personal circumstances, but the resulting texts expressed not merely a personal *apologia* but a general programme for the development of the mathematical arts. Moreover, Dee’s commitment to active service was not restricted to the realm of print. It was during the later 1570s and early 1580s that Dee achieved his greatest influence and standing in and around the court.³⁵ He was frequently consulted for advice on political, geographical and historical matters and, whether supplying navigational instruction or mustering historical and cartographic sources to support Elizabeth’s legal claims to foreign territories, Dee presented himself as a faithful servant of the commonwealth.

There is therefore a strong parallel between the mathematical careers and shifting identities of Dee and Digges through the 1570s and into the early 1580s. Yet their paths were to diverge: while Digges fulfilled military and civil duties within the Elizabethan state and journeyed to the Netherlands as part of a military intervention

in support of Protestantism, Dee secured access to the spiritual realm through the agency of Edward Kelley, leaving England in 1583 with Albert Laski. Dee's departure has often been interpreted as the beginning of a sad decline, a retreat into mysticism and delusion. Yet there can be little doubt that Dee himself believed that through these spiritual conferences he was able to achieve the most potent and universal forms of action and intelligence. The angelic conversations, with their political and irenic dimensions, were surely for Dee not only a culmination and transformation of his philosophical concerns, but a prolongation and deepening of the civic and worldly activism which he had developed in the 1570s. However, Dee's horizons expanded beyond those of service only to the British commonwealth. For Dee, the existence of spirits was not only literally interpreted and routinely granted, but access to spiritual intelligences was philosophically justified within a metaphysics linking human nature and the supercelestial realm. His conversations with angels were a means to achieve closer contact with the God who provided the basis and authority for all mortals, including temporal rulers.³⁶

Yet however we might interpret the angelic conversations – and it is striking that Dee refers to them not just as dialogues but as actions – Digges provides a contemporary vantage point from which Dee's distinctive choices are thrown into relief. While mathematics allows us to identify the substantial areas of common ground between Dee and Digges, I suggest that it can also provide a window onto the differences that are most vividly highlighted by their divergent paths in the mid-1580s. The case of astronomy illustrates the points where their conceptions of the proper terrain and status of mathematics conflicted rather than converged.

Mathematical astronomers of the sixteenth century adopted a variety of strategies to minimise and defuse potential conflict with natural philosophers. While the hybrid Ptolemaic-Aristotelian scheme of the medieval tradition of *Theorica planetarum* remained current, mathematical astronomers increasingly resorted to what Nicholas Jardine has termed the “pragmatic compromise”. This compromise gave the mathematician the liberty to use whatever mathematical means were deemed necessary to “save the phenomena”, in the classic phrase, while questions of the physical reality and character of the heavens fell under the gaze of the philosopher.³⁷ Dee presents an interesting case for the operation of these interrelations because he had both mathematical *and* philosophical ambitions. Yet he did distinguish between mathematical astronomy and a more philosophically based account of the cosmos, and he placed them on distinct epistemic levels. In the *Mathematicall Praeface*, Dee first charged astronomy with determining the sizes and distances of the earth, sun, moon, and fixed stars. As is clear from the *Propaedeumata Aphoristica* this information was of primary use in Dee's vision of a reformed astrology based on perspective.³⁸ However, Dee used biblical authority to determine the principal remit of the astronomical art: God “made the Sonne, Mone, and Sterres, to be to us, for Signes, and knowledge of Seasons, and for Distinctions of Dayes, and yeares”.³⁹ Although Dee enigmatically asks his readers to weigh the significance of the word “signs”, it is clear that a principal duty of the astronomer is to the calendar; he continues by saying that only through diligent observation and calculation of the celestial motions can there be

the distinct Course of Times, dayes, yeares, and Ages: as well for Consideration of Sacred Prophetesies, accomplished in due time, foretold: as for high Mystically Solemnities holding: And for all other humane affaires, Conditions, and covenantes, upon certaine time, betweene man and man: with many other great uses.⁴⁰

Thus, although the title *John Dee on Astronomy* has been given to the modern edition and translation of the *Propaedeumata Aphoristica*, Dee's major work on astronomy is actually his treatise on calendar reform of 1583 rather than his optically-based theory of astrological influence.

That the mathematical sciences could contribute to natural philosophy is evident from the *Propaedeumata Aphoristica*. But, for Dee, the mathematical astronomer did not have the sole or even primary authority to pronounce philosophically on the heavens. Dee's cosmology was based on much more than just mathematical astronomy. Astrology and, indeed, alchemy were equally at stake in questions concerning the cosmos. Alchemy as "inferior astronomy" presupposed not just an identification of the metals with the planets, but also the conventional order of the planets. Moreover, as Clulee has made particularly clear, in the *Monas Hieroglyphica* Dee went well beyond such standard doctrines and correspondences, not only integrating astronomy with disciplines such as alchemy but subsuming it within a wider programme which sought deeper and more primordial truths about the world and its God-given structure.⁴¹ When juxtaposed with his programme of hieroglyphic writing and "real cabala", the specifically *mathematical* art of astronomy was for Dee a limited and partial enterprise in its determination of celestial dimensions, positions and motions.

The significance of Dee's conception of the limited status of mathematical astronomy can be highlighted by contrast with Digges's vision, and is particularly evident in their respective responses to Copernicus. Both Dee and Digges were fulsome in their praise for his work, but Dee lauded Copernicus as a restorer of mathematical astronomy without discussing the physical reality of the heliocentric hypothesis, whereas Digges adopted the Copernican theory of the planetary order on mathematical grounds.

The topic of Dee and Copernicanism has been repeatedly examined, since it has provided a test case for those who wish to argue either that Dee was one of those working towards modern science or, conversely, that his mystical interests precluded any significant affiliation with progressive developments. The majority of recent studies have denied Dee's belief in the heliocentric theory and used this conclusion to undermine the Yates thesis that Hermeticism contributed to the adoption of Copernicus's world-system.⁴² Here I want to move beyond the terms of this debate – sufficiently discussed by now – and to look instead at what Dee's astronomical work tells us about the identity of the mathematician and the relation of mathematics to philosophy and other areas of learning.

Dee saw Copernicus as the most recent in a long line of major mathematical astronomers, restoring a science whose predictions and parameters were manifestly inaccurate. Copernicus's work was valuable because it provided the basis for new and improved tables which better predicted celestial motions. Dee was unstinting in

his praise of Copernicus in this role. In his preface to John Feild's ephemeris of 1556 Dee referred to Copernicus's dazzling brilliance, his divine studies and his Herculean labours in restoring the celestial discipline.⁴³ Likewise, Copernicus figures prominently in Dee's treatise on calendar reform, where Dee places him as the most recent and notable astronomer in his historical review aimed at establishing values for the most slowly changing of astronomical parameters.⁴⁴ Both these texts fall within the domain of mathematical astronomy and Dee makes it clear that this terrain is not the appropriate one on which to consider the reality of Copernicus's proposals. In the preface to Feild's tables, Dee comments simply that "this is not now the place to discuss [Copernicus's] hypotheses". The calendar proposal refers to the "newe paradoxall Hypotheses" of Copernicus and Dee says that his account depends "chiefly upon the said Copernicus his Calculation, and Phaenomenies: excepting his Hypotheses Theoricall; not here to be brought in question".⁴⁵

It is not clear to what place Dee thought a consideration of Copernicus's physical and philosophical claims could be deferred. In the *Monas Hieroglyphica*, Dee did discuss celestial order beyond the delimited domain of mathematical astronomy, but there he sought to transcend the detailed concerns of astronomy. In that text, rather than observation as the prime means of determining the underlying arrangement of the heavens, Dee was tempted by the prospect of deriving superior truth from his reconstitution of primordial symbols:

Will not the astronomer be very sorry for the cold he suffered under the open sky, for [all his] vigils and labours, when here, with no discomfort to be suffered from the air, he may most exactly observe with his eyes the orbits of the heavenly bodies under [his own] roof, with windows and doors shut on all sides, at any given time, and without any mechanical instruments made of wood or brass?⁴⁶

Yet Dee did not despise astronomical observation, or believe that it was entirely redundant. He had carried out programmes of observation with large-scale instruments in the mid-1550s and also at the time of the new star.⁴⁷ But precise observation delivered accurate parameters rather than establishing principles; cosmological principles were for Dee rooted in a wider disciplinary constellation than mathematics alone.

Digges on the other hand adopted and advocated the Copernican world system as the best representation of the actual order of the planets. In his *Alae* of 1573 he already expressed a preference for Copernicus, repeatedly echoing Copernicus's condemnation of the "monstrous", botched arrangement of the Ptolemaic spheres.⁴⁸ However, he withheld an absolute acceptance that Copernicus had restored the perfect anatomy of the heavens, wondering whether some adjustments were still required and whether the new star might indeed provide evidence that would prove Copernicus's case. Digges returned to the issue of Copernicanism in his *Perfit Description of the Caelestiall Orbes*, appended to the 1576 edition of his father's popular almanac, the *Prognostication Everlasting*. The *Perfit Description* provided an augmented translation of the major chapters in the first book of Copernicus's *De revolutionibus* and was preceded by Digges's much-reproduced image of the cosmos in which the stars extend infinitely outwards from the solar-centred planetary system. Although his earlier hopes for the new star as a cosmological arbiter had

remained unfulfilled, he now nevertheless expressed his views more emphatically in favour of the heliocentric doctrine.

Digges's advocacy of Copernicanism rested on an extraordinary elevation of the power of mathematics. Not only were mathematical techniques of investigation and argument to be accounted the best available for the domain of astronomy, but mathematics was to be considered as a means to arrive at the truth rather than just a tool to save the phenomena. Mathematics could demonstratively restore the perfect order of the celestial spheres without deferring to philosophy, traditionally placed above it in disciplinary hierarchies. Digges considered that, in contrast to the demonstrative certainty of mathematics, philosophy could offer only plausible or probable arguments.⁴⁹ This relative evaluation of mathematics and philosophy helps to explain the structure and sequence of the *Perfit Description*. Digges inverted the order of presentation which Copernicus had adopted for *De revolutionibus* and began his adapted translation with Book I, chapter 10: "On the order of the celestial spheres". Here Copernicus had presented his new arrangement of the planets and given a mathematical justification for his scheme. Only after reading this principal (and, for Digges, self-sufficient) argument was the reader then taken back to *De revolutionibus* I, 7-9 where Copernicus had stated and then disputed the standard philosophical reasons against the motion of the earth. Digges made his expository strategy quite clear:

because the world hath so long a time been carried with an opinion of the earth's stability, as the contrary cannot now be very impersuasible, I have thought good out of Copernicus also to give a taste of the reasons philosophical alleged for the earth's stability, and their solutions, [so] that such as are not able with geometrical eyes to behold the secret perfection of Copernicus's Theoric may yet by these familiar, natural reasons be induced to search further, and not rashly to condemn for fantastical so ancient doctrine revived and by Copernicus so demonstratively approved.⁵⁰

The realm of philosophy is only for those who lack "geometrical eyes" and remain stuck with probable argument and the deceptive evidence of the senses.⁵¹ Digges's conception of a geometrical vision sufficient in itself to overturn traditional geocentric doctrines endowed mathematical astronomy with independent authority and freed it from subjection or subordination to philosophy or, indeed, any other discipline. Dee had opted for a differently instructed vision to uncover celestial truth:

Raising toward heaven our cabbalistic eyes (that have been illuminated by speculation on these mysteries) we shall behold an anatomy precisely corresponding to that of our monad, which, in the light of Nature and life, will at all time reveal to us as is here shown, and will, by its pleasures, quite openly discover the most secret mysteries of this analysis of the physical world.⁵²

The contrast between Dee's "cabbalistic" and Digges's geometric eyes neatly encapsulates their differing visions of the scope and competence of mathematics. However, the contrast should not be overdrawn. Digges's geometric enterprise could scarcely be self-founding: inevitably it drew on moral resources and intellectual assumptions from beyond the strict realm of geometrical demonstration. Digges took as axiomatic the simplicity and order of the heavens, and accepted a fundamental opposition between the celestial and sublunary realms.⁵³ In both *Alae seu scalae mathematicae* and the *Perfit Description* he contrasted the perfection and regularity

of the heavens with the terrestrial world of generation and corruption. Above, there is the immutable empire of uniform, eternal, and pure substance, equated with the sacred temple for the Calvinist elect, while below, mortal sinners live out their days on the dark star of the earth. The celestial spheres attract the mind upwards away from the dregs of the body and their resplendent beauty entices noble reason with the prospect of joy and felicity, removed from all worldly troubles. All that is blessed finds its true home above, while mutability and decay are the destiny of the profane beings who dwell here below. Celestial order, simplicity, and harmony are opposed to sublunary irregularity and the uncertain, base, and brutish cares of humanity.⁵⁴ Digges's geometrical vision was thus grounded in a rich stratum of metaphor, moral evaluation and religious commitment. But he did not seek to provide a firm disciplinary foundation for his mathematical astronomy through a systematic philosophical or theological justification of these assumptions.

Dee on the contrary did attempt to elaborate a comprehensive philosophical position, within which mathematics could be situated. In the *Mathematicall Praeface*, he presented mathematics as just one division of a tripartite ontology and epistemology. Dee drew particularly on Proclus to present mathematical objects as an intermediate level of being between matter and spirit, the human and divine, sense and pure intellect.⁵⁵ For Dee, mathematics was thus always placed in explicit relation with other learned disciplines, as part of a larger hierarchy of knowledge. While distinguishing different realms of being and understanding, Dee did not see each as being sealed off from the others. He sought to connect and integrate disciplines in order to straddle the boundaries between natural, mathematical and esoteric knowledge. His objectives in mathematics were not inwardly self-referential, but were continuous with his other intellectual ambitions. By emphasising the practical, philosophical and spiritual virtues of various mathematical arts, Dee could move from the mathematics of the calendar or of navigation through to considerations of supercelestial intelligences without a break, as part of the same enterprise.

Hence while Dee placed each limited mathematical art within the broad horizons of Renaissance scholarship, Digges restricted the mathematical arts to a narrower intellectual terrain. Dee moved freely within a self-assigned sphere of learning which incorporated mathematics, magic and natural philosophy. Digges did not accept the values underlying this continuum but elevated mathematics above other disciplines. Digges expressed this sense of segregation from the beginning of his career. He wished that nothing be allowed to sully the purity of his *Mathematicall Discourse* of 1571. Not just vulgar concerns with utility and profit were excluded by this prescription. Digges would not even allow any philosophical "pollution" of the certain and separate domain of mathematics. In the preface to his treatise Digges noted that he would not "discourse of [the regular solids'] secret or mystical appliances to the elemental regions and frame of the celestial spheres, as things remote and far distant from the method, nature and certainty of geometrical demonstration".⁵⁶ The most obvious object of this implied reproach was the Platonic theory of the elements, as expounded in *Timaeus*. But Digges may have had a much more contemporary target in mind: the astrological *De divina astrorum facultate* (1570) of Dee's former associate Offusius, in which the regular solids were used to

determine cosmic and elemental proportions.⁵⁷ Evidently Digges had no wish to meddle with uncertain areas of natural or astrological philosophy. Yet whoever Digges meant to censure, his comments serve chiefly to highlight his contrasting image of geometry and his distinct identity as a mathematician.

Digges's deliberately limited conception of the legitimate terrain of the mathematician did not of course sever his ambitions entirely from the realm of philosophy. The case of Copernicanism shows that mathematics could, when secure on its own territory, challenge established philosophical conclusions. Dee however had a more expansive and positive conception of philosophy, and frequently identified himself as a philosopher rather than a mathematician. Mathematics was central to his programme but achieved much of its significance when brought to bear on philosophical issues: mathematically-informed natural philosophy provided insight into God's creation while metaphysics carried the philosopher into supercelestial realms, offering ascent towards the divine.

Much of the contrast between the identities of Dee and Digges as mathematicians therefore turns on their respective conceptions of philosophy. Whatever they shared in mathematics, Dee and Digges evidently had quite a different exposure to philosophy. From his time at Trinity College, it is clear that Dee was steeped in philosophical literature, and particularly in the familiar and conventional terrain of Aristotelian natural philosophy. Nicholas Clulee has indeed interpreted the *Propaedeutata Aphoristica* as the outcome of an early naturalistic and Aristotelian phase of Dee's intellectual career.⁵⁸ The product of a mainstream academic education, Dee could almost take familiarity with Aristotelian natural philosophy for granted.

Digges's intellectual upbringing was quite different. There is no evidence that he attended university and the only references to his education are to the mathematical instruction of his father and Dee. It may be that Digges saw so little through philosophical eyes because he had received no systematic grounding in academic philosophy. Digges's distinctively different evaluation of philosophy certainly suggests that Dee's instruction of the youthful Digges was largely limited to mathematical matters. Trained up in mathematics, it was therefore on mathematics that Digges rested his criteria of intelligibility and evidence.

I began this account of Dee and Digges with their texts prompted by the new star of 1572. Their conclusions on the star exemplify both the common elements in their mathematical work, and also the extent to which their visions of mathematics diverged. The published works provided demonstrative treatments of parallax as a means of establishing the distance and thus location of the new phenomenon. The texts were issued as soon as possible in order to encourage other European astronomers to make the necessary measurements. Digges's volume also dealt extensively with observational practice, discussing the correction of instrumental errors and the judicious choice of computational procedures.⁵⁹

The two texts were published before either Dee or Digges had arrived at definitive verdicts on the nature of the new star, though Digges was clearest in identifying it as a genuinely celestial phenomenon and recording its position in the

constellation of Cassiopeia. The similarities between their investigative strategies and chosen expository forms also appear to have been matched by the conclusions they reached after the star had finally disappeared from view. Although neither published their final judgements, Dee's conclusion that the star had been let down and then withdrawn is evident from the title of his lost work on the star: *De stella admiranda in Cassiopeiae Asterismo, coelitus demissa ad orbem usque Veneris, iterumque in coeli penetralia perpendiculariter retracta lib. 3*.⁶⁰ That this conclusion was shared by Digges is suggested by the evidence of the antiquary William Camden, who recorded in his *Annales* that both Dee and Digges believed the star to have gradually faded as it disappeared further from the earth.⁶¹

Yet despite the extent of their agreement, Dee and Digges made quite different uses of the new star. As we have seen, for Digges it was a first occasion for Copernican reflections as well as potential evidence for the superiority of the heliocentric world-system. Dee likewise considered the star to be of great significance but, with his quite different conception of the purpose and scope of mathematical astronomy, he interpreted it not as a cosmological but as a calendrical revelation. For Dee, the new star was literally an epoch-making event: he used its appearance to mark a new year zero of the same status as the birth of Christ and the creation of the world. He dated the "Necessary Advertisement" to the *General and Rare Memorials* as "Anno, Stellae (Coelo Demissae, rectaque Reversae) Quinto: Julij vero, Die 4 et Anno Mundi 5540".⁶² Dee also interpreted the new star as a sign or portent, just as the *Mathematicall Praeface* had hinted. In his copy of Manilius's *Astronomica* he noted:

I did coniecture the blasing star in Cassiopeia appering a° 1572, to signify the fynding of some great Thresor or the philosophers stone ... This I told to Mr. Ed. Dier. at the same tyme. How truly it fell out in a° 1582. Martij 10 it may appere in tyme to come ad stuporem Mundi.⁶³

For Dee, the new star was enrolled in his conception of mathematical astronomy as a calendrical and chronological art which also revealed portents; for Digges, the new star announced a celestial reformation in which mathematics triumphed as the key to heavenly truth.

My title posed the formulaic question "like father, like son?" for Dee and Digges. Despite Dee's evident importance for the content and direction of Digges's mathematical career, it is clear that he did not foster a mathematical son altogether in his own image. Digges emerged from Dee's tutelage with a vision of mathematics and its legitimate ambitions markedly different from that of his mentor. In this mathematical relationship, father and son ultimately followed different paths. Dee either did not try to instruct Digges in the more philosophical and recondite dimensions of his own work or, if he did, his teaching was ineffective. Dee had greater long-term impact, both on Digges and on other more humble contemporaries, through his prescription for the role of the mathematical practitioner set out in the *Mathematicall Praeface*. Yet Dee himself sought a more profound and prestigious identity beyond that of the mathematical practitioner and, even in the vernacular and outwardly practical *Mathematicall Praeface*, he hinted at the more potent and esoteric arts which only the adept might practise. Ironically, just as Dee was forsaking earthly avenues to wisdom in favour of spiritual access to more

“radicall truthes” in the 1580s, the prosaic part of his public programme was being successfully adapted by figures such as Digges who refashioned their identities as mathematical practitioners.⁶⁴

Digges thus helps to clarify the thorny problem of Dee’s contemporary significance and influence. The scale of that problem is perhaps most vividly illustrated by Peter French’s deeply ambivalent response to the issue. In his intellectual biography of Dee, French wrote that Dee “was decidedly out of place in sixteenth-century England”. Yet only three pages before he had decided that “Dee and the diverse contemporary attitudes towards him epitomize the English Renaissance”.⁶⁵ Rather remarkably, Dee was meant to be both awkwardly isolated and yet also representative. The uniquely privileged perspective on Dee provided by a detailed examination of his relations with Digges indicates how Dee could be both close to and distant from his contemporaries. Yet, however suggestive, an account which uses Digges as an exclusive vehicle for approaching Dee is obviously too narrowly limited to carry complete conviction. I therefore want to conclude by showing how Digges’s ultimately double-edged relationship to Dee is matched by the ironies of the latter’s reputation among more humble mathematical practitioners.

The most sensitive of recent interpretations of Dee have sought to recover his own self-understanding and intellectual practice. As a result we can better appreciate the coherence of Dee’s work and the rich interconnections between texts and plans which were often avowedly composed in haste and for highly specific occasions. Yet, given this historiographical finesse, we are apt to lose sight of the often less sophisticated readings that Dee’s contemporaries brought to bear. Certainly, the veiled projects and philosophical schemes excavated by modern scholarship were less noticeable (indeed usually invisible) to sixteenth-century vernacular authors on mathematics.

Dee’s *Mathematicall Praeface* was indeed read and admired by such mathematical contemporaries as William Bourne and Edward Worsop. But their reading of his text stripped it of its philosophical and magical ambitions. Dee instead became a useful ally and a quarry for information. Taken as authoritative in his presentation of the range of mathematical arts, Dee’s *Praeface* provided a framework within which narrower and more specific work could be carried out. Bourne, in his *Treasure for Travellers* (1578), abbreviated Dee’s discussion of the mathematical sciences while acknowledging that his own acquaintance with statics was based solely on the account given in the *Praeface*.⁶⁶ Likewise, Edward Worsop, in writing on surveying, relied on Dee as a point of reference for the character of mathematics, making extensive use of his discussion of astrology and astronomy. Worsop indeed called for the *Mathematicall Praeface* to be printed as a manual, assimilating Dee to the world of cheap print rather than the abstruse realm of occult doctrine. Neither Bourne nor Worsop mentioned Dee’s other (Latin) publications.⁶⁷

If mathematical practitioners such as Bourne and Worsop failed to fathom the depth of Dee’s studies, they nevertheless demonstrate Dee’s importance for the development of practical mathematics. Whereas Dee sought for himself an elevated role as a philosopher – in one instance, even, as a Christian Aristotle – he was a key

figure in establishing the identity of the mathematical practitioner and in promoting mathematics as worldly, instrumental, practical, vernacular and public.⁶⁸

Dee cannot of course be assigned exclusive paternity for the creation and growth of the tradition of mathematical practice in England. Yet he was clearly not averse to casting himself in a paternal role; whether he would have extended it beyond the specific case of Digges is however uncertain. But what of Dee's own parentage? If every father was once a child, how did Dee portray himself as offspring rather than as parent, and what did he make of his own intellectual genealogy?

As Sherman has stressed, Dee was passionately concerned to establish and display his genealogy.⁶⁹ Among the remarkable features of these endeavours were his attempts to link himself with Arthur and the early Welsh kings and to connect his lineage with that of Elizabeth. Yet perhaps the most extraordinary element in his genealogy was Dee's effort to forge a connection with Roger Bacon. Dee may have recognised many intellectual authorities but, as Clulee has persuasively argued, Bacon was the figure to whom Dee evidently felt closest.⁷⁰ Bacon provided Dee with a role model who advocated the centrality of mathematics within a broadly-based philosophical programme. Dee's composition of an *apologia* for Bacon in 1557 gives a hint of his sense of personal identification. But Dee set out not only to style himself on the intellectual example of Bacon but to actively construct a descent through which he could count Bacon as a blood relation. A substantial section of Dee's calendar proposal is devoted to proclaiming the merits of Bacon's own work on the topic and Dee wrote that no-one had made a better diagnosis and case for reform than this other British subject, "named (as some thincke) David Dee of Radik: But otherwise, and most commonly, (upon his name altered, at the alteration of his state, into the Fryerly profession) called Roger Bachon".⁷¹ Not content to magnify the achievement of his thirteenth-century predecessor, Dee was suggesting that he and Bacon actually belonged to the same family, for David Dee features in Dee's own genealogical constructions.⁷² Whatever the ultimate rationale for this identification it powerfully demonstrates Dee's sense of pedigree and suggests how much was at stake in his acceptance of Digges as his mathematical heir.

NOTES

¹ *Parallatice*, sig. A2^v and *Alae*, sig. A2^r. Digges repeats the sentiment in his preface to Dee's *Parallatice* at sig. A2^r.

⁴⁰ *MP*, sig. b^{ij}^v.

⁴¹ *NP*, Chapter 4.

⁴² In addition to Clulee's *John Dee's Natural Philosophy*, and Heilbron's introduction to the *Propaedeutica aphoristica* (*PA*, 34-49), see Robert S. Westman, "Magical reform and astronomical reform: the Yates thesis reconsidered" in Robert S. Westman and James Edward McGuire, *Hermeticism and the Scientific Revolution* (Los Angeles: William Andrews Clark Memorial Library, 1977) and J. Peter Zetterberg, "Hermetic geocentricity: John Dee's celestial egg", *Isis*, 70 (1979): 385-93.

⁴³ John Feild, *Ephemeris anni 1557 currentis iuxta Copernici et Rheinholdi canones* (London, 1556), sig. Aⁱ.

⁴⁴ Bodleian Library, Ashmole MS 1789; see, for example, fol.6^v for "Nicolaus Copernicus, the sixth, and most notable lyne of our Astronomical Dyall".

⁴⁵ Bodleian Library, Ashmole MS 1789, fols.6^v, 31^r, and note also fol.8^r: "Copernicus imagineth the Theoricall cause hereof [...] whereof, here, is no place to reason".

⁴⁶ *MH*, 130-1.

⁴⁷ For the work of the 1550s, see the *Compendious Rehearsall* in Crossley, 28 and Bodleian Library, Ashmole MS 1789, fol.10^r; Digges reports on Dee's observations of the new star in *Alae*, sig. B3^r.

⁴⁸ *Alae*, sigs. A4^v, 2A3^r, 2A4^v, L2^v.

⁴⁹ Cf. Digges, *An Arithmeticall Militare Treatise* sig. a1^r. This high evaluation of the status of mathematics, particularly in relation to astronomy, has ancient precedent in the opening section of Ptolemy's *Almagest*.

⁵⁰ Thomas Digges, *Perfit Description* in Leonard Digges, *Prognostication Everlasting* (London, 1576), sig. N4^r; also sig. N2^r for the persuasiveness of Copernicus to "any reasonable man that hath his understanding ripened with Mathematicall demonstration".

⁵¹ While Digges frequently vaunted (mathematical) reason at the expense of the senses (for example, in the *Perfit Description*, sig. M1^{r-v}), in *Alae*, sig. H.4^r he nevertheless acknowledged that the proper practice of astronomy depended on two complementary components: disciplined sensible experience as well as mathematical demonstration.

⁵² *MH*, 174-7.

⁵³ In *Alae*, sigs. A3^v, B1^v, Digges referred to extra-geometrical starting points as physical foundations. In stressing Digges's conviction of the radical divide between the terrestrial and celestial, I differ from Johnson and Larkey's interpretation ("Thomas Digges", 101-2). Wishing to present Digges as an exemplary anti-Aristotelian, they attempted to explain away his use of the distinction, seeing it as no more than a sop to his readers. This is to misconceive an essential element of Digges's intellectual order.

⁵⁴ I have run together the characterisation in this paragraph from various passages in *Alae* and Digges, *Perfit Description*. *Alae*, sig. A1^v (the beautiful order of the heavenly bodies), sig. A2^r (the unchanging pure aether), sig. A3^v (no substantial change in the heavens), and sig. L2^v (our troubled life on this dark and obscure terrestrial star). *Perfit Description*: the diagram and its captions (the earth as the globe of mortality compared to the perfect joy of the habitacle for the elect), sig. M2^r (quotations from Palingenius's *Zodiacus Vitae*), N4^r ("our Elementare corruptible world" matched against "the glorious court of the great god"). Note that, in the preface to *A Geometrical Practise*, Digges had earlier contrasted Atlas's imprisonment in a mortal carcass here in this most inferior and vile part of the universal world with the pleasant and beautiful frame of celestial orbs (sig. A3^r).

⁵⁵ For Dee's reading of Proclus, see *NP*, Chapter 6.

⁵⁶ Digges, *A Geometrical Practise*, sig. S4^v.

⁵⁷ Jofrancus Offusius, *De divina astrorum facultate in larvatam astrologiam*. (Paris, 1570), fols.3^r-5^r. For Offusius's connection with Dee, see Owen Gingerich and Jerzy Dobrzycki, "The master of the 1550 radices: Jofrancus Offusius", *Journal of the History of Astronomy*, 24 (1993): 235-254.

⁵⁸ See *NP*, Chapters 2-3.

⁵⁹ John Roche discusses Digges's reformation of the astronomical cross-staff in "The radius astronomicus in England", *Annals of Science*, 38 (1981): 1-32.

⁶⁰ *Compendious Rehearsall* in Crossley, 25.

⁶¹ William Camden, *Annales rerum Anglicarum, et Hibernicarum, regnante Elizabetha, ad annum salutis MDLXXXIX* (London, 1615), 232. In the text to his frontispiece in *Alae*, Digges says that he has recorded the position of the new star in case it retreats back again by divine command before the end of the world.

⁶² *General and Rare Memorials*, sig. ε*iiiij^r.

⁶³ *R&W*, 85 (*R&W*, no. 251). 10 March 1582 was the date of Dee's first session with Kelley. For Dee on the significance of the anniversaries of the new star, see *R&W*, 157 (*R&W*, no.D20).

⁶⁴ The term "radicall truthes" comes from Dee's *Liber Mysteriorum*, Sloane MS 3188, fol.7^r, cit. *NP*, 209.

⁶⁵ French, 22, 19.

⁶⁶ William Bourne, *A Book called the Treasure for Travellers* (London, 1578), sigs. ***2-3 and introduction to book IV.

⁶⁷ Edward Worsop, *A Discoverie of Sundrie Errours and Faults Daily Committed by Landemeaters* (London, 1582), sig. G3^v. The examples of Worsop and Bourne confirm Clulee's suggestions on the significance of the *Mathematicall Praeface*; "It may have been Dee's ironic fate to have contributed to the progress of science among those who were ignorant of the magical direction which Dee thought was the highest level of science." *NP*, 175. See also French, 173-4 for further contemporary references to the *Mathematicall Praeface* in the same vein.

⁶⁸ For Dee's self-identification as a Christian Aristotle, see *General and Rare Memorials*, sig. ε*j^v. On the formation of the culture of mathematical practice, see Stephen Johnston, "The identity of the mathematical practitioner in 16th-century England" in Irmgard Hantsche, ed., *Der "mathematicus": zur Entwicklung und Bedeutung einer neuen Berufsgruppe in der Zeit Gerhard Mercators* (Bochum: Universitätsverlag Dr. N. Brockmeyer, 1996), 93-120.

⁶⁹ Sherman, especially 10, 87.

⁷⁰ The theme recurs throughout *NP*, but see the summary statement at 232-4.

⁷¹ Bodleian Library, Ashmole MS 1789, fol.26^v.

⁷² See, for example, the abbreviated lineage added in the margin of Dee's copy of *The Laws of Hywel Dda*, reproduced in Sherman, 108.

RICHARD DUNN

JOHN DEE AND ASTROLOGY IN ELIZABETHAN ENGLAND

Without doubt, John Dee was a learned and expert astrologer. He has also gained a reputation as a unique and revolutionary thinker in this area of knowledge. However, by looking at his published and unpublished writings and at the relationship of his theories and practices to those of his contemporaries, this chapter will seek to show that a dichotomy existed in Dee's approach to astrology. This will reveal that, in different contexts, he was both revolutionary and reactionary.

ELIZABETHAN ASTROLOGY

To appreciate Dee's writings on astrology, it is necessary to look at the general background for astrology in the period and at some of its basic principles. From the start, it should be realised that although previous treatments have used the term "astrology" as unproblematic and simply defined, this has never been the case and was not so in Elizabethan times. Rather, there existed a wide range of beliefs concerning the influences of the heavenly bodies.¹

Almost everyone, even opponents of astrological prediction, accepted at least a basic notion, that the planetary bodies had some influence, although this did not necessarily go so far as to suggest that the influences were either significantly potent or predictable. Henry Howard, a vociferous opponent of astrology, wrote, for instance:

There may bee secrete influence of the Planets I confesse [...] Diverse of these great secrete properties are founde, to further or impeach the growth or comming forward of such things as are: but not to figure or fortel, the course of any future accident [...].²

Beyond this, however, a widespread notion of a "natural astrology" existed. This held that the stars had a discernible and foreseeable effect on things below, and considered the celestial influences as inclinations towards, rather than absolute determinants of, actions and events. Moreover, these were applied over wide areas (regions or populations) rather than to individuals. The predictions of natural astrology, therefore, often concerned phenomena such as the weather. Indeed, weather forecasting was the most acceptable and widespread form of astrological prediction in this period and some opponents of astrology wished this to be its limit:

Let us conclude (following the common opinion) that Astrologie generally cannot foretell any other thing by the knowledge of their art, but that which concerneth the

constitution of the ayre, and the particular change of that, according to the demonstration of the coelestiall signes.³

These beliefs could be extended still further, however, to the view that the celestial influences were sufficiently potent to determine the course of events at the personal level and were highly predictable. This strongest notion of astrology, judicial astrology, held that the state of the heavens influenced each and every moment of one's life. Naturally, judicial astrology was highly controversial.⁴

It is worth elucidating some of the basic rules of judicial astrology at this stage, since this relates to Dee's astrology. The key to any prediction was the astrological figure (Figure 1). This scheme represented the positions of the heavenly bodies at a particular time – in this case at the birth of Sir Thomas Smith's son in 1547 – as seen from the place concerned. The sky at this instant was divided into a number of regions, called houses. These were not the same as the signs of the zodiac (Aries, Taurus, etc.) but ran across them and were not usually of equal sizes (i.e. angular width). Most commonly, as in Figure 1, the chart was divided into twelve houses, although eight and sixteen house systems had also been used. Each of the houses was thought to govern a different part of one's life; for instance, the first house governed life, the second riches, the third siblings and so on.

Figure 1. A traditional nativity chart, calculated for the birth of the son of Thomas Smith. MS Sloane 325, fol. 82^v.

The positions of the planets were also plotted on the chart. The planets also influenced different areas of one's life, as did the zodiacal signs. It was the interaction between these factors that formed the basis of the interpretation of the figure, according to a complex set of rules, which could vary enormously between practitioners.⁵ One key element in the interpretation was the doctrine of aspects. This held that only certain angular relationships between the planets were significant. In this period, the five major aspects were conjunction (0° between the two bodies concerned), opposition (180°), trine (120°), quartile (90°) and sextile (60°).⁶ The astrological significance of any aspect depended on the planets involved.

Thus the figure gave a representation of the position of the planets relative to the observer's local horizon. It did not, however, give any indication of the size, distance from earth or speed of motion of the planets. These were not necessary for the interpretation of a traditional chart and it was rare for any major consideration of the physical characteristics of the planetary bodies or of their motions to appear in astrological writings. The relevance of this point will become clear in the comparison with Dee's astrology.

A number of uses for the astrological figure existed. The most obvious was the nativity, from which the astrologer made predictions about the subject's future life based on the positions of the heavenly bodies at the time of birth. Other uses included mundane astrology – casting a figure in order to predict changes for a region or nation – and electoral astrology – using a chart to determine the likely success of an action taken at a particular time; for example, a sea voyage. The most controversial use was the horary question. This was an application in which the astrologer cast a figure for the moment at which a query was put to him, and interpreted the figure in order to answer that query. Horary figures were used extensively by astrologers like Simon Forman, the foremost London consultant by the end of the sixteenth century (Figure 2), and Richard Napier, rector of Great Linford in Buckinghamshire.⁷

DEE'S ASTROLOGY

If we turn now to Dee's astrology, there are two types of evidence available – published texts and personal manuscripts. Of his published works, three are important: the *Propaedeumata Aphoristica* (1558, 1568), the *Monas Hieroglyphica* (1564), and *The Mathematicall Praeface* (1570).

In the *Propaedeumata Aphoristica* Dee set down 120 aphorisms outlining a new astrological system. The text drew two telling analogies for astrological influence: with light and with magnetism. The analogy with light was crucial. By assuming that the celestial influences obeyed the same laws as light – in particular, reflection and refraction – Dee provided a natural philosophically based mechanism for their operation in the terrestrial realm and a mathematical method for their analysis.⁸ The

Another example 1596 Maii: 9 ant: mer:
 at 40 m. p. 7 where the cosen sent the urine
 of the sick without the consent of the sicke
 to know the disease & of life & death: of 26 yeares:

Figure 2. An horary figure by Simon Forman. The figure has been cast for the time at which Forman was presented with a sample of urine by a cousin of the patient, in order to determine what would happen to them.
 MS Sloane 99, fol. 9^r.

analogy with magnetism was used to show how, in addition, rays of celestial influence could have different effects in different receivers, and that, unlike light, they could penetrate solid matter.⁹

Ultimately, Dee sought to show that astrological influences existed as occult rays which originated in the heavenly bodies, propagated through space according to the theory of the multiplication of species (a medieval concept), and had effects in the terrestrial realm dependent upon both their nature and that of the absorber.¹⁰ On this last point he stated, for instance, that: "The stars and celestial powers are like seals whose characters are imprinted differently by reason of differences in the elemental matter".¹¹

For the purposes of prediction using this new astrology, a different set of parameters was brought into play. In traditional systems, the key indicators of the influences were the positions of the planets relative to the astrological signs, to the houses of the astrological figure and to each other. According to Dee's system, the important factors in the heavenly region were now the occult natures of the planets, their distances from earth, and the duration of their time above the horizon, combined with the physical interactions between the rays of different planets. These interactions were crucial, and Dee identified over 25,000 different combinations, the effects of each of which would have to be discovered and learned. This new set of possible interactions replaced the five major aspects of traditional astrology.

So Dee set the astrologer the daunting task of determining a mountain of information before an astrological forecast would be possible. He did, however, suggest a means by which the influences and interactions could be studied and accurately predicted. Several aphorisms described the determination of the natures and strengths of the influences of the heavenly bodies through the application of "catoptrics" – the use of lenses and mirrors to isolate and magnify the rays.¹² This investigation of the influences also relied on an accurate knowledge of the sizes, distances from earth and motions of the heavenly bodies. Consequently, there appeared throughout the work calls for concerted efforts in the improvement of observational and mathematical astronomy.¹³ This task was compounded still further, since the astrologer was also required to determine how the nature of different absorbers altered the effects of the rays of astrological influence.

We can summarise, then, which elements of the *Propaedeumata* differed radically from those of traditional astrology. Firstly, Dee provided a physical mechanism for celestial influence, something which other treatments failed to address. Secondly, this mechanism implied new ways of making astrological predictions. Dee's system seemed to do away with many elements of traditional astrology, although it was not clear from the text precisely what the method and graphic form of a prediction would now be. Thirdly, Dee demonstrated that the foundations of astrology were safe and certain by virtue of their basis in mathematics, and provided a means by which the influences could be discerned and predicted through the combination of mathematical theory with observation. In other words, he provided a research method for the new astrology. Lastly, Dee's theories showed how the celestial powers could be actively used. While traditional systems allowed only passivity on the part of mankind, Dee claimed that it would be possible to manipulate the celestial influences and actively bring about wonderful transformations in the terrestrial realm.¹⁴ Thus he stated that: "If you were skilled in 'catoptrics', you would be able, by art, to imprint the rays of any star much more strongly upon any matter subjected to it than nature itself does".¹⁵

This is not to say that this system was produced out of thin air. Recent authors, notably Nicholas Clulee, have shown Dee's debt to medieval, Arabic and contemporary authors, whose works were found in great numbers in his library. It was Dee's combination of and additions to their theories that was novel, rather than the

theories themselves.¹⁶ Moreover, a significant amount of traditional astrological theory and terminology also remained. In particular, although Dee seemed to do away with the need for a traditional house-based system as described earlier, there were references to houses and to the question of house division in the *Propaedeumata*.¹⁷ Similarly, Dee retained the notion of the significator, another key element of house-based systems.¹⁸

But what was the extent of Dee's reliance on the house-based system? Clearly, he still required a system which would allow the mapping of the positions of the planets relative to the observer's local horizon. He would, for instance, still have needed to calculate the position of the ascendant (that part of the sky rising at the observer's local horizon) as a point of origin. But the sort of chart required by Dee's system would also have to include information on the distance of each planet from the earth, its size and time spent above the local horizon. This sort of information was not included in a traditional astrological figure. A figure produced using Dee's system would have appeared quite different from one produced in a traditional way, therefore, although no such figure has yet been identified.

Among Dee's other published works, the *Mathematicall Praeface* related quite closely to the *Propaedeumata*. In particular, the section on astrology in the *Praeface* formed a companion piece to the previous work by providing a general context for Dee's new astrological system. In it Dee explored astrology's place among the mathematical arts, giving it a place in his Groundplat as an "arte derivative" from geometry and arithmetic. More specifically, in the main text he stated that astrology was allied closely to "Perspective, Astronomie, Cosmographie, Naturall Philosophie of the 4 Elementes, the Arte of Graduation, and [...] Musike".¹⁹ This echoed what Dee had written in the *Propaedeumata*, where mathematics subsumed astrology through the association of the rays of celestial influence with the behaviour of light (allowing their analysis through the laws of optics). Accordingly, Dee referred in the *Praeface* to "my Propaedeumes" in which "I have Mathematically furnished up the whole Method" of astrology.²⁰

So the *Propaedeumata* and the *Praeface* complemented each other. The *Propaedeumata* showed how astrology was founded in optics, allowing mathematical (specifically geometrical) principles to be applied to its workings and transforming it into a demonstrative science. The *Praeface* provided a full context for this astrology, one which guaranteed its status as safe and certain, as an art aligned with the more generally acceptable practical mathematical arts.²¹

In the third text, the *Monas Hieroglyphica*, we find a more complex situation. Clearly the monad of the title related to Dee's astrology since it appeared on the title page of the *Propaedeumata* and was referred to in the main text of that work.²² Conversely, the *Monas* contained references to and quotes from the *Propaedeumata*.²³ The two works were further linked in that they both discussed superior and inferior astronomy, i.e. astrology and alchemy.

A more telling link exists, however. According to Clulee's analysis of the monad as a form of universal writing, it was capable of radically improving astrology. The generation of the planetary symbols from the monad restored them to their true proportions and symmetry and literally imbued them with power. This was power that the magus could control. The thrust of the two works thus coincided in their implication that the practitioner was able to manipulate the celestial influences and so procure great changes in his surroundings and in himself.

On the other hand, by reducing astrological prediction and manipulation to the application of this new universal writing, the *Monas* seemed to do away with the need for astronomical observation and calculation, which was, after all, an area of activity explicitly highlighted in the *Propaedeumata*. This also ran counter to Dee's placement of astrology within the domain of the practical mathematical arts in the *Praeface*.²⁴

In these three works, then, Dee made public his plans for a radical new astrology susceptible both to accurate prediction and to active manipulation. By looking at his personal writings, it is possible to compare his private practices with these public proclamations and so assess whether he was able to carry out the revolution he proposed.

Figure 3. An horary figure by John Dee. The figure includes the 'pars fortuna' (⊕) and the head and tail of the dragon (⊗ and ☿). These elements, which do not represent physical bodies, also appear in Figures 1 and 2. The lower calculation to the right of the figure is of the position of the 'pars fortuna' (2 17 6), using the positions of the moon (☾ at 4 27 2), sun (☉ at 2 21 50) and ascendant or cusp of the first house (11 54).

MS Ashmole 337, fol. 41^r.

Dee's private writings included many astrological notes and figures, including calculations of birth charts, and it is worth noting that Dee was arrested during Queen Mary's reign on charges relating to the calculation of the nativities of the royal family.²⁵ Horary figures also appear in his notes; for instance Ashmole MS 337, now in the Bodleian Library in Oxford, contains a series of such charts from the 1560s (Figure 3, for example). These indicate that Dee was acting as an astrological consultant in the same manner as Simon Forman later in the century. Significantly, in his birth charts and horary figures, Dee employed the conventional methods and figures of judicial astrology, including elements such as the "pars fortuna" and the head and tail of the dragon. These elements are crucial in demonstrating the conventional nature of Dee's charts. Both the "pars fortuna" and the head and tail of the dragon were calculated from the relative positions of the planets in the astrological chart and did not in themselves represent physical entities. The position of the "pars fortuna", for example, was calculated from the relative positions of the sun, moon and ascendant.²⁶ Elements such as the "pars fortuna" would not have been expected if Dee had been using the system proposed in the *Propaedeumata*, with its strong emphasis on a physical mechanism of influence emanating from actual physical bodies. Conversely, if these charts had been produced using Dee's new system, information on sizes, distances and time above the horizon should also appear. They do not. Clearly, therefore, Dee was applying traditional doctrines in his private astrological practices and his charts resembled those of other astrological consultants of this time.

Dee's "diary" entries, which appeared as jottings in the margins of the ephemerides that he owned, provide more ambiguous evidence.²⁷ On the one hand, they contained numerous notes of the time and place of birth of different people, the basic information required for the calculation of a conventional birth chart. For example, on 28 February 1588, he noted the birth of his son Theodorus, pointing out that Sirius was in the ascendant (i.e. in the first house).²⁸ On the other hand, the same entries also contained notes on the weather on particular days, potentially the basis of a systematic programme of observations linking weather patterns with planetary positions, the sort of programme called for in the *Propaedeumata*.

Lastly, anecdotal evidence comes from the *Compendious Rehearsall* of 1592,²⁹ in which Dee brought attention to the occasion on which he had been requested by Robert Dudley (later the Earl of Leicester) "what in my judgement the ancient astrologers would determine of the election day of such a tyme, as was appointed for her Majestie to be crowned in".³⁰ In asking Dee to consider an election for the Queen's coronation, Dudley expected him to adopt a traditional astrological technique.

CONCLUSIONS

The comparison of Dee's published and unpublished writings provides an ambiguous account of his thoughts and practices in astrology. This uncertainty was shared by his contemporaries. Dudley's request and the services that Dee provided as an astrological consultant showed him applying traditional techniques. Similarly,

references to Dee in contemporary works made no mention of his revolutionary ideas. Rather, his name was produced as one among a number of authorities whose support of traditional astrology served to legitimise it. In a defence of astrology in Richard Harvey's analysis of the 1583 conjunction of Saturn and Jupiter, for instance, Dee's name appeared alongside those of other English scholars – including Robert Recorde, both the Digges and Sir Thomas Smith – who rightly considered astrology a safe and legitimate study. Besides contemporary English authors, Harvey's list of worthies also drew on classical, medieval and contemporary Continental authors, including Alboazen Haly, Melanchthon, Cardano and Bonatus. The context here was traditional astrology and Dee's rightful place within this tradition was emphasised.³¹

Perhaps the explanation for this ignorance of Dee's radical ideas among English authors lies in the fact that his more innovative works, the *Propaedeumata* and the *Monas Hieroglyphica* were in Latin and may not have been widely disseminated in England. His one vernacular work covering astrology, the *Mathematicall Praeface*, discussed a general context for astrology without revealing his plans for astrological reform.

Furthermore, in Dee's private writings and in his role as unofficial court astrologer, we see a conventional approach to astrology, in the calculation of birth charts, elections and horary questions, which seems to be at odds with his radical statements in his published material. Two explanations for this spring to mind: firstly, Dee was acting as an astrological consultant, and so was meeting the market requirements for recognisable (therefore traditional) techniques. This would fit in with the pattern of Dee's life, where issues of money and patronage were of overriding importance. Secondly, the new system of the *Propaedeumata* was only an outline and still required a huge amount of both accurate astronomical study and terrestrial observation (through the application of "catoptrics", for instance) before it could become an effective predictive system. Consequently, the only working techniques available to Dee were those of conventional judicial astrology.

This account of John Dee as an astrologer shows two sides, therefore. On the one hand, he was a radical author with high hopes for an astrological system based on natural philosophy that would allow accurate determination and manipulation of the celestial powers. On the other, he was a conventional, albeit adept, practitioner, held in high esteem by his contemporaries as, in his own words, a "perfect and circumspecte Astrologien"³² and as a renowned authority in the ancient astrological tradition

STEPHEN CLUCAS

INTRODUCTION

Intellectual History and the Identity of John Dee

In April 1995, at Birkbeck College, University of London, an interdisciplinary colloquium was held so that scholars from diverse fields and areas of expertise could exchange views on the life and work of John Dee.¹ Working in a variety of fields – intellectual history, history of navigation, history of medicine, history of science, history of mathematics, bibliography and manuscript studies – we had all been drawn to Dee by particular aspects of his work, and participating in the colloquium was to confront other narratives about Dee’s career: an experience which was both bewildering and instructive. Perhaps more than any other intellectual figure of the English Renaissance Dee has been fragmented and dispersed across numerous disciplines, and the various attempts to re-integrate his multiplied image by reference to a particular world-view or philosophical outlook have failed to bring him into focus. This volume records the diversity of scholarly approaches to John Dee which have emerged since the synthetic accounts of I.R.F. Calder, Frances Yates and Peter French. If these approaches have not succeeded in resolving the problematic multiplicity of Dee’s activities, they will at least deepen our understanding of specific and local areas of his intellectual life, and render them more historiographically legible.

JOHN DEE AND INTELLECTUAL HISTORY

The life and work of John Dee first re-emerged into twentieth-century historical consciousness in the works of historians of science, who strove to “recover” Dee from the oblivion of his reputation as an occultist, and to reinstate him as a “progressive” Renaissance scientist, whose work contributed to the fitful beginnings of the scientific revolution in England. In the 1930s E. G. R. Taylor’s *Tudor Geography 1483-1583*, and Francis Johnson’s *Astronomical Thought in Renaissance England* both allotted a significant role to Dee in their narratives of Tudor scientific advancement.² Johnson saw Dee’s achievement as primarily “scientific” – he was, according to Johnson, “the leading mathematical scientist in England and the most influential teacher and adviser in that field after [Robert] Recorde’s death.”³ Johnson viewed Dee’s occult scientific activities as a detraction from his scientific reputation:

Dee’s later career, during which his unrestrained optimism concerning the possibilities of natural science made him a dupe of the charlatan Edward Kelley and caused him to turn his energies to alchemy and crystal gazing, has tended to obscure his real merit as a scientist and his very great services to his country.⁴

Johnson criticised Charlotte Fell-Smith for having “emphasized his reputation as an astrologer, alchemist and dabbler in spiritualism at the expense of his significant work in legitimate science,” and accordingly praised Taylor for having given a “truer picture of the man”.⁵ Taylor for her part shared Johnson’s need to expunge or explain away Dee’s occult interests:

The fact that John Dee was a practitioner of Judicial Astrology has, however, created such a prejudice against him, and has led to such a one-sided estimate of his place in history, that it is here necessary to state emphatically that a close examination of the evidence leaves no doubt of his intellectual honesty and genuine patriotism [...] his preoccupation with the search for the Philosopher’s Stone and the Elixir of Life lent urgency to his desire for a discovery of the way to Cathay, since it has been a constant tradition that Initiates and adepts are to be found among the learned men of the Far East. That such was the case, nevertheless, does not detract from the value of his geographical studies or his geographical teaching.⁶

If Taylor seems to harbour a suspicion that occult interests were intellectually dishonest and unpatriotic she was at least able to concede that Dee’s occult interests were a motivating force in his career, although in seeking to mitigate them it is clear that her sense of Dee’s “value” is dictated by early twentieth-century norms of what constituted legitimate forms of knowledge. The fame of Taylor’s Dee rests on the fact that he was a mathematician, a cartographer, the promoter of Gemma Frisius’s globes and instruments in England, and the friend and intimate of Gerard Mercator.⁷ The fact that Mercator shared and encouraged Dee’s astrological interests is noted, but only in so far as Dee’s “suspect” occultism can be palliated by the reflected glory of Mercator:

The high character of Mercator alone should be sufficient to acquit Dee of the charges of sorcery and conjuring – interpreted today as charlatanism – brought against him by the fanatical English mob, a charge which he frequently and earnestly repudiated.⁸

If the great Mercator was interested in astrology the implication seems to be, then Dee could too, and the guarantee of Mercator’s scientific reputation is mysteriously used to endorse the idea that Dee’s reputation for magic was a malicious invention. In a series of books and articles in the 1950s Taylor continued her “recovery” of Dee from charges of charlatanism. In her biographical entry on Dee in *The Mathematical Practitioners of Tudor and Stuart England*, for example, she presented Dee as essentially a practical scientific figure. “The practical applications of astronomy and geometry were foremost in his mind”, she said, “whether for casting nativities or advancing navigation, for reforming the calendar or mapping subterranean mines.”⁹ Although she characterises him as an “astrological expert”, Taylor takes pains to point out elsewhere that he “accepted the Copernican hypothesis.”¹⁰ In her 1955 article “John Dee and the Nautical Triangle, 1575”, Taylor is more explicit, complaining that historians had “treated him slightly, dubbing him astrologer and alchemist, by which words they understand ‘charlatan’.” In their characterisation of Dee as a “servile and ignoble figure”, she says, “the acclaimed mathematician and ever-ready instructor are forgotten.” While she accepts the reality of Dee’s interests in alchemy, astrology and what she calls “crystal-gazing”, “by this date”, she says, “his work on navigation had come to an end.”¹¹ Taylor then constructs a Dee who is internally contradictory (“Dee’s imagination often predominated over his science – but science he had”) but whose career could be neatly divided into the legitimate and scientific navigator (whose navigational works are said to have “foreshadowed” the “modern Nautical manual”)

and the illegitimate and imaginative “crystal-gazer”.¹² Curiously while Taylor was able to accept the historical specificity of Dee’s thought in some areas (his *Great and Rich Discoveries*, she argued, was important because it provided “direct and detailed evidence of how an Elizabethan cosmographer went to work”), she was openly contemptuous of his later career, when he was (as she puts it) “overseas chasing the will o’ the wisps of alchemy and crystal-gazing in Prague”.¹³ For Taylor “cosmography” seems to have more historical importance than alchemy and “crystal-gazing”, although they were all significant parts of Dee’s own sense of his intellectual activities.

While one could dismiss the lack of attention to the “occult” side of Dee in Taylor’s work as simply peripheral to her historical concerns, Taylor’s own repeated protestations and apologetic references to Dee’s occult interests marks a significant point of historiographical tension. This tension turns upon the problematic question of how the occult sciences (or “occult philosophy”) fit into the field of knowledge in the sixteenth and seventeenth centuries, a question which current discussions of the nature of the Scientific Revolution are doing little to address. Taylor’s approach is not dissimilar in many respects from that of Brian Vickers, who in his introductory essay to *Occult and Scientific Mentalities* argued that the occult was radically distinct from the scientific and should be studied and considered separately from the development of scientific thought.¹⁴ Taylor, of course, was writing at a time when the history of alchemy, astrology and magic had not yet gained the credence which it has today, and her failure of historical imagination is in large part due to the historiographical climate in which she was writing.

It was in the 1950s, in fact (some time between the publication of Taylor’s *Tudor Geography* and her *Mathematical Practitioners*) that the first major advances in the historiography of the occult sciences took place in Anglo-American scholarship, and with this the historical significance of Dee took on a new prominence.¹⁵ In 1952, I. R. F. Calder, working under the supervision of Frances A. Yates at the Warburg Institute made probably one of the most significant single contributions to Dee studies in the imposing shape of his sadly unpublished two volume PhD thesis “John Dee studied as an English Neoplatonist.”¹⁶ In its courageous attempt to survey the whole of Dee’s intellectual output, Calder rescued Dee from the narrow confines of the illuminating but partial accounts of Taylor and Johnson, and revealed the full historical complexity of Dee’s work. For the first time Dee’s occult philosophical interests – his interests in astrology, alchemy, and the cabala, the influence of Roger Bacon and Alkindi, the Pythagorean mysticism of the *Monas Hieroglyphica*, the neoplatonic aspects of the *Mathematicall Praeface*, and even the angelic conversations – received a sympathetic and objective historical examination. The strength of Calder’s thesis was, however, also one of its weaknesses – in his determination to present Dee as a typical figure, he was profoundly influenced by a particular thesis: that of Edwin Burt, who had argued that neoplatonic metaphysics had played a significant, albeit unrecognised, role in the development of modern science.¹⁷ Calder’s main aim was thus to show that

Dee may properly be considered a typical, though outstanding, example and exponent of sixteenth century English scientific neoplatonism – a movement which made a significant, if somewhat neglected, contribution to later and more generally appreciated development in science and philosophy.¹⁸

It is clear from Calder's preface to his thesis that his handling of Dee had been influenced by his discussions with both Yates and D. P. Walker. It is difficult to divine who was the originator of this interpretation, Yates, or Walker, or Calder himself, but what is certain is that Calder's "neoplatonic" Dee was taken up by his supervisor, and another of her students Peter J. French and developed into an even more influential interpretation, that of Dee as an "Elizabethan Hermetic Magus".¹⁹

In her influential 1964 study of the "Hermetic Tradition" (a Renaissance synthesis of neoplatonic, pythagorean and cabalistic themes putatively catalysed by Marsilio Ficino's translations of the *Corpus Hermeticum*, and the syncretistic philosophy of Pico della Mirandola), Yates argued that:

John Dee has to the full the dignity, the sense of operational power, of the Renaissance Magus. And he is a very clear example of how the will to operate, stimulated by Renaissance magic, could pass into, and stimulate, the will to operate in genuine applied science.²⁰

While she retains the Burtian flavour of Calder's Dee (the stimulation of "genuine applied science" by Neoplatonism), Yates subtly moulded him into a representative of her own "Hermetic tradition" whose representative figure was the "Renaissance magus". This becomes even clearer in her 1967 essay "The Hermetic Tradition in Renaissance Science":

John Dee seems obviously placeable historically as a Renaissance magus of the later Rosicrucian type. Paracelsist and alchemist, a practical scientist who wished to develop applied mathematics for the advantage of his countrymen, full of schemes for the advancement of learning [...].²¹

Peter J. French who worked closely with Yates while he was in England researching his study of Dee,²² developed Yates's thumbnail sketches into a book-length study in his *John Dee: The World of an Elizabethan Magus*, published in 1972. While French's study is sensitive to the interdisciplinary range of Dee's activities,²³ and touches upon his activities as "Philosopher, mathematician, technologist, antiquarian, teacher and friend of powerful people", it is the idea of Dee as "Elizabethan magus" which is the dominant idea of his book. Dee, French argued, was "a magician deeply immersed in the most extreme forms of occultism: he was Elizabethan England's great magus [...] one of a line of philosopher-magicians" who "lived in a world [which was] half magical, half scientific."²⁴ Hermeticism, French argued, that is to say "the gnostic philosophy based on the rediscovered texts of the legendary Hermes Trismegistus," was "basic to Dee's thought," and "pervaded his natural magic, his science and his religion."²⁵ While French is aware of the diversity of Dee's activities, ultimately he produces a homogeneous vision of Dee where, for example, his mathematics, architecture, navigation and technology are "all part of a broader magically oriented philosophy."²⁶ Dee's "science and magic, his art and even his antiquarianism," French argued, "all form part of a universal vision of the world as a continuous and harmonious unity."²⁷ In short, John Dee was "totally in the Hermetic tradition" as it had been conceived by Frances Yates.²⁸ The closeness of French's and Yates's ideas on Dee extends at points to direct verbal echoes, as we can see from the following two quotations:

Although his experiments in theurgy are regarded as pointless endeavours today, he saw them as a means of pursuing science at a higher level.²⁹

What Dee wanted to learn from the angels was the secrets of nature; it was a way of prosecuting science on a higher level.³⁰

The historiographical apogee of the Yatesian “Hermetic magus” however was relatively short-lived. In 1974 Robert S. Westman gave a paper at the Clark Memorial Library, in which he roundly criticised Yates’s contention that there was an occult philosophical impetus behind the Copernicanism of Dee and Giordano Bruno.³¹ Westman cites at length from a passage in Peter French’s book which argues that Dee embraced the Copernican hypothesis, and that this “scientific advance” was “spurred by the renewed interest in the magical Hermetic religion of the world.” This passage is (not unfairly) taken to be “entirely characteristic of the Yatesian mode of analysis.”³² While Westman concedes that Dee had praised Copernicus’s labours in “reforming the celestial discipline” (*in coelesti disciplina restauranda*) in his preface to John Feild’s *Ephemeris for the Year 1557*, and made use of Erasmus Reinhold’s Prutenic Tables in his manuscript treatise on the reform of the calendar, he refuses to accept that this constitutes proof that he was a Copernican. In fact, Westman goes on to argue, “wherever Dee had the opportunity to assert his belief in the reality of Copernicus’s theory, he did *not* do so.”³³ Westman also rejects the supposed Hermetic interest which Dee took in Copernican theory (what French calls his “spiritual affinity with heliocentricity”), pointing to the absence of Hermetic references in Dee’s private marginalia to Paulus Crusius’s *Instructions Concerning the Equal and Apparent Revolutions of the Sun* (Jena, 1567) as proof of his claims. While Westman ignores the Neoplatonic emphasis in the collection of quotations on the sun which Dee collects at the back of his copy of Crusius (there is a quote from Plato’s *Timaeus*, and a quote from one of the Orphic hymns), he is probably correct in suggesting that Dee’s views on Copernicus, far from being “Hermetic”, “fall into the same pattern of reading the Copernican theory that we find among almost all university astronomers of the period.” Dee, he argued, “had no need of a heliocentric system, whether magical or astronomical”.³⁴ Westman’s conclusions are aggressive, if not unfair: firstly he believes that Yates’s (and French’s) claims about a “Hermetic reform” in Copernicanism is fundamentally flawed. “Not a single leading thinker included by Dr Yates in the Hermetic tradition interpreted the Copernican theory as a magical symbol or made it the operational basis of a system of magical forces.” There was, in any case, “no single ‘Hermetic interpretation’” of the Copernican theory, but a “diversity of responses”.³⁵ “Hermetic” thinkers, he argued, reflected rather than initiated Copernican advances, and while Giordano Bruno’s cosmological innovations were grounds for allowing the Hermetic tradition a “modest supporting role” in scientific advances, he does not agree that the magical worldview was “responsible for spurring these conceptualizations”.³⁶ In Westman’s view, the “significant physical and mathematical insights Bruno and other alleged Hermeticists arrived at came from their individual, creative intuitions, often under the influence of doctrines first formulated in mediaeval natural philosophy, and *in spite of* their adherence to Hermetic doctrines.” There was, in fact, no evidence for a general thesis concerning the influence of “magic” on “science”.³⁷

Another, even more unsympathetic response from the history of science lobby came in 1978, when John Heilbron, in his introduction to the edition and translation of Dee's *Propaedeumata aphoristica* (which he co-edited with Wayne Shumaker) assessed Dee's intellectual activities in terms which make it clear that he – like Westman – rejected the Burtian interpretation of the Scientific revolution promoted by Calder, Yates and French. Whilst affecting to give a balanced picture of Dee's career Heilbron barely disguises his antipathy towards the occult side of Dee's activities, characterising his career as “a continuous progress toward the occult and the irrational.” Dee's mathematics he argued, “did not grow from or together with his occultism,” as Yates and French had argued, “but, rather, preceded it, and [...] in so far as he devoted himself to occult studies he moved off the high road of the scientific revolution.”³³⁸ Heilbron identifies Dee's mathematical career as a turning away from “hard headed” and “technical” mathematics towards that of “Platonizing philosophies”, the province of “circle squarers and [...] fuzzy-minded astrologers.”³³⁹ Heilbron utterly rejects what he scathingly calls Dee's “chats with angels”, and sees his work on calendrical reform, presented to Queen Elizabeth in 1582 as “his last tract of any scientific importance.”³⁴⁰ Although Heilbron acknowledges that Dee's contemporaries had a high opinion of his mathematical abilities, he finds this reputation “easier to ascertain than its basis.”³⁴¹ While Dee's *Praeface* had been extolled by Calder, Yates and French as a triumph of neoplatonic scholarship, Heilbron criticises it for its inclusion of unorthodox mathematical sciences – which he sneeringly refers to as “jabberwocky disciplines”³⁴² – such as “thaumaturgike”, which Heilbron dismisses as a confection of “the thousand amusing, silly, practical, or useless things set forth in the books of Giammbattista della Porta, Athanasius Kircher, Gaspar Schott, and Francesco Lana.”³⁴³ In the light of these observations Heilbron felt that Dee deserved only “a modest place in the intellectual history of Tudor England.”³⁴⁴ For Heilbron Dee's occultism was an obstacle, and not a stimulus to scientific endeavour diverting Renaissance “scientists” from “investigations of the ordinary and the regular” into fanciful mystical speculations.³⁴⁵ What is at stake in Heilbron's account of Dee is a certain conception of the Scientific Revolution which radically excludes the occult sciences as “non-scientific”. This begs the question, of course, of why Heilbron felt drawn to edit Dee's *Propaedeumata* at all. The answer would seem to be that Heilbron was only able to countenance the *Propaedeumata* by denaturing it. Ignoring the cabalistic, astrological and magical themes of the work and focussing on Dee's grappling with the problems of the measurement of planetary distances and motions, Heilbron presents the *Propaedeumata* as “a fully intelligible series of recipes for applying arithmetic and geometry to a standard scholastic physics and astronomy.”³⁴⁶ Dee's primary source for the idea of stellar radiation, Al-Kindi's *De radiis* (a work which often bore the subtitle “seu theorica magica” in manuscript) is likewise misleadingly described as “a straightforward determinist astrology” which “urged its merits as a mathematical science, and grounded it physically in the interplay of radiations continually [...] pouring out of celestial bodies,”³⁴⁷ which ignores, for example, Al-Kindi's radiative theories of incantational, talismanic and sacrificial magic.

In his introduction to his 1975 edition of Dee's *Mathematical Praeface* the renowned historian of Paracelsianism and the “chemical philosophy”, Allen G. Debus steered a difficult course between the Yatesian view of Dee and more traditional views

of Dee's *Praeface* (such as that of E. G. R. Taylor) which saw it as a precursor of a modern scientific outlook. Debus cautioned against views which took Dee's concept of *scientia experimentalis* as a precursor of the "modern controlled experiment",⁴⁸ and cautioned against the sanguinity of those who might be tempted to view his championing of "applied" mathematics in the *Praeface* as a "modern" scientific tendency. "Any [modern] definition of mathematics", Debus observed, "would be insufficient to encompass Dee's approach to the subject," which embraced "a mathematical spectrum that ranged from the study of navigation and mechanics to mysticism."⁴⁹ The "revised interpretations" of Yates and French, he felt, had gone "too far in their claims for Dee as a scientific prophet". The alchemical and cabalistic mysteries of the *Monas Hieroglyphica*, he pointed out, had been far more "influential" than the supposedly scientifically progressive *Mathematicall Praeface*, and the vagaries of his reputation should sound a note of caution, he said, to "those who might wish to interpret the Scientific Revolution simply as the growth of positive knowledge accompanied by an almost inevitable decay of the pseudo-sciences."⁵⁰

Probably the most important breakthrough in Dee studies in the aftermath of the Yates thesis was made by Debus's student Nicholas H. Clulee, who in his 1973 doctoral thesis and in a series of articles in the late seventies and early eighties began to formulate a view of Dee which radically questioned the Yates-French version of Dee without trivialising the importance of his occult scientific outlook.⁵¹ This culminated in the publication of his groundbreaking study *John Dee's Natural Philosophy: Between Magic, Science and Religion* in 1988, which was a watershed for the study of Dee's natural philosophy. Breaking free of the "Hermetic Dee" of Yates and French, Clulee provided a new, and more plausible, set of contexts for Dee's natural philosophy, and rather than treating Dee's career as a homogeneous worldview, sought to trace a discrete intellectual development, moving from an early phase of eclectic Aristotelianism (albeit augmented by his readings in mediaeval *perspectiva*) at the time he was writing the *Propaedeumata aphoristica*,⁵² to his later essentially religious orientation in the angelic conversations which – in Clulee's view – were "antithetical to science as both empirical investigation and rational inquiry."⁵³

We are fortunate indeed to have in this volume a retrospective survey of Dee studies by Nicholas Clulee, from the vantage-point afforded by the 1995 conference. As a key figure in the intellectual historical understanding of Dee, he is in a unique position to chart the changing fortunes of Dee as an object of historical inquiry. Clulee revisits the critique of the "Warburg interpretation" of Dee, but this time he places it the context of the changing historiography of the history of science as a discipline. The emergence of the "Warburg" Dee, Clulee points out, was conditioned by the emergence of the "Scientific Revolution" as a concept. Clulee shows how recent reappraisals of this powerful concept, or "master-narrative", have opened the way for different understandings of Dee's place in the period. Clulee sees recent contextualist approaches to early modern science (such as that proposed by John Schuster) as providing more scope for the study of figures like Dee who do not really fit the Scientific Revolution narrative. If our focus on the natural philosophers of the sixteenth century is not orientated towards the culmen of the seventeenth-century "heroes" (Galileo, Boyle, Newton), but instead towards the "contingencies of the process of change in natural

philosophy” in the “Scientific Renaissance” itself, then we can begin to understand the achievements of the period for their own sake, and not simply as stages on the way to the Scientific Revolution. Of equal importance to this historiographical “positioning” of Dee studies are Clulee’s proleptic remarks on future possibilities for Dee studies. His call for “rethinking the Dee canon” is a timely one, and while some of the directions which he indicates in this essay have already begun to come to pass (Clulee’s own recent essay on Dee and Paracelsianism, for example, or Steven vanden Broecke’s study of Dee’s natural philosophy in the context of the community of mathematical practitioners in Louvain), the broad outlines of his suggestions remain pertinent for the study of Dee in the forthcoming decades.⁵⁴

Clulee’s essay also highlights the singular importance for Dee studies of the work of Julian Roberts and Andrew Watson. The publication in 1990 of *John Dee’s Library Catalogue* marked a significant watershed for our understanding of Dee’s intellectual life.⁵⁵ In addition to providing an invaluable finding-list of the extant volumes once owned by John Dee, including notices of marginalia and other inscriptions, this volume also includes vital new historical information about the growth of Dee’s private library – an invaluable resource for the historian attempting to trace the development of Dee’s intellectual and practical interests. In recording the locations of the books and manuscripts which Dee owned and annotated, Roberts and Watson have given Dee scholars a whole new body of evidence to assess beside his established oeuvre of manuscript and printed works. This work, as Clulee says, is “a touchstone for almost all future work on Dee”⁵⁶ “Because we have [...] this] record of his library [...] and many existing copies of his books with his annotations can be identified,” Clulee says, “the possibilities of doing a cultural history of his intellectual life are particularly rich.”⁵⁷

Two recent examples of Dee scholarship attest to the accuracy of this statement. Detailed knowledge of Dee’s library and close attention to his marginalia, for example, play a vital role in William H. Sherman’s important study *John Dee: The Politics of Reading and Writing in the English Renaissance* (1995). “Dee’s extensive marginalia”, Sherman argued, had “disappeared from our intellectual map of the Renaissance”, before the work of Clulee, Roberts and Watson. Sherman is emphatic about the importance of this newly rediscovered evidence: “However messy, modest, and (as it were) marginal they at first appear, it is no exaggeration to say that Dee’s marginalia are central to the recovery of his intellectual activities, and [...] his role in society.”⁵⁸ The new kinds of evidence which marginalia provide are an important part of Sherman’s radical reappraisal of Dee’s intellectual activities. Deliberately eschewing the post-Yatesian focus on Dee’s occult philosophical interests, Sherman sought to bring to light Dee’s role as a courtly advisor and political intelligencer. Sherman’s approach stresses Dee’s “scholarly mediation between a body of knowledge (England’s administrative, fiscal and military strengths and weaknesses) and a body of political readers (an elite group of government officials).”⁵⁹ That is to say, he looks at Dee as an “intelligencer”, and focuses on his contributions to what he calls his “political science”. This focus is both timely and salutary. Intellectual historians have in the past been content to deal with intellectual figures of the past as if their work existed in a timeless and transcendent realm of “pure” thought. Sherman tries to reposition Dee, and his intellectual labours, within a concrete social and political context. In emphasising the

courtly, political aspects of Dee's career, Sherman does not so much seek to obliterate the "occult" or philosophical Dee so much as to present another facet of Dee's work. He does not "claim to present 'the whole Dee'", but rather to "offer [...] a range of perspectives which have not figured in previous pictures of the whole Dee."⁶⁰ Sherman focused on the court patronage enjoyed by Dee and his undertaking of a variety of intellectual services in the service of Queen Elizabeth and various courtiers. His work on Dee's role in Elizabethan maritime enterprises in particular have added a whole side to Dee's work which had previously been neglected in Dee studies. Sherman argued that a close scrutiny of Dee's manuscript works "cast serious doubts on the packaging of Dee as – exclusively or even primarily – a Hermetic Neoplatonic magus". The "many traces of [Dee's] non-magical activities," he suggested, had been systematically "played down or left out altogether" in previous accounts of Dee's career.⁶¹ While one might want to qualify Sherman's compensatory secularisation of Dee,⁶² his recovery of a "lost Dee" of political intelligence and policy has vitally enriched our understanding both of Dee's own activities and of the historical and socio-political specificity of English Renaissance intellectual life in general.

The "occult" side of Dee's career came to the fore once again in the work of Deborah E. Harkness, although she took her cues far more from the natural philosophical Dee of Clulee than the Hermetic magus of Frances Yates and Peter French. Like Clulee, Harkness wrote her PhD thesis on Dee,⁶³ and published significant articles on the angelic conversations⁶⁴ and Dee's scientific household,⁶⁵ prior to the publication of her book *John Dee's Conversations with Angels: Cabala, Alchemy, and the End of Nature* in 1999.⁶⁶ The first book-length study of Dee's dealings with the angels, Harkness's historically sensitive account of the angelic conversations emphasised the ways in which Dee's library informed his understanding of what he assumed were communications from angels – providing him with corroboration for what Kelley was relating to him, or with grounds for disputing and questioning some aspects of the narratives. In particular Harkness stresses the role of works on angelology, Christian cabala, and alchemy, which helped Dee "to formulate his own Christian natural philosophy."⁶⁷ Harkness also indicates the ways in which Dee's post-1583 career constitutes a continuation rather than an abrupt break with the natural philosophical, mathematical, astronomical and alchemical interests of the 1550s, 60s and 70s. Harkness describes Dee's angelic conversations as "Dee's last universal science", which was "an attempt to provide a universal basis for natural philosophy [... which] sought to unify and make coherent all religious beliefs, natural knowledge and ancient theory."⁶⁸ It is precisely this attempt at unifying different forms of knowledge which has made Dee such a challenging and important figure for Renaissance intellectual historians. If in the past Dee's incongruence with modern disciplinary frameworks made him (or particular aspects of his work) marginal to many scholars, increasingly his perceived disciplinary incongruity is being seen as a symptom of the unique ways in which Renaissance thought and practices were constituted, rather than as problematic or anomalous. With the growing realisation that interdisciplinary approaches are vital for a fuller understanding of the structures of Renaissance thought or mentalities, figures like Dee are becoming more important for us to understand. Increasingly Dee's "problematic" career has been explained, rather than explained away.

DEE AND INTERDISCIPLINARY STUDIES

The subtitle of the present volume, “interdisciplinary studies in English Renaissance thought” is motivated by a profound conviction that when studying intellectual formations of the early modern period interdisciplinarity is not simply a fashionable methodological option, or theoretical reflex, but a historiographical necessity. The history of Dee studies has been a history of disciplinary confusions and antagonisms. In order to understand the multiplicity and complexity of Dee’s practises and beliefs requires a purposeful suspension of the epistemological categories of contemporary disciplines in order that we can understand the epistemological matrix which allowed the co-existence of what are now often perceived to be contradictory or mutually exclusive elements.

Dee himself seems to have consciously avoided disciplinary specialisation. In a letter written by Dee’s son Arthur in 1649, in response to biographical queries about his father’s life, we hear that Dee “was a generall Scholler and would neuer take the degree of D[octo]r, although he was generally styled so [...] he neuer would take any profession vpon hym.”⁶⁹ This conscious avoidance of a singular “profession,” and the role of “generall Scholler” is a category of intellectual self-definition typical of humanist scholars in sixteenth- and early seventeenth-century England.⁷⁰ Dee’s avoidance of a university career, however, cannot be attributed simply to humanist idealism. In the preface to his *Propaedeumata aphoristica* in 1558, Dee declared himself to be the professor of a continental style of philosophy (*peregrina philosophandi ratio*) which was not that of the universities (*Communi, tritave philosophandi via*).⁷¹ In a letter to William Cecil, Lord Burleigh in 1563, Dee explicitly contrasted the intellectual narrowness of the English universities with his own desire for a more interdisciplinary approach to natural philosophy:

Albeit that o’ vniversities, both, in them have Men in sundrye knowledges right excellent, as, in Diuinitie, the hebrue, greke and latin tung, &c. Yet forasmuche as, the Wisdome Infinite of o’ Creator, is branched into manifold mo sort of wunderfull Sciences, greatly ayding Dyuine Sights to the better Vew of his Powre and Goodnes, wherin o’ cuntry hath no man (that I ever yet could hereof) hable to set furth his fote, or shew his hand : as in the Science *De Numeris formalibus*, the Science *De Ponderibus mysticis*, and ye Science *De Mensuris Diuinis* : (by which three, the huge frame of this world is fashioned, compact, rered, stablished & preserved) and in other Sciences, eyther wth these Collaterall, or from them derived, or to themwards, greatly us fordering.⁷²

Dee’s career was characterised by this passionate pursuit of “manifold [...] sorts of wunderfull Sciences.” He proudly refers to his *Monas Hieroglyphica* as founding a “new discipline” (*Disciplina noua*), for example,⁷³ and his *Mathematicall Praeface* to Billingsley’s *Elements of Euclide* introduces a bewildering variety of new subjects (such as “hypogeiodi” – the science of subterranean measurement, or “menadrie”, the science of artificially augmenting natural forces) to the traditional classification of the mathematical sciences.⁷⁴ There has been an increased focus in recent intellectual history on the problematic nature of early modern disciplines and their relationship to current disciplinary formations, and Dee seems to offer an extremely rich and instructive example of the tension between disciplinary recuperation and disciplinary innovation in the late sixteenth century.⁷⁵

There is clearly nothing distinctively “Renaissance” about interdisciplinarity *per se*. Renaissance thinkers often valued the stability offered by clear disciplinary boundaries, and the proliferation of attempts to classify the arts and sciences in the late sixteenth and early seventeenth century suggests an increased concern for fixing and stabilising the field of knowledge. Conrad Gesner, for example, in his *Pandectarum sive Partitionum uniuersalium* made a strong case for maintaining disciplinary boundaries:

To put in order what has been written is impossible unless the precise location of all knowledge has been established. This must be done, not only because there are so many and diverse kinds of subjects, but also because one and the same subject, if considered from different points of view, may belong to different branches of knowledge. And yet it is necessary that a subject be held together within its own boundaries, so that it does not intrude on others.⁷⁶

Like Dee, Gesner embraces the *diversification* of knowledge even as he tries to insist upon its unity, and acknowledges the importance of viewing subjects “from different points of view”. Scholars like Dee, who embraced this diversity, seem to create problems for the intellectual historian because the process of partitioning (of increasing specialisation) – which begins with works like Gesner’s *Pandectarum* – has accelerated to the point where diversification has become problematic. Coming from distinct provinces of historical scholarship it is often incomprehensible to those studying, say, Dee’s contributions to geometry, or cartography, that the same man embraced the divinatory *ars sintrillia*, folklore on hidden treasure (“hill-digging”), antiquarianism or conversations with angels. If intellectual history is to locate a historical figure within a coherent discipline or domain (Dee as “mathematician”, as “cartographer”), how does one account for these other disciplinary enterprises? Sometimes, too, the very nature of what structures these endeavours is problematic, what is the place, for example, of “secrets” or “mysteries” within the disciplines currently recognised by intellectual history?

Nicholas Clulee has drawn our attention to the difficulty of what he calls Dee’s “omnidisciplinarity” and William Sherman has pointed out that the range of Dee’s interests “gives twentieth-century intellectual historians a strong sense of cognitive dissonance, if not schizophrenia”.⁷⁷ Anthony à Wood was responding – in his own mid-seventeenth-century fashion – to the interdisciplinarity of Dee’s career when he described him, in his *Athenae Oxoniensis*, as “a searcher into profound Studies, a great Investigator of the more secret hermetical Learning, a perfect Astronomer, a curious Astrologer, an excellent Geometrician, and indeed excellent in all kinds of Learning.”⁷⁸ There is an implicit danger, however, in thinking about “early-modern interdisciplinarity” – that is, that we might reconfigure various instances of Renaissance thought as if they were hybridised “mixtures” or composites of our own disciplines. The dangers of such unconscious anachronism can only be overcome by appealing to contemporary definitions and categories, and rethinking early-modern intellectual (or practical) formations not as “mixed” or divided within themselves but as unique and self-constituting modes of thought (or practice). This collection of essays aims to reflect the disciplinary complexity of Dee’s intellectual project, without attempting to reduce that complexity to a “continuous and harmonious unity.”⁷⁹ Bringing together disparate areas of Dee’s work, from metallurgy to astrology, from cartography to magic, from mathematics to antiquarianism, our aim is to bring this interdisciplinary complexity to

the foreground and to invite renewed historical scrutiny of the field of knowledge in Elizabethan England.

One area in which Dee enjoyed an unparalleled reputation during his lifetime was in the field of mathematics, and it is fitting that this volume has two essays which address this aspect of Dee's career. In his survey of Dee's mathematical work in the introduction to the English translation of Dee's *Propaedeumata Aphoristica*, John Heilbron was rather critical of Dee's abilities. "The fact of Dee's contemporary reputation," Heilbron suggested "is easier to ascertain than its basis", it was only amongst "the less able," he adds, that "Dee passed as a prodigy".⁸⁰ Be that as it may, Anthony à Wood described Dee (along with Thomas Harriot, Nathaniel Torperley and Walter Warner), as one of "the Atlantes of the mathematic world",⁸¹ and cites one of Dee's contemporaries who considered him to be "the prince of all the philosophers and mathematicians of our age."⁸² Heilbron's conclusions may, in fact, tell us more about what some mid-twentieth-century historians of science considered to be "significant" achievements than it tells us about Dee's place in late sixteenth-century English mathematics.

The essays of Robert Goulding and Stephen Johnston give us a more historically sensitive and measured assessment of Dee's mathematical achievements. Both essays consider Dee's relationship to his younger contemporary Thomas Digges, and reflect upon Dee's mentorial influence and upon the divergence of the two men's mathematical careers. Goulding's essay focuses on Dee's *Parallaticae commentationis praxeosque nucleus quidam* and Digges's *Alae seu scalae mathematicae*, works published in 1573 ostensibly in response to the appearance of the 'New Star' (or supernova) in 1572. Goulding provides a detailed comparison of the two men's methods of measuring parallax and how it compared to the existing method of Johannes Regiomontanus who had developed a method for calculating the parallax of occasional astronomical bodies (such as comets) by means of spherical triangles. Although he identifies flaws in the treatments of both Dee and Digges, Goulding emphasises that "their mastery of parallax far exceeded that of any of their contemporaries" and he shows that their ideas about the nature of the New Star were taken seriously enough to be subjected to a critique by Tycho Brahe in his *Astromomiae instauratae progymnasmata*.⁸³ While both Dee and Digges's works claimed to be addressing the New Star, Goulding notes their failure to apply their new parallax theories to the new phenomenon and suggests other reasons for their decision to publish at this time. Goulding shows how the two mathematicians use the theory of parallax to promote their own (very different) mathematical agendas which were independent of the novel astronomical phenomenon they were ostensibly commenting upon. Goulding shows that Digges's interest in accurate astronomical measurement reflected his desire to provide proof of the Copernican hypothesis, while Dee was more interested in increasing the accuracy of his new astrological theory.

While Stephen Johnston also looks at Dee and Digges's responses to the New Star, his essay reflects more widely on the mathematical careers of the two men and sees the relationship between Dee and his young protégé as a symptom of a changing conception of the mathematical profession at the end of the sixteenth century. The career of

Digges, Johnston suggests, “provides an opportunity to assess Dee’s role in forming the next generation of mathematicians.”⁸⁴ Digges, who had been taught mathematics by Dee after the death of his father in 1559, had been profoundly influenced by Dee’s example. Although Digges had “reworked the terms of his mathematical identity” in the 1570s-80s, moving from his defense of the “intellectual nobility” of purely theoretical mathematics in his *Mathematicall Discourse of Geometrical Solids* appended to his edition of his father’s *Pantometria* (1571) to an ethos of “active service of prince and commonwealth” after the publication of his *Stratoticos* in 1579, Johnston doesn’t see this as a break with Dee’s mentorship influence.⁸⁵ Rather than seeing Dee and Digges as polarised figures, Johnston sees the influence of Dee behind Digges’s early concern with abstruse problems in solid geometry, and his later turn toward practice and utility. In many respects, Johnston argues, there is a “strong parallel” between the careers of Dee and Digges in the 1570s, with both men increasingly embracing a “vernacular ethic of mathematical service.”⁸⁶ However, like Goulding, Johnston also identifies a “fundamental divergence in their respective conceptions of the identity of the mathematician” which he feels is particularly visible in their respective attitudes towards mathematical astronomy, and particularly the Copernican hypothesis.⁸⁷ While Digges “adopted and advocated the Copernican world system as the best representation of the actual order of the planets”, Dee avoided discussing the truth or falsity of Copernicus’s “Hypotheses Theoricall”.⁸⁸ While Digges stressed the autonomy and superiority of mathematical astronomy, Johnston argues, for Dee “cosmological principles were [...] rooted in a wider disciplinary constellation than mathematics alone,” and mathematical astronomy was seen as subordinate to wider philosophical questions.⁸⁹ This profoundly different conception of the disciplinary status of mathematics, Johnston suggests, underlies the very different paths their careers took in the 1580s, with Digges pursuing “military and civil duties” and Dee pursuing his angelic conversations in Europe.⁹⁰

Johnston’s and Goulding’s essays both highlight the problems of disciplinarity in Elizabethan England. “For Dee,” Johnston says, “mathematics was thus always placed in explicit relation with other learned disciplines, as part of a larger hierarchy of knowledge.” He sought to “integrate disciplines in order to straddle boundaries between natural, mathematical and esoteric knowledge”, whereas Digges “restricted the mathematical arts to a narrower intellectual terrain” but “elevated mathematics above other disciplines.”⁹¹ While Johnston is undoubtedly right to suggest that Dee’s “long term impact” on mathematics was the practical ethos of his *Mathematicall Praeface*, which promoted “mathematics as worldly, instrumental, practical, vernacular and public”, his account of the philosophical orientation of Dee’s mathematics (and Goulding’s account of the epistemological assumptions of the *Propaedeutica aphoristica*), show that a full understanding of Dee’s mathematics requires us to rethink the place of mathematics amongst the disciplines at this time.⁹² Nicholas Clulee’s account of the mathematical science of “Archemasterie” in the *Mathematical Praeface*, (which includes prophecy and divination) makes it clear that Dee had a distinctively premodern understanding of the boundaries of mathematics, and that the “practical” ethos of the *Praeface* co-exists with more “occult” or “neoplatonic” understandings of the discipline.⁹³ In a letter to Lord Burghley in 1574 Dee refers to a mediaeval treatise on caves by Pandulfus, the *De meatibus terrae* (which deals with astrology, geomancy

and divination) as a work of “mathematics and philosophy”.⁹⁴ Until we can find a way of placing Dee’s conception of mathematics “as part of a larger hierarchy of knowledge” the full significance of his mathematics seems likely to elude us.

One area in which Dee’s practical mathematical expertise made him an influential figure was maritime navigation. The essays of Robert Baldwin and William Sherman both address Dee’s involvement in maritime affairs and the ways in which his “studious exercises” contributed to the elaboration of an expansionist, imperialist project for dominating the seas and extending the limits of England’s dominions. Baldwin’s essay shows how the various branches of Dee’s studies intersected in his role as intellectual advisor to (and investor in) the Cathay Company voyages to the North West in the 1570s. Baldwin shows how these activities brought together Dee’s knowledge of navigation, geography and cartography (he taught navigational mathematics and the use of navigational instruments to English mariners in his library at Mortlake, worked with Stephen Borough on circumpolar sea charts and corresponded with Abraham Ortelius and Gerard Mercator about their world maps), and his knowledge of alchemy, metallurgy and mining law. Like Johnston, Baldwin stresses Dee’s role as a practical mathematician, who sought ways in which “his skill in spherical geometry and his knowledge of terrestrial variation might be put to practical use”, but also emphasises Dee as a political figure and an economic investor.⁹⁵ Baldwin’s essay shows the disastrous impact of the failure of the Frobisher voyages (which failed to find gold-bearing mineral ores in Baffin and Kodlunarn Islands) on Dee’s court reputation (a number of leading court figures, including William Cecil and Francis Walsingham, were among the investors), and suggests that Dee’s flight to the continent with Edward Kelley in 1583 may have had strong economic incentives. Despite the failure of this key project Baldwin sees the venture as a realisation of an “interdisciplinary, technological and mathematical vision” which Dee derived from his contacts in the 1560s with mathematicians such as Gemma Frisius and Gerard Mercator in Louvain.⁹⁶

William Sherman, like Baldwin, sees the Frobisher voyages of 1576-8 as a key moment in Dee’s career, and emphasises the way in which Dee’s reading and research were fundamental to his practical involvement in maritime affairs. Dee’s “textual exploration”, Sherman argues, was as important as the “geographical exploration” of figures such as Martin Frobisher.⁹⁷ The ability to amass and keep track of the proliferating textual information about voyages of discovery was a vital part of these economic enterprises. “Libraries”, Sherman says, “played an especially important role in the launching and directing of voyages of exploration and colonization”.⁹⁸ Sherman uses the marginalia in Dee’s copy of Ferdinand’s Columbus’s account of his father’s famous voyage to the New World as a “sustained example” of the kinds of reading practices which he outlined in his *John Dee: The Politics of Reading and Writing in the English Renaissance*, and as an “occasion for some further thoughts on Dee’s reading practices [...] on English Imperialism.”⁹⁹ Sherman’s detailed account of Dee’s annotations in Columbus’s book gives us a vignette on the ways in which Dee was involved in “advocating policies gleaned from his reading of historical texts”, and how marginalia can “take us closer to the important ways in which texts mediated both personal lives and power politics in the early modern period.”¹⁰⁰

Dee's interests in the occult sciences of astrology, alchemy and the cabala are dealt with in the essays of Richard Dunn, Federico Cavallaro and Karen de León-Jones. Dunn's account of Dee's astrology focuses on the discrepancy between Dee's innovative new theory of astrological prediction as set out in his *Propaedeumata aphoristica* (1558) – which was based on natural philosophical principles derived from the mediaeval tradition of *perspectiva* – and the traditional house-based horoscopes (including birth charts and horary figures) which make up the bulk of his actual astrological practice. While Dee's published works promised a radical reform of astrology, Dunn, concludes, Dee was “applying traditional doctrines in his private astrological practices and his charts resembled those of other astrological consultants of the time”.¹⁰¹ Dunn also notes the links between the reformed astrology of the *Propaedeumata* and Dee's *Monas Hieroglyphica* which sought to present a new discipline which would deal with both “superior” and “inferior” astronomy (i.e. astrology and alchemy).

Federico Cavallaro's reading of the *Monas Hieroglyphica* focuses on the second of these two “astronomies” – alchemy – and seeks to give an outline of how the various parts of the *Monas* relate to stages in the alchemical process. Cavallaro's analysis sheds new light on this notoriously difficult work and advances some useful speculations on the allegorical intentions underlying some of this work's most obscure passages. Cavallaro's analysis shows the interpretative difficulties posed by the work which combines citations of Greek alchemical authors such as Ostanes and Pseudo-Democritus, with Paracelsianism, Pythagorean numerology and the Cabala.

Julian Roberts and Andrew Watson's account of Dee's book purchases in the 1560s has shown that Dee bought many books on the cabala and Hebrew scholarship and although Dee has gone on record as having a limited knowledge of Hebrew, it was clearly an area of scholarship which he considered extremely important.¹⁰² Karen De León-Jones's essay takes a critical look at Dee's interest in the Jewish mystical tradition of the cabala, or rather his interest in the “Christian cabala” which was derived from it in the course of the sixteenth century by scholars such as Johannes Reuchlin and Henricus Cornelius Agrippa. Taking issue with Frances Yates's facile characterisation of Dee as “an inherently and intrinsically Hermetic-Cabalistic thinker” De León-Jones both problematises the notion of a “Christian Cabala” itself (which has an uneasy relationship with the Jewish mystical traditions which go under the name of Cabala) and assesses the extent of Dee's interest in cabalistic doctrines and the use which he makes of them in his printed works.¹⁰³ De León-Jones stresses Dee's critique of traditional Jewish cabala in his *Monas Hieroglyphica* and his insistence that his own doctrines constituted a “cabala of the real” rather than a grammarian cabala of the Hebrew language. De León-Jones stresses the innovative and creative aspect of Dee's use of the cabala, retaining its hermeneutical techniques but divorcing it from the meditative and mystical aspects of the Jewish cabala and divesting it of the Jewish cosmological principle of the *sefirot* (the emanations or names of God). Dee, she argues, was deeply influenced by Reuchlin's belief that the cabala was congruent with Pythagorean doctrines, and this led him to transform the cabala into a mathematical discipline that drew both on Pythagorean numerology and Euclidean geometry.

Probably the most controversial and difficult area of Dee's "occult" or "magical" studies is undoubtedly the so-called "angelic conversations" – a series of crystallomantic visions fastidiously recorded by Dee between 1581 and 1609. As Peter French astutely remarked in his 1972 monograph, accounts of Dee's work often come to grief on the question of Dee's belief that he could communicate with spiritual beings: "There are always those angels lurking in the background," French complained, "to make people uncomfortable."¹⁰⁴ Those of us working primarily on the angelic materials are only too keenly aware of the continued difficulties and discomfort experienced by modern historians when faced with these kinds of beliefs.

György Szönyi's essay seeks to provide some specific contexts for Dee's 'scrying' practices, and focuses particularly on the influence of Paracelsus, which, he argues, was "systematically overlooked" by Frances Yates and treated only superficially by Peter French. Szönyi shows that Dee used Paracelsus's term for magical talismans – *gamaaea* – in both his *Propaedeumata aphoristica* and the *Monas Hieroglyphica* and argues that it was Paracelsus's mystical goal of *exaltatio* which prepared Dee for his crystallomantic activities.¹⁰⁵ He also looks at the "angelic language" or *lingua adamica* supposedly revealed to Dee and Kelley in the context of the sixteenth-century vogue for "universal" or "artificial" languages, and the search for universal knowledge. Unlike Clulee and Sherman, Szönyi is an advocate (with some minor modifications) of the Yatesian thesis of Dee as a "Hermetic philosopher", although (unlike Yates) he sees Dee not as a precursor of modern science, but as a "forefather" of seventeenth-century "esotericism".¹⁰⁶

My own contribution to the volume emphasises the extent to which Dee's angelic conversations were shaped by mediaeval magical practices. Beginning with a survey of the various ways in which intellectual historians have characterised the conversations and a brief excursus on the terms which Dee used to describe his communications with spiritual beings (spiritual "actions" and "mysticall exercises"), I go on to show the considerable influence of Pseudo-Solomonic magical arts of the late middle ages, which were widely disseminated in the second half of the sixteenth century. I argue that mediaeval and renaissance magic relied heavily on existing traditions of Christian prayer, and particularly the idea of the divine granting of petitions (*impetratio*). While there is a considerable overlap between Dee's conversations and mediaeval theurgy, I also stress the peculiarity of Dee's project: its apocalyptic and millenarian objectives and pseudo-prophetic claims.

Deborah Harkness's essay – presented to the John Dee Colloquium prior to the publication of her 1999 book – explores on a smaller scale some of the themes of her book-length study. In particular Harkness focuses on the extent to which Dee's involvement in the angelic conversations was continually mediated by the knowledge which he gleaned from the works which he collected in his Mortlake library. While Sherman has rightly stressed the civic and political role of the *Bibliotheca Mortlacensis* as "a space where independent scholarship could be carried out and circulated among the academic, commercial, and political communities",¹⁰⁷ Harkness shows that his library was also a repository of more recondite and arcane knowledge, and played a vital role in Dee's more private, theurgical activities. Dee's library, Harkness argues,

“provides the ideal starting point for an investigation of the angels’ revelations”.¹⁰⁸ In particular, she shows how Dee made use of books on angelology and eschatology to help him make sense of his turn toward angelic revelations in the 1570s and 80s. Harkness sets Dee in the context of a more general European “millenarian moment” prompted by “an alarming number of comets, new stars, earthquakes, grand conjunctions and other strange natural events.” and shows how he used his extensive holdings of books on angelology to shed light on the visions which he recorded so assiduously.¹⁰⁹

In her book on Dee’s angelic conversations, Harkness announced her discovery of not one, but two copies of the mysterious *Book of Soyga*, about which Dee had sought angelic advice in 1583.¹¹⁰ In his essay in this volume professional cryptologist Jim Reeds, well known for his work on Trithemius’s *Steganographia*,¹¹¹ brings modern cryptological expertise to bear on the mysterious “magical tables” of *Soyga* (cellular tables filled with apparently random sequences of letters) and compares them with Dee’s use of similar tables in his *Liber Logaeth* (Sloane MS 3189) which incorporates eight of the 36 tables contained in the *Book of Soyga*. Reeds gives the first detailed description of the *Soyga* tables and analyses their formal characteristics. Identifying recurrent patterns Reeds is able to arrive at a “recipe for recreating the tables” given a six letter code-word and a blank grid.¹¹² While Reeds is modest about his achievement there is no doubt that his work on the underlying mathematical structure of the *Soyga* tables will be of enormous help to anyone attempting to understand the original method of their construction. Not only has Reeds been able to reconstruct the implicit mathematical structures of the tables, he has also used modern techniques of error analysis to emend the inadvertent mistakes produced by scribal mistranscription. This analysis also gives Reeds a sound basis for suggesting that Sloane MS 8 (Dee’s copy of the *Book of Soyga*) is the more accurate of the two copies, and was also the manuscript which was used by Dee when he compiled the *Liber Logaeth*.¹¹³ Reeds ends his study with a comparison of the formal structures of different kinds of magic tables used in the early modern period which, he suggests, has received “scant attention” from historians of magic such as Frances Yates.

While most of the essays in this volume seek to offer new perspectives on Dee’s known works, the pieces by Susan Bassnett, Jan Bäcklund and Julian Roberts in this volume shed new light on Dee through presenting new archival, bibliographical and biographical information. Bassnett and Bäcklund focus on the shadowy and often misrepresented figure of Edward Kelley. Routinely presented by historians and biographers as a diabolical charlatan – duplicitous, schizophrenic or criminal – Bassnett shows us a hitherto unknown side of Kelley through a close examination of materials relating to his stepdaughter Elizabeth Weston, while Bäcklund’s piece describes an unnoticed collection of documents in the Royal Library in Copenhagen relating to Edward Kelley and alchemists moving in the Dee-Kelley circle.

Instead of depicting Edward Kelley as a disreputable and criminal character, Bassnett emphasises the extent to which he was able to use the connections he made during his travels with Dee to carve a respectable niche for himself in Central Europe (with “family connections to the emergent figures of the new Bohemian middle class”)

and his role as a “loving stepfather” to the Neo-Latin poet Elizabeth Weston.¹¹⁴ Bringing together new evidence from Oxfordshire county records and autobiographical details from Westonia’s Latin poetry, Bassnett sketches out a tantalising new set of possibilities for our understanding of Kelley and his relationship with Dee which, in contradistinction to previous historical accounts (which stress Dee’s innocent credulity), “is not altogether favourable to Dee”.¹¹⁵

Julian Roberts, who presented a privately printed set of corrections to *John Dee’s Library Catalogue* to participants in the 1995 John Dee Colloquium gives us an invaluable account of newly discovered books which once formed part of Dee’s library, including such remarkable finds as Dee’s densely annotated copy of Marsilio Ficino’s *Omni Divini Platonis Opera* (Basel, 1532), found in the library of St John’s College Cambridge, and the two manuscripts of the *Aldaraia sive Soyga*, discovered by Deborah Harkness in the Bodleian Library and the British Library.

These essays introducing new materials which shed light on Dee and his associates, and the other essays which introduce new perspectives on aspects of Dee’s intellectual and professional activities suggest that there is still a great deal of work to be done on Dee and his involvements in many aspects of Elizabethan life. Dee certainly remains an enduringly fascinating figure: in their different ways Edward Fenton’s popular edition of Dee’s diaries, Benjamin Woolley’s popular biography *The Queen’s Conjurer: the science and magic of Doctor Dee* (2001) and Håkan Håkansson’s recent PhD thesis on the occult-philosophical dimensions of Dee’s work, *Seeing the Word: John Dee and Renaissance Occultism* (2001) provide ample testimony that Dee’s interest in “rare and strange Artes” continues to exercise a fascination for scholars and the general public alike.¹¹⁶ As a brief look at the selective bibliography at the end of this volume will testify, a considerable amount of new work on various aspects of Dee’s intellectual legacy has been published since 1990. With new materials and new studies emerging at this rate we can expect our understanding of Dee and his significance for sixteenth-century intellectual life to continue changing and developing throughout the twenty-first century.

NICHOLAS H. CLULEE

JOHN DEE'S NATURAL PHILOSOPHY REVISITED

Almost thirty years ago I presented my first paper on Dee, and the reception at the History of Science Society meeting was not so much hostile as vacant and indifferent. At a time when the "Scientific Revolution" had pride of place in the history of science, Dee could not hold a candle to Copernicus, Vesalius, Galileo, Descartes, Newton, or the other heroes of scientific progress. For close to the next quarter century I could not count on anyone in an audience knowing who Dee was, let alone recognizing him as of any importance. Because of these experiences I developed an almost ritual like formula of several sentences to introduce Dee and plug his claim to scholarly attention. If Dee, perhaps, has not in the last decade become the latest counter-hero in the revisionist culture wars of the scientific revolution, he has at least moved out of the shadows of preterition. In the ten years since I published *John Dee's Natural Philosophy*, I have sensed a more easy familiarity with Dee in scholarly circles. This is less because of my work, I think, than of the accumulation of a critical mass of scholarship. There has been a mounting volume of studies on Dee, most notably William Sherman's *John Dee: The Politics of Reading and Writing in the English Renaissance* and Deborah Harkness's studies of Dee's angel conversations.¹ This improvement of Dee's status in scholarship, however, does not mean that his identity has been resolved. Trying to bring who, or what Dee was into focus has not been easy. To paraphrase Peter Novick, trying to pin Dee down may be like trying to nail jelly to a wall.² Since my primary concern with Dee has been in the context of the history of science, a field that has experienced considerable changes to its conceptual framework in the past decade, I think it appropriate in this context to reflect on the historiographic locus of John Dee in the history of science.

Now historiography may be the refuge of those with little new to say, but two things suggest otherwise on this occasion. First, Yates's "reintroduction of Dee" was carried out against the backdrop of a particular stage in the history of science; making these relationships clear will assist in critically appreciating her work and the Dee that emerged from it. Second, major changes have accrued over the last ten years in the historiography of early modern science and these present an altered framework for understanding Dee in relation to science.

I have previously referred to Yates's and French's picture of Dee as the Warburg interpretation,³ because Frances Yates, from her position at the Warburg Institute, was its root and guiding inspiration, and I will use that designation here for its verbal convenience. For the first of my themes, I want to suggest that this Warburg John Dee was very much conditioned by its development in the context of the concept of

the Scientific Revolution. As Floris Cohen recently has made clear, the concept of the “Scientific Revolution” as a localized historical occurrence that created a specifically modern and western science of the natural world was a very specific historical creation, barely fifty years old, that in its earliest formulation wove together several strands at cross purposes.⁴

What became the modern idea of the Scientific Revolution was articulated in 1943 when Alexandre Koyré, localizing the emergence of modern science within astronomy and physics, applied this phrase to his sense of a sharp conceptual shift yielding Galileo’s and Descartes’s new understanding of motion. While never entirely lost, this sharp disjunction was progressively flattened out.⁵ Koyré himself eventually placed it within a broader historical process beginning with Copernicus and only resolved with a “Newtonian synthesis,” a process that seemed to parallel Edwin Burt’s theme of the mathematization of nature from Copernicus to Newton.⁶ Finally, in 1948 Herbert Butterfield’s lectures on *The Origins of Modern Science* gave greater general currency to the idea that this great story of the transformation of astronomy and mechanics was the decisive shift in the transition to the modern world. He also further broadened it by extending the dates from 1300 to 1800 to encompass Vesalius and Harvey, a host of other interesting things happening in the Renaissance, and a “Postponed Scientific Revolution in Chemistry.”⁷ Butterfield thereby bequeathed something of a “dual usage” of the concept of the Scientific Revolution. One usage referred to the master narrative of an inner revolution in astronomy and mechanics and the attendant philosophical shifts progressing from Copernicus to Newton that became something of a standard model. The other usage applied to the congeries of developments in the broader chronological period in which the master narrative was embedded and whose relation to the inner revolution remained unclear and problematical.⁸

On an individual level, John Dee exemplifies a number of challenges presented by this new conception of a Scientific Revolution. His learning, interests, and activities in mathematics, navigation, and astronomy had never been forgotten, and bits and pieces of his work could be associated with some of the novelties of the sixteenth century and hints of some progressive strand, such as Copernicanism, could, with enough effort, be teased from his legacy.⁹ But if all of Dee’s activities are considered, including his conversations with angels through Edward Kelley and other mediums, there might seem to be no place for the likes of him in Koyré’s and Burt’s conceptual mutations or in the master narrative of Butterfield’s “inner revolution,” whose core Rupert Hall identified with the triumph of rationality.¹⁰ Despite any positive glimmers, this new concept of the Scientific Revolution threatened to consign Dee to Hall’s “vast deal of esoteric chaff” that had to be eliminated before a pure science emerged.¹¹

This “litmus test” had a real impact in casting Dee into preterition. I remember a meeting much like this one devoted to Thomas Harriot in 1971. For the opening of his keynote address, Edward Rosen chose to quote from a passage in Vesalius on the renewal and usefulness of the sciences, using this text to highlight themes he related to Harriot. Since all of these themes could be found in Dee’s *Mathematicall*

Praeface, I was puzzled. I asked Rosen why he did not take for his text Dee's *Praeface*. Besides Harriot and Dee being acquainted, the *Praeface* seemed more appropriate in that it was English, to say nothing of actually recommending mathematics on which Vesalius is silent. Rosen replied that he did not want Dee's funny business with angels and so forth to confuse the issue.

Not only Dee but the entire character of the Renaissance was implicated in the concept of the Scientific Revolution. If it was the seventeenth-century mutation in science that marked the beginning of the modern world, what then of Burckhardt's Renaissance and "The Discovery of the World and of Man"? Butterfield implied that the Renaissance was merely preliminary to the Scientific Revolution which he claimed "outshines everything since the rise of Christianity and reduces the Renaissance and Reformation to the rank of mere episodes, mere internal displacements, within the system of medieval Christendom."¹² The new history of science, which was gaining status as a professional academic discipline, threatened to consign Renaissance scholars to the pre-modern shadows.¹³ In response, there developed a considerable literature by Renaissance scholars concerned to establish the positive relation of Renaissance culture to the progressive movement toward modern science.¹⁴ Frances Yates shared these concerns. When she began working on Bruno in the 1930s, she inherited from Duhem the notion that science was medieval and that the Renaissance and humanism had impeded it.¹⁵ Later, reflecting the new concept of the Scientific Revolution, she was concerned that science came later and independently of the Renaissance. As she observed:

we all descend from Descartes and the seventeenth century, and surely someone ought to be able to tell us what the seventeenth century emerged from? Did it spring ready armed like Minerva out of nothing, as professor Kristeller says some people think? Did it spring from medieval philosophy and science after their interruption by Renaissance humanism? Neither seems likely according to the normal rules of progression. There ought to be an intermediate ancestor and it ought to be Renaissance philosophy.¹⁶

The Warburg Interpretation sought to rescue the Renaissance and Dee from preterition by developing how Renaissance philosophy was this intermediate ancestor. This ultimately centred on presenting Dee, because of his recognized scientific activities, as a key vehicle through which a strand of Renaissance culture flowed into the progressive movement that became the Scientific Revolution. Consequently, the Scientific Revolution actually offered a framework for legitimating Dee, including even his apparently non-scientific diversions, as an important historical figure. This approach is first evident in Calder's 1952 dissertation, "John Dee Studied as an English Neoplatonist," done under the direction of Yates and already reflecting her interest in Dee and science.¹⁷ Working in the early years of the concept of the Scientific Revolution, Calder accepts as his framework the emphasis on mathematization and mechanistic causality that Koyré, Burt, and others took as the essentials of the new science. Calder argued that Dee's advocacy of a scientifically oriented form of Renaissance Neoplatonism put him in a line with Kepler and Galileo as a proponent of the extension of methods of quantitative analysis to natural questions in place of the qualitative approach of Aristotelian science.¹⁸

However, it proved difficult to find within the Neoplatonism of the Renaissance a clear mechanism of transition from number symbolism to mathematics as a tool of quantitative analysis other than Koyré's mutation in Galileo's thought, leaving the Renaissance and science as distinct as ever.¹⁹ This weakness was alleviated by Frances Yates in 1964 in *Giordano Bruno and the Hermetic Tradition*. Here she identifies the specific texts of the Hermetic corpus as the "vital core of Renaissance thought on nature" and linked them very directly to the start of the Scientific Revolution through the Hermetic conception of magic.²⁰ In her search for the intermediate ancestor of Descartes, Yates said,

perhaps we should look harder for the hidden springs of the movement which was to be so fateful, seeking them, not in humanism nor in a rather confused 'Neoplatonist' philosophy, but in the accompaniments of that philosophy, Hermeticism, Cabalism, Lullism, Pythagorean numerology – that labyrinthine maze in which the late Renaissance seeks ever more feverishly for an operative 'method' – until Descartes emerged with a method that worked.²¹

Yates was not the first to recognize the importance of the *Hermetica* or to make a connection between magic and science, nor was this the central or exclusive concern of her works, but she constantly gravitated to the question, and her formulations became popular and the centre of controversy over what came to be called the Yates thesis. The formulation of this evolved with each of her works, but the core idea is that an intellectual movement, such as the Scientific Revolution, begins with a "movement of the will" – a change in attitude and intellectual direction – not the specific breakthroughs that come later.²² The Hermetic magus as operator, in this interpretation, began this movement of the will and shaped it in the direction of the control of nature, experiment, and the use of number and mathematics, and ultimately provided the atmosphere and impulse for the crystallization of the new conception of science in what is almost a Gnostic revelation.²³

Yates turned to Dee in support of her contention that it was the union of Hermetic magic with the Neoplatonic-Pythagorean view of number as the key to the secrets of nature that promoted an interest in the mathematical study of nature through the mathematical arts and physics. The key text here is his *Mathematicall Praeface* to the English translation of Euclid's *Elements* of 1570, in which he strongly advocated the study of the mathematical and mechanical sciences that were to triumph in the seventeenth century.²⁴ The source, she suggested, of not only Dee's advocacy but also of his actual practical scientific work and of the central place of mathematics in the expressions of his natural philosophy in the *Propaedeumata Aphoristica* and the *Monas Hieroglyphica*, was the union within the Renaissance Hermetic tradition of magic with Pythagorean speculative mathematics.²⁵ In her noteworthy formulation, Dee is:

a clear example of how the will to operate, stimulated by Renaissance magic, could pass into, and stimulate, the will to operate in genuine applied science; or of how operating with number in the higher sphere of religious magic could belong with, and stimulate, operating with number in the lower sphere of 'real artificial magic'.²⁶

Yates's association of Dee with Hermetic magic preserves Calder's theme that Neoplatonic mathematicism was preparatory to the development of early modern science. What is new is the role of magic. The idea of operational power inherent in

Hermetic magic is the key both to understand how Dee's angelic conversations and his practical scientific activities and interest in mechanics flow from a single source but also to explain why the view of mathematics inherent in Neoplatonism came to be actively applied to the study of nature.

In Yates's later works Dee became even more central. As she admitted, the Elizabethan Renaissance and its continental connections had been an early and persistent concern, and Dee increasingly became the medium through which she extended the influence of the "hermetic-cabalist tradition" in an English guise into even wider areas of sixteenth-century culture than she had in her work on Bruno.²⁷ Yates eventually came to distinguish two phases within the Hermetic tradition: an early Renaissance phase and a later Rosicrucian phase. The Rosicrucian type of magic, so-called because of its role in the Rosicrucian manifestos, evolved in the later sixteenth century and aimed at more direct operation in the external world and contributed most directly to science.²⁸

Yates traced the formation of this Rosicrucian type of Hermeticism to John Dee's combination of magic, cabala, and alchemy in the *Monas Hieroglyphica* and the spiritual exercises he carried out with angels. In 1583 he carried this brand of Hermeticism to Eastern Europe and became the leader of a religious movement centred on a cabalist and alchemical philosophy that became the root of the later Rosicrucian movement.²⁹ The culmination of Yates's progressive unravelling of the English Renaissance is *The Occult Philosophy in the Elizabethan Age*, where she finds the key component of Elizabethan culture to be a cabalistic variety of the Hermetic occult philosophy built from Lull, Ficino, Pico, Agrippa, and Francesco Giorgi, given a particularly English and Rosicrucian expression by Dee with his addition of alchemy.³⁰

For all the importance that Yates gave to Dee as a "towering figure" in the history of European thought, she herself never seems to have studied him intensively. In her early works, she relied upon Calder for basic information and even detailed textual readings, as well as his broad interpretation, which she subsumed within the larger Hermetic tradition. Later she could turn to Peter French's *John Dee*, which appeared when Yates's interpretation of Dee was still a group of scattered suggestions.³¹ His accomplishment was to elaborate these suggestions into a comprehensive interpretation of Dee as a Hermetic magus encompassing not only Dee's works but arguing as well for Dee's importance in English culture through his work in navigation, the influence of the *Mathematicall Praeface* on English mechanicians, and the influence of his philosophy in literature through his association with the "Sidney circle" and patrons at court. Subsequently, this Warburg Interpretation became an accepted framework, accepted with little question in many circumstances, including Couliano's *Eros and Magic in the Renaissance*, a number of dissertations, including mine, and as the starting point for rich fictional elaboration as in Eco's *Foucault's Pendulum*.³²

Returning to Yates, her "thesis" generated considerable controversy among historians of Renaissance thought and of early modern science. It was originally to

pursue Dee as a test case in exploring the relations among mathematics, magic, and the development of science that I began working on him. The extent of his concrete work in mathematics, astronomy, alchemy, and the practical mathematical arts offered opportunities that were insufficiently exploited by Yates or French. In pursuing this, however, I became progressively dissatisfied with the Warburg Dee. Beginning with a sense that important elements of Dee's thought ill fit the Hermetic framework, this dissatisfaction extended to the basic approach of the Warburg Interpretation. Common to Calder, Yates, and French was an approach in which Dee's importance was established by splicing him into an existing intellectual tradition that intersected with science. This yielded a Dee who was a static embodiment of tradition, with his texts as mere containers of ideas. If he was to be important in his own right, I thought he deserved better.

When I wrote *John Dee's Natural Philosophy* I had two objectives. One was to contribute to the discussion of the place of the "occult" sciences in the Renaissance and their relation to the development of natural philosophy and science, for which Dee seemed an ideal case study. The second was to give Dee's natural philosophy the study it seemed to deserve if he was indeed as important a figure as Yates claimed. I therefore endeavoured to approach him not as someone to be placed within an existing tradition or as an instance of influences but as an individual whose works must first be studied in their own right. I began then with Dee's writings that most significantly engaged issues of natural philosophy: the *Propaedeumata Aphoristica* of 1558, the *Monas Hieroglyphica* of 1564, the *Mathematicall Praeface* of 1570, and the records of his conversations with angels from 1583 to 1589. I attempted to situate each text within Dee's career at that point – to discover issues he was engaging, how these grew out of both practical concerns and his reading, how his texts reflect a creative engagement with the cultural resources available to him, and how both the issues and his formulations might have been related to his social situation and aspirations. Because we have a record of his library, now available in a magnificent edition by Julian Roberts and Andrew Watson, and many existing copies of his books with his annotations can be identified, the possibilities of doing a cultural history of his intellectual life are particularly rich.³³ Considering his writings as creative products of his engaging particular issues, of his reading in his wonderful library, and of his dialogues with his books and contemporaries, leads to an appreciation of the complexity and individuality of Dee's philosophical roots, to the awareness that his thinking changed over time and needs to be related to changing social and cultural frameworks, and to different conclusions on the central historiographic issue of magic and science.

I did not find in his work in natural philosophy a further elaboration of Renaissance Florentine Neoplatonism, or of a coherent recognized "Hermetic" tradition, or of a Renaissance "occult philosophy" with a Hermetic, or Neoplatonist, or Pythagorean, or Cabalist core as Yates variously specified. He began with a neoplatonizing Aristotelianism, giving a particular role to optics derived principally from Roger Bacon. Later he evolved a more clearly neoplatonic, alchemical and magical occultism and spiritualism derived principally from Johannes Trithemius.

His theory of the status of mathematics and of the possibilities of its application to reality was derived from Proclus. He moved beyond the optical physics of astrological influence in the *Propaedeumata* to come to share with others of his time the search for an "ancient theology," a pristine divine language of things transcending the conventional character of human languages, and a religious immediacy through magic as a religious mysticism, but his realization of these things came through his own personal development and an idiosyncratic blend of sources in which medieval Latin and Arabic authors were of as much importance as those of the Renaissance.

The evolution of Dee's thinking and his changing interests were socially conditioned by his pursuit of patronage and the effort to define an identity and role for himself. While the Warburg Interpretation mentioned Dee's practical activities and his relations with the court, his writings and intellectual life were not closely tied to his practical need to establish and build a career. In actuality, he presented his work in natural philosophy as a claim to elevate himself from the narrow instrumental role of teacher and practical adviser to the status of royal intellectual with the financial security and freedom to pursue his special studies. In the *Monas* the image of the natural philosopher evolved into an exalted source of wisdom and advice in the polity because as an adept he had privileged access to secret and divine understanding. This new image was suggested by the *Secretum secretorum* and Roger Bacon's annotations on it, where the occult wisdom of the philosopher is the basis of Aristotle's special claims as adviser to Alexander. This association spurred and shaped Dee's assimilation of more spiritually occult sources in his quest to be Elizabeth's and Britain's "Christian Aristotle."

On Yates's central issue of magic, I see Dee's writings presenting two strands tending in different directions. One strand was a natural magic encompassing natural lore, the practical arts, a natural philosophy providing for powers and correspondences that can be manipulated, and an ethos that sought to understand and to capture and control the powers and processes of nature. The other was a religious magic in which occult correspondences and powers were seen as paths to the divine and the spiritual ascent of the magus. Of the two, natural magic was the more conducive to the investigation of nature we associate with science, the religious variety referencing nature and natural knowledge as a source of spiritual insight rather than as subjects of study in their own right. On the issue of the connection of Renaissance occultism with the Scientific Revolution, which had been the original objective of my study of Dee and for which Dee was a mainstay of the Yates thesis, the jury is still out. Although there are pointed demurrers, a variety of studies have accumulated indications of continuity from various occult traditions into facets of the new sciences of the seventeenth century.³⁴ Specific connections from the works of Dee have not, however, been forthcoming. Nonetheless, for what it is worth, John Henry has suggested that the most positive connection of the occult with seventeenth-century science was a natural magic of the type Dee related to Roger Bacon.³⁵

Now I would like to think that I have made some useful contributions to understanding Dee, but with regard to the Warburg Dee and the Yates thesis these conclusions are rather bleakly negative. Dee is not the “towering figure in European thought” whose example will support a connection between the Renaissance in the guise of a revival of Hermetic magic and the new science of the Scientific Revolution. While the continuity from Renaissance to new science is still problematic, I think Dee also suggests a good deal of continuity between medieval and Renaissance, with the medieval elements being the more productive for Dee’s investigation of nature.

Rather than make Dee a unique case, some of these conclusions actually accord with other scholarly directions that have emerged since Yates’s work. That hermeticism and the *Hermetica* played little role in Dee’s thought is not surprising in the light of Brian Copenhaver’s work. Copenhaver has shown that Hermes and the *Hermetica* served a mainly doxographic role, providing a basis of legitimacy for magic that was based on the theoretical foundation of a Neoplatonic cosmology most clearly expressed by Proclus and supported by a long tradition of supposedly empirical information about magical objects. The *Hermetica* were not necessary for the adoption of or pursuit of an occult or magical natural philosophy, as is clear in the case of Dee, who appealed little to authority and when he did, usually invoked Roger Bacon. When the *Hermetica* went beyond legitimating magic to actually shaping it, as in the case of Robert Fludd, it was the religious elements that predominated, driving magic away from its natural orientation toward a spiritual theosophy similar to Dee’s later inclinations and less conducive to science.³⁶

On a larger scale, changes in the historiography of science have made the issue of continuities between the Renaissance and early modern science of less central concern. In recent years there has been a sense of considerable difficulty with the entire idea of the Scientific Revolution. The sense of crisis reflected in Jan Golinski’s “question as to whether the notion of a coherent, European-wide, Scientific Revolution can survive continued historiographical scrutiny” seems confirmed when Cohen, after reading the wide-ranging collection of papers in *Reappraisals of the Scientific Revolution*, came to wonder “whether such a thing as the ‘Scientific Revolution’ mentioned in the title ever took place at all.”³⁷ Originally designating an event – Koyré’s sharp mutation in the science of motion – the concept has been progressively diluted and flattened out to designate a chronological period encompassing such a variety of developments that its claim to mark a unique and decisive stage in the development of the West is in serious jeopardy.³⁸

A number of things contributed to this state of affairs, but overall, they are at root a function of the progressive historicization of science. The very emergence of the notion of the Scientific Revolution was coupled with an historicist aim on Koyré’s part to analyse the thought of a scientist in the context of his own work and that of his contemporaries and predecessors rather than just tracing prevailing scientific ideas back to their origins or as a way of illustrating preconceived philosophical viewpoints.³⁹ In its earliest stage, this effort yielded a sharply defined turning point within the clear line of a narrative from Copernicus to Newton.

Butterfield's broadening of coverage and the dual usage of the term blurred the clear narrative line, as did growing specialist studies highlighting lesser-known scientific characters and previously unknown sides of familiar figures.⁴⁰ Inclusion of elements previously marginalized by the great story became a deluge following the publication of Yates's *Giordano Bruno*, as magic, alchemy, Paracelsian medicine, and hosts of other occultist and mystical approaches to nature claimed equal status with and came to jostle side by side with and even to displace the traditional heroes.⁴¹ Recently, more serious challenges have come from the "linguistic turn," which at its most radical raises doubts that there is a reality of nature that could be known by science, reducing the privileged status of "modern" science at the expense of the older "occult" science, and the contextualist approach of social constructivism by which what used to be seen as purely scientific advances are seen as contingent products of problems and solutions that develop in local frames of meaning produced in a social context by rival interest groups.⁴² In sum, the clear line of a master narrative from Copernicus to Newton has been muddled, and the traditional framework of debate between internalist and externalist causes, and evolutionary versus revolutionary change, which rested on the assumption that modern science has some defining feature, whose appearance in the Scientific Revolution it is the historian's task to explain and present in a "great story," has been rendered problematic by doubts that such a feature can be grasped.⁴³

While historians of science who made their careers as investigators of the Scientific Revolution may anguish over the "uncertainties of a larger historiographic framework in flux" and lament the passing of the distinctiveness of what the concept originally denoted, this may be a positive step for the study of Dee and figures like him.⁴⁴ First, in the area of science, this frees us of the burden and constriction of ever trying to relate him to a progressive movement whose outcome in Newton was foreordained. The contextualist approach, offered by John Schuster in response to the difficulties in the historiography of the Scientific Revolution, by focusing on the contingencies of the process of change in natural philosophy and the sciences rather than developments destined to culminate in Newton, offers a framework that looks promising for the investigation of Dee. This approach takes natural philosophy and the various sciences as sub-cultures whose social and cognitive enterprises interact internally and among each other, while also being conditioned by "the larger social, political, and economic contexts in which they were practiced and promoted."⁴⁵ The challenge thus becomes the description and explanation of these processes of not necessarily progressive change within the natural philosophies and sciences of the early modern period.

Freed of the Whiggish concern with progressive change, what Schuster calls the "Scientific Renaissance" of the sixteenth century can be considered independent of any progressive contribution to the future. In conjunction with the increasing erosion of Aristotelian natural philosophy, the availability of the scientific, mathematical, and natural philosophical heritages of classical antiquity and of Arabic and Latin medieval civilizations provided a host of competing socio-cognitive subcultures as they interacted with the re-evaluation of the status of the practical arts and found new and receptive social, political, and economic audiences and avenues of

advancement outside the universities in courts, commerce, administration, and popular culture. What prevailed was not a single alternative to Aristotle, whether Neoplatonic, Hermetic, or Chemical, but a broad, eclectic, shifting, and confused range of intellectual and social initiatives.⁴⁶

This characterization accords well with Dee's eclectic reading from classical to medieval Arabic and Latin sources, his openness to the practical arts, his groping for an appropriate social identity and locus, and his shifting definition of problems as he cut himself loose from the natural philosophical framework of Aristotelianism. What follows are some scattered observations on what I see as some of the opportunities for Dee scholarship flowing from these shifts in historiography. First, opportunity exists for much more work on Dee as natural philosopher and scientist. Many of Dee's works could use further investigation, the *Mathematicall Praeface* being one. Some years ago Bert Hansen embarked on a project, which has since lapsed, to produce a detailed annotated edition of the *Praeface*, identifying references and exploring the sources and functions of its various components. I think it would still be valuable to carry this out. Of course, anyone undertaking this now has at their disposal Julian Roberts's and Andrew Watson's magnificent edition and study of Dee's library. It goes almost without saying that this must be a touchstone for almost all future work on Dee and could be the subject for studies of its own.

If studied in a larger context, Dee could also serve to illuminate aspects of the dynamics of Schuster's Scientific Renaissance. In a recent paper, Bernard Goldstein and Peter Barker called attention to the important influence of Christoph Rothmann's rejection of solid celestial orbs on Tycho Brahe's promulgation of his geo-heliocentric alternative to Copernicus. Rothmann came to his conclusion from studies of the position and parallax of the comet of 1585, for which he relied on Johannes Pena's translation and promotion of the practical use of Euclid's *Optics*, as well as the work of Gemma Frisius.⁴⁷ What strikes me is that Dee had studied these same works from his interest in optics, he had also worked on the parallax of the Nova of 1572, and he had corresponded with Tycho, yet Dee never reached the point where he had anything of interest to offer Tycho. Now this could be taken as an instance of Dee missing the progressive boat, but from another perspective it could provide an opportunity for a comparative study of the intersection and interaction of texts, of the definition of problems at hand, of the constraints of social contexts, and of the possibilities and limitations of disciplinary dialogues.

A second consequence of abandoning the search for strong links between the Renaissance and the Scientific Revolution is that science and natural philosophy need not be the only historiographic context in which to consider Dee. Establishing Dee as a, or even the, link between Renaissance and new science was the problematic that framed the Warburg Dee. However much I may have managed to present a different Dee, the same problematic served as my starting point and my issues and consideration of Dee as natural philosopher. Decoupling Dee from science presents other possibilities. Most obviously, consideration of a number of his activities, and I am thinking particularly of the angelic conversations, should benefit from freeing them from the implicit question of how could a man of science

do this? In addition to the contributions at this colloquium to this facet of Dee, we now have several important studies from Deborah Harkness.⁴⁸

This also implies rethinking the Dee canon. Since Calder, the *Propaedeumata*, the *Monas*, and the *Praeface* have stood at the core of that canon, with other writings as peripheral or marginal. William Sherman has called attention to the “unreading” suffered by some of Dee’s texts and their contexts that accompanied the picture of Dee as primarily philosopher/natural philosopher/scientist.⁴⁹ Sherman’s initiative reached fruition just as this colloquium opened with the availability of the first copies of his *John Dee: The Politics of Reading and Writing in the English Renaissance*.⁵⁰ Using Dee’s library, his marginalia, and manuscript remains to their fullest, and analysing the intellectual activity they reflect, Sherman presents Dee in the new context of consultant within commercial, academic, and courtly spheres, and reconstructs the scholarly network that centred on Dee’s library and household. Deborah Harkness has also contributed to transforming Dee from isolated intellectual into a more multidimensional personality with her recent study of the management of Dee’s “experimental household,” evoking the importance of Jane Dee’s role along side that of John.⁵¹

This unreading, despite Sherman, is persistent and results from more than exclusive focus on Dee’s natural philosophy or printed sources. In two recent pieces on maps in Tudor England, one particularly concerned with the political function of maps, Dee is barely mentioned, and then only on the basis of the older secondary literature.⁵² Richard Helgerson in his *Forms of Nationhood. The Elizabethan Writing of England*, has only one reference to Dee in a note on maps. Helgerson’s silence on Dee partly results from the condition that Dee is not part of the literary canon that Helgerson takes as his matter; so, the picture of Dee as scientist is not the only source of an unreading.⁵³ Dee left writings appropriate to Helgerson’s subject, but they are in manuscript, which is a further obstacle to reading Dee fully. All post-Warburg studies of Dee have given serious consideration to his manuscript remains, and it should go without saying that any future work on Dee cannot ignore the manuscript remains. The larger problem that these examples present for this colloquium is that historical studies can apparently be written without Dee. Is he really so inconsequential? Just as I complete this draft, I am encouraged that this situation may have taken a turn for the better after seeing a notice for Lesley B. Cormack’s *Charting an Empire. Geography at the English Universities, 1580-1620*.⁵⁴

One thing that has struck me lately is that the actual history that Dee has experienced serves to define a number of areas that deserve further investigation. For instance, the *Mathematicall Praeface* was reprinted twice in the seventeenth century, in 1651 and in 1661, as part of the republication of Billingsley’s Euclid. This could provide a concrete line on Dee’s possible influence into the core period of the Scientific Revolution, which might yield results through an investigation of these re-editions, their readership, and how Dee’s *Praeface* fared among them. To be truly fruitful, this ought to investigate the motives for republication, how Dee was read and by whom, and how his ideas may have functioned in that period.

Again, with the change in the historiography of science, perhaps the most interesting possibilities are in other areas. In the broad sweep of history we should acknowledge that despite the efforts of Calder, Yates, and French, Dee's name is not and probably never will be invoked in the company of Galileo, Descartes, Boyle, *et. al.* to stand for certain intellectual values associated with enlightenment. This marginalization may be the product of the social construction of an ideology of science, but it speaks to a cultural artefact that might yield to historical analysis. At the same time as he has been marginalized in one tradition, he has been absorbed into a different mainstream in being evoked from his own day to ours in occultist and spiritualist contexts. I am thinking of the sensationalism of Deacon's secret agent, the fascination with his angelic language and mystical books from Casaubon to Laycock's *Enochian Dictionary*, and how readily Umberto Eco could use Yates's Rosicrucian Dee to create for him a major role in *Foucault's Pendulum*. Quite recently, Erik Davis traced modern computers to the magic and art of memory of Lull and Bruno, and drew parallels between Dee's channelling to the spirit world and Davis's own evocation of a spiritualized New Age cyberculture. Dee's angels are seen as prefiguring software agents, his angel magic giving us a "hermetic image of information space." Thus, we have "Dee accessing angelic agents through the interface of coded Calls and 'shew-stone glass'."⁵⁵ In thoroughly de-historicizing Dee, I find this approach less than helpful in understanding Dee. Since I have also worked as a computer consultant, this does not even do anything for my understanding of computers and the "information highway." This is a cultural artefact, however, and why Dee is invoked in this context may tell us something about the thing Davis calls cyberculture; certainly it speaks volumes about the mystifications evoked by novel technologies in the manner so luxuriantly explored by Pynchon as well as the "excess of wonder" leading the hermetic interpreter on that is one of Umberto Eco's themes.⁵⁶

Closer to our scholarly home in the sixteenth and seventeenth centuries, Dee's *Monas* had by far the strongest history of all of his works. In addition to the original 1564 edition, there was one printed in 1591 at Frankfurt, as well as its inclusion in the 1622 and 1659 editions of Zetzner's great *Theatrum chemicum*. Further, the *Monas*, its central symbol, or its ideas are mentioned, referenced, discussed, or critiqued by Johann Valentin Andreae, Petrus Bongus, Gerard Dorn, Andreas Libavius, Heinrich Khunrath, and Athanasius Kircher, and possibly others. In addition, it was clearly suggestive to the author of the *Consideratio brevis* that precedes the second Rosicrucian manifesto, the *Confessio fraternitatis* of 1615.⁵⁷ This association with the Rosicrucian phenomenon also absorbed other Dee influences such as the publication of Dee's edition of and notes to Roger Bacon's *Epistola de secretis operibus artis et naturae*, to which has been added introductory material and additional notes indicating Rosicrucian sympathies.⁵⁸

Yates's *Rosicrucian Enlightenment* may have been on to something after all. Tracing the Rosicrucian phenomenon to Dee's "mission" to the East and his association there may be without foundation, but we need to acknowledge a historical reality here. Dee's *Monas* in some way became a part of a cultural ferment in the late sixteenth and early seventeenth centuries that could well repay study.

Such study should involve looking at things not exclusively from Dee's side but also from the perspective of those who read him. For instance, only four years after the *Monas* appeared, Gerard Dorn featured the Monas symbol and other figures from the *Monas* as part of a device on the title page of his *Chymisticum artificium naturae*. This is interesting in a number of regards. Dee owned a copy of this, and complained that Dorn used the symbols without properly crediting him.⁵⁹ Dorn, in fact, uses Dee's figures in his own particular context. Dorn, and other authors who mention Dee's *Monas*, provide materials for the study of how others read and filtered Dee's ideas to give the richest picture of how Dee became part of this cultural ferment. Further, Dorn is particularly important as a major agent in the dissemination of Paracelsian ideas in the late sixteenth century. Because of the large collection of Paracelsian works in Dee's library catalogue, Dee's relation to the Paracelsian strand in the sixteenth century is of interest, and Dorn's work presents one intersection of Dee and Paracelsian ideas that should be of interest not only from the point of view of Dee, but also in terms of the development of the Paracelsian tradition.⁶⁰

In making all these suggestions, and suggestions is all they are, my main concern is to suggest that there is ample opportunity for fresh perspectives to tell us more about who John Dee was and what his significance was in the culture of early modern Europe.

ROBERT BALDWIN

JOHN DEE'S INTEREST IN THE APPLICATION OF NAUTICAL SCIENCE, MATHEMATICS AND LAW TO ENGLISH NAVAL AFFAIRS

INTRODUCTION

Although John Dee's first teaching appointment was in classics at the new Trinity College, Cambridge in 1547, he was soon off abroad to buy books later that year, and going on extended trips to the Universities of Louvain and Paris in 1549 and 1550 to study the practical application of mathematics to navigational problems. He learned much there about the relationship of these matters with geography, politics and international law, as well as acquiring a number of instruments. Dee had returned by 1551, taking service in February 1552 with William Herbert, the Earl of Pembroke, who through his marriage to Anne Parr remained very influential at Court until his death in 1570. Dee would share many of the same interests with the Welsh-speaking Earl and his sons, from Welsh history, to the law on mineralogy and prospecting, metallurgy, to cartography and exploration. Those shared interests shaped the Herbert family's investment decisions in respect of their estates in Wales and Gloucestershire, where they successfully exploited coal, iron and copper deposits, and the losses they incurred due to over-confidence in the American ores found on Martin Frobisher's northern voyages to "Meta Incognita" between 1576 and 1578.

Dee claimed to have been offered a mathematics lectureship at Oxford in 1553-4. His purchase of Ptolemy's *Mathematica constructionis liber primus* in Oxford on 16 April 1554 attests to his new need for mathematics textbooks. Another surviving mathematics textbook from his library, acquired in 1551 and subsequently annotated in 1555, suggests a friendship with Edward Bonner, Bishop of London.¹

Although Dee retained many friendships made in that formative decade from 1545 to 1555, the navigational instruments and globes which he had bought while abroad were tentatively offered to Trinity College and St. John's College in 1550. There is real doubt over whether the newly established colleges retained them, for they were certainly in Dee's house at Mortlake by 1568. They included a treasured

variation compass, several ordinary sea compasses, a “most excellent clock by Dibbley”, two Mercator globes heavily amended in his own hand, a “magne[t] stone” (i.e. a lodestone), a “radius astronomicus” and a ring dial sold to him by Gemma Frisius in Louvain. Dee certainly taught their use in his own library at Mortlake and added to this collection a large astronomical quadrant made in 1551 by his ill-fated but distinguished sea-going pupil, Richard Chancellor.²

In 1551 Dee had worked under the patronage of the Duke of Northumberland with Richard Chancellor, Hugh Willoughby and Sebastian Cabot in preparing various Atlantic ventures and the 1553 expedition to Russia. He certainly formed a close friendship with Richard Chancellor as they evaluated together the viability of the Duke’s various schemes.

As a result Dee possessed a version of Chancellor’s manuscript account of his exploration past the North Cape along with another version by Hugh Smith which included a small sketch map of their discoveries near Novaya Zemlya. He also retained one of Chancellor’s quadrants, and Chancellor’s work on a diagonal scale. In 1557-1558 Dee worked with Stephen Borough through the technical problems of preparing a chart of the far northern waters explored by the latter in 1556. He would engage in related correspondence with Gerard Mercator and Abraham Ortelius from the time that Ortelius’s cordiform world map appeared in 1564. Dee compared Mercator’s maps with “my friend Stephen Borough, his platt”, a chart of the North East Atlantic now known through the survival of part of it copied by William Borough and now in Trinity College Dublin.³

From about that time Dee took to heart much of the practical navigational advice of Martin Cortes’s *Breve Compendio de la sphere y arte de navegar*,⁴ translated between 1558 and 1561, as the *Arte of Navigation* through the initiative of Stephen Borough and Richard Eden. In particular Dee followed Cortes’s earlier educational advice that subjects that were difficult to convey in writing should be presented as platts or charts. Dee can be seen working on this proposition both as the “paradoxall compass” (or circumpolar chart) in 1557-8, and in other navigational charts, but also exploiting it as “the Groundplat of my MATHEMATICALL Preface annexed to Euclid (now first) published in our Englishe toung”, published by Henry Billingsley in 1570 as *The Elements of Geometry*.⁵ He used the same device as a “Platt of a Petty Navy Royall”, and as a “platt politicall” when setting out his case for an imperial strategy published as *The General and Rare Memorials pertayning to the Perfect Arte of Navigation* in 1577.⁶ In the manuscript of the next but one part of the work, *The Great Volume of famous and Riche Discoveries*, Dee shows misplaced confidence that he would soon be vindicated by the exploration of his pupils Martin Frobisher and Christopher Hall. This comes out in the following remark which also hints that Dee himself considered making a voyage to the Far North as it asserts:

I trust with one or two complete surveys, after this to be performed by my travail [...] that all the northern part of Asia, with the two principall cities thereof, Cambaia and Quinsay, will become to the British natural inhabitants of this Monarchy so well known as are the coasts of Denmark and Norway and their periplus.⁷

Teasing Ortelius on account of his earlier correspondence and fully aware that Humphrey Gilbert had only copied Ortelius in making his map in 1566 (published in 1576 showing the most northerly point as “C. de Paramantia”), Dee wrote on 16 January 1577 to ask:

on what authority you have placed the Cape Paramantia and Los Jardines on the northern coast of the Atlantic, and of all the other things, which you are the first and only one to place in that region.⁸

This in turn provoked Ortelius to visit his cousin in London in March 1577. After discursive meetings with William Camden and Richard Hakluyt, Ortelius visited Dee on 12 March 1577. Dee then helped Burghley to finalise instructions for Frobisher’s second voyage, using ideas derived from Mercator’s letter of 20 April 1577.⁹

DEE’S TEACHING

Dee’s navigational teaching had initially followed the largely mathematical syllabus taught in London from 1547 by a fellow Welshman, Robert Recorde. From 1560 onwards Dee set about correcting some of Recorde’s textbooks for re-issue after Recorde’s death in 1558 because those texts were used to instruct the Muscovy Company’s pilots.¹⁰ Recorde’s *Castle of Knowledge*, as published by Reyner Wolfe, was re-issued in London in 1561 in an edition reflecting more of Dee’s tuition. This edition was taken by Frobisher to the North West in 1576 along with four other works – all obviously taken because of Dee’s recommendation as to their geographical and mathematical content. They were Dr William Cunningham’s *Cosmographicall Glasse, conteyning the pleasant principles of Cosmographie, Geographie, Hydrographie, or Navigation* (London: John Daye, 1559), Pedro de Medina’s, *Regimento de Navigacio* (Seville: Simon Carpintero, 1543) – more than likely in one of the revised formats issued in 1552, 1562 or 1563 – plus two works by André Thevet; one possibly *La Singularitez de la France Antarctique, autrement nominee Amerique* (Paris, 1558) or a manuscript version collected by Thevet about 1563; the other certainly was the much larger volume, *Cosmographie Universelle*, just published by Pierre Hullier in Paris in 1575 and replete with useful maps, especially a recent and detailed one of North America.¹¹

One of Dee’s library catalogues shows the items that John Davis and Nicholas Saunder had stolen from it in 1584 as “Jo. Davis spoyle”. On 30 March 1592 Dee’s diary recorded that “Mr. Saunder[s] of Ewell sent home my great sea cumpass: but without a needle: it came in the night by water.” In 1592 these items, and the unrecovered books in particular, were cited in evidence to the inquiry conducted into Dee’s losses. In the same context Dee described his house at Mortlake as “Mortlacensi Hospitali Philosophorum peregrinatum” revealing the open way in which he ran his library.¹²

Within the opportunity that his Mortlake home offered he nurtured an interdisciplinary approach which took his pupils’ understanding far beyond the theorems so ably advanced by Robert Recorde and Henry Billingsley. This became particularly clear in February 1570 when he set out definitions of those navigational

sciences which were still new to many English readers in his preface to Billingsley's *The Elements of Geometry*. He also defined navigation as the demonstration of the shortest (and therefore cheapest) safe and convenient route for a ship between two accurately defined locations.

Revealingly, he defined the science of hydrography, which:

delivereth to our knowledge, on Globe or in Plaine, the perfect Analogicall description of the Ocean Sea coastes, through the whole world: or in their chiefe and principall partes thereof: with the Iles and chiefe particular places of daungers, conteyned within the boundes, and Sea coastes described: as of Quicksandes, Bankes, Pittes, Rockes, Races, Countertides, Whorlepooles. &c. [...]. And besides thys, *Hydrographie*, requireth a particular Register of certaine Landmarkes [...] and what way, the Tides and Ebbes, come and go, the *Hydrographer* ought to recorde. The Soundings likewise: and the Channels wayes: their number, and depthes ordinarily, at ebb and flud, ought the *Hydrographer* by obseruation and diligence of *Measuring*, to haue certainly knowen. And many other pointes, are belonging to perfect *Hydrographie*, and for to make a *Rutter* [...]: as of the describing, in any place, vpon Globe or Plaine [chart], the 32. pointes of the Compase, truly: (wherof, scarsly foure, in England, haue right knowledge: bycause, the lines therof, are no straight lines nor Circles). Of making due projection of a Sphere in plaine. Of the Variacion of the Compas, from true Northe [...].¹³

In 1570 Dee declared the spirit in which he entered into such teaching as “To stirre the imagination mathematicall: and to inform ye practice mechanicall.”¹⁴ In this spirit, and in his consideration of geography, Dee gave much thought to means of putting theoretical geometrical projections to practical use in navigation. In August 1576 Dee wrote to John Daye saying that he had invented the circumpolar chart or “Paradoxall Compass in playne” in 1557, and describing his realisation that a circumpolar sea chart could be of very considerable help in the assessment of real distance across the icy waters of the latitudes that Stephen and William Borough had been required to explore between 1556 and 1576.¹⁵

To Dee, the navigator's precision was just one part of the complex concept of place which he applied to overseas opportunity. He probably vested extra characteristics in it beyond those discussed in Ptolemaic texts because he realised that, while one could define a place by means of latitude and longitude, he could offer the sailor no convenient means to determine longitude at sea where it mattered most. Dee was not a natural sailor but his own experience of seagoing would serve to focus his mind on how his skill in spherical geometry and his knowledge of terrestrial variation might be put to practical use. As his mind turned over those problems in later years, he began defining the location of some lesser known contexts by means of antiquarian research. This features in his work on Wales compiled in 1574,¹⁶ but most dramatically in the text of four out of the five claims of prior discovery he asserted on verso of his chart of the North Atlantic clearly ruled and drawn up in 1578, although not finished and dated until 1580.¹⁷ This was expressed as ‘A brief remembrance of sundry forein regions, discovered, inhabited and partly conquered by subjects of this Brytish Monarchie’.

This map contains by far the most accurate data on the south-eastern part of Frobisher Bay, Baffin Island, of any contemporary map of Frobisher's discoveries. It must derive from his privileged access to the voyager's charts and journals between 1576 and 1580. However, its ruled graticule suggests Dee was as concerned with other related problems, such as the convergence of meridians, and how to present a navigator with the cartographic and toponomic realities. In doing this he thought not in the time-honoured manner of the land lawyer, nor in compliance with the Privy Council's instructions that Frobisher's discoveries be kept secret, but more practically about how to present visually the problems of what compass course to steer, and how far along the North West passage were the newly discovered mines.

Clearly Dee's regular cross-channel trips had helped him grasp the practical navigational value of the coastal view to the sailor – views such as those that accompanied Pierre Garcie's popular printed rutters for the French and English shores. In consequence Dee counselled Hall to prepare similar views of Iceland and Meta Incognita. Hall duly named the first new view of mountains in Iceland which he had time and visibility to draw in his journal, "Dee's Pinnacles".¹⁸

Another crude manuscript near polar chart drawn at sea in 1580 for Dee is to be found in British Library, Cotton MS Otho EVIII, Art 16, fol. 77. Its data on the Viagatz passage south of Nova Zembla was a corrective to Dee's chart drawn some months before that sketchy survey. Dee's instructions to Charles Jackman and Arthur Pet for the voyage to Cathay and Japan reveal Dee's huge confidence in his own charts as the latter part of the title states: "With which instructions a new chart (made by Hand) now given allso to eche of the sayd two masters, expressing their Cathay voyage more exactly than any other yett published."¹⁹

That same fire-damaged text clearly relates to a signed circumpolar chart which Dee drew for Pet before his departure in 1580, and which survives in an atlas in the library at Burghley House, Stamford. A text written below it (thus on the back of a printed world map) is in Burghley's hand and describes Frobisher's voyages of 1577. It captures the strategic concern of Burghley and Dee about such northern passages about Latitude 64 degrees North.²⁰ Dee's chart (Plate 1), but not the appended comment in Lord Burghley's hand, once accompanied a copy of the explorers' instructions dated 17 May 1580. That chart illustrates the importance that Dee also attached to gathering and studying Oriental cartography, for the Far Eastern part of the map at Burghley House suggests that Dee already had access to a Chinese map printed in 1536.²¹ Nonetheless, at Dee's instance, Jackman and Pet were instructed to procure any new maps and charts drawn or published in China and Japan.²²

Finding the theoretical North Easterly route impassable, Pet returned home in March 1581. Jackman's ship was only lost after he parted company with Pet in February 1581 to re-explore the North West passage and perhaps the mines and supplies which he knew from personal experience had been abandoned by Frobisher in 1578. Indeed, a tiny part of Jackman's logbook from William Borough's former ship, the *Judith*, described his encounter with the coast of Meta Incognita (i.e. Baffin Island) which he explored with Frobisher in 1578. This fragment survived in Dee's

library and is now in the British Library.²³ In 1581 Jackman lost his life in enthusiastic pursuit of that other chimera, the northern route that had brought about the association of Dee and Jackman with Michael Lok, William Borough and Lord Burghley, and all as a result of Frobisher's limited grasp of the severe challenge of near Arctic exploration even in the months of July and August.

Dee's conviction about the value of the "Paradoxall compass" (or circumpolar sea chart) in illuminating the theoretically shorter northern ways to Cathay and Japan seems to have remained largely intact despite disappointments and lives lost by his pupils like Chancellor and Jackman in search of it. The disappointments in this respect which stung Dee more began with John Daye's refusal in 1577 to publish the large "Paradoxall chart" and associated tables that had figured in Dee's manuscript as completed the previous year.²⁴

That disappointment had been assuaged by Daye's publication in 1577 of the massive first part of Dee's *General and Rare Memorials pertayning to the Perfect Arte of Navigation*, and by a general enthusiasm surrounding Martin Frobisher's voyages of 1576 and 1577, based on the hope that gold-bearing ores had been discovered midway along the North West passage. Gold seemed in turn to offer a commercial underpin and a reason to proceed to the establishment of a colony. Thus in 1578 an expedition with fifteen ships was sent to establish a permanent mining colony where Fenton intended to winter with a party of miners.²⁵ This investment was justified by doubtful assays and sustained by unproven theories about the circulation of water underground and the formation of metals which had clearly informed Dee's review of the same subjects published in his *Monas Hieroglyphica* in 1564 and which re-appear in his preface to Billingsley's work in 1570.²⁶ But through 1578-83 virtually all the justification for the venture was unravelled by discord, huge financial losses and by disillusion over the metallurgists' skills. Had Frobisher's voyages been successful commercially, Dee's reputation as an advisor and shareholder would have risen. As it was, Dee's reputation and self-esteem in those marine and metallurgical circles suffered severely.

Except insofar as he had had some practical knowledge derived from experiments and from officially watching some of the hot assays of the Frobisher ores, Dee's competence was more that of the well-read theorist rather than the practitioner. His skills were no match for the status he was accorded by the Privy Council as a Commissioner for the Assaying of ore from the North West. His status as a navigational tutor and experimental metallurgist was largely advanced before 1583 through his own theoretical advocacy of both and the reading his own large library of mathematical, navigational, metallurgical and alchemical works allowed.

His practical experience of some of the ideas he advocated comprised no more than some small-scale alchemical experiments in the laboratory adjacent to his library. Having seen the larger-scale work done by Jonas Schutz and other metallurgists at first hand in London and Dartford, and having discussed its theoretical basis with them, John Dee must also have realised during the winter of 1578-79 that Schutz had fundamentally failed the Adventurers. In this context it is significant that

after the Cathay Company's erstwhile Treasurer, Michael Lok, had been cast into London's debtors' prison, John Dee began his own programme of alchemical experiment on "marcasite" at Mortlake. His activity is recorded in some detail in a text which shows he had framed his questions in a quasi-scientific way, and then tried to test them. Dee's own records of all this appear in the Bodleian Library's MS Rawlinson D241, entitled "An autograph of Dr John Dee containing a Diary of some Chemical Triels", which records experiments conducted by Dee between June and December 1581. At folios 1-8 Dee was concerned to explore the properties of rocks identified as "Marcasite", which was the identification given by contemporaries and the sailors who wrote accounts of the rocks brought from the Arctic by Frobisher's fleets. He too found that it held no gold.

Dee's status in such matters was not totally destroyed by this because he had another specialised body of knowledge about mining and mining law which could not be devalued by the assayers of Frobisher's ores who continued their activity up to the end of March 1583. This legal knowledge was derived from his collection of historical works, law books and sets of bylaws produced in south German, Bohemian and Hungarian mining communities.²⁷ His geographical reading, especially in theoretical and economic geography, was wide but no less thorough. Although his lack of knowledge of how such practitioners and artificers operated day by day let him down, was Dee justified in looking for some intellectual and economic coherence in the application of mathematics, navigation, geography, geology and metallurgy?

Dee did not realise that his "paradoxall compass" was virtually the same thing that some Spanish navigational instructors in the Casa de Contratación had adopted in 1522 after Sebastian del Cano's circumnavigation.²⁸ Dee may simply have advanced the idea in 1557 on seeing how Mercator's terrestrial globe was completed with a small circumpolar gore.²⁹ English Atlantic voyages to the gold-rich Guinea shore from 1554 onwards gave firmer encouragement for English mariners to turn to him for instruction in the skills of celestial navigation and mathematical correction to observations taken far out in the Atlantic. But Dee almost certainly did not have that first-hand experience of voyaging to St Helena in 1562-63 which Coote suggested in his entry for the *Dictionary of National Biography*. In 1562-63 Dee was actually travelling about Europe from Antwerp visiting various Italian cities and going as far as Bratislava and its nearby mines in 1563.³⁰ Was that European tour devised to collect books of reference and atlases and so test the coherence of a grander intellectual theory?

Dee's reading and travels ensured that many others consulted him on what trades and what geographical ideas to develop, while he himself continued to correspond with overseas mathematicians and cartographers.³¹ Dee's circle of visitors included men who brought him new knowledge about the Atlantic; some deposited items with him ranging from logbooks, such as Christopher Hall and Charles Jackman entrusted to him, to large and detailed plane charts of the Atlantic such as one by the exiled Simão Fernandes which was copied in Mortlake on 20 November 1580 as: "The counterfet of Mr Fernando Simon's, his sea carte which I lent unto my Master at

Mortlake, A[nno] 1580 November 20. The same Fernando Simon is a Portugale born in Tercera being one of the Isles called Azores.”³²

For these and closely-related reasons, Dee’s charts were thought of as state-of-the-art geographical and political statements. Thus Dee’s large Atlantic chart drawn in 1578 shows the growing seaborne contact England enjoyed with her new ally in Morocco, as clearly as the new discoveries in *Meta Incognita* “presently by our people to be inhabited”.³³ That map was also a way of illustrating the strategic importance of the Azores and the campaign of 1578 to 1582 fought between Philip II’s Armada and Dom Antonio’s rival forces which were operating with English naval support. The latter were co-ordinated in London through Dr Hector Nunez and other Portuguese religious and piratical exiles known to Dee and Burghley.

Upon that uniquely scholarly exchange of knowledge, and a complex history of claims and counter claims to the North American shore exchanged with Sir Humfrey Gilbert beginning on 6 November 1577, Dee developed another odd relationship. It was mutual respect which led Dee to give Sir Humfrey Gilbert a circumpolar chart showing much more of the Americas in 1582. This famous chart is now in the Free Library of Philadelphia.³⁴ It informed Sir Humfrey Gilbert’s fatal voyage in the *Squirrel* in 1583 and his formal claim to Newfoundland.

Rather similar matters were discussed with John Davis and Adrian Gilbert (another of Dee’s pupils) in Dee’s presence from 23 January to 6 March 1583. These led to a formal proposal submitted as “A brief collection of the substance of the grant desired by the discoverers of the North West partes”.³⁵ Under this a fifth part of all discoveries of gold, silver and pearls would be due the Queen but power to make laws there would be surrendered to the “Fellowship of New Navigations Atlantical and Septentrional” in which Adrian Gilbert, John Dee and John Davis were to be exempted forever from payment of customs “having been the chiefest travellers to find out this northerly voyage, and being of that company.” Dee’s advocacy of the spatial realities conveyed by the circumpolar chart not only seemed to qualify him as one of the chief armchair travellers, it also led a desperate Michael Lok to produce a similar one in 1582 engraved on copper for Richard Hakluyt, showing the form and location of Frobisher’s discoveries.³⁶

THE SPECULATIVE CLIMATE

It is significant that both Lok and Dee produced their charts amidst other work on vastly detailed assemblages of supporting data and advice exactly as if they had something to prove. They had. Both mens’ reputations had been badly damaged by the catastrophic failure of the Cathay Company’s speculative attempt to colonise and extract the ores of Kodlunarn Island and other sites in *Meta Incognita* in 1578.³⁷ Until 1583 Dee also harboured the hope of locating a copper mine in the project to colonise Newfoundland.

It is evident that both Dee and Sir Francis Walsingham struggled to recover from their serious losses following the Cathay Company’s voyage to the South Atlantic in

1582. But Dee could not afford to await the outcome of that voyage to re-establish his position. It was as well that he did not, even though briefly he considered embarking for Newfoundland early in 1583. Considering the interests of his wife and family he chose Cracow and Prague instead, embarking from Sheerness on 20 September 1583 for Bremen, Lubeck and Rostock, and thence through Poland to Cracow. In preceding this with a careful catalogue of his books, before packing carefully selected ones, he shows his choice was a well-considered risk, and one made with the promise of funding from Prince Laski. Edward Kelley's advice, however derived, alighted on the main chance too. So it was Dee's choice to immerse himself in central Europe which he hoped would help make a greater success out of his metallurgical and astronomical knowledge. Consequently he took only a few of his reference books and metallurgical texts to Europe.³⁸

In some ways Dee was correct in his assessments of his economic prospects in 1583. English investors were not in a position to make an immediate success from exploration and metallurgical discoveries in America. Only Drake's spectacular captures of rich Spanish cargoes during his circumnavigation in 1577-80 saved the Crown and many of the Privy Council from severe financial embarrassment.³⁹

It was nearly four months after Dee left that the next step was taken to organise further English colonial enterprise. On 6 February 1584 Adrian Gilbert, John Davis and Sir Walter Raleigh (a name entered in Dee's stead) gained the letters patent they had sought with Dee in 1583. But in 1584 they only just managed to fund another exploratory voyage to North America's shores, with Simão Fernandes acting as pilot. Further settlement was not attempted until May 1585. Under Governor Lane, the first Virginian settlement contained a comparable mathematical intellect in Thomas Harriot, and in Joachim Gansz a brilliant Czech metallurgist who would successfully operate a furnace at Roanoke.⁴⁰

Dee did not return to England until after Thomas Harriot's *Briefe and True Report of the Newfoundland of Virginia* had been published in 1588, with just a few hints about the presence of copper resources inland. John White's belated attempt at resupply in 1590 marked the failed end of that venture and it was becoming clear that Dee had little new to offer the maritime community except perhaps for some legal ideas that would appear in his *Thalattokratia Bretanniki* in 1597 to justify British claims to St George's Channel and the North Sea.⁴¹

Deacon's hypothesis that Dee's time in central Europe reflects his employment by Walsingham as a secret agent or technological spy is only partially substantiated by his evident knowledge of ciphers and the evidence of one of Dee's letters to Walsingham written from Trebona.⁴² But that he was sufficiently embarrassed financially in 1583 to take virtually any paid employment is also clear. The circumstances of Dee's return in 1589 serve only to suggest that in 1583 he had faced a personal and financial crisis in choosing whether to exploit his knowledge of navigation or metallurgy. Another man with a keen interest in metallurgy, and who played a pivotal role observing the assays from 1577 to 1579, was Richard Young, a Commissioner appointed by the Privy Council, who lived in Stratford to the east of London, and

with whom John Dee would stay for about three weeks on his return from Europe, having travelled via Bremen to arrive on 23 November 1589, as Dee's own diary entries attest. Dee had written to him as "Justice Young" on 20 August 1589, describing the state of the Netherlands, and advising him of his intended return, but it was a document that found its way to Walsingham and so into the State Papers.⁴³ It suggests Walsingham was suspicious of Dee's plans and the use of his library, as Dee had been a commissioner for the North West Parts and their Ores since 1577, and therefore had retained some vital documents.

Young must have taken time in November 1589 to brief Dee on all that had happened, and vice versa. The fact that Dee's first visitor on 19 December 1589 at Mortlake was Adrian Gilbert, a difficult protégé now aged 45, offering recompense for the Coombe Martin mines and for goods carried away, can be no coincidence. That Richard Young was the man who finally sorted out Dee's debts in late 1589 by persuading Adrian Gilbert to make Dee significant compensation, and so allowed for his re-entry as Nicholas Fromond's tenant to his Mortlake home and library on 10 December 1589, is almost certain.

Richard Young was first present with Dee at the assays of Frobisher's ores on 8 March 1577 in London. The Commissioners appointed to view the assays were John Dee, Edward Dyer, William Wynter, Edward Hogan, Thomas Randolph and Sir William Pelham, and Andrew Palmer knew of the offers that Michael Lok made for the Meta Incognita ores.⁴⁴ It may give more idea as to how closely the Commissioners were bonded by their experience from 1577 to 1583 that Dee's diary hints at a rather closer relationship with Richard Young, calling him his brother. Dee perhaps meant a brother in law by his first wife Katherine Constable. Dee had had another reason to keep close to Richard Young, for both were tardy over a freighting liability to Thomas Alleyn for the 1578 voyage and both were subscribers to the Frobishers' voyages, Young for £50 to the second and £50 promptly paid for the third.⁴⁵

Dee's relationship with a newly wealthy Adrian Gilbert, renewed at Young's instance in December 1589, provides one key to Dee's new confidence that he could satisfy his creditors. Gilbert's largesse, arising from his usurping Dee's interest in Coombe Martin's mines, was then put at the disposal of Dee, meeting debts to the Birckman's executors and others. Until then Dee was evidently fearful of the consequences of the resentment in court circles about the failure of the Cathay Company and the Commissioners like himself, Richard Young, and Edward Dyer, all appointed by the Privy Council to oversee smelting operations but without the means to meet the large debts consequential upon its failure to trade as an incorporated body.

From 1574 to 1583 Dee had found himself trapped by his enthusiasm for metallurgical investment, making both right and wrong choices, but seeing no real benefits for himself until 1589, despite the fact that Frobisher's metallurgists could draw on their successful regional experiences throughout England and Wales to

exculpate themselves from the worst of their misjudgements on the *Meta Incognita* ores.

Some of the most important practitioners were denizens from central Europe, and brought their ideas directly from European practice. By 1576-77 their industry could be seen as enjoying unprecedented growth, for the number of men employed in it in England and Wales grew hugely between 1566 and 1576. It has been estimated that the Company of Mines Royal and the Company of Mineral and Battery Works together created new employment for 10,000 men over that decade.⁴⁶ This success contrasts starkly with the otherwise lacklustre performance of the English economy from 1561 to 1574. This contrast underlies the misplaced confidence of speculative investors in 1576, 1577 and 1578. Frobisher's attempt to meld in one venture new navigational and metallurgical skills along with a new legal claim of sovereignty owed much to Dee's vision. However, it was intrinsically flawed.

Between 23 January and 6 March 1583 Dee was in two minds as to how he would meet any consequential claims, and where to direct his resources and energies. His decision to invest in the Coombe Martin lease shows the same self-confidence as was evident when he concurrently helped formulate fresh plans for a return to the North West of America with Adrian Gilbert and John Davis.⁴⁷ But his confidence collapsed in August and September 1583. Acting on Kelley's advice and obviously for his family's sake, Dee chose the lesser of two speculative risks by concentrating on his metallurgical and alchemical opportunities, rather than the seaborne risks associated with sub-Arctic exploration – risks which were more appropriate to younger men and seasoned mariners. It was a decision that would effectually cut him adrift from England's seafaring community and lose him valuable assigned incomes such as that from the Deanery of Gloucester. In the years after 1589 he would only have a Doctorate in medicine from Prague University to show for his choices taken in September 1583.

INDIVIDUAL CONTRIBUTIONS TO DEE'S THOUGHT

Dee's actions have to be viewed as determined by his own version of an interdisciplinary, technological and mathematical vision of the Habsburg Empires. He first encountered that vision in the University at Louvain. There at first hand he met the Professor of Mathematics, Gemma Frisius and his talented pupil Gerhard Mercator developing a co-ordinated geo-political vision of the benefits of navigational theory, mathematics, geography, metallurgy and hydrography. Dee met this again in Paris University in 1549-50 in the teaching of Oronce Fine and Pierre Ramus. It was a structured system of quasi-colonial thought developed initially in the *Armazéns da Guiné*, *Mina é India* in Lisbon, attended with success because gold was found in Guinea (hence the Gold Coast) and at Sofala in East Africa in 1505. The whole notion was brought to its academic apogee by his great friend and fellow mathematician, Pedro Nuñez.

Dee returned to England in 1551 but not before acting as some kind of encouraging go-between in Antwerp in 1550 for Joachim Gundelfinger who was

seeking through diplomatic channels to place under young Edward VI's patronage a skilled team of central European miners, prospectors, assayers, charcoal-burners and furnacemen.⁴⁸ They eventually settled in Ireland at the charge of Edward VI to be supervised rather ineffectually by Robert Recorde as Master of the Mint and Mines in Ireland. Gundelfinger's team were probably Protestant or Lutheran in sympathy as they formally approached Edward VI's Council with their proposals. By 1551 William Williams thought their work as lead and silver smelters at Clonmines was no more effective than that of their English and Irish associates.⁴⁹ It was another ten years before Daniel Hechstetter was able to bring such a team of Germans to Cumberland with William Cecil's help.⁵⁰ It remained rare for their practices to be written down in any detail in England, albeit Hechstetter's son did make the attempt to write up all their established "recipes".⁵¹

However, best central-European practice was manifest in the form of local printed bylaws about assaying described as "Probierbuchlein". An early model of their form was one produced at Magdeburg in 1524. From 1564 to 1581 John Dee made a large collection of these localised assaying treatises, such as Zimmerman's *Probirbuchlin*, published in Augsburg in 1573 which advocated wet assays using acids. Other "Bergwerkbuchlein" in Dee's Library covered mining bylaws current when they were printed.⁵² In those formative years Dee made a special point of collating all such metallurgical advice and German law-books on mining practice, much of which he obviously shared with the Herbert and Sidney families during his lifetime. Dee certainly used his own copies of *probierbuchlein* such as Lochner's, for his library held the 1564 and 1574 versions, several of Agricola's works, and Zimmerman's *Probirbuchlin Germanici* as published at Augsburg in 1573 in shaping his advice.⁵³ In 1574 Dee's strategic conclusions from this reading and academic learning were brought to new focus by Richard Grenville's proposals, and later in May by Michael Lok's which resulted in the dispatch of Frobisher to search for the North West passage.⁵⁴ Dee compounded his mistakes with over-confidence on 3 October 1574 in writing to Lord Burghley offering to discover a mine of gold or silver within the Queen's dominions.⁵⁵ Late in 1574 Frobisher gained a derogation from the Muscovy Company's monopoly (which must have been known to Lok and probably Dee) to pursue exploration of a north-western passage to Cathay and Japan, and to evaluate any mine-sites that might be found along the way. Lok later implied that Dee first became involved in May 1574 saying just that Dee became interested 'on hearing the common [gossip] of the new enterprise'.⁵⁶ By 1576-77 Dee's related ideas on the sea transport and navigational skills needed to transport mineral wealth were consolidated for limited publication as a vast tract called rather misleadingly, the *General and Rare Memorials pertayning to the Perfect Arte of Navigation*. (Plate 2)⁵⁷

Another major contribution to Dee's thinking came from the circumstances of his patron, William Herbert, Earl of Pembroke, who was made President of the Council of Wales and the Marches in 1550 and had taken Dee into his service in February 1552. The Earl was personally very interested in augmenting his estate incomes from mines and metallurgy, particularly in the great swathe of new family lands in the Forest of Dean, and ex-monastic lands in the Black Mountains and down towards the

sea near Swansea acquired in 1546. To exploit this effectively he and his sons needed both mineralogical and legal advice, and some of the newer technical skills like cartography and men with metallurgical experience in the development of water-powered blast furnaces. In 1559 the Earl acquired in fee simple the ex-monastic land of Neath Abbey and the Manor of Neath and Cadoxton for £3200.

Just as the Earl's activities followed up Richard Eden's ideas so Dee found two role models on which to base his new technologically advanced naval strategy. One was the Earl, the other his newly wealthy naval neighbour at Lydney, Sir William Wynter, who became a shareholder in the Company of Mines Royal in November 1567. Following some major legal decisions in 1569 and 1581, the Earl's son, who had been quite closely associated with Philip II's metallurgical advisors in 1554-56, saw the way open to encourage the building of a major copper smelter completed by Joachim Gansz in 1582. Located beside the river at Neath, that smelter was ideally placed to smelt both Welsh ore, and those found in Cornwall and North Devon. The Coombe Martin mine with its seaside location was to be Dee's way of entering the same league after William Wynter, the Earl of Pembroke, Sir Thomas Gresham, and Dee's closer friends Edward Dyer and Richard Young had all lost money and reputations in the Cathay Company debacle. Dee sought a formal lease on the seaside mine from 1583 knowing that if it were to be successful much of the ores could be smelted in the Neath smelter for it was easily shipped from the hard standing of Coombe Martin's harbour.⁵⁸

John Dee signed and sealed a lease on the Coombe Martin and nearby Knap Down mines in Sir Lionel Duckett's London house on 13 March 1583, but his interest presumably was usurped by John Poppler and Adrian Gilbert in 1587. Nonetheless on 19 December 1589, about a decade after an earlier reconciliation with his ambitious pupil, Dee was offered generous compensation for his Coombe Martin mining lease by Adrian Gilbert.⁵⁹

If the idea of a seaside mine was a failure in *Meta Incognita*, and pursuit of the consequential debts a major factor in determining the timing of Dee's flight, the harsh cliffs of North Devon were to confer commercial success on the concept by the late 1580s. By 1587 Adrian Gilbert and John Poppler had successfully obtained a lease to work the discovery near Coombe Martin, known as Fayes Mine, which would yield £10,000 to each partner in it in 1587-8 and 1588-9.⁶⁰ Subsequently, two famous silver bowls were made from the silver of Fayes Mine.⁶¹ Long after Dee's death, and well after Bevis Bulmer had received a knighthood and succession to the title of 'Master of Metals' for his work in Scotland, the economic geography foreshadowed in Dee's interdisciplinary thinking cohered within a wider industrial revolution. Mining developments by the seashore between 1579 to 1588 showed the way.⁶²

THE ROOTS OF DEE'S INTEREST IN COASTAL MINES AND METAL TRANSPORT

Dee's interest in mines and metallurgy was less in the detailed engineering than in the legal, strategic and practical circumstances of the marine movement of lucrative non-ferrous ores. The common technical root in this thinking can be traced back to the accumulating influence of John Dudley, Duke of Northumberland, and his advisors John Dee and Sebastian Cabot and Richard Eden who from 1547 onwards successfully transplanted to England some of the interdisciplinary thinking developed earlier in Iberian ports. But it was just a one-way shift, for Cabot himself leaked the essence of the plan for a sea borne raid on Peru's new silver mines to Charles V in November 1553 if not a year earlier.⁶³

Through this time, and in particular as a result of Queen Mary's marriage to Philip II of Spain, English attention became concentrated on developments within the Spanish Empire. Among the consequences were some translations by Richard Eden initiated from texts that had become known to the Duke of Northumberland. They were dedicated by Eden to the Duke in 1553 as *A Treatise of the Newe India*. Two years later Eden translated further foreign texts including *The Decades of Newe Worlde or West India Conteyning the navigations and conquests of the Spanyardes*, Sebastian Munster's *Cosmographie*, Antonio Pigafetta's account of Magellan's circumnavigation in 1519-1522, Lopez de Gomara's work the *The debate and stryfe betwene the Spanyardes and Portugales*, Amerigo Vespucci's text *Of the Pole Antarticke and the Starres abowt the same* and a most important text, Biringuccio's *Pyrotechnia, or Booke of Metals*. In his preface to the *Booke of Metals*, Eden gives three reasons for translating it, suggesting there was an obvious need for further guidance among both sailors and the propagandists of Empire in both metallurgy and navigation. He wrote:

It seemeth to me a thing indecent to read so much of golde and sylver to knowe lyttle or nothing of the naturall generation thereof [...] and secondly that [...] if in trauallyng in straung[e] and unknowen countreys he may knowe by the information of th[e] inhabitaynts or otherwyse, that such regions are fruitful of the riche metals he may make further searche for the same. The third cause is, that although this oure realme of Englande be ful of metals [...] yet there is fewe or none in England that have any great skill thereof, or anything written in oure owne tounge, whereby men may be well instructed of that generation and finding of the same: as the lyke ignorance hath been among us touching Cosmographie and Navigation until I attempted according to the portion of my talent and simple learning to open the first doore to the entrance of this knowledge into owre language.⁶⁴

The speculative climate which so boosted mining investments in England and Wales was the direct result of a case heard before the Court of Exchequer in 1569, *Regina v. the Earl of Northumberland*. The vital conclusion was that the contents of mines containing precious metals were not necessarily bespoke for the sovereign under English law. If less than 50% by value of the output of a mine were gold and silver it was available for general sale. The monarch might then have just a share of those proceeds, say 20%. This in turn gave hope of a wave of overseas finds of gold and silver similar to the Mexican gold rush of the 1520s.⁶⁵

Those who put such a strategic vision before Edward VI and later Elizabeth I, included William Cecil and William Wynter who, like Dee, were greatly attracted by the new confidence of technical practitioners in navigation, geography, mathematics and metallurgy, and by their misleading theory that in certain places water could help deposits of minerals to grow. The same enthusiasms were shared by two more of Dee's friends who held potentially lucrative office as Customers of London, Henry Billingsley and Sir Thomas Smith. While Dee's connection with Billingsley has already been described, the investments of Sir Thomas Smith in the Company of Mines Royal and the Company of Mines and Battery Works, and the unincorporated Cathay Company, also mirrored Dee's interests and extensive reading in metallurgy and the organisation of mines.⁶⁶ The influence of Burghley and Wynter ensured that in 1577 Dee and some officials of the Royal Mint and Armouries were appointed as Commissioners charged by the Privy Council with investigating and appraising the methods used to smelt the rocks brought back from Kodlunarn Island by Frobisher's ships.⁶⁷

By 1578 the disreputable smelting practice of Battista Agnello and Burchard Kranich had been exposed by Robert Denham; and Dee was among the first to know, as Lok would show. But Jonas Schutz's reputation was not so quickly destroyed. Dee had taken out two Cathay Company subscriptions or options that he could not afford. Up to November 1578 he avoided paying up his £100 to the Treasurer, Michael Lok.⁶⁸ By then the Treasurer had spent huge sums on building a special water-powered blast furnace at Dartford to Schutz's specifications, confident it would perform as well as the new furnace, construction of which he had supervised at Keswick during 1576. But during the winter of 1578-79 Schutz, like Robert Denham and Roger Williams after him, was subject to inevitable failure as the surviving hornblende feed stocks from the Baffin Island sites were found to contain virtually no gold.⁶⁹

It was Schutz's failures at Dartford which finally pricked the speculative bubble despite talk of defects in the design of the furnace.⁷⁰ Thereafter Dee's debts arising from book purchases and his unwise speculation in the Cathay Company began to loom large in appraisals of his position, and determined his flight in September 1583.

THE NAVIGATIONAL CONTEXT OF DEE'S TEACHING

Dee had long realised that in order to bring home the proceeds of overseas mines reliably (as the economic underpin to envision a future British Empire) the techniques of oceanic navigation would have to be mastered too. Thus it is no surprise that it is from the era 1557 to 1583 that much of our knowledge of Dee's navigational understanding derives.

By this time Dee himself was in possession of Robert Thorne's papers about the basic proposition of a passage to Asia north of the Americas and of maps and data assembled for Cardinal Wolsey about 1527.⁷¹ The basic concepts must also have been well known to Dee as a regular user of the Royal Library in Whitehall where charts by Girolamo Verrazano and Sebastian Cabot hung in the Royal Privy Gallery. Both were remarkable for their lack of detail on the far north east and north west.⁷²

Dee's account of his involvement in Frobisher's voyages suggests he became involved early in 1576.⁷³ Lok's account says that Dee became formally involved in Frobisher's project on 20 May 1576 when, along with William Borough and Christopher Hall, he attended Lok's London home.⁷⁴ Lok wrote that he then laid before them books, charts and instruments and "my notes thereof made in writing as I had made them of many yeres Study before".⁷⁵

Dee seemed convinced and expressed his willingness to help. Soon afterwards, a former Lord Mayor, Sir Lionel Duckett of the Company of Mines Royal and the Muscovy Company invited Dee to Muscovy House, specifically to instruct Frobisher, Hall and Owen Griffin for a few days before their departure. Dee gave them an intensive course in celestial navigation and cosmography and related subjects so that they could also survey the land they might encounter. Dee retrospectively recorded instructing the expedition's "Masters and Mariners in the use of [in]struments for Navigation in their voyage [...] whereby he deserveth just commendation."⁷⁶ That commendation he duly got in the form of a letter sent from Shetland by Frobisher and Hall in 1576 acknowledging his 'friendly instructions' and adding, to what were probably their written notes, "we doo remember you and hold ourselves bound to you as youre poor disciples". But the rest of their letter suggests Dee's teaching was far too advanced mathematically for them to use regularly.⁷⁷

Dee nonetheless had faith in Hall and may well have lent him his own variation compass for the first voyage. Dee probably also had a direct hand in formulating the list of instruments bought for the first voyage. The surviving account shows that to a great extent they replicate the items known to be in Dee's library and that the purchases made in 1576 were largely from Humfrey Cole. But those who have commented on this to date have all relied upon the Record Commissioners' transcripts made in 1833 which were incomplete. In consequence they have failed to see some vital innovations. The "great globe of metal in blancke" came in a "case of leather" so that it could be taken to sea alongside the armillary sphere correctly named "armilla Ptolomaei, or hemispherium".⁷⁸

More particularly the few who have commented on that list have missed the significance of the print of Ortelius's chart for which the cost was deliberately omitted by Lok, and which was consequently also omitted by the Record Commissioners in 1833. Lok's deliberate omission was probably because the map and other instruments were borrowed from Dee. Support for this comes from the fact that the inventory of purchases was not sufficient for the first voyage's two ships as in many cases only one instrument was purchased in 1576 by Lok.⁷⁹ So in addition to the data which the Record Commissioners failed to cite, the original accounts show payment of £3. 3 shillings to "William Thomas, Compasse maker for twenty compasses of divers sorts" and 17 shillings "for 18 hower glasses, some paid to him £4"; and "paid for an Astrolabium of William Burowe, £3. 10 shillings". That astrolabe was unlikely to be Dee's planispheric astrolabe as had been suggested by some commentators who had relied on the Record Commissioners' transcripts, and is

much more likely to be Borough's own mariner's astrolabe.⁸⁰ Furthermore that astrolabe does not correspond readily with the one kept in Dee's library, the history of which has been traced by Julian Roberts.⁸¹

William Borough's astrolabe (also unduplicated in the inventory) had been made to the standard form of the mariner's astrolabe, so well described in Martin Cortes's manual which his father, Stephen Borough, had brought from Seville in 1558 and which Eden translated as *The Art of Navigation* in 1561. That text described in precise detail how to make a mariner's astrolabe but not how to make a planispheric astrolabe.⁸²

William Borough had himself made many voyages to Russia, via the North Cape in 1553, 1556 and 1567 and through the Baltic in 1558-67 and 1569-70 and 1574-75. When acting in an official capacity after 1576 William Borough was usually described by Lok as "my Lord Admiral", but this cannot refer to his later naval status as Treasurer of the Navy, a post carrying the nominal rank of Vice Admiral which he held from 1582; or as Comptroller of the Navy, a post he held from 1587 to 1598. Thus Lok must be referring to his status within the Muscovy Company, where after due instruction from Dee from the 1550s onwards he rose to and through the rank of Chief Pilot. By 1585 Borough had become Master of Trinity House on account of his established navigational skills.⁸³

Dee had by 1576 assembled a collection of sea compasses in his library.⁸⁴ The reason for this was probably his interest in using those compasses to investigate magnetic variation. The assumption then widely made was that on completion most compasses varied slightly in the amount of variation from true north shown for the place of manufacture. But if variation were to be determined either by local anomalies (or by changes in longitude as was then postulated) all the compasses should record the same differential in degrees or points of the compass, even though the actual measurements might differ. Indeed an English rutter which can be dated from internal evidence to 1578 contains an element entitled "William Borough's rules" recording changes in latitude and just such compass variation, expressed as points of the compass for the voyage from Orfordness past the North Cape to Russia.⁸⁵ Other notes in a different hand at the end of the document may also refer to large-scale compass variation calibrated in degrees and on a scale which would only be encountered near the north Magnetic Pole. Borough's curiosity over terrestrial magnetism and its application to navigation can be traced through Dee's tuition and thence into Hall's detailed interest in terrestrial magnetism. Richard Madox during the Cathay Company's voyage to the South Atlantic, on 15 November 1582 wrote of Dee's pupil, Hall [alias Pallinurus], stating:

Pallinurus told me as a certainty that when they were in the North West, they passed close to the coast commonly called Labrador, in Lat. 63 they found the noon sun two points from the compass, whence I gather that the needle deviates 22 degrees to the west which if it is true that it is so suggests to me that the rule is the nearer the pole the greater the deviation of the needle, etc. I do not know, however, by what hidden force it is impelled.⁸⁶

Yet, 20 years before the Spanish king offered a large prize for such a solution in 1598, George Best would reveal that Dee had already put the pilots of Frobisher's Arctic voyages onto the same opportunity. We now know this was a false hope, but it was one which would nonetheless result in useful and helpful increments to the data appearing on charts. In so doing, Best overstated the competence of most English masters in celestial observation and navigation even as he hoped that endeavour might enable true North to be compared with a localised reading for magnetic north, and that in due course such measurements could be reduced to a predictable table or chart. Best wrote of this challenge that:

in these dayes it is likely to receive his perfection, concerning his Northeasting and Northwesting to be brought into rule, and particularly in this noble voyage of Captain Martine Frobisher, who as you shall understande in the discourse, hath diligentlye observed the variation of the Needle. And such observations of skilfull Pylots, is the onely way to bring it in rule, for it passeth Natural Philosophy. The making and pricking of Cardes, the shifting of Sunne and Moone, the use of the compasse, the hour glass for observing time, instruments of Astronomie for taking longitudes and latitudes of Countreys, are so commonly knowen of every Mariner now adayes, that he hathe bin twice to sea, is ashamed to come home, if he is not able to render account of all those particularities.⁸⁷

Dee was also intrigued by other navigational problems which might be tackled by the application of mathematics and geometry. Dee's library contained works which reflected his concern to solve the problem of the nautical or spherical triangle. To this end he acquired Peter Apian's *Instrumentum Sinuum primi mobilis* in both its 1534 and 1541 versions, and Rheticus's tabular version of 1551. He also retained Richard Chancellor's notebooks after his death at sea in 1556. This may have served to concentrate his mind on this, for he could then see the value of knowing the shortest way (and therefore the great circle distance) between two places. Arbitrary as this was for land sites because such a route could not be followed due to the terrain, it seemed of great potential value to the long distance oceanic navigator, and a natural question for anyone like Dee with access to globes to postulate. Dee's progress with this can be seen in his "Canon Gubernauticus" or "An arithmetical Resolution of the paradoxall compass". His 28 pages of manuscript tables therein show how he tried as early as 1557 to set this understanding down in a two-dimensional "paradoxall compass" or chart.⁸⁸

As he also suggests there that the circumpolar chart he described should be drawn up on paper with "the diameter fifty inches", it becomes clear this was asking too much of the engraver and printer to capitalise for publication. Thus this material probably represents what John Daye wisely encouraged Dee to discard as inconsequential between mid August 1576 and September 1577. Something of the flavour of that editorial process nonetheless survives in the only volume of the four intended volumes of Dee's *General and Rare Memorials pertayning to the Perfect Arte of Navigation*, for there Dee states "The second book or volume [...] will be of more than hundred pound charges to be prepared for the print (in respect of the Tables and figures thereto requisite)."⁸⁹

At the same time as rather ineffectually proofing that text for printing, Dee attempted to collate his notes on antiquarian and geographical accounts of many

voyages via the South Atlantic as far as Cathay and other parts of the Pacific Rim. He ordered the 250 folios of that manuscript into twenty-eight chapters between 24 March and 8 June 1577. That manuscript, entitled *Of Further and Rich Discoveries*, was assembled in expectation of a favourable outcome to Frobisher's second voyage and a surge of public interest. That publication was aborted by Daye, who as early as November 1577 got cold feet about the project in the light of the first reports on the Frobishers' second trip to the North West. Dee himself lacked the means to fund it alone.

But Dee had another distinct strand to add to his status in these matters. This was not prejudiced, but indeed advanced over the next year as fifteen ships under Frobisher's command were sent to the North West in 1578 to settle a mining colony on the Countess of Warwick's Island, now called Kodlunarn Island. Dee's confidence stemmed not from the assays of early 1577, but from a quintessentially geographical and legal view derived from his reading. This bore fruit as a five-point presentation of Elizabeth I's claim.⁹⁰ The fifth point was:

Anno 1576 et 1577. 5. The Ilands, and Broken land Easterly: and somewhat south of Labrador were more particularly discovered and possessed A[n]no 1576, and the last year by Martin Frobiysher Esquier: and presently is by our People to be inhabited: The Totall Content of which lands thereabowt by our Sovereigne queene Elizabeth is lately named Meta Incognita.

This was expressed on the other side in the form of a chart of the North Atlantic which Dee revised in 1580.

THE POLITICAL CONTENT WITHIN DEE'S NAVIGATIONAL TUITION

Dee's appreciation of England's potential place in international affairs revolved around his vision of a "British" Empire. In this Dee was acting in pursuit of an interdisciplinary, technocratic and mathematically informed vision of the Iberian overseas empires which he had encountered at first hand in Louvain in 1547. His ideas involved keeping a fleet of 60 large warships on constant patrol and able to extend their influence into the Atlantic. As such it bears some similarity to the contemporary ideas advanced by Pedro Menendez d'Aviles to protect Spanish trans-Atlantic interests.

A survey of the shipping of Queen Elizabeth's realm made in 1560 suggests there were 79 large English ships operating commercially and that the Queen owned 30 more specialised fighting vessels. The corresponding list for 1577 shows that 136 ships over 100 tons were available but most of them were built as merchantmen.⁹¹ The Queen certainly could not afford the cost of about £200,000 in order to keep 60 large ships at sea and even had to hire out some of her ships.

Dee's scheme for "A Petty Navy Royall" was advanced early in his great text on navigation, showing its central importance in his thinking. Beginning on page 3 of the *General and Rare Memorials pertayning to the Perfect Arte of Navigation* he defines its function as to deter France, Denmark, Scotland and Spain from invasion

or naval threats designed “to annoy the blessed state of our Tranquillitie”. Even today, Dee achieves resonance in proposing strategic deterrence, and to finance his proposals with a 10% tax on foreign fishing vessels.⁹²

The strategic purpose of Dee’s Petty Navy Royall was the case that Fortescue had advocated a century earlier. The strategic perceptions about an overseas empire, and the possibility of conquering Scotland and Ireland by permanent naval and military forces were no more than an echo of the basic propositions in Thomas Elyot’s book, *The Governour*, published in 1531 and well known and read in Court circles by royal advisors from Thomas Cromwell to Lord Burghley. Elyot also saw the strategic role of maps, a subject dear to Dee’s heart, writing in 1531 that a ruler needed to see his realm “in figure” to determine “where he shall employ his study and treasure, as well for the safeguard of his country as for the commodity and honour thereof.”⁹³

Dee’s considered thoughts about applying navigational know-how in political contexts were set down in his manuscript “Brytanici Imperii Limites” in 1576-78 and in “Thalattokratia Bretanniki” (British Sea Sovereignty). Sherman has shown they relate more to international power politics and law than to navigational science.⁹⁴

Dee’s strategic naval ideas circulated narrowly.⁹⁵ He still had in his library in 1583 sixty corrected copies from a print run of no more than one hundred copies of the *General and Rare Memorials pertayning to the Perfect Arte of Navigation*. Thus it is difficult to suggest that Dee was better attuned to the strategic naval issues through unofficial briefing, or as a secret agent of Walsingham’s, than his learning and experience might sustain alone. Although Dee had a hundred copies of his *General and Rare Memorials pertayning to the Perfect Arte of Navigation* printed by Daye, he retained sixty in his own library, suggesting that his circulation was exactly the same as the number of investors in Frobisher’s third voyage, less himself. It would thus have reached the Queen, her principal advisors, her courtiers and Lok’s London associates. Its ideas may well have helped sell to those investors the strategic points and synergies embodied in the hopes for settlement at Kodlunarn, and for English trade revival based on using the North West passage. When Davis and Saunder stole so many of his texts in a raid on his library in 1584 they probably thought that he knew much more about Polar navigation and geography than he had published. On 26 March 1591 the cartographically astute Robert Beale returned his manuscript, *Of Rich and Famous Discoveries*. Although 1592 saw Dee accounting for his losses and trying to recover his navigational texts from Davis and Saunder, he was only partially successful. Perhaps the depletion of his library and the fact of a continuing state of war with Spain gave rise to new emphasis in Dee’s final marine work *Thalattokratia Bretanniki* as finished in September 1597. This asserted British claims to St. George’s Channel and the North Sea and the value of actively patrolling on that basis given persistent Spanish naval threats. Perhaps as a result of earlier disillusionments Dee now chose not to develop any more navigational or geographical theories but to use his legal reading more intensively instead. By then he was immersed in the Wardenship of Manchester College, as an armchair lawyer and Paracelsian doctor, enjoying occasional visits from surveyors such as Saxton, and

teaching the mathematical principles he had learned in Louvain fifty years earlier only when the occasion served.

Nonetheless something of Dee's legalistic and imperialist teaching certainly had an impact on some of his other pupils; notably on George Best, described variously as a gentleman, captain, lieutenant, and the sailing master who accompanied Frobisher to the North West in 1577 and 1578. Best's considerable literary skill and navigational knowledge contributed to speculative propaganda and the new legal claim that had stimulated such vast over-investment by members of Elizabeth's Court.

Apart from Michael Lok and his family nominees, and Martin Frobisher who had direct access to Dee's tuition, the major investors in Frobisher's voyages came from the Elizabethan Court. They included Elizabeth herself, her trusty Lord Treasurer, Burghley, the Lord Admiral, Clinton, the Earl of Sussex, Henry, Earl of Pembroke, Francis Walsingham, the Earl of Warwick, Lord Hunsdon (Henry Carey), Sir Thomas Gresham, Sir Francis Knollys, William Wynter, and the Countesses of Warwick and Pembroke. Other investments of a smaller order were made by many members of Elizabeth's Court and by several city associates of Michael Lok. All presupposed success. Some may have invested at the instance of Dee himself. Many must have thought that the Privy Council's clear regulation of all aspects of the venture would ensure that their involvement was a safe investment. It was far from safe; indeed the Privy Council's instructions, and their omissions such as the failure to have the Cathay Company formally incorporated, probably worsened the prospects of success.

However, it was another aspect of Privy Council involvement which touched Dee most directly. None but their appointed commissioners could keep the ship's detailed journals, rutters and charts from Frobisher's voyages.⁹⁶ Yet Dee was clearly so interested in their content, that he was tempted to exploit his status as a Commissioner to ensure that some of the prime elements prepared by his pupils ended up in his own library. He certainly retained Hall's journal of Frobisher's Third Voyage and part of Jackman's to both of which he added titles; also Sellman's manuscript, which was formally handed in to Lok on 2 October 1578, but which Dee himself transcribed in full and subsequently annotated.⁹⁷ The Privy Council's intention was not that Dee should have retained such data for his own library.

In the event, the Privy Council's controls which aimed at official custody for all maps, journals and logbooks were even more ineffective than Dee's actions suggest. Important details of ore samples and a chart had reached Madrid by March 1579.⁹⁸ While the content of the official journals and charts were quite properly known to Dee, they were also commented upon improperly by George Best who accepted that neither the charts, nor the journals, nor the assay results could be transcribed because of the Privy Council's instructions. The instructions were designed to stop foreigners examining the expedition's work. Sellman observed the restriction by handing Lok his account on 2 October 1578. But late in 1578 Settle and Best got away with it lest the attempt to stop them should cause the financial bubble to burst. Nonetheless, by

including what was by his own admission poor quality mapping, “roughly framed, without degrees of Longitude or Latitude”, Best was able to show how effectual Dee’s thinking had been without explicitly breaking the rules for participants and copying the officially issued charts drawn by James Beare. Best felt his crude world map showed how:

my minde was to make knowne to the eye what countries have beene discovered of late yeares, and what before of olde time. The olde knowne partes have their boundes traced and drawn with whole lines, the newe discovered Countries have theyr bounds drawn wyth points or broken lines, whereby the reader shall at the first sight see [...] within these 80 yeares, that have so muche enlarged the boundes of the Worlde, that nowe we have twice and thrice so much scope for our earthlie peregrination, as we have had in times past, so that nowe men may no more contentiously strive for roome to build a house on, or for a little turffe of one acre or two, when greate Countries, and whole Worlde, offer and reach out themselves, to them that will first vouchsafe to possese, inhabite, and till them. Yet there are great countreys yet remaining withoute Maysters and possessors, which are fertile and bring forth all manner of corne and grayne [...] straunge beastes and fishes, both in sea and fresh waters. Mountains bringing forth all manner of Mettals as gold, silver, yron, &c.⁹⁹

CONCLUSIONS

The publication of Dee’s first volume of his *General and Rare Memorials per-tayning to the Perfect Arte of Navigation* in 1577 came as the Queen, the Court and Lok showed appreciation of points Dee had been making for over twenty years to the trainee pilots of the Muscovy Company and to their predecessors. Dee’s practical contribution to an emergent European tradition of exploiting mathematical ideas in the service of navigation would be taken further by other navigational instructors. One of them was Thomas Harriot who embarked for Virginia in 1585. There is evidence that thereafter Harriot and Dee maintained a friendly relationship.¹⁰⁰ Furthermore the fact Dee took firm steps to recover those texts comprising “Jo. Davis’s spoyle” during the early 1590s shows that he never lost interest in nautical science even if he hardly advanced it any further through his writings after 1583.

Another person to make very similar speculative mistakes to Dee, and yet to have great faith in technological and mathematical advances was Sir Thomas Gresham. His will of 1575, proved in 1579, effectively founded the Gresham College Professorships in Law, Astronomy, and Geometry and four other subjects on Lady Gresham’s death in December 1596. This illustrates his commitment to the same body of technologies that Dee had helped to develop before 1583. Unlike Dee, Sir Thomas Gresham could well afford to gamble in subscribing to the Cathay Company ventures after he had retired from acting as the Crown’s principal financial agent in 1574.¹⁰¹ In fact Gresham was determined right up to 1579 to keep faith with the ideas developed by Dee and Borough despite the failures associated with the Frobisher voyages of 1576-78.

When considering navigational instruments like the globes and the armillary sphere bought for Frobisher from Humfrey Cole in 1576, alongside the plainer cross staff, and a mariner’s astrolabe bought second hand from William Borough, as Lok records, we have to remember that the purchases of globes and compasses for

Frobisher's voyages reflected Dee's own collection, and his tuition in the use the variation compass in particular.

It remains a good measure of the scientific advances that Dee prompted between 1576 and 1580 that the Hatfield House chart, formerly No. 98 (Plate 3) drawn by William Borough and marked up by Christopher Hall, informed the subsequent publications of Robert Norman and William Borough on terrestrial magnetism.¹⁰² It thus anticipated by 120 years the assemblage of the magnetic data that Edmund Halley published in 1700 for the whole Atlantic.¹⁰³ Likewise, the purchases made in 1576 by Michael Lok even as Gresham and Sir Lionel Duckett were talking about the precise skills that were needed by Frobisher, Hall and Griffin, illustrate the impact of Dee's tuition. This wider competence was why in 1576 Dee had been chosen by Duckett to teach those particular skills and set them in a practical context for his pupils' sake.

A subsequent result of those conversations among the most concerned of the investors was one made only after more political lobbying and interference, including some from the Rev. Richard Hakluyt, as he alludes to the matter in 1598.¹⁰⁴ Their mutual concern was that Sir Thomas Gresham had posthumously endowed a Professorship of Astronomy to teach "the principles of the spheres and theoriques of the planets and to explain the use of common instruments for the capacity of mariners, which being read and opened, he shall apply to use by reading geography and the art of navigation in some one term of every year."¹⁰⁵

Under Sir Thomas Gresham's will the Professor of Geometry was to teach arithmetic, and theoretical and practical geometry including the use of globes. Concurrently, also under the terms of Sir Thomas's will, the Mercers Company were jointly to sponsor the lectures in "law". One measure of Dee's strategic influence is the change he promoted in the associated legal, financial and political climate as he sought to foster a maritime strategy with associated overseas settlement and colonisation. The breadth of Sir Thomas Gresham's endowment was very much the product of Dee's advocacy of these subjects as inherently inter-related.

Dee's charts, showing that all these factors were considered at once, are still important to the assertion of Canadian sovereignty in the Arctic; in particular there is one we have examined which bore a five-point claim to sovereignty on the reverse. Quite as useful is William Borough's chart as supplemented with Hall's magnetic data for the locations mentioned in his journal of the third voyage. Dee's advice as given in 1576 shaped how Hall's log and chart recorded the places where the ceremonies of taking possession in the name of Elizabeth I took place. Those ceremonies themselves were influenced by Dee's tuition of Frobisher and Hall and his extensive reading on the assertion of legal sovereignty by the European powers. However, Dee's *General and Rare Memorials pertayning to the Perfect Arte of Navigation* makes the equally important point about his endeavour that "the End of Ends, and the uttermost scope of the said Arte of Navigation, is such Publick Commodity."¹⁰⁶ Dee's understanding of "Publick Commodity" necessarily evokes his almost mystical vision of the usefulness of a mathematical approach. He defined

Plate 3: A navigational chart of the North Atlantic, 1578. Drawn by William Borough, revised by Christopher Hall. Hatfield House CPM1/69. Reproduced by courtesy of the Marquess of Salisbury.

“Publick Commoditie” as early as 1570 in the last paragraph of his famous preface to Billingsley’s *Elements of Geometrie*, where he wrote:

Besides this, how many a Common Artificer, is there, in these Realmes of England and Ireland, that dealeth with Numbers, Rule and Cumpasse: Who, with their owne Skill and experience, already had, will [...] finde out, and deuise, new workes, straunge Engines and Instrumentes for sundry purposes in the Common Wealth? or for priuate pleasure? and for the better maintayning of their owne estate? [...] For, no man (I am sure) will open his mouth against this Enterprise [... nor any] that hath any care & zeale for the bettering of the Common state of this Realme.¹⁰⁷

NOTES

¹ *R&W*, 4.

² British Library, Cotton MS Vitellus C.VII, fol. 9^{r-v} is the part of the description of his library which describes his instruments. See too a transcript in *R&W*, 194-5 and the supplement prepared for the John Dee Conference in April 1995. See also *R&W*, 35 and John Roche, “The Radius Astronomicus in England”, *Annals of Science*, 38 (1981): 1-32.

³ John Dee, *Of Riche and Famous Discoveries*, British Library, Cotton MS Vitellus C.VII, fol. 60^v. The cartouche of William Borough’s chart at Trinity College, Dublin, (MS 1209) says:

Sith Tullie sayeth that each man ought his travaile to applie,
to other men’s commoditys: This counsell follow I.
For perfectlie in this my khart the coastes where I have passed
I have set forth: that others may thereby som knowledege fayn.
Great profit maye it bring to them that by these coastes sayle,
for it of instruments is chief that maye them most availle;
which if it doo such favour fynde, as trayayle hath deserved,
it shall procure me to expresse, that which I have safe read.
W. Borough.

⁴ Martin Cortes, *Breve Compendio de la sphere y de la arte de nauegar con nuevos instrumentos y reglas*. (Seville, 1551), trans. by Richard Eden, *The Arte of Navigation, Conteyning a compendious description of the sphere* (London, 1561) and nine subsequent editions between 1572 and 1630. Its origins lay in the official visit which in 1558 Philip II arranged for Stephen Borough to make to Seville, presumably to share his knowledge of the icy waters off the North Coast of Russia explored two years earlier.

⁵ *MP*. Dee’s preface is entitled “A first fruit full Preface specifying the Chiefe Mathematicall Sciences”.

⁶ John Dee, *General and Rare Memorials pertayning to the Perfect Arte of Navigation* (London, 1577), sig. Biii. See also Christopher Lewis Oastler, *John Day, The Elizabethan Printer*, Oxford Bibliographical Society Occasional Publication 10 (Oxford: Oxford Bibliographical Society, 1975).

⁷ British Library, Cotton MS Vitellus C.VII, fol. 79. While this ‘periplus’ may refer to various Dutch rutters published from the 1540s onwards, there is far more detail about Norway’s coast in an English text that seems more closely related to both William Borough and Dee, namely British Library, Harley MS 167, fols. 39-72 which contains “Borough’s Rules” relating to a passage along Norway’s coast and past the North Cape.

⁸ Pierpont Morgan Library, MS MA 2637 (R-V Autogr. Misc, English). Dee’s letter of 16 January 1577, written from Mortlake, covered cartographic and navigational issues and the politics of the Netherlands. See *Abrahami Ortelii, geographi antverpensis et virorum eruditorum ad eundem et ad Jacobum Collum Ortelianum, Abraham Ortelii Sororis filium, epistolae*, ed. John Henry Hessels (Cambridge, 1887), 157-160 (158). Dee had realised that these two names on America’s northern shore (as shown on Ortelius’s 1564 world map engraved in Antwerp) were omitted from his much smaller 1570 world map. By contrast with the rather numerous 1570 map, only three copies of the large 1564 world map on eight sheet are known, one in the Rotterdam Maritime Museum, one in the University Library, Basle, and the last in the British Library’s Map Room. See Rodney W. Shirley, *The mapping of the world: early printed*

maps, 1472-1700 (London: Holland Press, 1983), Entry 144, plate 97, 129-133; Helen Wallis, "Across the Narrow Seas" in Susan Roche, ed., *Studies in the History and Bibliography of Britain and the Low Countries presented to Anna E. Simoni* (London: British Library, 1991), 31-54.

⁹ British Library, Cotton MS Vitellus C.VII, fols. 264-269. *Of Great and Rich Discoveries*, incorporates Mercator's letter and Dee's translation of 1577. See also: E.G.R. Taylor, "A letter dated 1577 from Mercator to John Dee", *Imago Mundi*, 13 (1956): 56-68. Frobisher had already used both Ortelius's world map, probably the larger 1564 edition (880 x 1500 mm), and Mercator's even larger world map of 1569, (1340 x 2120 mm), as the inventory of the items supplied for the 1576 voyage shows. See Public Record Office, Exchequer, King's Remembrancer, E164/35, fol. 17. A full transcript of this can be found in James McDermott, "Humphrey Cole and the Frobisher Voyages" in Silke Ackermann, ed., *Humphrey Cole: Mint, Measurement and Maps in Elizabethan England* (London: British Museum Publications, 1998), 15-16. The fact Ortelius's map was supplied at no cost in Lok's account suggests Dee had lent it to his erstwhile pupils in 1576, but had it back in time to discuss it in detail with Abraham Ortelius in March 1577. Ortelius's world map "Typis Orbis Terrarum" drawn about 1569 and published in Antwerp in 1570 (335 x 495 mm) was not detailed enough to have sustained such usage, or to have been much help to Frobisher and Hall in 1576. For further recent discussion, see James McDermott, "The Navigation of the Frobisher Voyages", *Hakluyt Society's Annual Talk*, 1997, published in 1998, 3-24. McDermott and Waters express their doubts that the brass globes and the brass "Sphaera Nautica" ordered were ever taken to sea. They do not consider the sturdy nature of the large surviving examples of Cole's work at St Andrews University, nor the possible utility and durability of Cole's preparing a suitably cased brass engraved version of the very large Italian globe published in 1574. This made up a globe of 71 centimetres in diameter. That Italian globe carried lots of data on the vicinity of Greenland, Labrador and the western end of a NW passage, probably largely derived from Basque whalers through their Italian bankers. Its gores carried the best commercially available data on the region, a fact Dee was well connected enough to know. Perhaps made by the Sanuto brothers, its gores were intended for a market among affluent seamen. In 1578 Cornelius Ketel painted a portrait of Frobisher alongside a globe, probably a new one made up from gores supplied by Sanuto or Cartaro but undoubtedly simplified and scaled down by the painter to show only the regions of concern to Frobisher. That portrait survives in the Bodleian Library. See too Raleigh Ashton Skelton, *A Venetian Terrestrial Globe, represented by the largest surviving printed gores of the 16th century* (Bologna: Garisenda Antiquariato Libri e Stampe, 1969).

¹⁰ Robert Recorde, *The Castle of Knowledge* (London, 1556), preface. The rare second edition (B.L. C.31.622) and another of Recorde's textbooks, the *The Grounde of Arts* (London, 1540), were extensively edited by Dee (referred to as "I.D.") and appeared in 1561 under the title *The Ground of Artes teachyng the worke and practise of Arithmetike and now of late overseen and augmented with newe and necessarie additions by I.D.* (British Library, C.1.1022). Recorde was until his death Surveyor of the Mines to Queen Mary, and shared with John Dee interest in antiquarian matters, in Wales, and in mining, as well as in thirteenth- and fourteenth-century mathematical texts such as that on the *navicula* that might have been of use to astronomers and navigators. In 1557 while Recorde was working up theorems for his unfinished "Treasure of Knowledge", Dee also formulated his ideas for the manuscripts, *De Nova Navigationis Ratione*, and *Euclidis elementorum, libri XV*. See Robert William Theodore Gunther, *Early Science in Oxford*, 15 vols (Oxford, 1923), I, 107.

¹¹ Public Record Office, E 164/35, fol. 17. It is possible that Lok's account here refers to a manuscript set of sailing directions for India that bears two of Thevet's signatures, one dated 1563, another 1567. This suggests it might have been lent by Thevet to someone like Dee to transcribe. Dee certainly credits Thevet as a source in his text *Of Rich and Famous Discoveries*, (British Library, Cotton MS Vitellus C VII fol. 125) completed in 1577. Dee's Library contained three works by Thevet (*R&W*, Nos. 238, 346 and 1096). Two of those works, both heavily annotated in respect of Cathay, survive in The Royal College of Physicians' Library, London. The third work has not been identified but might be Thevet's own copy of a rutter by Emmanuel Alvares, *Roteiro de Navegacam Da qui pera ay india*. This was certainly widely transcribed in the mid-sixteenth century, see Bibliothèque Nationale (Fonds Portugais ancien, No 48). A possible master copy in 92 folios, autographed back and front by Thevet, is in the National Maritime Museum, Greenwich, (MS 35-013c/P31). Prior to 1935 it was in Professor Charles Boxer's library and is described in Charles Ralph Boxer, *Mariners Mirror*, 20 (1934): 176-77.

¹⁷ British Library, Cotton MS Augustus I.I.i. verso.

¹⁸ British Library, Harley MS 167, fols. 182-200. *The Account of the Third Voyage to Meta Incognita made by Christopher Hall*. The first page of the report shows that it had belonged in John Dee's Library, and bears a few notes in Dee's hand on Sir Francis Drake and young William Hawkins. Fol. 187 bears a coloured coastal view of the rugged snowy form of "Dee's Pinnacles".

¹⁹ British Library, Cotton MS Otho EVIII, (Article 16) fols. 78-9. One of the circumpolar charts that Dee drew for Pet and Jackman survives in the library at Burghley House, Stamford within a volume of Ortelius's *Theatrum Orbis Terrarum*, annotated in Lord Burghley's hand. Lok's later engraved chart of 1582 owes much to Dee's circumpolar charts, and the Burghley House exemplar in particular.

²⁰ The title page of this collation of charts from Ortelius's *Theatrum Orbis Terrarum* (Antwerp, 1570), bears the manuscript inscription "This book belonged to the L'd Treasurer Burghley" probably written in the hand of his eldest son, Thomas, 1st Earl of Exeter (1542-1622). After the prefatory world chart (the 1570 version) there was bound in Dee's northern hemisphere and below it an inscription in Lord Burghley's hand about Frobisher's second voyage reading thus: "Anno domini 1577 et 19 Eliz. Reginae. Furbisher capitaneus navis appellate ye Ayde, cum 2no aliis navibus discessit en ostio Thamisis 25 Maii et adiit quasdam Insulas in Mare Aglonari in Latitudini 64 et Longitud[ini] [blank] atque 19 July, et ibique mora traxit per diversque ad 24th Augii et terversus est in portuum Plymouth 20th Septembrii."

²¹ A similar Chinese map reached Philip II's Library in the mid-1570s in a diplomatic bundle from the Philippines. See R.C.D. Baldwin, "The Interchange of European and Asian Navigational Information in the Far East before 1620", in Derek Howse ed., *Five Hundred Years of Nautical Science, 1400-1900* (London: National Maritime Museum, 1981), 80-90.

²⁸ Antoine de Smet, "John Dee et sa place dans l'histoire de cartographie" in Helen Wallis and Sarah Tyacke, eds., *My Head is a Map: Essays and memoirs in honour of R.V. Tooley* (London: Francis Edwards, 1973), 107-113.

²⁹ Bodleian Library, Ashmole MS 242. No. 83.

³⁰ Edward Cannan, *Churches of the South Atlantic Islands, 1502-1991* (London: Anthony Nelson, 1992), 25 and 259n which details various searches for Dee's visit to St Helena, concluding that Coote probably mistook Madox's hand and descriptions of Fenton's voyage of 1582-83 for Dee's. See too *DNB*, XIV, 271-279.

³¹ E.G.R. Taylor, *Tudor Geography, 1483-1583* (London: Methuen, 1930), 88-96, 263-265. On page 265 Taylor cites a short part of Dee's library catalogue, cited in evidence for compensation in 1592. This explains the practical value of instruments he had kept in his library (and whose utility must have been known by John Davis) saying, "The instruments necessary for a skillful seaman are the Sea Compasse, a Cross staff, a Quadrant, an Astrolabe, a Chart, an instrument magneticall for finding of the Variacion of the compass, an horizontall plane sphere, a globe and a paradoxall compass [...] but the Sea Compass and

Cross staff are instruments sufficient for a seaman's use: the astrolabe and the Quadrant being instruments very uncertain for sea observations."

³² British Library, Cotton MS Roll XVIII, 48.

³³ British Library, Cotton MS Augustus 1.i.i.

³⁴ Free Library of Philadelphia (William Elkins Collection, 42). "Sir Humphrey Gylbert knight his chart" also bears Dee's own cabalistic symbols identifying him as its author. It was long kept by the Percy and Leconfield families, whose late sixteenth- and early seventeenth-century papers were full of naval, mining and mathematical interest. See *Catalogue of Exceedingly Rare and Valuable Americana, with some important English Books and Manuscripts, largely from the Library of Henry Percy, 9th Earl of Northumberland (1564-1632) at Petworth House. Sold by order of his Descendant, The Right Honoble. Lord Leconfield. Which will be sold by Auction by Messrs Sotheby and Co. [...] On Monday the 23rd day of April, 1928, and the following Day* (London: J. Davy and Sons, for Sotheby & Co, 1928), lot 78.

³⁵ David Beers Quinn, ed., *The Voyages and Colonising Enterprises of Sir Humphrey Gilbert*, Hakluyt Society Second Series, 2 vols (London: Hakluyt Society, 1940), 83-84, illustrates Dee's opportunism over this.

³⁶ Michael Lok's chart was sought for Richard Hakluyt's *Divers Voyages touching the discoverie of America* (London, 1582), where it was published opposite (sig. B4, second count). It is entitled "ILLUSTRI VIRO DOMINO PHILIPPO SIDNAEO MICHAEL LOK CIVIS LONDINENSIS HANC CHARTAM DEDICABAT, 1582."

³⁷ Donald D. Hogarth, Peter W. Boreham, and John G. Mitchell, *Mines, Minerals and Metallurgy: Martin Frobisher's voyages of 1576, 1577 and 1578*, Mercury Series, 7 (Ottawa: Canadian Museum of Civilisation, 1994), 73-99.

³⁸ Dee had two copies of Biringuccio's text and multiple copies of Agricola's study, *De Re Metallica* (Freiburg, 1556) and (Basle, 1558), and copies of major works by Ercker, Munster, Oviedo and de Barros. All were heavily annotated, in those sections dealing with mines in the Iberian empires. Roberts and Watson show that the metallurgical texts and mining regulations that Dee took to Prague in 1583 as those marked with a T in the catalogue. Dee also took important geographical texts like Munster's *Cosmographia* which had an extensive section on mining and smelting in central Europe. Dee's collection of mining texts and mining laws included the bylaws of Kuttenburg (i.e Kutna Hora) in Bohemia, and other mining towns in Alsace and Saxony. See *R&W* nos. 5, 178, 215, 222, 227, 459, 677, 1437, 1453, 1534-5, 1540, 1542-44, 2214. A fuller discussion of those legal texts on mining appears in Herbert Clark and Lou Henry Hoover, *Georgius Agricola, De Re Metallica. Translated from the first Latin edition of 1556 with biographical introduction, annotations and appendices upon the development of mining methods, metallurgical processes, geology, mineralogy and mining laws from the earliest times to the sixteenth century* (London, 1912; repr. New York: Dover Publications, 1950), 609-614.

³⁹ Public Record Office, SP 12/144/17 parts 1 and 2 details Drake's profits and the treasure to be removed to the Tower of London, then estimated at over £250,000. It notes that over £10,000 was retained by Drake.

⁴⁰ David Beers Quinn, *Set Fair for Roanoake, Voyages and Colonies* (Chapel Hill: University of North Carolina Press, 1985), 92. See too: Hatfield House, Cecil MS 276/5: "first written in the high duch by the experte and chiefe M[aste]r of the Emperors mynes in the kingdom of Bohemia, Lazarus Erkerne, nowe translated into English by Joachim Gaunz of Prage." See also Gary C. Grassl, "German Mineral Specialists in Elizabethan England and Early Modern America", *Yearbook of German-American Studies*, 31 (1996): 25-28, 49-52.

⁴¹ British Library, Harley MS 249, fols. 95-105. At the beginning it is dedicated "To my very Honourable Friend Syr Edward Dyer, Knight", and at the end it notes he now sent "this Treatise with a peculiar letter besides Johannem Crocker on Friday 15th last of september 1597." British Library, Royal MS 7, C. XVI fols. 158-165 is another nearly contemporary copy of the same text, dated 8 September 1597. Yet another copy appears in his hand in a copy of his *General and Rare Memorials*, British Library, C21.e.12 as fols. 3-13. It was later given to Captain Hitchcock by Dee.

⁴² Public Record Office, SP12/30/30 dated 17 June 1587. Richard Deacon, *John Dee: Scientist, geographer, astrologer and secret agent to Elizabeth I* (London: Frederick Muller, 1968). See also the Garland and Simkinson request that Dee attend the Court of the Russian Emperor, and Public Record Office, SP12/196/143^r (dated 18 September 1586) later reproduced by Richard Hakluyt, *The Principal Navigations, voyages, traffiques and discoveries of the English Nation* (London, 1598), I, 508.

⁴³ Public Record Office, SP12/31/35.

⁴⁴ British Library, Lansdowne MS 30/4, fols. 10-12; *Acts of the Privy Council of England*, ed. John Roche Dasent, 46 vols (London: HMSO, 1890-1964), X, 147 for January 1577/78.

⁴⁵ Vilhjalmur Stefansson, *The Three Voyages of Martin Frobisher in search of a Passage to Cathay and India by the North-west, A.D. 1576-8: from the original 1578 text of George Best*, 2 vols (London: Argonaut Press, 1938), II, 113, 117, 119, 132, 198, 202, 205, 217.

⁴⁶ William Robert Scott, *The Constitution and Finance of English, Scottish and Irish Joint-Stock Companies to 1720*, 3 vols (Cambridge, 1911, repr. Bristol: Thoemmes Press, 1993), I, 39-44.

⁴⁷ *Private Diary*, 18-19. This is a conflation of selected entries from Bodleian Library, Ashmole MS 487 and 488. See also, Albert Hastings Markham, ed., *The Voyages and Works of John Davis the Navigator*, Hakluyt Society First Series, 59 (London, 1880), Introduction.

⁴⁸ *Calendar of State Papers: Foreign Series, of the reign of Edward VI, 1547-1553*, ed. William Barclay Turnbull, (London, 1861), No. 245: Joachim Gundelfinger to the Privy Council, 18 October 1550.

⁴⁹ *Calendar of State Papers relating to Ireland, of the reigns of Henry VIII, Edward VI, Mary and Elizabeth 1509-1573*, ed. H.C. Hamilton, 5 vols (London, 1860-1890), I, 114, 121-127.

⁵⁰ Maxwell Bruce Donald, *Elizabethan Copper: The History of The Company of Mines Royal, 1568-1605* (London: Pergamon Press, 1955, repr. Whitehaven: Michael Moon, 1989), 124-145.

⁵¹ Cumbria Record Office, (Kendal) Rydal MS 28, fols. 146-169 (sometimes described as Rydal MS R). Other passages on crushing and weighing houses and even furnaces among the Rydal manuscripts lack the operational detail. The international infrastructure of technical and financial resources required can be seen through: William G. Collingwood, *Elizabethan Keswick: Extracts from the original account books 1564-1577 of the German Miners in the archives of Augsburg*, Cumberland and Westmoreland Antiquarian Society, Tract Series, 7 (Kendal, 1912, repr. Whitehaven: R. Moon, 1987). See Ian McNeil, "Blast: From Blowpipe to Blowing Engine", *Newcomen Society Transactions*, 60 (1989): 95-106. Rhys Jenkins, "The Society for the Mines Royall and the German Colony in the Lake District", *Newcomen Society Transactions* (1938): 225-234. Alnwick Castle, MS Y.I, no 6 comprises the Hechstetter's operational data as sent to Henry Percy, 9th Earl of Northumberland, "to informe myselfe of the ystate of the mynes and finding no great alteracion [...]", 23 January 1617/18. Parts of the text are drawn from sixteenth-century recipes, but most of this text is devoted largely to arguments for a reduction in the rent for the Cumberland mines then operating to a loss. It allows for insight into the traditional German methods of mining and smelting then in use. The technology as Dee knew it from Alsace is best shown in H. Groff's illustrated manuscript, in *L'École Supérieure des Beaux Arts*, Paris, published with notes by E. Brugerolles, *La Mine et mode de l'emploi*, 1526 (Evreux: Editions Gallimard, 1992).

⁵² Hoover and Hoover, *De Re Metallica*, 609-614.

⁵³ See *R&W*, nos. 177, 178, 215, 1051, 1919, all Agricola's works, plus the Duke of Saxony's mining ordinances, the *Bergordnung* of 1574 (*R&W*, no. 227). Zimmerman's important study, *Probirbuch*, not the title cited by Dee above (*R&W*, no. 1535), may have come to Mortlake a little later, but certainly well before 1583, along with Ciriacus Schreitmüller's *Probierebüchlin Fremde und subtile Künst [...] von Woge und Gewicht auch von allerhandt Probenauft Ertz, Gold, Silber etc* (Frankfurt-am-Main, 1578), *R&W*, no. 1534. The last two probably came as a result of intelligence and help obtained for him by Sir Philip Sidney. Dee records its origin in a meeting involving Lord Leicester, Edward Dyer and Philip Sidney on 16 January 1577. As Roberts and Watson show by reference to Pears's transcripts of Sidney's correspondence with Hubert Languet, Sidney exchanged data derived through Dee about Martin Frobisher's supposed discovery of gold in 1576 and 1577, seeking in return fulfilment of a promise to dispatch the laws of Gutebergica, i.e. the Kutna Hora mines in Bohemia. See Stewart Adolphus Pears, *The correspondence of Sir Philip Sidney and Hubert Languet* (London, 1845), 128, referring to correspondence from Languet dated 28 November 1577 and Sidney's fuller letter of 1 October 1577.

⁵⁴ Public Record Office, SP12/95, nos. 63 and 64, a further copy SP12/229/97, fols. 1-5, and a draft patent at SP 12/235/1. The former was a petition and letter to the Queen for "A discovery of lands beyond the Equinoctial [...]" and to establish the authors and fellowship of this voyage in the nature of a corporation". Lok probably took it as a model for the proposals he worked on with Dee and Frobisher but he too failed to secure incorporation, demanding, as Burghley thought, too much in the form of the charter that he proposed. See too Alison Grant, *Grenville* (Appledore: North Devon Museum Trust, 1991), 14-18. A derivative of Grenville's scheme but expressed in considerable detail was later penned by Richard Hakluyt as "A discourse of the Commodity of taking the Straight of Magellanus". It was probably prepared for Sir Francis Walsingham in 1580.

⁵⁵ British Library, Lansdowne MS 19, (art. 19).

⁵⁶ British Library, Lansdowne MS 100, (art. 1) fol. 4.

⁵⁷ One copy of this work which was to remain in his library for over twenty years (British Library, C.21.e12) bears the text of the *Thalattokratia Bretanniki* on blank leaves at the back in Dee's hand. That copy was sent on to Sir Edward Dyer on 15 September 1597. See note 41 above for more details.

⁵⁸ For a tiny image of the Cadoxton smelter beside the river near Neath see West Glamorgan Record Office, Dynevor Memorial, "The description of the Lordship of Cadoxton juxta Neath now parte of ye possessions of ye Right honourable John Herbert Esquier one of her majestie's Pryvie Counsell and Secreatary of Estate unto her highness." c.1601. "clericus fecit et descripsit."

⁵⁹ Oxford, Bodleian Library, Ashmole MS 488. Dee's diary recorded on 19 December 1589 that Gilbert "Offred me as much as I could require at his hands, both for my goods carryed away, and for the mynes." See *R&W*, 35.

⁶⁰ Peter Claghton and Neil Parkhouse, *Out of the World and into Coombe Martin* (Coombe Martin: Coombe Martin Local History Group, 1989), 33-37. N. Parkhouse, "Coombe Martin – An Industrial slum?", *The Quarterly Journal for British Industrial and Transport History*, 7 (1995): 5, 10-11.

⁶¹ S.H. Burton, *Walks in North Devon: A Guide to its Scenery, Architecture, History and Antiquities* (London: T. Werner Laurie, 1953), 69-70 gives the full texts of the two inscriptions as originally determined in John Prince, *Danmomii Orientales Illustres, or The Worthies of Devon* (London, 1810).

⁶² Stephen Atkinson, *The Discovery and Historie of the Gold Mynes of Scotland, 1619* (Edinburgh, 1825), 52-53; Scott, III, 409.

⁶³ Archivo General Simancas, Ingalterra, leg. 818/72. Sebastian Cabot to Charles V, a transcript clearly misdated 15 November 1554. Presumably the original dated from 1553 or even a year earlier still. As taken forward later to Philip II it also contained a map now lost. It may well have formed part of Cabot's reply to a letter written by Emperor Charles V to the young Queen Mary on 9 September 1553, following the failure of the Duke of Northumberland's plot to put Lady Jane Grey on the throne. The Duke, who was a keen supporter of Dee's ideas, was executed for treason in August 1553.

⁶⁴ Edward Arber, ed., *The First Three English Books on America 1511-1555 A.D.: Being chiefly translation, compilations &c. by Richard Eden* (Birmingham, 1885), 355. This large work incorporates many of Eden's earliest translations.

⁶⁵ Public Record Office, E231/28d and SP 12/40/81-83.

⁶⁶ British Library, Sloane MS 2483. Donald, pp 66-72.

⁶⁷ British Library, Lansdowne MS 30, Art.4. fol. 12.

⁷⁷ Dee, *General and Rare Memorials*, sig. A2^r.

⁷⁸ Public Record Office, E164/35 fol. 17.

⁷⁹ Dee's loans of equipment and his advice may have been so significant in themselves and for the prestige that they conferred, that Lok himself was prepared to acquiesce to Dee's not paying up his adventurer's shares.

⁸⁰ Stefansson, *Voyages of Martin Frobisher*, II, 77. This gives its sources as the Royal Commission on Historical Manuscripts, 1832 and 1833, pp.74-77, 558-62 and copied directly without reference to the originals in Richard Collinson, ed., *The Three Voyages of Martin Frobisher in Search of a Passage to Cathaia and India by the North West, A.D. 1576-1578*, Hakluyt Society, First Series, 38 (London, 1867). A correct copy appears in J.M. McDermott, "The Account Books of Michael Lok relating to the North West Voyages of Martin Frobisher, 1576-1578" (Unpublished PhD thesis, University of Hull, 1984), 83-84, and as an appendix in the Hakluyt Society publication cited above. The uncorrected form appears in David Watkin Waters, *The Art of Navigation in Elizabethan and Early Stuart Times* (London: Hollis and Carter, 1958), 530-532.

⁸¹ See *R&W*, Introduction.

⁸² *The Art of Navigation*, trans. by Richard Eden (London: R. Jugge, 1561), fols. lxxviii-lxx, Part 3, Ch.7 entitled "The making and use of the Astrolabe with which the mariners take the Altitude of the Sunne."

⁸³ Alwynne A. Ruddock, "The Trinity House at Deptford in the Sixteenth Century", *English Historical Review*, 65 (1950): 458-476. Charles Raymond Booth Barrett, *The Trinity House of Deptford Strond: written and illustrated by C.R.B. Barrett* (London, 1893), 131-134.

⁸⁴ *R&W*, Appendix 3, 196-197.

⁸⁵ British Library, Harley MS 167, fols. 39- 76. Mr Borrough's rule is on fol. 69.

⁸⁶ British Library, Cotton MS Titus BVIII, fol. 199^v. Elizabeth Story Donno, *An Elizabethan in 1582, The Diary of Richard Madox, Fellow of All Souls*, Hakluyt Society Second Series, 147 (London: Hakluyt Society, 1976), 227. Her edition of the text explains that Madox is using Pallinurus as a pseudonym to disguise Hall's identity here as he did on at least six other occasions on the voyage. Madox did this in order to protect him from further humiliation by Fenton, and from identifying his alcoholism.

⁸⁷ George Best, *A True Discourse of the late voyages of discoverie for finding of a passage to Cathay by the North Weast under the conduct of Martin Frobisher* (London, 1578). Reprinted in Stefansson, *Voyages of Martin Frobisher*, I, 16.

⁸⁸ Oxford, Bodleian Library, Ashmole MS 242, no 83. See note 15 above for title.

⁸⁹ Dee, *General and Rare Memorials*, sig. A2^r. E.G.R.Taylor, "John Dee and the Nautical Triangle", *Journal of Navigation*, 8 (1955): 318-325.

⁹⁰ British Library, Cotton MS Augustus I.i.i. verso.

⁹⁹ Best, *A True Discourse*, in Stefansson, *Voyages of Martin Frobisher*, I, 22.

¹⁰⁰ In Dee's copy of Richard Hakluyt's translation of *El viage que hizo A[ntonio] de E[speio] en el anno de ochenta y tres: el qual con sus companeros descubrieron una tierra [...] a quien pusieron por nombre nuevo Mexico etc.* (Madrid and Paris, 1586), now British Library, B32.a.32, we find the following

inscription in Dee's hand: 'Johannes Dee: A[nn]o 1590. January 24. Ex dono Thomae Hariot, Mei Amici.' It is thus very soon after his return to his home at Mortlake.

¹⁰¹ State Papers describing Sir Thomas Gresham's investments are: Public Record Office, SP 12/111/48; SP 12/119/30 and 41; SP 12/126/2, 8, 32 and 56; SP 12/127/8 and 16; SP 12/130/16, 21, and 35. More detail about Sir Thomas Gresham's foundation in its earliest phases is to be found in John Ward, *The Lives of the Professors of Gresham College* (London, 1740), iv-viii; Sydney John Teague, *Sir Thomas Gresham financier and college founder* (London: Synjon Books, 1974); Peter Winckworth, *History of the Gresham Lectures, Inaugural lecture, City University* (London: City University, 1966); Francis R. Johnson, "Gresham College: Precursor of the Royal Society", *Journal of the History of Ideas*, 1 (1940): 413-438; Public Record Office, SP 12/170/1.

¹⁰² Now Hatfield House Library, CPM 1/69 reproduced here by courtesy the Marquess of Salisbury.

¹⁰³ For a full discussion of the significance of other contemporary work on terrestrial magnetism, by Borough, Gilbert and Norman in England, and of the longitude prizes offered formally from 1598 by Philip III of Spain, see Richard C.D. Baldwin, *The international interchange of navigational information between the maritime communities of Iberia, Asia and North Western Europe, 1500-1620* (Unpublished thesis, University of Durham, 1980), 155-254.

¹⁰⁴ Richard Hakluyt, *The Principal Navigations*, I, Prefatory address. Gresham's large incomes arising from clever currency speculation, trading in Ordnance and servicing the wool trade's needs meant his large trading debts extended far beyond the Cathay venture and caused the House of Commons to take a close interest in the matter of his estate. That led to Parliament passing a special statute, which began as "A Bill for the relief of Sir Thomas Gresham's creditors" that secured its first and second readings on 15 and 20 February 1580. It passed quickly through Committee stage between 28 February and 4 March 1580, to a third reading on 13 March 1580. In its final form it was passed as a Private Act 'for the establishment of an agreement between Sir Henry Nevill, Knight, and Dame Anne Gresham for the better purposes of the last will and testament of Sir Thomas Gresham deceased and paying his debts.' Its main effect was to put off endowment of the lectureships until after Anne Gresham's death by which time it was hoped all Sir Thomas's trading positions would have unwound.

WILLIAM H. SHERMAN

JOHN DEE'S COLUMBIAN ENCOUNTER*

On at least one occasion between 1571 and 1583 John Dee encountered Christopher Columbus. The medium was Columbus's son Ferdinand, and they met in the margins of Ferdinand's famous *History [...] of the Life & Deeds of the Admiral Christopher Columbus* – one of the earliest and most important accounts of Columbus's encounter with the New World.¹ Dee purchased the work sometime after its publication in 1571, and he read and annotated it carefully.² In 1583 the book was entered in his library catalogue, with a slightly garbled title.³ It ultimately made its way into the British Library, where I stumbled upon it in the summer of 1994.⁴

My discovery, like that of Columbus himself, was accidental. Columbus had set out from Spain expecting that his westward course would take him clear across to the eastern coast of Asia: when he made his landfall in the Bahamas his sources led him to suppose that he was somewhere near Japan. When I called up the *Life of Columbus* I was not searching for the tracks of John Dee: following up a passing comment made by David Quinn, I had been led to expect some interesting marginalia by Gabriel Harvey, the other great Elizabethan annotator to whom I had turned my attention. I recognized almost immediately that the notes were unmistakably Dee's⁵ – a realization that filled me with as much apprehension as excitement, since my book on Dee (with its detailed assessment of Dee's contribution to English maritime expansion) was already making its way through the press.

In that study I tried to assemble all of the available primary and secondary sources pertaining to Dee's place in maritime history and the history of geography.⁶ Following Eva Taylor, David Waters, and others, I argued that he did more than anyone to import knowledge of the science of navigation and the history of empire to England, and – often behind the scenes – worked to apply this knowledge in the texts and voyages which would gradually allow England to catch up with its Continental rivals.⁷ In a series of treatises, maps, and conferences from the 1550s to the 1590s, Dee developed an expansionist program, which he called “this British discovery and recovery enterprise.”⁸ Calling for both the discovery of new lands and the recovery of regions that were once arguably subject to the British crown, Dee

* Different versions of this paper were delivered at ‘John Dee: an Interdisciplinary Colloquium,’ Birkbeck College, University of London; The Postgraduate Seminar, School of English and Drama, Queen Mary and Westfield College, University of London; and the fourth annual conference for ‘New Researchers in Maritime History,’ National Maritime Museum, Greenwich (UK). I am grateful to all three audiences for their helpful comments, and to all three institutions for their financial support.

eventually claimed for the queen a vast territory covering most of the water and much of the land in the northern hemisphere.

Dee's writings on navigation and empire cluster around 1576 to 1578 – the precise dates of Martin Frobisher's three voyages to the Canadian Arctic, an enterprise for which Dee was the primary scholarly advisor. The Frobisher connection is important, as we shall see, for Dee's Columbian encounter. Over eighty years after Columbus's voyages, Frobisher's saw the first extensive contact between English explorers and North American natives and the first attempts at a permanent colony. Although they were unsuccessful on almost every level, they thus mark England's belated entry into direct competition with Spain, and the beginning of its rise as an imperial power. Dee's marginalia, I would suggest, were produced in the context of the Frobisher voyages and reflect a key moment in that transfer of power.⁹

In my book I also argued that the textual exploration of Dee was as important as the geographical exploration of figures like Frobisher in effecting this transfer. Libraries played an especially important role in the launching and directing of voyages of exploration and colonization. This was certainly true of Dee and his massive collection; but it was equally true of Columbus. Recent work has revealed the extent to which his own readings both enabled and framed his New World encounter. The Biblioteca Colombina, as it is now known, has been largely dispersed; but it still contains a number of books that belonged to Columbus and bear his marginal annotations.¹⁰ And in relating these readings to the two men's often enigmatic texts and actions, scholars have turned to similar sources and models: a recent description of Columbus as "a Hermetic character" who "was aware, it would appear, of his existence on the cusp of two temporal worlds – the Medieval and the Renaissance," would not be at all out of place in a book on Dee.¹¹ Dee's Columbian encounter, then, represents more than just a curious and hitherto unknown chapter in the reception of Columbus in early modern England. This meeting in the margins of the book that Washington Irving called "the cornerstone of the history of the American continent"¹² provides the occasion for some further thoughts on Dee's reading practices (offering a sustained example of the kind that I was unable to deliver in my book), on English imperialism, and on the modes of cross-cultural contact in sixteenth-century Europe.

II

One of the most consistent features of Dee's marginalia as a whole is their attention to the conditions of textual production and reception: he regularly notes any reference in the text to the author's life as well as the authorship, ownership, or use of any other texts.¹³ The very first marginalia in *The Life of Columbus* concern Ferdinand's textual legacy. Next to the passage, "I, who had sailed with [Columbus] for some time, and had written of lesser things," Dee jotted, "Note other bokes of this Author."¹⁴ But Dee was even more interested in Ferdinand's ownership of books – not surprisingly, since Ferdinand was perhaps the most serious bibliophile of his day. I have already mentioned that Columbus founded a great library; but it was Ferdinand who turned it into what must have been an unrivalled institution. He

quickly abandoned his career as a colonial administrator to devote himself to book-collecting and the advancement of learning; and by the 1520s the collection had evidently achieved almost universal coverage.¹⁵ A dedicatory epistle in the *Life* praised the collection in the following terms: "Ferdinand [...] left to the cathedral of Seville [...] a library that was not only very large but rich, full of the rarest works in all the sciences and regarded by all who have seen it as one of the most remarkable things in all Europe."¹⁶ Dee tagged the passage with the simple word, "Bibliotheca", but it must have had particular resonance for his own "Bibliotheca" in Mortlake.

These notes, like the ones in which Dee provided information about when and where an author lived, and where other related books could be obtained, owe much to the uncertainties of textual transmission in his day – especially the difficulty of identifying and accessing books in an age before lending libraries or national libraries and in which cataloguing was still very primitive. In the maritime sphere the textual record was even more uncertain. First, Dee knew how important it was – when places and phenomena were being observed, potentially, for the first time – for explorers to keep detailed records. Reading that "the Admiral was very careful to keep a journal of all that happened on the voyage: wind directions and currents, the distance run by each ship, and all that they sighted on the way," Dee wrote in the margin, "Note what things are to be noted in a voyage by Sea."¹⁷ On more than one occasion Dee was responsible for briefing English mariners on precisely this practice and, in fact, played a significant role in the development of ships' logs.¹⁸ Dee was especially interested in Columbus's techniques for ensuring that reports of his discoveries would make it back home even if he did not. In Chapter 37 Ferdinand cites a dramatic passage from his father's log when, on 14 February 1493, a storm scattered Columbus's ships:

Then, with my thoughts in this whirl, I thought upon Your Highnesses, and considered some means whereby, even were I dead and the ship lost, you might get news of the success of my voyage [...] Therefore I wrote on a parchment, as briefly as the state of things required, how I had discovered those lands as I had promised to do; the length of the voyage and the route thither; the goodness of the country and the customs of its inhabitants; and how I had left Your Highnesses' vassals in possession of all I had discovered. This writing, folded and sealed, I addressed to your Highnesses with a written promise of 1,000 ducats to whoever should deliver it sealed to you [...] I straightaway had a great wooden barrel brought to me, and having wrapped the writing in a wax cloth and put it in a cake or loaf of wax, I dropped it into the barrel, which I made secure with hoops and cast into the sea; and all thought this was an act of devotion.

Along the top of that page Dee wrote, "Note these Practices to saue his Letters and Aduertisements to the King of Castile."¹⁹

Geographical and navigational notations were themselves subject to uncertainty, as previously canonical texts and previously current maps were being rendered obsolete by new experiences.²⁰ Not surprisingly, Dee's marginalia display a constant concern with Columbus's itinerary; with the distances he travelled and the means he used to measure them; and with the location of various points in the New World. For the Spaniards and their competitors, the most celebrated and contested location was, naturally, their first site of contact. Dee identified this spot in Ferdinand's narrative

by noting, “The first place of the Spaniards inhabiting and the Rutter [or directions] how to arrive at it.” In several places, Dee commented on Columbus’s mistaken landfall: he drew special attention to the passage, “[he] was mistaken in his belief that the first lands to which one would come would be Cathay and the empire of the Great Khan.”²¹ Given his own goal of finding a way around the Americas to Cathay – which was, after all, the initial purpose of Frobisher’s voyages – Dee was extremely attentive to Ferdinand’s summary of classical and medieval sources on the subject (particularly those that had led to Columbus’s mistake).

Columbus’s reckonings – and Ferdinand’s accounts – were full of inconsistencies, and Dee was careful to note “A marvaylous error in Latitude”,²² a “great error in Mariners reckoning”,²³ and a “Diuersitie in Reconing”.²⁴ His own work on the science of navigation, especially in the polar regions, brought him up against the vexing problem of magnetic variation; and at several points he drew attention to “the variation of the Cumpas.”²⁵

There was almost as much variation in Columbus’s place-names as in his reckoning; and in a string of notes Dee struggled to sort out the group of names apparently given to single islands, and the single names given to groups of islands. When Ferdinand names several “sub-polar islands” in Chapter 9 – such as Friseland, Greenland, and (most important for Dee’s claims on behalf of a British Empire) St. Brendan’s Isle – Dee’s pen was predictably active.

Elsewhere I have discussed Dee’s reliance on, and propagation of, the myth that 300 years before Columbus, the Welsh Prince Madoc sailed to America and left behind a tribe of Welsh Indians.²⁶ One of the main lines of proof for this surprisingly persistent myth was a perceived similarity between the Welsh language and certain Native American dialects. In Gwyn Williams’s fascinating account of this story, there is a chapter entitled, “Marginal Madoc”²⁷ – and Madoc makes several appearances in the margins of Dee’s Columbus. In the bottom margin of sig. M7^v, Dee speculated that the word “Zaunia” derived from “the Welsh pronunciation of Iohn,” and that “Huino” was “perhaps so named of some Owen which cam with Madoc ap Owen Gwynned.” When Ferdinand reported that the Indians recite the names of their ancestors, Dee found another Welsh parallel: “Note [...] custom of [...] rehersing the names of theyr parents [...] after the Welsh manner.”

These linguistic fantasies notwithstanding, it should be clear that Dee’s concerns were remarkably pragmatic. There is very little attention, here, to prophecy or the supernatural – and, indeed, surprisingly little in the way of wonder, which Stephen Greenblatt has identified as the primary mode by which early modern Europeans apprehended the New World and its inhabitants.²⁸ In his related annotations in André Thevet’s *Cosmographie Universelle*, by contrast, Dee was more clearly interested in novelties and curiosities, noting the people of Madagascar who live to the age of 160, “the first Invention of Letters Hieroglyphic,” and the people of Zipangu [Japan] who “eat flyes.”²⁹ Dee’s Columbian marginalia focus above all on Columbus’s practical methods and “policies” – perhaps the most commonly used word in the notes (after, of course, “nota/note” itself). Some of these concern the voyages them-

selves, as in Dee's notes on the number of men on the ships or the reward for the first man who spotted land. Others concern the establishment of a colony on that land: he notes descriptions of forts and deliberations about leaving men behind. Most, however, are policies for successful interaction with, and exploitation of, the indigenous population. Dee identifies tricks for securing the faith of the people, extracting information from them, and – what would become the most familiar colonial scenario of all – exchanging worthless trinkets for valuable commodities.

A sickening number of these practices that Dee labels "policies" entailed the forceful seizure of natives: on G6^r Dee noted that "7 interpreters [were] taken," on H3^v that "12 indians [were] taken," on H7^v that "a woman [was] gotten," on H8^v that "An indian in a canoe [was] taken," and so on. This, along with the detailed discussions of how to procure the natives' permission to leave men behind, and how many men were needed to keep that colony safe, takes us close, once again, to Frobisher's own voyages, in which a total of four Inuit natives were seized (one of whom while still in his kayak), and which – had not a ship gone down carrying building materials and provisions, would have led to the first English winter colony in the New World.

Frobisher's venture is also invoked by Dee's careful attention to any mention of gold. Gold was the master commodity and at least the indirect object of all European exploration, so it is not surprising to find Dee noting "a shew of gold"³⁰ and, later, a "great quantity of gold".³¹ But, more specifically, Dee attended to the fact that gold was accidentally discovered on Columbus's first voyage and that in subsequent voyages hired labourers from Spain were taken to mine the ore – a sequence of events which would be precisely replayed in Frobisher's voyages, whose first voyage created an unprecedented gold rush and whose second and third voyages were equipped primarily as mining ventures.

Not all of Dee's notes were quite so ruthless about the domination of the New World. Annotations in the *Life of Columbus* and related volumes reveal Dee's fascination with natural phenomena: at one place he noted, "Flying fish" in the margin,³² and along the edge of another page he jotted, "Melons in two monthes grown; Cucumbers in 20 dayes; Wheat in a month."³³ He was also capable of a more sympathetic attitude toward the native population: he noted several descriptions of the people (especially those of Cuba, as opposed to the hostile "Caribi") which described them as gentle, tractable, and apt to learn languages; and compared their social and religious institutions favourably to those of Europe.

But one senses that this is less ethnographic admiration, of the sort found in Thomas Harriot's *Brief and True Report of the New Found Land of Virginia* (1588), than an attempt to play up the atrocities committed by the Spanish *conquistadores* on an innocent population. Ferdinand was not especially concerned with screening out Spanish abuses (except those that directly implicated his father), and his text provided much fuel for Dee's anti-Spanish sentiments. He identified several descriptions of what he labelled "ill rule" among the colonists, such as the point in the narrative when Columbus returned to Española and "asked about the Christians

he had left there and was told that some had died of sickness, some had separated from the rest, and [...] all had four or five wives apiece.”³⁴ Dee suggested in the margin of Q3^v that the Spaniards were too harsh in punishing the Indians and too lenient with their own men, and observed that “The Indians [were] seduced by the Spaniards to vse violence.”³⁵ When Ferdinand suggested that “The Admiral would not permit his men to take anything [...] [so] that the Indians might not regard the Christians as thieves,” Dee quipped, “Wel done if you had kept that rule allwayes.”³⁶ And when Ferdinand reported that some of the settlers had almost degenerated into cannibals themselves (“some, like Caribs, proposed to eat the Indians aboard [...] and would have done it, too, if the Admiral had not forbidden it, saying that as [...] human beings, they should not be treated worse than others”) Dee scathingly remarked, “Well sayd, if you allwayes made such account of them.”³⁷

But Dee saved his most vehemently critical, and explicitly political, outbursts for Ferdinand’s frequent assertions of Spain’s claims to territorial possessions in the New World. Dee was well aware of the obstacle the Spanish claims presented to his “discovery and recovery enterprise.” What he did with Ferdinand’s account is the textual equivalent of Francis Drake’s piratical raids on Spanish ships: he learned what he could about the various methods of taking possession (the legal procedures, military strategies, ritual dedications, etc.) before refuting the validity of their application to Spain.³⁸ On L5^v Dee wrote along the top margin, “A more close and just title by the Popes gift then by force of sword: neyther good, as it was vsed,” and alongside the text on that page he entered two simple words – “Possession” and “Noe,” echoing a marginal note from several pages back, “No good Possession.”

Ferdinand’s text ends with a brief section, probably added by the translator, which describes Columbus’s funeral and celebrates his legacy. On these last few pages Dee hung a final string of objections: “Where?”, “Note Lyes”, “Note this Aequivocation”, “By what justice?”. In the end, Dee could only match the text’s triumphant conclusion – “History knows of no man who ever did the like, wherefore the world will ever remember the first discoverer of the West Indies” – with a final, emphatic “Not true.”

III

As in the sources I have discussed in my previous accounts, this encounter reveals a Dee who is more concerned with advocating policies gleaned from his reading of historical texts than with establishing “a quasi-mystical, quasi-scientific, quasi-religious world order” based on his own prophecies.³⁹ Nevertheless, history and prophecy are inextricably linked in Renaissance thought and its extensions into the New World; and there is evidence to suggest that, for at least a brief period, Dee gave in to a “prophetic impulse” not unlike that which had driven Columbus to the ends of the earth. Djelal Kadir’s provocative study, *Columbus and the Ends of the Earth: Europe’s Prophetic Rhetoric as Conquering Ideology*, describes Columbus’s “self-perceived role as providential agent with [...] a prophetic task”,⁴⁰ in which he is “the elect hero and privileged emissary to play out the last and climactic act of this cosmic theater.”⁴¹ And, in a useful paper describing the 1583 angelic conversations

which accompanied (and to some extent explained) Dee's departure from England and his withdrawal from the imperial projects he had helped to set in motion, Stephen Clucas finds a new strain of apocalyptic prophecy: "Dee hoped for a divine millennial comedy," he concludes, "whose catastrophe would be universal forgiveness and the apotheosis of his nation."⁴² While I clearly underplayed these important sources in my previous account of Dee's role in English imperial expansion, I remain wary of a tendency to mystify the terms of Dee's highly rhetorical conversations (angelic and otherwise), and to project them onto circumstances in which they may not apply.

In tracing the parallels between Dee's and Columbus's projects there is a danger of collapsing the differences between the two explorers, as well as obscuring the particular circumstances of their own lives. Kadir suggests that "the prophetic impulse exhorts peregrination to the peripheries, to the thresholds or liminalities of time-space [...] It obliges one to live beyond one's present and [...] in an untenable terrain."⁴³ This certainly applies to the exploration represented by Dee's angelic conversations as much as to the voyages of Columbus. But it is not much help in placing Dee's encounter with Columbus; and I would suggest that we need to attend to a different, and more precise, set of time-space coordinates. Like England's interest in the New World in general, Dee's Columbian encounter was belated and second-hand. His exploration, which took place in the margins of a book in a library, was that of the armchair traveller. And it took place at a moment of significant political and professional insecurity.

In a discussion of Columbus's prophetic writings published the same year as Kadir's, Valerie Flint offered a different reading of his prophetic posture: she suggested that "the great need he had for a 'finem honestum' [honest end], a justifying higher motive for his pursuit of gold for his sovereigns and rewards for his family [...] might bring us to look now with new eyes upon the nature of Columbus's attachment to the [apocalyptic and messianic messages]."⁴⁴ Other work on prophecy in the early modern period has stressed that it was usually deployed by marginal figures, and while it was usually concerned with some form of national legitimation it was also a means of personal legitimation.⁴⁵ We may not think of figures like Dee or, especially, Columbus as marginal figures in need of legitimation; but they felt, and expressed, this need acutely. Despite the status which their explorations granted them, both Dee and Columbus – like Doctor Faustus – were ultimately bound by the constraints of service.

There is, in fact, one significant moment of sympathy in Dee's Columbian marginalia, where he wrote "True" rather than "Not true" – and it concerned Columbus the frustrated advocate of exploration rather than Columbus the celebrated prophet of empire. In the early chapters of the work, Ferdinand recounted how Columbus made the rounds of the European courts seeking a patron for his voyages – including England's own King Henry VII (whose counsellors Dee faulted for losing this opportunity). The passage which evoked Dee's sympathetic agreement concerns Queen Isabella's reluctance to invest and reads, "As for the foolish argument that it would discredit the Queen to have contributed to the project

in case the Admiral did not fulfill his promises, he was rather of the opinion that the Sovereigns would be regarded as generous and high-minded princes for having tried to penetrate the secrets of the universe [...].”⁴⁶

The work of Mary Helms throws some light on the position that Dee and Columbus found themselves in, which was at once powerful and precarious. In her book, *Ulysses' Sail*, Helms traces an association, in pre-modern cultures, between esoteric knowledge, travel, and socio-professional status: “To the extent [...] that geographically distant places, peoples and experiences are perceived [...] within essentially supernatural or cosmological contexts, then knowledge of, or acquaintance with, geographically distant places, peoples and things rightfully falls within the domain of political-religious specialists whose job it is to deal with ‘mysteries’.”⁴⁷ Lisa Jardine and Jerry Brotton have recently applied Helms’s insights to the world of Renaissance ambassadors;⁴⁸ but they may be even more applicable to less official, more mysterious emissaries like Columbus and Dee.

IV

In justifying his own “desire to speak with the dead,” Stephen Greenblatt explains that “the dead [have] contrived to leave textual traces of themselves, and those traces make themselves heard in the voices of the living. Many of the traces have little resonance, though every one, even the most trivial or tedious, contains some fragment of lost life; others seem uncannily full of the will to be heard.”⁴⁹ It may well seem that the traces of Dee’s marginal encounter with Columbus are more trivial and tedious than uncannily full of the will to be heard, and it is easy to be disappointed by such texts. It should be clear even from the *Life of Columbus* that Dee’s annotations lack, for the most part, the personal, creative, and emotional intensity that modern readers have come to look for in engagements with texts. Likewise, they may seem less resonant than the dramatic stories of exploration and piracy which have sustained and shaped Elizabethan maritime history.

But if they are seen in the context of a range of transactions – if they are set alongside not only the texts which they annotated but the explorations which they informed – such marginal texts do afford an unexpected intimacy and vitality. They may also take us closer to the important ways in which texts mediated both personal lives and power politics in the early modern period. And, finally, in what they do if not always in what they say, they may be an unexpected key to the “secrets of the universe” that Dee and Columbus tried to master and offer both to their patrons and to posterity.

NOTES

¹ *Historie Del S.D. Fernando Colombo; Nelle quali s'ha particolare, & vera relatione della vita, & de' fatti dell' Ammiraglio D. CHRISTOFORO COLOMBO, suo padre* (Venetia, 1571). First published in Italian thirty-two years after Ferdinand's death, this text took an appropriately eccentric route to the press. Ferdinand wrote his account in Spain and in Spanish, but it remained unpublished during his life. After his death in 1539 the

manuscript found its way into the hands of the Genoese physician Baliano de Fornari, who finally took it to Venice to be translated by Alfonso Ulloa. When Fornari died, not only were the projected Spanish and Latin editions abandoned but the Spanish original was lost. For a useful account of the text, and a listing of recent editions, see the English translation of Benjamin Keen, *The Life of the Admiral Christopher Columbus, by his Son, Ferdinand* (New Brunswick, NJ: Rutgers University Press, 1958; repr., 1992), whose edition I cite throughout.

² Dee traveled to the Continent in 1571 to consult with doctors about the queen's illness, and it is possible that he acquired the book on that trip.

³ See *R&W* 1101. The entry reads, "Historia del mondo nuovo di Fernando Colombo. 8o Ven. 1571." This misleading description might be explained by the full title of the work: after "suo padre" the title-page continues, "Et dello scoprimento, ch'egli fece dell'INDIE Occidentali, dette MONDO NUOVO, hora possedute dal Sereniss. Re Catolico." If we imagine the title-page being quickly scanned during a hasty inventory, it is easy to see how the words "historia" (the first word) and "mondo nuovo" (in all caps) would be picked out.

⁴ The British Library has three copies of this text: the one containing Dee's annotations is shelf-mark 615.d.7.

⁵ I want to thank Julian Roberts for confirming my attribution. See his comments in his essay in this volume.

⁶ William H. Sherman, *John Dee: The Politics of Reading and Writing in the English Renaissance* (Amherst: University of Massachusetts Press, 1995), Chapter 7.

⁷ See especially E. G. R. Taylor, *Tudor Geography, 1485-1583* (London: Methuen, 1930) and D.W. Waters, *The Art of Navigation in England in Elizabethan and Early Stuart Times* (London: Hollis and Carter, 1958).

KAREN DE LEÓN-JONES

JOHN DEE AND THE KABBALAH

IS THERE A CHRISTIAN KABBALAH ?

Recent scholarly debate on the impact of the Kabbalah, a form of Jewish mysticism, on the development of early modern Christian thought has been divided over whether the reception of the Kabbalah was motivated by philo- or anti-Semitism. Even in the same volume, contrasting opinions may be upheld by critics.¹ Debates are welcome, however, as they demonstrate not only the recognition of influence of Judaism on Christianity, but also because they show the progress made not only by scholarship on Jewish-Christian relations but also in what was once called the “occult philosophy”. The degree of detailed research indicates that no one seriously doubts that there were Christians not only familiar with Jewish Kabbalah but who considered themselves to be practicing Kabbalists while remaining wholly within whatever form of Christianity they embraced, whether Catholic or Protestant. Current research into the Jewish tradition and its relationship to Christian thought by scholars of the calibre of Moshe Idel and David Ruderman² has moved a long way from the initial groundbreaking studies of Gershom Scholem on Jewish mysticism and Kabbalah, or from Frances Yates, Paolo Rossi and D. P. Walker, who first mentioned the more “esoteric” and pluralistic aspects of *prisca theologia* in Christian intellectual circles and whose writings are now familiar to anyone undertaking the study of early modern thought. Yates in particular played an important role in signalling the presence of the Kabbalah in the Neoplatonic circles in England and on the Continent, inspired by the Italian School founded by Marsilio Ficino and Giovanni Pico della Mirandola.

Undoubtedly there were Christian practitioners of the Kabbalah. Pico was most likely one of them, however Ficino, who initially introduced the Kabbalah in his philosophical writings, was certainly not one of them. The issue of who is a Kabbalist is a complex one, as there is no consensus among scholars as to how to define the term. Each critic or historian has used the term “Kabbalist” differently, sometimes to indicate Christian Hebraic scholars who focused specifically on recuperating, translating and commenting Jewish Kabbalistic works, sometimes simply to indicate a Christian thinker who makes essentially very general remarks on the subject. Kabbalah was common knowledge in the sixteenth century.

I would argue that it was an intellectual trend that can be compared to the popularity of some critical methodologies in the twentieth century, particularly to some of the hermeneutical approaches such as Deconstructionism, that can be found in more or less complex forms in the writings of scholars and critics who more or less

grasp the material. Thus I hesitate to apply the term “Kabbalist” to any thinker, especially Christian pluralists or syncretists of the early modern period, preferring instead to consider each case individually, keeping in mind that Kabbalah is a phenomenon of the sixteenth century intellectual world. I must emphasise that I do not, *a priori*, assume or exclude the possibility that Christians can be Kabbalists: rather I accept that there is a form of Christian Kabbalah, and Christians who considered themselves practitioners or at least initiates. Whether present scholarship or they themselves would have used the term “Kabbalist” to designate themselves, is another question.

Among the thinkers Yates labelled a “Christian Cabalist” is the mathematician John Dee. In the sixteenth century many mathematicians, for example, Johannes Kepler and Tycho Brahe, were familiar with at least the reputed numerological aspect of the Kabbalah, although the greatest mathematician interested in the Kabbalistic tradition was probably Leibniz, a century later. Ever visionary in her scope, the basic premise of Yates’s famous work, *The Occult Philosophy in the Elizabethan Age* argues in favour of a significant and widespread influence of the Jewish tradition, that is the Kabbalah, on Elizabethan thought: she even approaches the somewhat tricky issue of philo- versus anti-Semitism.³ For Yates, Dee is part of an establishment context of Kabbalah that permeates all of his *opus*: from mathematical speculation to imperial propaganda, and of course angel magic. Of his stance on the Jews, she is rather silent, as in fact there is little material for discussion given that Dee’s writings on Kabbalah are nearly asemitic. While I disagree that Dee is an inherently and intrinsically Hermetic-Kabbalistic thinker, let alone necessarily a true “Christian Cabalist”, I do agree with Yates’s insistence that Dee’s use of Kabbalah is intrinsic to his mathematical theorizing, as outlined in his early works on Euclidean geometry. As Yates rightly pointed out, the extant texts that designate Dee’s familiarity with Kabbalah are his renowned preface to Euclid’s geometry, his *Aphorisms* and the *Monas Hieroglyphica* in which he puts forth a clear argument for the mathematical basis of Kabbalah.

IS JOHN DEE A KABBALIST?

In his *Monas Hieroglyphica* (1564), Dee proposes what he terms the “real Kabbalah”, to set himself apart from the Christian Kabbalistic tradition. In doing so, the uniqueness of his interpretation and the lack of self-definition as a Kabbalist make it difficult to define him as such. Like many of his contemporaries, Dee was familiar with the Christian form of Jewish mysticism known as the Kabbalah, which came into vogue in Renaissance Christian philosophical circles after Giovanni Pico della Mirandola’s publication of the (in)famous *Conclusions*. Various Christian Kabbalistic texts by Pico, Johannes Reuchlin and others were owned by Dee,⁴ even some Jewish ones (those that circulated more freely in Christian circles), often with elaborate commentary. Of the Christian adaptations of the Kabbalah, the thinkers most influential on Dee have already been identified as most likely to have been Cornelius Agrippa and Reuchlin, two of the most renowned thinkers of the period, known even among Jewish Kabbalistic circles. Reuchlin’s *De arte cabalistica* (1517) and Agrippa’s *De occulta philosophia* (1533)⁵ were *de rigueur* reading, often

treated as textbooks or reference guides, for aspiring students of the Kabbalah. The general influence of Reuchlin on Dee, well documented by scholars and attested to by the numerous heavily annotated works by him present in Dee's personal library, will be discussed later. For now it is crucial to make the point that the influence of Reuchlin's Kabbalistic precepts is manifest in Dee's careful definition of the term "Kabbalah" that implies Reuchlin's differentiation of the significance of the term "Kabbalist" and its employment.

In the preface to the *Monas*, Dee claims that the Jewish Kabbalah focuses on "what is said", and is based entirely on grammar, while his is a Kabbalah of "what is."⁶ Therefore Dee consciously sets himself apart from what he considers traditional Christian Kabbalists, emphasizing his differences with them and the uniqueness of his work, rather than points in common. Among these traditionalists are all the Christian Hebraists, who learned Hebrew, often from a converted Jew or New Christian, so as to study the original text of the Old Testament and the Kabbalah. The trend was started by Pico, who learned Hebrew and was initiated into the Kabbalah by the New Christian Flavius Mithridates.⁷ Many others followed, especially in Italy, where there were notable Jewish thinkers of a Neoplatonic and Kabbalistic bent such as Leon Ebreo and Johannes Alemanno (who knew Ficino), to name a few, and where for a period relations between the faiths permitted intellectual exchange.⁸

A Hebraist, Reuchlin himself was heavily influenced by the Italian Neoplatonic School of the fifteenth century originating in Ficino and Pico, seen by him to have directly inherited the Jewish Tradition.⁹ Skilled in the language, Reuchlin published a Hebrew grammar and dictionary, for beginners and specialists alike. Although inspired by Pico's pluralistic vision, his philological knowledge of Jewish texts surpassed Pico's, as does his mathematical interest. It is likely that Dee was more influenced by Reuchlin in his Kabbalistic thinking than by either Pico or Agrippa.¹⁰ Let us not forget that Dee's analysis of Kabbalah is intimately linked to his mathematical theories based on Euclidean geometry and Pythagorean theorems. It was Reuchlin who ably defended the idea, inherited by the Italian Neoplatonic School in a mathematically undeveloped form, that Pythagoreanism was directly related to Jewish Kabbalah.¹¹ He goes so far as to have one of the characters in his famous dialogue, *De arte cabalistica*, define Pythagoreanism in the same manner as Kabbalah: "The Pythagorean is he who gives credence to what is said, remains silent to begin with, and understands all the precepts."¹²

By approaching the Kabbalah in a highly mathematical manner, playing on and developing Kabbalistic hermeneutic techniques, and transforming them into scientific proofs, it is clear that what Dee develops in his Kabbalah are the Pythagorean precepts, that Reuchlin already argued were Kabbalistic in his *De arte cabalistica* (1517). Probably Dee's primary source for the *Monas Hieroglyphica*, it is the only work by Dee that he claims as "Kabbalistic". For Dee, Reuchlin's work exposes the "real Kabbalah" precisely by demonstrating the proofs of the validity of Kabbalah in Pythagorean-like theorems. In Book Two of his *De arte cabalistica*, for example, Reuchlin argued that Pythagoreanism had its origins in Kabbalistic doctrines, concluding that Pythagoras had gleaned his ideas concerning the creation and

use of symbols from Kabbalah, and that he employed the techniques of *gematria*, *notarikon* and *temurah* to derive such things as the Tetractys or Quarternary. Accordingly, for Reuchlin the Kabbalah is a sort of symbolic theology, where words and letters are codes for other things found in Nature. In a more radical interpretation, Dee reduces Reuchlin's definition of the Kabbalah to one universal symbol that contains all the theoretical power of the universe: the hieroglyph of the Monas. The symbol of the Monas encompasses all of the elements of the structure of the universe, all of the theories that illustrate the process of Creation, and contains all of the revelations of the primary sources whether mathematical, philosophical or technological.

If the Monas contains the revelations of the Kabbalah, does this make Dee a Kabbalist? Conveniently, the question of who is and is not a Kabbalist is an ancient one, that Reuchlin attempted to resolve in the following manner in his *Ars*:

Kabbalah [*Cabala*] is a matter of divine revelation handed down to further the contemplation of the distinct Forms and of God, contemplation bringing salvation; Kabbalah is the receiving of this through symbols. Those who are given this by the breath of heaven are known as Kabbalics [*Cabalici*]; their pupils we will call Kabbaleans [*Cabaleos*]; and those who attempt the imitation of these are properly called Kabbalists [*Cabalistæ*]. Exactly this, day by day, they sweat over their published works.¹³

A clear hierarchy, separating the mystic believer from the lay receiver, with a barb at the academics who publish on the material. Already in his time, Reuchlin saw the diffusion of Kabbalah. The last category is seemingly the one Dee fits into, as he is not obviously a receptor of divine revelation in his Kabbalistic writings: one may argue that he is in his angel communications, but these works are marginally related to Kabbalah, at best. We shall see that although his knowledge of Kabbalah itself is certainly of the latter kind, thus of a Kabbalist in the Reuchlinian sense, Dee's aspirations would be to be considered someone who has achieved the symbolic stratum of the Kabbaleans.

For our purposes, as twentieth-century scholars of the Kabbalah, the term "Kabbalist" no longer has the meaning intended by Reuchlin as the tripartite distinction is not made. Yates certainly did not make such distinctions; she also certainly thought of Dee, among others, as a practitioner of what she terms "natural magic" or the "Hermetic-cabalistic" magic. Unfortunately, none of these definitions are entirely satisfactory, as even if consensus were achieved on categories of Kabbalistic practice or influence, the degree of initiation would nonetheless remain an issue. Sixteenth-century thought (I use the term carefully, as this comprises philosophy, theology, mathematics and sciences) is full of Kabbalah, in the loosest possible sense of the word. Encyclopaedias and dictionaries of the time employed its terminology or at least had a reference to Kabbalah. The first Kabbalistic texts printed were published by Christians, presumably because there was a market for them.¹⁴

My hesitation in labelling Dee or any Christian thinker who does not declare himself a Kabbalist as well as my arguments against Yates's labelling him and others as such, has been discussed at length elsewhere;¹⁵ essentially, it lies in the

facile access to and use of some Kabbalistic jargon or ideas during the sixteenth century that do not carry much philosophical or theological weight. Because Dee's otherwise prolific writings on the subject of the Kabbalah are limited to three short works with no significant carry over to others and because he is not interested in arguing in favour of a Kabbalistic vision of the Monas or espousing a Kabbalistic approach to English Protestant theology, I do not consider him a Kabbalist.

This said, I do not diminish the importance of the Kabbalah in the three works influenced by it: the preface to Euclid's geometry, Dee's *Aphorisms* and *Monas*. I will even go so far as to claim that these works do more than testify to the general diffusion of the Kabbalah in Elizabethan intellectual circles, but are a unique and interesting example of religious and scientific syncretism in the period. Where I draw the line is to declare that the *Monas*, the most complex and complete of the three works, is a radical new contribution to the development of Christian Kabbalah or that the Monas is a vehicle for Dee's personal and distinct Kabbalistic revelation. Kabbalah, as defined by Dee, is too real, the way numbers are invisible but "real", for it to transmit the inexpressible wonder and awe of Creation at the basis of the worship of the Judeo-Christian divinity.

To the question "Did Dee consider himself a Kabbalist?" I would answer in the negative. By carefully distancing himself from Christian Hebraicists, in vogue at the time in Reforming circles such as that of Philip Sidney, Dee emphasizes the scientific rather than the mystical concept of Kabbalah, that voids it of its particularly Jewish character and in turn eliminates all the pro-Reform rhetoric often associated with Christian Kabbalah. The rapture inspired or sought by the Kabbalah among Christians is well documented, one has only to think of the writings of Giordano Bruno, in the 1580s, who fused science with mysticism, whose polemical tone urged a reform of Christianity. What is original to Dee, is that the mystical language associated with the Kabbalah is totally lacking in the *Monas*. It is replaced by the use of Kabbalistic terms such as *gematria*, *temurah* and *notarikon* associated with numerologically based hermeneutical techniques. These are carefully interpreted in a Pythagorean vein, to disassociate the Kabbalistic techniques from their exegetical or grammatical use, and rather to emphasise their mathematical value. Through the Kabbalah, whose number mysticism is often reduced in its Christian form to number symbolism, he aspires to provide a new universal symbol whose mystical potential also has mathematical credibility. By doing so, Dee takes further the Christological interpretations of Kabbalistic precepts begun by Pico: the prophetic voice of the Kabbalah that Pico describes is here redefined and contained in the symbol of the mathematical universe, the monad, that Dee calls a cross. Although it is Reuchlin who stated that Kabbalah provides the symbolism that is the absolute basis of life,¹⁶ for him this is also a declaration of faith. For Dee, it is the generating life force of the universe, which derives from the divinity but is neither a definition nor a description of God. Crucially, the Monas is not a symbol to interact with, as the *sefirot*, manifestations of the divinity, may be for the Jewish or Christian Kabbalist. Without creating a direct relationship with the divine, at the basis of Reformed Christianity, the symbol of the Monas may have Christological and cosmological implications, but it is not a meditative device for the faithful to focus their belief upon.

This is a startling deviation from most Christian Kabbalistic thinkers, who place themselves in a long line of Jewish and Christian Kabbalistic authorities, and insist on the precedent not the innovation. Earlier generations of Christian Hebraicists hunted for rare and unpublished, untranslated Hebrew texts that could deepen their acquisition of the language as a means of penetrating the mysteries of the Kabbalah, forcing it to reveal the universal Truth of Christian fulfilment of Biblical prophecy. Rather than seek to translate and publish Hebrew works, Dee presents himself as the publisher of Pythagorean theorems and Euclidean Geometry: it is a return to the Greek basics. Kabbalah derives from and depends upon Greek culture, precursor in its own right of the Christian rationalist tradition. Furthermore, Dee is sidestepping the great debates of his time, centred around the Aristotelian School at Oxford and the Platonic school often associated with Christian Hebraicists, by returning to pre-Socratic thought. This said, again Reuchlin offers an alternative, by defending Pythagorean mathematics with the statement that the Arab mathematician Abubacher claimed that “Mathematical knowledge was still not perfect at the time of Aristotle.”¹⁷ Thinkers like Bruno who were contemporaries of Dee will resolve the issue differently, proposing a syncretic model that absorbs all of the above. Nicholas Clulee has convincingly outlined Dee’s polemic against traditional Kabbalah, and the fact that Dee retains only the link between Grammar and Mathematics, which Dee discusses in his Dedication to the *Monas*. Rather than basing his Kabbalah on language, Dee’s “alphabet of nature”, as most scholars agree to define it, is based on Euclidean Geometry and Pythagorean mathematics. Thus the “real Kabbalah” according to Dee is a mathematical Truth that can be proven concretely by numbers and spiritually in the profound revelations it offers as to the source of the power of Creation. The “Kabbalah of what exists” is a revelation of the potential of human knowledge and comprehension, as all the Arts are united in it, whose ultimate source may be God, but whose power is comprehensible and quantifiable. Dee approaches the Kabbalah as mathematics, treating the Kabbalistic principles he espouses as if they were theorems or hypotheses, while at the same time universalising his Kabbalah as an all-inclusive discipline. Dee then, is not easily labelled a Kabbalist, or even a Kabbalistic thinker, but one who utilizes certain specific aspects of the Kabbalah in a unique manner. It is precisely in this innovative interpretation of traditional Kabbalistic principles or techniques that the significance of the “real Kabbalah” postulated by Dee lies.

Ironically, creativity and innovation are what make it problematic to label Dee a Kabbalist. The term has certain implications. It implies adherence to certain practices and beliefs that Dee did not share. At the very least, those thinkers generally labelled Christian Kabbalists were dedicated to the study of the Hebrew texts, to promulgation and commentary much in the same manner as their Jewish models: two outstanding examples of this are of course Pico and Johannes Reuchlin. The term also implies the development of a Christian Kabbalistic system that incorporates within a syncretic philosophy the fundamental principles of the Jewish texts. At the basis of this system is always the cosmology of the *sefirot* that reveals the secret Names or aspects of God, and that when contemplated and meditated on lead to a direct mystical union with the Deity. Few of the Christian thinkers who delved into the teachings of the Kabbalah could really be labelled Kabbalists. Most

Christians interested in Kabbalah avoided delving more than necessary into the often obscure depths of the discipline, relying predominantly on Christian texts and applying the art in a wholly superficial manner. At best they may be deemed Kabbalistic thinkers, not Kabbalists. In the case of Dee, his specific interest in the *Monas Hieroglyphica* in the Kabbalah of Creation, and his reduction of the Kabbalah to *gematria* transforms this contemplative, mystical art into a mathematical discipline: into the “Kabbalah of reality” wherein lies the power of Creation. It is impossible to consider him a Kabbalist when he does away with so much of the fundamental character of the Kabbalah, whether in its Jewish or Christian form.

MONAS HIEROGLYPHICA

Dee comprehends and interprets the Kabbalah in a context different from that of both his predecessors and contemporaries. Schooled in the pluralistic Humanist tradition, that united Neo-Platonism, Neo-Pythagoreanism, Hermeticism, Alchemy and Kabbalah, Dee is actually at the cusp of modernity that will take the Humanist tradition further into a syncretic whole. He will transform syncretism into synthesis. What sets Dee apart from his contemporaries is the extent to which he “mathematicizes” his peculiar version of the Kabbalah, essentially eliminating from it the usual cosmological, exegetical, mystical and prophetic aspects that fascinated Humanists. A mathematician of some note, expert in navigation and optics, Dee is a thinker of what now would be termed a “scientific bent”, curious about the workings of nature, in all its manifestations and ramifications. His curiosity encompasses metaphysics and mysticism, Euclidean geometry and communications with angels to get at the primordial mystery of Nature: and it is precisely in this seemingly paradoxical union, typical of early modernity, that Dee must be understood.

Two aspects of the Jewish Kabbalah primarily interested Christian thinkers: the cosmology of the *sefirot* and the magical/mystical manipulation of the Hebrew alphabet. Dee eliminates from his Kabbalah the ten emanations or Names of God, the *sefirot*. Dee never mentions the ten emanations by name, which is extremely significant, as they are the basis of Kabbalistic cosmology, as well as ten of the Names of God, and are the most popular adaptation of the Kabbalah amongst Christian thinkers. Unlike his contemporaries, obsessed with the multiplication of cosmological systems to structure their universe, Dee never brings in the *sefirot*, even though they are also known as the divine numerations, and we shall see that Dee is interested in the mathematical basis of the Kabbalah.

What Dee retains of the Kabbalah in the *Monas* are the three hermeneutic techniques, based on the manipulation of letters, that result in numerical calculation: *gematria*, *notarikon*, and *temurah*. *Gematria* is the calculation of the numerical equivalent assigned to each consonant of the Hebrew alphabet (*aleph*, the first consonant equals the number one) so that words that are different in linguistic significance are equivalent numerically, and thus semantically linked. *Notarikon* is the representation of an entire word by any consonant that makes up its root (vowels are not written), usually the first letter of the word. (An excellent example of this is Dee’s use of the Greek letter *delta* to represent his name.) *Temurah* is the exchange

of one consonant for another, much like a basic code, so that words are rewritten not in the letters that phonetically represent the sound, but using other letters assigned to represent the sounds (b for d, d for f).

Ultimately, the purpose of much Kabbalistic speculation is to imitate the act of the Creation of Adam and produce an artificial anthropoid, shaped from clay: the *golem*. At the very heart of certain Kabbalah is the explication, interpretation and commentary on Creation for a practical purpose. Already early texts like the *Sefer Yetzirah* and the *Bahir* reveal the secrets of not only God's Act, but on how the worthy may create or animate a *golem*. In the early Jewish texts the consonants of the Hebrew alphabet serve as not only the vehicle for the primordial Creation, but for the creation of the *golem*. After fashioning a figure from clay, the Kabbalist inscribes on the forehead three letters, א מ ט, (*aleph, mem, tav*) that form the word *emet* (truth). Afterwards, the Hebrew alphabet, in all its permutations including the vowel-consonant combinations, is recited, to animate the being. The *golem* contains all the permutations of the alphabet, like the Monad. The difference is that the creature itself cannot create, for it is sterile. In essence, this is an imitation of the biblical account of the creation of Adam. Thus the Theorems are Kabbalistic because they too replicate the act of Creation by creating the symbol of the Monas. That is to say, the symbol of the Monas is a sort of *golem*, within the Kabbalistic tradition, and also tied into the alchemical tradition of the creation of the homunculus. The adept or initiate who assembles, through Dee's Theorems, the hieroglyph of the Monas may animate it in the fashion of the Kabbalists animating the *golem*: by inscribing the Truth (*emet* in Hebrew), on the figure. *Emet* appears repeatedly in other works by Dee, such as *De heptarchia mystica* as a Seal and a divine Name, which reconnects the *Monas Hieroglyphica* with Dee's angel magic and other speculations.

Dee himself declares the hieroglyphic Monas to be, among other things, "Kabbalistic", and claims that the text will explicate the figure "mathematically, magically, cabalistically and anagogically."¹⁸ Clulee rightly defines the Monas as "a powerful hieroglyph revealing the unity of created nature and embodying the unity of knowledge about the unity of creation."¹⁹ Dee attempts to contain in one symbol the process of Creation, confident that the unity of creation is revealed through 24 theorems based on the 24 Metatheses of the Pythagorean Quaternary. Through the theorems with which he assembles the hieroglyph of the Monas, Dee attempts to demonstrate the primordial act of Creation, with the intention of containing the potential of creation. These theorems are reiterations of Euclidean and Pythagorean principles, with which Dee was intimately familiar. Pythagoras assumes number to be the indisputable, fundamental component of what exists. What is Kabbalistic about Dee's theorems is the method behind their construction, which is an expansion of the hermeneutic techniques of *gematria*, *notarikon* and *temurah*. By adapting techniques traditionally applied to textual analysis, often in the context of interpreting Genesis, Dee underscores the fact that his work concerns the process of Creation. By applying techniques of biblical exegesis to his Theorems, Dee explicates a "creationist Kabbalah" that defines what is, how it came to be and how it may come to be. Dee is the first thinker to attempt the construction, mathematically proven in 24 theorems, of a symbol of Creation, and is unique in suggesting it as a

“scientific” hypothesis and arguing its proof based on the Kabbalah.

To condense the Kabbalah into a symbol Dee must first construct it. This he does beginning with the straight line, circle and point: the three elements from which letters are also composed. The first five theorems are a very close re-interpretation of Genesis, even with the appearance of the Sun and Moon. If read in the manner of Kabbalistic exegesis, the first theorems are very interesting in their relationship to the tradition of Pico, Reuchlin and Guillaume Postel, who most closely follow the hermeneutics of the books *Yetzirah* and *Bahir*. In these early Jewish texts Genesis is replayed through the formation of the letters of the Hebrew alphabet, tracing out the shapes of the consonants and interpreting them in a mystical vein, revealing the intrinsic divine powers of the letters. Dee, who laments in the text of the *Monas* the inadequate explanations of Jewish Kabbalists for the configuration of the letters, provides through the theorems of the “real Kabbalah”, what he claims are the true reasons for the “shapes of the letters, their positions, their order in the alphabet, and their numerical value.” At the origin of all letters, according to Reuchlin and Dee, is the point, line and circle: that is, they derive from the most basic geometrical symbols. Rather than the explicit heaven and earth of Genesis 1:1, in Theorem I Dee divides the line and circle: Reuchlin had already described the derivation of the Monad from numbers that derive from duality, points from numbers, lines from points, plane figures from lines, solid figures from plane figures, and from these solid bodies and this sensible world, a globe with all its orbits, and its constituent elements: fire, air, water, earth.²⁰ So it is clear that the bodies, appearing in a later Theorem, derive from the same geometrical source as letters. Dee’s Kabbalah thus centres around the manipulation of the letters of the Hebrew alphabet, and the development of what I would term a language for Creation that can ultimately be reduced to one complex symbol that contains and incorporates the meanings and powers that the letter combinations of an alphabet transform into language and then act and revelation. In one of the theorems, it shall be seen that the actual pictorial representation, the glyph of the *Monas* itself, is made up of letters, and of their numerical values.

THEOREMS

Theorem I is very much like the opening lines of the *Bahir*, notably repeated by Reuchlin, in which the first verse of Genesis, in Hebrew, *bereshit elohim* (God created), is interpreted in light of the initial consonant *bet* (ב).²¹ In Hebrew, *bet* has the value of two, and Dee poses two initial units from which all else is created: “by the straight line and the circle.” In Pythagorean speculation, two is the first number, since one is the basis of number.²² But there are also two worlds to consider, the micro- and macro-cosm, encountered in Theorem XXII with the mortal and immortal Adam. As in the second verse of Genesis, in Theorem II form emerges, expanding from the base of matter: line and circle with the point. Earth forms from these components in Theorem III, in addition to the Sun and Moon, concluding the first day of Creation, as Dee himself notes in Theorem V. The genesis of the Monad, is an imitation of the primordial act, a demonstration of the evolution of geometry and a profound argument for the mathematical structure of the universe: an inno-

vative speculation, for the time. In the first Theorems Dee establishes that universal meanings may be appointed to all symbols, thus the calculations based on the symbols may be universally applied, since in essence he manipulates the three fundamental components (line, circle and point) using three fundamental techniques.

Thus, there exists an affinity between grammarians, the manipulators of language, and mathematicians, the manipulators of numbers, united by Dee's "real Pythagorean Kabbalah". Apart from the linguistic and numerical value of a letter, the symbol itself is significantly made up of geometrical shapes, as is seen in the theorems. Dee links his hieroglyph with grammar, and thus with the use of sacred language. It is, however, a Pythagorean language, with a mathematical basis, so that the hieroglyph is defined in the "Pythagorean manner". The powerful result of a Pythagorean manner of understanding the hieroglyph is that as numbers are universal signs, the meaning of the symbol can be universally recognized, transcending language. Grammar is universal to all languages, but all languages are not universally understood: hence, language is not an impartial description of reality, like numbers. Consequently, Dee claims that he will explain the functions of letters, at the basis of Kabbalah, in terms of what, according to Pythagoras, incontestably exists: the mathematical principles of the universe. Clulee has already demonstrated how the disciplines of grammar and geometry, among others listed by Dee, are incorporated in his "real Kabbalah".²³

Dee expands the linguistic-numeric power of letters to the Greek and Latin alphabets, and treats the components of language, expressed or defined by an alphabet, made up of letters, as Pythagorean symbols. In essence, the symbols that make up the three alphabets represent the same sounds, they derive their form from the point, line or circle and have a numeric value: thus they contain the same power of Creation. Therefore, he not only applies the three linguistic techniques of the Kabbalah to the Latin tongue, but attempts to condense the complexities of linguistic combinatory techniques into a unique symbol, a hieroglyph, adding an "Egyptianizing" element to the linguistic syncretism of his philosophy. A hieroglyph is essentially a symbol that has a pictorial, linguistic and magical value. It remains then within the confines of the Pythagorean interest in symbols. In his Theorems Dee composes the Monas in the same manner that a Kabbalist composes a *golem*: through letters.

In his theorems Dee transforms the three basic Kabbalistic techniques of exegetical method into scientific method. *Gematria* (the calculation of the numerical equivalent of a letter) is equated by Dee with geometry, and is thus the most common Kabbalistic technique he employs and will be the focus of my analysis of his theorems. Geometrical *gematria* is most evident and most complex in those theorems related to the supporting Cross element of the Monas, based on Pythagorean concepts. The Cross is significantly composed of either the Ternary (formed by two intersecting straight lines and the centre) or the Quaternary (formed by four straight lines enclosing four right angles). To begin the possible *gematriot*, the two Pythagorean definitions of the Cross of the Monas are derived from the double sense of the symbol and the doubling of the parts that make it up. When the elements of the Quaternary are squared, they produce the Octad: the squaring of the

figure is also a form of *gematria*. To attain the Septenary, the lines and point, still treated as if they had a numerical or linguistic value, can be added together to form seven: the two lines plus the point of the Ternary and the four lines of the Quaternary equal seven elements. According to this logic, the *gematria* or geometry of the universe unites the Ternary and the Quaternary to the Septenary or the Octad, so that the Monas contains all the fundamental Pythagorean numbers. Their equal numeric value can only prove their equal interpretative value. What is truly fascinating in Dee's case is that he derives *gematriot* for the components of a symbol, not of a word or phrase: he has invented the *gematria* of symbolic images.

Theorem VIII illustrates well Dee's syncretic Kabbalistic-Pythagorean method. Dee ably reiterates the Pythagorean expansion of the Quaternary (that Reuchlin associates with the four letter Name of God, the Tetragrammaton, יהוה) in the Decad ($1+2+3+4=10$), claiming that it is a "Kabbalistic extension". What follows is also a significant Kabbalistic explication of the Latin use of letters to signify numbers. Thus the Roman numeral X (letter X), is both the Quaternary and the Decad. On the one hand it recalls the Rectilinear Cross of Theorem VI, symbol of the Quaternary: which, if the four straight lines are separated, gives four of the Roman numeral I (letter I). On the other hand, the numerical value of the symbol is ten: naturally, it also contains the Ternary and the Septenary, which add up to the Decad. This is a very limited example of *gematria*. It is an obvious application of the technique, resulting in the unoriginal conclusion that the Monad is the unity that comprehends multiplicity.

A more successful interpretive calculation is that of the Roman numeral V, or the Latin letter "V" found in Theorem XVI. Two straight lines of equal length shape the letter-numeral "V" which is assigned the value of five for it is the fifth vowel, and naturally represents the Quinary. If two of these figures are united, they form the Equilateral Cross of the previous theorems, and their combined value also adds up to ten, or, if multiplied, 25. If the Roman numeral is squared then it also yields the number 25, and the sum of the two squares is fifty. Squaring is certainly part of *gematria*, and to conclude in this vein, Dee noted that the symbol "V" is the fifth vowel of the Latin alphabet but also the twentieth letter, which adds up to 25. Squared, the Roman numeral X is one hundred.

The divisions of the Cross are also the Latin letter "L" (tenth letter of the alphabet) with the numerical value of fifty, which in the form of the Cross has the accumulated sum of one hundred. Now, if the Quinary is multiplied by the Decad, its product is fifty, at the basis of the L-shaped Cross. This is proven by the fact that the letter "L" is the tenth in the alphabet, also if read back from the letter "X", establishing their equal value, so that the letter "L" can also represent the Denary, as it is the tenth letter of the Latin alphabet. If the three Roman numerals are added together, as in theorem XVII, they form the Latin word *lux*, which leads to more *gematria*. I shall illustrate only one possibility, and that is that the $L=V \times X$ ($50=5 \times 10$), which in turn is the sum of the name of God, El. El is the name of God most cited by Dee throughout his works. The latter is a form of *notarikon*, where one letter, the first, is equal to the sum of the parts of the word.

Dee turns the *notarikon* of the Roman numeral, Latin letter “L”, as the name of God El, into *temurah*. By exchanging El (L) for the first consonant of the Tetragrammaton, *yod*, “V” for the repeated *heh* and “X” for *vav*, the Tetragrammaton in Latin letters spells *lux*. Reuchlin states, in derivation from *Yetzirah* that the Tetragrammaton created Heaven and earth.²⁴ So from Dee’s El, or the Latin letter, light is created light (*lux*). Furthermore, Psalm 118 is reinterpreted by Reuchlin to read “El, the Tetragrammaton, has given us light.” El is one of the most powerful names of God: it is added as a suffix to the root base to form the names of the angels (Gabriel, Michael, Raziel), imbuing the name with divinity. Thus El is the name of power from which all the other names are formed,²⁵ even the Tetragrammaton.²⁶ It is also one of the two fundamental letters for the Kabbalistic Creation, as is clear from the opening verses of *Yetzirah*. As *bet* (ב) is the first letter in Torah, *lamed* (ל) is the last. Kabbalistic Creation can be said to go from *bet* to *lamed* as from *alpha* to *omega*. Together, they form the word *lev* (לב)²⁷ or “heart”, whose numerical value is 32 and represents the Kabbalistic 32 paths of wisdom contained in the Torah. For this reason, and because the consonants are also prepositions, they can be combined with the letters of the Tetragrammaton, and in turn “El” or *lamed* functions as a suffix for the 72 angelic names. The first letter of the Tetragrammaton is the tenth consonant of Hebrew, *yod* and Dee states in the Dedication that all the consonants of the Hebrew alphabet derive from *yod*. Furthermore, יחוד is interpreted by Christian Kabbalists as the name of Christ. The Christological implications of including the Names of God in the Cross of the Monas are obvious, as is the mystical function such a symbol performs. The Equilateral or Rectilinear Cross, that contains and repeats the Name El, and incorporates the Creative aspect of the divine in the anatomy of the symbol.

This is clear in Theorem XVII, where the *gematria* culminates in an illustration of the first five Theorems. Dee continues his Kabbalistic computations to produce the number 252, derived from all the *gematriot* (addition, multiplication, etc.) and which when written in Roman numerals (CCLII) produces the fundamental elements of the Monas: two semi-circles, two straight lines and two intersecting lines at a 90° angle. In this context, with the letter-numerals that compose the glyph clearly indicated, Theorem XII, with its recombination of the astrological symbols based on the circle and lines of the Monas is better understood. As Clulee has pointed out, Theorem XII is itself a demonstration of *temurah*, where the signs of the zodiac are derived from the symbol of the Monas. A *gematria* of the zodiac signs is thus possible, revealing all their numerical and proportional affinities, since it is evident from the symbols that all the lunar signs and all the solar signs add up to the same amount: 252.²⁸

In Theorem XVIII the *temurah* of the planetary symbols and the *gematria* of light come together in the figure of the Egg. Immediately recognizable as an allusion to the alchemical *opus*, the figure is less familiar as a Kabbalistic allusion to Creation. For Reuchlin the cosmic egg represents the two Kabbalistic worlds: the physical and transcendent. Reuchlin believes that the two worlds are “‘like the white of an egg’, the white being inside the shell, which is the firmament, while itself it surrounds the yolk.” In this way, from Creation, the intelligible world is bound to the archetypal world.²⁹ In short, even in Kabbalah, the egg contains the cosmos. Dee

claims that the preceding theorems demonstrated how the Inferior Astronomy is guided by the superior celestial Astronomy. This understanding is brought through Kabbalistic illumination, which reveals how the Monas is constructed. By merging the Monas glyph with the figure of the Egg, the cosmic structure is included in the symbol. It is here, where Dee clearly presents a Ptolemaic planetary order, that the absence of the *sefirot* and of a traditional Kabbalistic cosmology is glaring. Essentially, Dee has no need to employ the cosmology of the *sefirot*, usually at the heart of any traditional Kabbalistic analysis. Their cosmological value, as the mystical aspect of the planets, may be well integrated in the planetary signs included in the Egg. If the *sefirot* are to be taken as ten Names of God, then these too are incorporated in the hieroglyph of the Monas, under the all powerful names El and Tetragrammaton. If anything, Dee considers the *sefirot* truly numerations, and has subsumed them in the anatomy of his Monas, in the letter-numerals that make up the glyph, and in their Pythagorean equivalents. The structure of his Theorems eliminates the need for the ten *sefirot*, or could even replace them as the structure of the universe, since they could individually or collectively be interpreted as Pythagorean numbers: their unity is already demonstrated in the Decad. Interestingly enough, by dealing with numbers, Dee has eliminated the need for contemplating the numerations of the Deity in the form of the *sefirot*, for the theories and numerical ratios are encompassed in the actual anatomy of the glyph. He has replaced the cosmological system with a cosmological symbol.

However, Dee retains in his Monas the symbols that represent the cosmological system of the *sefirot*, in the form of the Adam Kadmon, to which he refers in Theorems XIII and XXII. The Adam Kadmon is the Name of one of the formations of the *sefirot*. In Theorem XIII Dee calls the Monas the Mercury of the Philosophers, well known from alchemy, and also the “celebrated microcosm and ADAM.” Reuchlin states that there is an Adam for each world, a “heavenly Adam,” the ADAM KADMON, “made by his word,” and another, “earthly Adam, fashioned from clay by the hand of God.” One is one with God; the second is not only “the other one,” but “different”, quite “other” from God.³⁰ The other Adam is man, as God said “let man be the image of this world, hence he is the microcosm.”³¹ Both represent the infinite celestial world connected with the finite earthly world. Both encompass the elements of creation. Like the cosmic egg, the Adam Kadmon represents the dimensions of the universe. In essence, the glyph of the Monas is the Adam Kadmon, and the *sefirot* that compose the figure are contained in the dimensions of the symbol.

Already Pantheus, in his *Voarchadumia*, had used a form of alchemical Kabbalah to create the new Adam, the Mercury of the Philosophers. Dee’s use of the term *voarchadumia* in his Dedication is an evident reference to Pantheus’s text. The association of the *terra lemnia* with the philosophical Hermes, and the red earth of the *voarh beth adumoth*, where from the Hebrew *adamah* (earth) derives *adam* (man), is an allusion to the Adam Kadmon, the celestial Adam formed by the *sefirot*. Hence, it is the figure that contains all of the divine numerations, the macrocosmic or immortal Adam of Theorem XXII, whereas the earthly, mortal Adam is the microcosm, often associated with Christ or with a sort of celestial *golem* which contains powers of revelation and creation. The earthly Adam and the

golem are both shaped from clay and then animated through language. If the celestial Adam, the Adam Kadmon is thought of as a celestial *golem*, then it is animated by *emet*, by divine Truth.

Through the complex application of *temurah* to the structure of the Monas in Theorems XXI-XXIV it is evident how Dee manages to liberate himself from the *sefirot*. These final theorems constitute an elaborate example of what Dee also calls *metathesis* (the transposition of sounds or letters) applied to the Pythagorean Quaternary. Theorem XXII, dedicated to the symmetry of the hieroglyph, reveals the similarity of the structure of the Monas to the structure of the *sefirot*. By geometric calculations on the intersections of the lines and circles of the Monas, attributing letters to the connecting points, Dee is essentially interconnecting the parts of the Monas as is done to the structure of the Adam Kadmon. By eliminating the cosmological structures of the *sefirot*, Dee has eliminated the elements of the traditional Kabbalah that cannot be proven to exist, and absorbed them into mathematical theorems that can be proven. This passage into the realm of numerations is the passage from the first Monad into all possible Metatheses, which Dee reconnects to the *temurah*, culminating into a sort of final vision of the Monas in the final Theorem, replacing the Adam Kadmon or the Apocalyptic vision of God the Creator.

This confirms that the ultimate source of Creation is God, and that what Dee has revealed can only be an imitation of the act of Creation. It is also a projection into the Adam-Christ of the Christian spirit, so that in the assembly of the Monas, the adept is, like the Kabbalist, animating a *golem*: a pale imitation of the primordial creation, where nonetheless the adept approaches God.

If there has been little evidence found for a satisfactory general Kabbalistic interpretation of Dee, the most significant factor is the fact that Dee, as Clulee has pointed out, is not a thinker whose texts demonstrate an easy and consistent line of thought. This is the case with his use of Kabbalah, which is negligible in some of his texts, but a substantial component in others. Although there are elements of the Kabbalah in many of Dee's writings, often these are unoriginal aspects of limited significance in the overall context of the work, for the most part related not to the Neo-Pythagorean principles but to angelic communications. Or else, as in the case of the seal *emet*, or the name El, they are fairly derivative although important functions in the text. Certainly, the function of the Kabbalah is different in each individual text, according to the purpose of the text. Dee's works span a wide range of subjects and interests, and hence of method and interpretation. Their originality is increased by the syncretic context of Dee's intellectual background. Only the *Monas Hieroglyphica* exemplifies Dee's creative and innovative use of the Kabbalah.

CONCLUSION

In the end, the important question is not so much whether or not Dee is a Kabbalist, but what the function of his new mathematical Kabbalah is. In the well-established Humanist tradition of Christian Kabbalah, the purpose of its study was the recuperation of ancient knowledge to establish a universal Truth. Thinkers like Pico (who deemed himself a Kabbalist) had a religious agenda: to demonstrate the universal truth of Christianity via the Kabbalah, based on Christological interpretations of the texts, often with the aim of utilizing the Kabbalah to convert Jews. Later thinkers saw within it a system compatible with other philosophical and even scientific systems then in vogue, that by the mid-sixteenth-century attracted a certain amount of experimentation by intellectuals of Dee's calibre: a contemporary example would be Giordano Bruno, who combined Kabbalistic mystical revelations with Copernicanism to develop his own Nolan philosophy.³² Dee is neither a Humanist like Ficino, interested in recuperating ancient texts, nor a Hebraist and Kabbalist like Reuchlin, nor is he concerned with the philological aspects of the Kabbalah. Reuchlin argues that the Kabbalah is the source of salvation, and that a Kabbalist is one who studies it to redeem himself and the human race. With the dominion of Protestantism in England, the establishment of a universal religion is of less concern to Dee than it was to Pico or even Bruno, and the conversion of Jews is not a relevant concern. In the *Monas Hieroglyphica* Dee is concerned with a different sort of revelation, that of a new form of numerical revelation that is closer to Cartesian than traditional Jewish Kabbalistic thought; indeed, it anticipates somewhat the later interest of mathematicians like Leibniz.³³ Even taking into account the final vision offered in the *Monas*, the exaltation is ultimately that of the indisputability of Dee's proofs, mystically inspired perhaps, but mathematically exact. It is an application of Kabbalah which predates the development of scientific method, of "objective" scientific proof. Dee's Kabbalah helps usher in a new era, marked by thinkers like Bruno, Robert Fludd, Leibniz and Isaac Newton: the modern, paradoxical era of scientific discovery never far removed from theological confirmation. Much research remains to be done to fulfil the plea made by Yates in the epilogue of *The Occult Philosophy* for scholars to pursue the study of the importance of the Kabbalah in the development of Christian thought.

NOTES

³ Frances Yates, *The Occult Philosophy* (London: Ark Paperbacks, 1979). She discusses Dee at least in passing in nearly all of her numerous works.

⁴ *R&W*, 28-29.

⁵ The text was already in a written version in 1510, but went unpublished until 1533. For a detailed discussion of the textual history, see Paola Zambelli's *L'ambigua natura della magia: filosofi, streghe*,

riti nel Rinascimento (Milano : Il Saggiatore, 1991) as well as her numerous articles on Agrippa that heavily influenced Yates and are contained in the bibliographical references of *Occult Philosophy* and other works. Agrippa probably knew Reuchlin's earlier Kabbalistic work, *De verbo mirifico* (1494), directly inspired by a meeting with Pico: it is one of the books listed in Dee's library inventory, heavily annotated by him.

⁶ Frances Yates thought of the *Monas* as a "cabalist mathematical alchemy," and conceived of the glyph as an amulet. Michael T. Walton also interprets it as an alphabet of nature, based on the Kabbalah. See *NP*, 78 for a brief summary of the different interpretations of the text.

⁷ See Chaim Wirzubski, *Pico della Mirandola's Encounter with Jewish Mysticism* (Cambridge: Harvard University Press, 1989).

⁸ An excellent starting point for the historical background is Cecil Roth, *The Jews in the Renaissance* (Philadelphia: The Jewish Publication Society of America, 1959); tempered by the more recent work of Robert Bonfil, *Jewish Life in Renaissance Italy*, trans. Anthony Oldcorn (Berkeley: University of California Press, 1994). Bonfil argues against the importance of the proliferation of Kabbalah.

⁹ Johann Reuchlin, *De arte cabalistica* (New York: Abaris Books, 1983), 39.

¹⁰ Yates and Zambelli would disagree, but Agrippa's mathematical abilities must have seemed extremely limited to Dee.

²¹ *Bet* is interestingly enough written as a half circle and line in Hebrew, which traditionally leads to a long explanation on the formation of the letters. Dee complains in the text of the *Monas Hieroglyphica* how there is little on the history of the formation of the letter in Hebrew, and I think here he is recreating and reinterpreting the explanation of *bet* in terms of the basis of the hieroglyph of the *Monas*, to demonstrate how the real Kabbalah distinguishes itself from the mere description of common language to the true event of Creation, for Dee in the form of geometrical *gematria*. The act of writing the letter, *bet*, would proceed from the point, formed from the initial contact of pen on paper, and developed into a half circle, with a line underneath. Dee himself even indulges in the common Kabbalistic explanation for why the second letter of the alphabet, *bet*, and not the first *aleph* is used in creation, by adding it later in theorem XV, as we shall see. So the line and circle are the basis of the glyph and of creation.

²⁵ Reuchlin, 305.

²⁶ Reuchlin, 303.

²⁷ By the way, the consonant *bet* has two pronunciations, a guttural and a palatal, which explains why "heart" is pronounced with a final "v". I do not believe Dee thought of this, but that would make the first and last letters of Creation in Torah the letters that make up his *Monas*: "L" and "V", even including the LVX they equal.

²⁸ Since the lunar signs are composed from only one semicircle, hence excluding one Roman numeral C, they total 152. They remain within a proportional ratio to the other, solar signs, since they still contain the essential numbers. One hundred is of course one of the ratios of the alchemical *opus*.

FEDERICO CAVALLARO

THE ALCHEMICAL SIGNIFICANCE OF JOHN DEE'S
*MONAS HIEROGLYPHICA**

Throughout his career John Dee had an abiding interest in alchemy. As a renaissance scientist he developed this interest in the alchemical tradition descended from the Alexandrines into a philosophy of nature that included laboratory practice. In the *Monas Hieroglyphica* (1564) he distinguished his own scholarly endeavours from the general mass of practitioners who had discredited the name of “alchymia”, and for this reason he preferred to use the terms “voarchadumia”, “mechanical magic” or “Real Cabala” to refer to his own work. The term “voarchadumia” was coined by the Venetian alchemist Johannes Pantheus, whose work was known to Dee and is known to have been one of the sources for the *Monas Hieroglyphica*.¹ Dee saw the alchemical enterprise as a task for an alchemist/“hero” who “understands the supercelestial virtues”.² Contemporary commentators of the *Monas Hieroglyphica* clearly had no doubts that its primary focus was alchemy,³ and Dee’s continual pursuit of alchemical revelations seems to support this interpretation. Long after the publication of the *Monas Hieroglyphica* Dee continued his alchemical researches, even while he was engaged in the “angelic” revelations of 1582-9, during which (together with his “skryer” Edward Kelley), he sought immediate divine knowledge of “nature’s secrets”.⁴ In the angelic revelations Dee was inspired by references to invocations in the ancient Greek alchemists. In the *Monas*, however, he was influenced by “natural magic” which works its miracles in the laboratory through the power of “philosophical mercury”, which reigns both in “superior” and “inferior” astronomy (as Dee calls them): that is, both heavenly Mercury (i.e. *spiritus mundi*) and the mineral Mercury. In the preface to the work, Dee clearly states that he is seeking the “fundamental truths of natural science” the “explanations of [...] celestial influences and events”, and “supercelestial virtues and metaphysical influences”.⁵ Only the “singular hero”, he says, is capable of understanding these things. He contrasts the “astronomical characters” that represent the planets with his own mystical symbols “imbued with immortal life”, which would be understandable “in any tongue and in any nation”.⁶ From the symbol of Mercury, which forms the basic structure of the hieroglyphic monad, Dee derives all the other planetary symbols as well as the origin of the Greek, Hebrew and Latin alphabets, numbers, and even geometry.⁷ [Plate 4] The Geometer who reads the *Monas Hieroglyphica*, Dee says, will discover in it something akin to the quadrature of the circle,⁸ although it seems likely that he is referring here to an obscure alchemical allegory rather than to a geometrical demonstration. Michael Maier, in

* This chapter was translated from the Italian by Stephen Clucas, with the kind assistance of J.V. Field. For the purposes of this volume the author’s citations of Dee’s *Monas Hieroglyphica* have been referred to the standard English translation by C. H. Josten.

Plate 4: The geometrical construction of Dee's 'Hieroglyphic Monad', *Monas Hieroglyphica* (Antwerp, 1564), p. 24^r. Reproduced from the facsimile edition of C.H. Josten, courtesy of *Ambix*.

his extensive collection of alchemical symbols, the *Atalanta fugiens* (1617), states (in Emblem XXI) that the circle is the simplest substance and the square is the four elements which are also represented by the four colours during the alchemical “work”.⁹ Hence Dee’s statement that the circle transforms itself into a square signifies the alchemical passage of the mineral into a perfected, purified substance which manifests itself successively in the seven phases (and four colours) commonly described by alchemical authors.

The musician, he says, will be “struck with wonder” by the “inexplicable celestial harmonies”¹⁰ which are represented in the alchemical work, a reference to the idea of alchemy as an “art of music”, in so far as it involves an understanding of the harmonic proportions between the weights of materials and durations of processes. The “music” also refers to certain sounds said to be heard during the final stages of heating. The astronomer, he says, will be able to observe the motions of the planets without getting cold. He refers here to the various stages of the matter as it is heated, stages that derived their names from the seven planets.

Just as the optical practitioner creates, by means of a conic section, a mirror which when placed in the sun’s rays burns certain substances, so the alchemist makes a trigonal section of a tetrahedron to make a three-dimensional mirror which “can reduce any stones or any metal to, as it were, impalpable powders by the force of [...] heat”, without the aid of the sun.¹¹ This allegory refers to the power of the Mercury that forms the basis of the symbol of the Monas, which is represented here by the mirror. Mercury is the primary purified mineral used in the alchemical *opus* or work. In a subsequent phase, in which it becomes “Alkahest” or a “universal solvent”, Mercury (antimonite) is called “philosophical Mercury” by some alchemical authors.¹² The triangle refers to the fundamental alchemical Ternary or triad of sulphur, salt and mercury, which are to be understood as essential principles and not to be confused with the everyday substances that bear the same names. Those who work and reflect on “the subtle investigation of weights”, Dee says, will see that “the element of earth can float above water”.¹³ He refers here to the relative quantities of the various alchemical substances, and the proportions between them, and to the condensation of liquid on the surface of the heated substance which resembles a floating island. Maier and others refer to this as “the island of Delos”, where Latona gave birth to Diana and Apollo, or the lunar and solar principles.¹⁴

Dee calls these symbolic games which are applied to physical reality “Real Cabala”. He says that the hieroglyphic monad conceals a “terrestrial body” in its “innermost centre”, which must be united with solar and lunar influences. This union or “marriage” is the terrestrial sign of a union of cosmic influences, because the monad cannot be “fed” or “watered” on earth until the “fourth [...] metaphysical revolution” has been completed.¹⁵ Once this union has been effected, he says, the operator will “go away into a metamorphosis” and will “afterwards very rarely be seen by mortal eyes”.¹⁶ A few pages later Dee insists on the necessity of assimilating the product obtained by means of this process in such a way that the alchemical operator himself will be “dignified”.

An explanation of this obscure passage is that the hidden body in the innermost centre is the Philosophers' Stone, which lies hidden in primal matter. During the course of the work it is strengthened by the divine powers or influences – that is, by the energies emanating from the Sun and Moon. A brief seventeenth-century treatise entitled *The Centre of Nature Concentrated, or The Regenerated Salt of Nature commonly called the Philosophers' Stone*, sheds some light on the significance of the metamorphosis of the Monas-Stone.¹⁷ The earth or Salt increases in power through what alchemists call “multiplication”. Dee refers to four of these multiplications in the text of the *Monas Hieroglyphica*. Essentially, the process of placing the Philosophers' Stone in a crucible together with a quantity of Philosophical Mercury, or “alkahest”, on four separate occasions is meant to enhance the Stone's powers. Whoever was “fed” by the stone would attain such an intense spiritualization of their body that they would become invisible.

The Stone has other explicitly stated properties that Dee is interested in. He claims that those familiar with the Philosophers' Stone may observe through a thin, transparent sheet all the things contained underground and in the waters of the earth. In this “carbuncle or Adam's stone” the adept would be able to explore the airy and fiery regions. The most likely explanation of this passage has again to do with alchemical experimentation in the laboratory. By placing a thin sheet of mica on the crucible during the work, the alchemist may observe the transformation of the materials as they are subjected to the fire.¹⁸ This transformation is identical to that experienced by the minerals in the entrails of the earth. In short, all the four principal elements may be observed, and the carbuncle is the final Red Stone of the alchemical *opus*.

In order to put these rather obscure and oblique alchemical references into a larger context it is necessary to briefly analyse the twenty-four theorems found in the second part of the *Monas Hieroglyphica* in an alchemical perspective. The first four theorems deal with the most abstract concepts: the point, the line, and the circle. Dee claims that all things are created from the point: thus the Monas symbol contains a circle with a central point that represents the earth, as well as containing the symbols of the sun and the moon.¹⁹ [Plate 5] This initial point of creation (earth) represents the beginning of the alchemical *opus*. Maier seems to corroborate this interpretation when he states that the point from which the line originates is sulphur, and goes on to say (in words which are reminiscent of Dee's) that the innermost centre of the terrestrial body or mineral is formed by the principle of sulphur.²⁰ This particular mineral (antimonite) used by the alchemists, is the progenitor of metals, and when the sulphur principle contained in it is strengthened and stimulated, any metal has the potential to be transformed into gold. The theorems continue with the central cruciform section of the Monas. In theorem VI Dee equates this cross with the Pythagorean Ternary, which in turn becomes the Quaternary, and the Octonary.²¹ The ancient alchemists considered the “magic” Ternary to be the triad of body, spirit and soul (*corpus, spiritus, anima*): this is valid for the Quaternary and the Septenary as well. Dee is most likely referring here to Ostanès, an author he refers to later in the text. Ostanès explicitly referred to the Ternary allegory of the “vital spirit” and the “soul” which are needed to enrich the “body” of the mineral stone.²² This kind of

Plate 5: The 'Hieroglyphic Monad', *Monas Hieroglyphica* (Antwerp, 1564), p. 25^r.
Reproduced from the facsimile edition of C. H. Josten, courtesy of *Ambix*.

terminology has led to serious confusions in modern interpretations of these kinds of texts. The “body” is, of course, the mineral and the materials which the alchemist begins with; the “spirit” and the “soul” are the sulphur and mercury which these materials contain. Dee’s contemporary Paracelsus preferred to speak of “salt” rather than “body”. The “Septenary” which Dee refers to are the seven types of metal generated by the Elements and the Ternary. In Theorem VII, Dee says that the four elements must be drawn out of their “natural habitations” and compares the geometrical line which is composed of flowing points to the physical “line” of droplets (*Lineae, ex STILLAE*) which rain down during “mechanical magic”.²³ The “natural habitations” of the elements refers to composed bodies in general and specifically to the minerals used in the alchemical *opus*, as is clear from ancient and mediaeval alchemical theories. According to Maier, who follows these earlier theories, during the “cooking” (*coctio*) the alchemical egg is formed and the four elements are liberated in order: Water, Air, Fire, Earth.²⁴ This is the sequence of states in which we see the materials during the alchemical process: first liquid, then gaseous, then in a red-hot molten state before they re-solidify into the Philosophers’ Stone. Theorem VIII also refers to the elements and metals. The twenty-first letter of the Roman alphabet “X”, Dee says, is the sign of the “Denary” which is produced by the Pythagorean Quaternary ($1 + 2 + 3 + 4 = 10$) which is the union of the Ternary ($1 + 2$) and the Septenary ($3 + 4$) as well as the four initial lines that form the cruciform mid-section of the Monas. This alludes to union of the Ternary (salt, sulphur and mercury), the Quaternary (the elements) and the Septenary (the seven metals) in the alchemical *opus*.

In Theorem IX, Dee says that through the “magic of the [...] four elements” the four lines of the Monas are separated and made into a circle which is the conjunction and completion of the solar circle which forms part of the Monad symbol.²⁵ This separation and conjunction refers to the “solve et coagula” of the alchemists, which refers to the whole alchemical process, but especially to the final separation of the four elements and their re-conjunction in the Philosophers’ Stone. This process is often represented as a circle, or by the ancient cosmic symbol of the *ouroboros*, the snake biting its own tail. The zodiacal division of Aries, he says in Theorem X, is the place in the heavens from which the “fiery triplicity” originates. “In the practice of this monad the aid of fire is required”, Dee says, and it is fire which will effect the separation of the elements, “in which the denarian proportion will be strong”.²⁶ The astrological sign of Aries here signifies the vernal fire, that is, the celestial, cosmic or solar fire. In 1758 the erudite alchemist Pernety reiterated Dee’s theorem, claiming that the celestial fire was the principle of two other fires: the “terrestrial” or “central” fire, and “artificial” fire. The first, the terrestrial fire is innate in terrestrial bodies, and is stimulated by celestial bodies. The second, artificial, fire is kindled by man to heat bodies from the outside.²⁷ In his theorem Dee refers to the fundamental operation of the separation of the elements by means of the “fires”. In Theorem XI he says that the two semi-circles of the sign of Aries (at the base of the Monad) signify that the Earth – the mineral of the *opus* – must be mixed in equal proportions with the celestial fire, just as the day at the equinox is divided into equal proportions of light and dark.²⁸ This signifies that the initial weights of the mineral (which is considered in some texts, because of its characteristics to be the natural salt of anti-

mony), and the celestial fire, must be equal. Naturally the “celestial fire” had to be collected in some concrete form, and it was considered to be especially concentrated in the springtime, in morning dew. This was another of the “secrets” of the alchemists, but we should note that dew was also used in *spagyria* (chemical medicine) and the collection of dew is clearly shown in the engravings of the *Mutus liber*.²⁹ There are many references to dew in the various alchemical authors, but they tended to be more circumspect about revealing the identity of the mineral that was used. Dee is quite explicit about the use of dew, and his original frontispiece shows the sun and the moon pouring their aqueous humours into two dishes.³⁰ In Theorem XII, Dee shows the figures of three planets which contain the crescent-shaped symbol of the moon: that is Saturn, Jupiter and Mercury. Dee says that it is the “purest magic spirit [i.e. Mercury]”, rather than the moon itself, which carries out the “work of albification”, by impressing the figures into the prepared earth.³¹ These figures represent the final phases of the *opus*, the first of the so-called “Kingdoms” or “Reigns”, which is associated with the “white” or lunar phase of the work, but does not participate in the process which leads to the formation of the “red” or solar stone. The pure earth is the primal matter after the necessary preparation in the first two phases of the work. It is worth noting that Dee deals with general principles, and does not give concrete details of the process, which would seem to indicate that his knowledge was more speculative and theoretical than derived from laboratory practice.

In Theorem XIII, Dee analyses those planets whose signs contain the symbol of the sun: that is Mars (which also contains the sign of Aries), Venus (which contains the cross of the elements), and especially Mercury, the “Philosophical” Mercury, which he also calls “microcosm” and “Adam”. The alchemical authors usually represent the red stone with the solar symbol, but Dee emphasises the leading role of the mercurial rather than the solar aspect, which he calls the “golden work” (*Operi Χρυσοκοραλλινω*).³² The term derives from Stephanos of Alexandria, and may indicate Dee’s preference for the early Greek alchemical tradition.³³ Dee also adds that to attain the Adam (or Philosophical Mercury), it is necessary to reunite the soul which has been separated from the body in the work. This is done by means of the art of fire, he says, which is dangerous because of the “fiery and sulphurous fumes which it occasions”.³⁴ Here the “soul” probably represents the fumes (*halitus*) or mercurial principles of the mineral liberated during the “cooking” process, corresponding to the phases of the metallic “reigns”, which are gradually reabsorbed in a natural manner by the mass at the bottom of the crucible. Nonetheless these fumes carry the sulphur or the principle of combustion, and this makes the work dangerous as they may cause the crucible to explode. When he states, at the end of this theorem, that Lucifer or Venus must be united to the Moon or Mercury or Mars to make “the Sun of the philosophers” appear, he is referring to the final metallic “reigns”, known to the alchemists as Venus, Mars and the Sun. The solar reign ends with the “multiplication” of the final Stone, which Dee calls the Monad, or the red Adam.

In Theorem XIV, Dee cites one of the sayings from the *Tabula smaragdina* attributed to Hermes Trismegistus that the father and mother of the Stone are the Sun and the Moon, which he says have been “clearly proved” by means of his hiero-

glyphic symbol. To this Dee adds that the “offspring” or *Terra Lemnia*, mentioned in the Theorem, is nourished by solar and lunar rays.³⁵ Many alchemical texts attribute the absorption of solar and lunar influences not only to the dew deposited under the sign of Aries, but to the process of the work itself. The *Terra Lemnia* thus refers to the island where Vulcan’s forge was situated, representing the application of fire to the alchemical materials.³⁶ In the following theorem (XV) he deals with the times of greatest solar and lunar influence, and therefore the best times of year to accomplish the alchemical *opus*. The “sun’s splendour” is at its height in Aries, and the moon’s in Taurus. Therefore the moon has a “prolific conjugal love” for the sun, and their union is the alchemical marriage which Ostanes refers to when he says “Nature rejoices in Nature”.³⁷ The changes of season, marked by solar eclipses, are the conjunction of the Sun with Mars, with the power of Mars, exalted in the astrological house of Aries. The sign of Aries is joined with the elemental cross and sign of Taurus in Dee’s symbol of the Monas. This union exalts the Sun and Moon by means of the science of the elements. Dee is reiterating a common alchemical doctrine that the alchemical work should be undertaken in the spring, when the sun is astrologically exalted in Aries and the moon in Taurus, and Mars in the house of Aries. Solar eclipses are explained as the eclipse of light by the purified primal matter when iron is added to dust in the work. It is necessary to purify the mineral of antimony as well, to obtain the famous *regulus martis stellatus* (“starry regulus of mars”) of the alchemists and metallurgists (an idea which recurs later in Newton’s alchemical writings).³⁸ Through “the science of the elements” (by which Dee meant alchemy) the Sun and Moon’s exaltations are obtained.

The elemental cross reappears in theorem XVI as the figure “X”. Dee subjects the symbol “X” to a “cabbalistic anatomy” (*notarikon*) in order to obtain the letter “V” whose value in the Latin numerical system is five, or the Quinary.³⁹ In the divine name “El” (here written in the Latin alphabet!), Dee finds the letter “L”, tenth in the Latin alphabet, and so on. Dee concludes that one may progress from the number one to ten to one hundred through his method.⁴⁰ Alchemically the Latin “X”, or St Andrew’s Cross, is the “manifested light” or spark of the celestial and terrestrial fire which “composes or disintegrates, begets or kills” the “superior or spiritual force which acts in a mysterious manner within concrete matter”.⁴¹ The celestial fire, or “magical spirit” represented by the “X” is qualified by Dee as one of God’s “great [...] mysteries”.⁴² The number five recalls the Quintessence, or synthesis of the four elements, and Dee calls it the *Quinarius*, or “circular number” which refers to the circulation and transformation of elements referred to in earlier theorems. The numerical progression from one to ten to one hundred alludes to the increase of power in the Philosophers’ Stone during the course of the *opus*. Dee continues his numerical calculations relating to the symbol “X” in the following theorem (XVII). By a cabalistic calculation ($4 \times 5 + 4 \times 50 + 10 + 21 + 1$) Dee reaches the total 252, a number which probably represents Mercury. Indeed, if it is transformed back into Roman numerals – CCLII – its components can be used to assemble the Monas symbol. The three basic Roman letter/number forms, L, V, and X, are for Dee the sources of light, since the combination of the three symbols form the Latin word *lux* [i.e. LVX].

Theorem XVIII states, in accordance with alchemical teachings, that the superior celestial astronomy is the “teacher” of the inferior one. Dee presents an “anatomy” of the Monas to reveal its mysteries through physical analysis. The Monas is seen here as the “celestial messenger”, whose celestial movements are co-ordinated through the figure of the “egg”.⁴³ Inferior astronomy refers to the alchemical material which contains the unaltered planetary virtues that are revealed in the various colours and appearances during the transformations in the furnace. This is what Dee means by physical analysis. The Monas represents the god Mercury, and the Egg is the name given by alchemists to the materials assembled in the last part of the alchemical work. According to Dee the oval shell of the Egg is composed of ether, like the heavens in the Ptolemaic system. He invites the “wretched alchemists” to comprehend the meaning of the albumen’s water, the yolk’s oil and the shell’s chalk. The symbol of the Egg is an ancient one in alchemy as an analogy for the furnace.⁴⁴ In Dee’s “Egg diagram” [Plate 6] the planets are depicted in Ptolemaic sequence, with the central planets (Mars, the Sun and Venus) related to the final solar phases of the metallic “reigns” in the centre or yolk, and the “lunar” planets in the watery albumen. Dee then outlines a fable concerning the scarab beetle, the eagle and the egg. This refers to the ascent of vapours in the closed crucible towards “heaven”, that is towards a “jovial” material state. To compel these vapours to descend, so that they coagulate and form solids is known as the “dung’s Art”. Dee also alludes to “the art of the Heliocantharis” or solar beetle, which involves drawing out the solar qualities hidden in obscure and stinking matter during the phase of Saturn’s “reign”, as is often described in alchemical texts. According to Dee the person who knows the art of the beetle may dissolve the egg and the shell with pure albumen, by adding the yolk and rotating and mixing them. That is to say, the shell of the Philosophers’ egg is formed naturally by salt compounds.⁴⁵ The pure albumen is the mineral, the purified primal matter or “mercury” which is added during the final phase, and mixed with the albumen which is already present. The yolk is the sulphurous component which must prevail and transform the egg into gold. The spiral revolutions in the crucible follow the sequence of planetary “rulers” – that is, Saturn, Jupiter, Moon, Mercury, Mars, Venus, and Sun. In concluding this theorem Dee claims that Anaxagoras had attained this *magisterium* which was an excellent medicine (although he is not referring here to Anaxagoras of Clazomene).⁴⁶ Theorem XIX completes the *analysis Pyronomica*, or separation carried out in the “reigns” by the regulation of the fire under the crucible. This theorem states that the virtues of the Sun and the Moon are infused into inferior bodies to produce aqueous and igneous humours which give the Stone its reddish colour.⁴⁷

Theorem XX returns to the Cross and its intersecting axis. The two axes form a binary, which is immediately explained as the Sun and Moon, or Sulphur and Mercury. By dividing the axis in various manners, Dee produces the Ternary (Sulphur and Mercury with Salt, or Body). The central point of the cross is the origin of all things, but it is also earth (“feculent, corruptible and full of darkness”) which must be purified in order to free the elements.⁴⁸ The mineral-earth liberates the point-moanad which allows the Ternary to reunite, clothing it in “the ornaments of white garments” like the white stone during the lunar “reign”.⁴⁹ The “ratio of equality” which Dee mentions refers to the perfect balance of the four elements, which he

Plate 6: The 'Egg diagram', *Monas Hieroglyphica* (Antwerp, 1564), p. 17^r.
Reproduced from the facsimile edition of C. H. Josten, courtesy of *Ambix*.

repeatedly emphasises throughout the work. Thus the Monad increases its “dignity” and power through the “uncommon activity of a master”.⁵⁰ There is little new material in this particular theorem, apart from the balance of the elements, which are examined not so much in terms of their material weight, as much as the developments occurring during the phases of the different “reigns” which manifest the dominion of the various elements. Most alchemical authorities suggest that the alchemist must intervene at this point, regulating the fire, either increasing or decreasing it, so that the substance is neither under- nor over-heated during the seven phases, which would require several weeks’ work.

Theorem XXI also reiterates an earlier theme: he says that he has already shown how the substance “enveloped in the recesses of the Monad” could be “brought to light” and vice versa. Here Dee alludes to the power of the Sun and the Moon, and Sulphur and Mercury, which are contained in the Philosophers’ Stone and manifested in the “planetary” colours. Whereas in Theorem XVIII he followed the Ptolemaic planetary order he now considers the order of the planets favoured by Plato (which Plato called the “Egyptian order”), beginning with Saturn, and followed (in descending order) by Jupiter, Mars, Venus, Mercury, the Sun and the Moon.⁵¹ The first three are said to congregate around the sign of Aries, while Venus and Mercury congregate around the Cross. Dee is most likely referring here to the planetary symbols extracted from the Monas symbol when it is disassembled: so that the sign of Aries is united with the elemental cross, and the Sun and the Moon are separated. Dee invites the reader to observe that when the figure is inverted, the Sun and the Moon revolve downwards towards the earth, which (he says) represents the principles of “stability” and “fixation”.⁵² Evidently Dee is referring here to the insertion of the Sun and Moon – by means of the fire of Aries and the elemental fire – into the mineral Earth in which they can be “fixed” and utilised. In examining the figures of Aries and the cross, Dee says that Aries is a “doubled moon” (i.e. it is constructed symbolically out of two semi-circles or lunar “crescents”), or a Moon which “exists and is alive”, and is provided with vital movement by the “craft of the elements” signified by the cross. The two semi-circles can be assembled into the sign of the Sun, and thus the living and existing Moon must be “treated by the magisterial art of the elements” because “it possesses the power to manifest the circular fullness of the sun”.⁵³ Dee understands “Moon” here as the lunar “ruler” in the process, as well as the primary white mineral, which is called “moon” when it has been purified. This is the mineral that is enriched by celestial influences during the course of the work. This mineral is also known as “philosophers’ Venus” and Dee places it close to Venus in his scheme. The overall meaning of this passage is that the power of Aries is solidified in the solar force, and forms the final stone. With this Dee ends the “cabbalistic anatomy” of his symbol, and instructs his reader to educate himself in “the fire of Aries of the first triplicity” or the “equinoctial fire” which causes the sun to be exalted to an uncommon degree. As has already been demonstrated, this is the vernal fire of Aries, the “beginning of the fiery triplicity” in Theorem X.⁵⁴ The fire originates in the Sun which, according to the alchemical writers, contains more power than ordinary solar heat.

Theorem XXII focuses on the “secret vessels of the holy art”.⁵⁵ Dee begins with the “artificial vessel” symbolically derived from the circle of the Monas, or from the Sun and Moon that it represents [Plate 7]. He then refers to an “earthen” and a “vitreous” vessel (represented by the Greek letters δ and λ respectively, which he also compares to a mortar and pestle which can be used to grind pearls, crystals, rubies and other stones).⁵⁶ The glass vessel is the salty crust that forms as a result of the application of fire to the materials in the final cooking. Because this crust is formed naturally it is also called “nature’s vessel”. The “vessel of the Art” or artificial vessel is the refractory of earth, which contains the glass vessel as the mortar contains the pestle.⁵⁷ The ground stones represent the various stages or colours of the “reigns” undergone by the material through the *opus*. Dee also refers to an “alpha” and an “omega” vessel,⁵⁸ which represent the beginning and the end of the alchemical process. The alpha is formed by the Sun and the Moon, while the omega is “full of mysteries”, although both are formed from base but necessary matter. This can only be the alchemists’ Mercury, the basis of the work, the primal matter that transforms into the Philosophers’ Stone. The celestial Mercury contains the Sun and Moon (as dew’s salt) already contained in the mineral earth. Dee then obscurely states that the alpha vessel must be employed by means of “the very secret and short art of using the air-shaft [of the vessel]”.⁵⁹ This is followed by a sentence of garbled Hebrew, which Grillot de Givry translates as “The incorruptible salt in which the first principle of things is preserved, in which the vitriol floats after dissolution.”⁶⁰ This could refer to the “mysterious artifice”, often alluded to in the alchemical literature, which is used in the central part of the work to collect the vitriol or “green lion”, which is not ordinary vitriol, but a by-product of the transformed primal matter. This process is referred to as “the taking of the Island of Delos”, the birthplace of Diana and Apollo (or Moon and Sun) in the operations called “sublimations”.⁶¹ Dee refers to the omega vase as “a man of all hours” (*omnium horarum homo*),⁶² which is similar in meaning to the “slave” or “mercury of all trades” which are the names given by alchemical authors to the purified primal matter sometimes added during the course of the work. According to Dee, at this point the “fruits of the Hesperian garden” will be seen in the alpha and omega, as in a mirror.⁶³ That is, through the “common Mercury” the alchemist will arrive at the mythical golden fruit guarded in the garden of the Hesperides. The phases of the metallic “reigns” may be observed during the *opus* through the mercurial mirror. Dee concludes this theorem by citing the praise of Pseudo-Democritus (i.e. Bolos of Mendes) for those who thrive on the “fiery strength” (the “heroes” of Dee’s preface) – the Greek alchemists who intone hymns for “the healing of the soul and a deliverance from all distress”.⁶⁴

Finally, in Theorem XXIII, Dee assembles the graphic symbol of the Monas. Returning once more to the four elements, he says that they are found in everything which contains the generating principle, and that it is essential when practising the Art that the elements should be present in equal proportion. He then tells the reader how to construct the Monas, which, he says, can be reproduced on seals or rings. In sum, he suggests two units of measure for the radii of the circle, and two units for each of the horizontal arms of the cross, with one and three units respectively for the upper and lower vertical arms. This gives us an overall height of nine units (“nine

Plate 7: The 'artificial vessel' (*Vas artificiale*) *Monas Hieroglyphica* (Antwerp, 1564), p. 22^r. Reproduced from the facsimile edition of C. H. Josten, courtesy of *Ambix*.

equal parts of the length of our fundamental AB”), which represent the nine operations of the Hermetic work.⁶⁵ Theoretically these proportions or symmetries should be utilised in the alchemical work, and the four equalized elements should therefore dominate in turn through the course of the “reigns” in the alchemical process. Dee then goes on to make a comparison between the “Pythagorean” Quaternary and the four arms of the cross, which represent an “artificial” Quaternary (*Quaternarii artificialis*) which can be subjected to “a peculiar and mystical division and computation.”⁶⁶ Dee extracts certain numbers, adding, multiplying and permutating the alchemical Quaternary in an application of the Hebrew technique of the transposition of letters (*tsiruf*). He then constructs a diagram based on the Pythagorean Quaternary 1 – 2 – 3 – 4, which is based on the number of units used to construct the cross, and he says that this Quaternary can be used to calculate both the duration of time and the intensity of “powers and virtues” in the alchemical work.⁶⁷ Using similar calculations, Dee derives the force of the heat of the fire using the progression 10 – 20 – 30 – 40, which runs parallel with the increasing intensity of the “acquired and internal power” that accumulates in a denary proportion (1 – 10 – 100).⁶⁸ It should be noted, however, that the intensity of the fire is measured in relation to an initial temperature which is not stated. The “internal power” refers to the anticipated multiplication of power of the Philosophers’ Stone during the various stages of the alchemical work. The “analytic weights” (*pondera analytica*) which Dee refers to (designated by the numbers 3 and 4) are related to the Ternary and the Quaternary, while the “synthetic weights” (*pondera synthetica*) – a sequence of ten numbers from 13 down to 1 – seem to refer to the decreasing weight of the materials which terminates in the monadic unity of the Philosophers’ Stone.⁶⁹ The schema separates time into the “particular” and the “magisterial”. The first includes the seven alchemical operations: Preparation, Putrefaction, Separation, Conjunction, Coagulation, Contrition and Imbibition, while the second refers to the “lapidific” and “fermentative” phases of the formation of the Philosophers’ Stone, which is designated by the number 252 (which, as we have seen represents the final perfected Mercury, but could also allude to the number of days needed to complete the Work). Dee’s “magisterial time” refers to those final operations which are often briefly referred to by alchemical authors as *solve et coagula*, which makes nine operations in total. In the following diagram, the “Horizon Æternitatis”,⁷⁰ [Plate 8] Dee once again insists upon the necessity of the successive predominance of the four elements in the Work, in the following order: Earth, Water, Air, Fire – whose power must increase in a denary proportion: 1 – 10 – 100 – 1000.⁷¹ He also refers to the progressive development of the “body, soul and spirit” of the minerals represented in the traditional colour sequence, from “darkness” (black), to “crystalline” (white) to “citron” (yellow), and “anthrax” or the final red carbuncle of the Stone itself.

Dee then declares that once the monad has been “correctly, wholly, and physically restored to itself”, it is “not in the power of nature or of any art to impel it more than four times by supercelestial revolutions to make any progressive movement”.⁷² Here Dee refers to the four “multiplications” of weight and power which (according to alchemical authors) are permitted once the Stone has reached the celestial or ethereal level, and has attained its maximum level of creative force. Dee ends this theorem with an obscure reference to “four very famous men, philo-

Plate 8: The 'Horizon Æternitatis' figure, *Monas Hieroglyphica* (Antwerp, 1564), p. 27^r. Reproduced from the facsimile edition of C. H. Josten, courtesy of *Ambix*.

sophizing together" (*Quatuor simul [...] Philosophantes Clarissimi Viri*), who had been "granted [...] power over other creatures and large dominion" by God through the "very great wonder" of the Monas.⁷³ Although it does not seem likely that Dee saw himself as one of these favoured operators, it is possible that he might have known them. The last Theorem (XXIV) ends by suggesting that the circle of the elements (divided into equal proportions in the alchemical work) is analogous to the equinoctial circle (the equal proportions of day and night), the metamorphosis and metastasis of the Quaternary being defined by the number 24 (4 X 6). This number is related to the four beasts of the apocalypse ("each having six wings") and to the twenty-four "elders" surrounding God in heaven.⁷⁴ It should also be noted that six is the number of metals excluding gold involved in the alchemical Work, i.e. the number of "reigns" of each of the four elements prior to the final "reign of Gold". Thus Dee's twenty-four theorems taken together are themselves a "cabalistic" presentation of the Monad.

While Dee's alchemical observations might seem far too abstract and "literary" to be considered a "theory", and while he fails to follow a consistent line in his presentation of the *opus*, we should remember that these tendencies are present both in the ancient alchemical tradition and in the more recent alchemical literature with which Dee was intimately acquainted. How much he may actually have practised alchemy in the laboratory is difficult to estimate,⁷⁵ but his deep familiarity with the fundamental principles of alchemy, and his desire to theorise on the process of the alchemical *opus* speak for themselves.

NOTES

J. REEDS

JOHN DEE AND THE MAGIC TABLES IN THE *BOOK OF SOYGA*

“Oh, my great and long desyre hath byn to be hable to read those tables of Soyga”. –
(John Dee).¹

1. JOHN DEE AND THE BOOK OF SOYGA

Until recently the *Book of Soyga* was known only by repute, through mention in the diaries of John Dee (1527-1608). Dee's association with the *Book of Soyga* is conveniently summarised by Christopher Whitby:² On 18 April 1583 Dee was unable to find his *Book of Soyga*: it had been mislaid. On 29 April 1583 Dee remembered a detail about the missing book: “E[dward] K[elley] and I wer talking of my boke Soyga, or Aldaraia and I at length sayd that, (as far as I did remember) Zadzaczadlin, was Adam by the Alphabet therof.” On 19 November 1595 Dee recovered his *Book of Soyga*. Many years later Elias Ashmole (1617-1692) reported that “the Duke of Lauderdale hath a folio MS. which was Dr. Dee's with the words on the first page: Aldaraia sive Soyga vocor”.

In addition to these unremarkable appearances of the *Book of Soyga* in Dee's *nachlaß* – unremarkable, for who does not sometimes mislay and later recover a valued book? – there is the singular exchange held between Dee and the angel Uriel on the occasion of their first conversation, at Mortlake on Saturday, 10 March 1581/1582, the very first scrying session mediated by Dee's most famous scryer, Edward Kelley (1555-c.1595), also known as Kelly and Talbot.³ In the following, Δ is Dee, VR is Uriel:

Δ – ys my boke, of Soyga, of any excellency?
VR – Liber ille, erat Ada[m]e in Paradiso reuelatus, per Angelos Dei bonos. [That book was revealed to Adam in Paradise by God's good angels.]
Δ – Will you give me any instructions, how I may read those Tables of Soyga?
VR – I can – But solus Michaël illius libri est interpretator. [Only Michael is the interpreter of that book.]
Δ – I was told, that after I could read that boke, I shold liue but two yeres and a half.
VR – Thow shallt liue an Hundred and od yeres.
Δ – What may I, or must I do, to haue the sight, and presence, of Michael, that blessed Angel?
VR – Presentias n[ost]ras postulate et invoke, sinceritate et humilitate. Et Anchor, Anachor, et Anilos, non sunt in hunc lapidem invocandi. [Request and invoke our presence with sincerity and humility. Anchor, Anachor and Anilos are not to be called into this stone.]

Δ – Oh, my great and long desyre hath byn to be hable to read those tables of Soyga.

VR – Haec maximè respiciunt Michaëlem. Michaël est Angelus, qui illuminat gressus tuos. Et haec revelantur in virtute et veritate non vi. [These things are mostly to do with Michael. Michael is the angel who illuminates your steps. And these things are revealed in virtue and truth and not by force.]

Δ – Is there any speciall tyme, or howre to be observed, to deale for the enioying of Michael?

VR – Omnis hora, est hora nobis. [Every hour is ours.]⁴

To summarize: Uriel confirms Dee's high estimation of the *Book of Soyga's* value. Dee wants angelic help in understanding his *Book of Soyga*, but only the angel Michael is cleared to talk about this topic. If, as some scholars believe, Kelley was a charlatan, then here we find him (in the voice of Uriel) being characteristically evasive. As a newcomer to Dee's household he does not want to commit himself to any more specific statements about the *Book of Soyga*, about which he knows very little beyond the fact that it fascinates Dee.⁵

There things rested for roughly four centuries. Dee prized his *Book of Soyga*, but since the book was lost, modern scholars could only guess about its contents and possible influence on Dee's magic system, especially for the version in his *Book of Enoch*.⁶

But then in 1994 Deborah Harkness – like the hero of Poe's "The Purloined Letter" – located not one but two copies in the obvious places, in this case in two of England's greatest libraries. They had been catalogued under the title *Aldaraia* instead of *Soyga*.⁷

At last we can examine the *Book of Soyga*, and in particular its tables, and see for ourselves what it was that Dee prized so highly.

The *Book of Soyga* is an anonymous late-mediaeval or early modern Latin magical work extant in two sixteenth-century manuscript copies: one in the Bodleian Library, which I refer to as Bodley 908, and the other in the British Library, which I refer to as Sloane 8.⁸ Since there is as yet no edition or translation of either of the two manuscripts for me to refer to, nor even a synopsis of their contents, I offer the following brief description.⁹

The Sloane 8 copy (but not the Bodley 908 one) bears the title *Aldaraia sive Soyga vocor* at the head of the text and on the leaf preceding the text, both in the same hand as the text, fitting Ashmole's description. Sloane 8's preceding leaf also bears the description *Tractatus Astrologico Magicus*, written in a different hand. Both copies contain the equation of "Adam" with "Zadzaczadlin", so there can be no doubt that Harkness's *Book of Soyga* is closely related to Dee's *Book of Soyga*; on Ashmole's *Aldaraia sive Soyga vocor* evidence, and based on the arguments I present at the end of section 5, it is easy to guess that Sloane 8 was in fact Dee's copy of the *Book of Soyga*.¹⁰

The 197 leaves of Bodley 908 contain three named works, *Liber Aldaraia*, *Liber Radiorum*, and *Liber decimus septimus* (of 95, 65, and 2 leaves, respectively) as well as a number of shorter unnamed works totalling about 10 leaves. The final 18 leaves

contain the tables that are the subject of this paper. Sloane 8 has 147 leaves, and seems largely identical with Bodley 908, except that the tables occupy 36 leaves and the *Liber Radiorum* is present only in a 2 leaf truncated “executive summary” version.

A cursory inspection of the *Book of Soyga* shows it is concerned with astrology and demonology, with long lists of conjunctions, lunar mansions, names and genealogies of angels, and invocations, not much different from those found, say, in pseudo-Agrippa.¹¹ A single example, of a list of spirits of the air, is illustrative of the whole:

Adracty, Adaci, Adai, Terocot, Terocot, Tercot, Herm, Hermzm, Hermzisco, Cotzi, Cotzizi, Cotzizizin, Zinzicon, Ginzecohon, Ginchecon, Saradon, Sardon, Sardeon, Belzebuc, Belzscup, Belcupe, Saraduc, Sarcud, Carc, Sathanas, Satnas, Sacsan, Contion, Conoi, Conoison, Satnei, Sapnn, Sappi, Danarcas, Dancas, Dancasnar.¹²

Some of the spells or incantations have a vaguely Christian or alchemical air to them, as “Petra Ouis Angelus Agnus Lapis Sponsus” and “Diuinitas Christus Venturus Iustorum Humanitatis Vnitas”,¹³ but the overall impression is that it is no more an alchemical treatise than it is a devotional work.

Several features of the *Book of Soyga* seem worth particular mention, as being untypical of a standard late mediaeval or Renaissance magical work, or of the run-of-the-mill necromancy handbook.¹⁴ In contrast to most mediaeval or Renaissance works, the text has extremely few references to known authors or personalities. There are no recognizable *auctores*. Other than the occasional mention of a few Old Testament names, and two references to *Libro Geber*, and a puzzling marginal gloss “Steganographia” in the same hand as the text, which is presumably a reference to the work of Johannes Trithemius (1462-1516), there are no references to recognizable personalities.¹⁵

Instead, it makes numerous references to what are presumably mediaeval magical treatises, works such as *liber E*, *liber Os*, *liber dignus*, *liber Sipal*, *liber Munob*, and the like.

Throughout the book much importance is placed on writing words backwards. This can be seen in some of the titles mentioned above: *Sipal* backwards is *Lapis*, and *Munob* reversed is *Bonum*. Phrases such as “Retap Retson” occur throughout. This principle is reflected in the form of the tables, as discussed below. The name of the work, *Soyga*, is itself explained to be “Agyos, literis transvectis”.¹⁶

Throughout the book there is a preoccupation with letters and combinations of letters, assignments of numerical values to letters, assigning letters to planets and to elements, listing combinations of letters associated with houses of the moon, recombining letters and syllables in incantations to form new magic words, listing new names for the 23 letters of the Latin alphabet, sometimes taken in reversed Z through A order, listing new symbols for the 23 letters, and so on.

And, towards the end of the book there is the set of thirty-six large square tables, described in section 2 of this paper, filled with a seemingly random jumble of letters.

(One of these is illustrated in Plates 9 and 10.) These tables do not appear to be like any illustrated in, say, Shumaker's survey of mediaeval and early modern magic works.¹⁷

The *Book of Soyga*'s preoccupation with letters, alphabet arithmetic, Hebrew-like backwards writing, and so on, is of course characteristic of the new Cabalistic magic which became popular in the sixteenth century, exemplified by the great compilation of Agrippa of Nettesheim (1486-1535), and borrowing authority both from the Renaissance humanist interest in the Cabala expressed by such figures as Pico and Reuchlin and from the supposed Biblical antiquity of the Cabala.¹⁸ Although large square tables are not themselves a characteristic feature of the traditional Cabala, they had by Agrippa's time become an integral part of the Christian magical Cabala.¹⁹

Such a work must have appealed to Dee since it encompassed so many of the ingredients associated with early modern magical and Christian Cabalist texts; we know the tables in the *Book of Soyga* excited John Dee's interest, as seen in the dialogue with Uriel. They certainly also excited mine as a professional cryptologist. Were they, I wondered, filled with a random (and hence pointless) selection of letters, or were they a cryptogram (with a hidden "plain text" meaning, which might at least in principle be recoverable by cryptanalysis), or was there some other structure or pattern to them? I approached the tables as I would any cryptographic problem, first transcribing the data and entering it into the computer, and then trying out what I knew of the bag of code-breakers' tricks. The results, which I describe in sections 3 through 6, were unexpectedly gratifying.

This paper, then, indirectly addresses the question of the *Book of Soyga*'s possible influence on Dee by examining and comparing the *form* (or method of construction) of the tables in the *Book of Soyga* and those found in other early modern magic tables (including Dee's and Agrippa's), rather than their *function* (i.e., purpose or method of use).

2. THE MAGIC TABLES OF *THE BOOK OF SOYGA*

The *Book of Soyga* contains thirty-six tables; each table is a square grid of 36 rows and columns; each grid cell contains a letter of the Latin alphabet.²⁰ These tables turn out to be formed by a completely deterministic calculation method, or algorithm, starting from an arbitrary "code word" for each table. This construction algorithm is so intricate that it is unlikely that its presence would be detected on casual examination of the tables.

Each of the thirty-six tables is headed with a number and a label. I summarize these in my Table 1. For convenience I will refer to them as T1, T2, and so on. T1 through T12 are labelled with the signs of the zodiac, Aries through Pisces; as are T13 through T24. T25 through T31 are labelled with the seven planet names, and T32 through T35 with the four element names. T36 is labelled with the word

Plate 9: *Book of Soyga*, T1 Aries table. The Bodleian Library, University of Oxford, MS Bodley, 908, fol. 180^r.

36	Magistri	MOYSES	197 ^v	137 ^v /138 ^r	

Eight of these tables also appear copied in Dee’s notebook, the *Book of Enoch*, joined in pairs: “The First Table” in the *Book of Enoch* is a 72-row table, filling both pages of an opening, the first 36 rows of which are Soyga’s T1 and the last 36 rows

The image shows a manuscript page from the Book of Enoch, folio 58v, which is equivalent to the T1 'Aries' Table. The page is filled with a dense grid of text, organized into 26 columns and 26 rows. The text is written in a cursive script and is organized into a large table with a header row and a footer row. The page is numbered 184 in the top left corner and J. REEDS in the top right corner.

Plate 11: *Book of Enoch*, equivalent of T1 'Aries' Table. Department of Manuscripts, British Library, MS 3189, fol. 58^v. (By Permission of the British Library).

of which are Soyga's T13, the two "Aries" tables, and so on, as indicated in my Table 1.²¹ See Plate 11 for the *Book of Enoch* version of T1 "Aries".

The tables are written with italic letters, mostly lower case, written into a neatly pencilled regular grid. In Bodley 908 the grid cells measure approximately one quarter of an inch, so a complete table fits on one page. In Sloane 8 the grid cells are approximately one third of an inch in size, and each table occupies the two facing pages of an opening. In each book there is occasional use of the short *s*; much more common is the long *ſ*. The writing becomes more even after the first few tables, with greatly diminished use of upper case letters, as if the copyist became accustomed to what must have been an unusually irksome and tedious task of copying completely senseless data which offered no obvious contextual clues for correcting mistakes. In Bodley 908 upper case *L* is used exclusively, presumably to avoid confusion with long *ſ*. In Sloane 8 lower case *l* is used exclusively.

The handwriting in Bodley 908 is quite even, and pains seem to have been taken to make the letters clearly distinguishable. The handwriting in Sloane 8 is less clear, so that *n* and *u* are often hard to tell apart, as are the pairs *c/e* and *l/i*. Sloane 8 shows obvious signs of proofreading, with dots, double dots, and cup strokes marking errors or doubtful readings. Occasionally a cell contains, in addition to its main letter, a tiny *f* followed by another tiny letter; I surmise *f* means *forte* and the following letter is a suggested correction. Some corrections seem to have been made by erasure and overwriting; the handwriting also seems to change part way through.

The left-hand margin in each table is special. Each table has a "code word", e.g., T1 "Aries" has code word NISRAM. The left margin is composed entirely of the code word and the reversed code word, e.g., NISRAM MARSIN NISRAM MARSIN [...] repeated until the margin is filled.

The code words are listed in the third column of my Table 1. All thirty-six of them are exactly 6 letters long. The treatise in the *Book of Soyga* which discusses the tables, the *Liber Radiorum*, has a series of paragraphs mentioning the code words for twenty-three of the tables, together with number sequences which stand in unknown relation to the words.²²

Note that the code words for T13–T24 are the reverses of those of the corresponding T1–T12. Thus, T1 "Aries" has code word NISRAM and T13, also "Aries", has code word MARSIN.

In Bodley 908, T36 "Magistri" has a blank 13th line – the first line after the first complete MOYSES/SESYOM cycle on the left. The Sloane 8 version of the table has the same 35 non-blank lines, but they have "closed ranks" so it is the last line of 36 which is blank.

In general, the first four or five rows of the tables appear very repetitious. Often the first row or two consist entirely of endless repetitions of a given two-letter "motif", followed by two or three rows of repetitions of a 4-letter motif, with maybe another row or so consisting of repetitions of a 12-letter pattern. But these

This may be seen in T1 “Aries”, shown in Plates 9 and 10, where the first three lines soon fall into repetitions of the 4-letter motifs *dizb*, *lytr*, and *xiba*, respectively, and the next two rows into repetitions of the 12-letter motifs *qsrnylfdzfzly* and *ohqtauiducis*, respectively. Many of these motifs are found in several of the tables.

[illegible]

3. ANALYSIS OF TABLES

is, the pattern $\begin{bmatrix} ? \\ m & m \end{bmatrix}$ was almost always actually $\begin{bmatrix} n \\ m & m \end{bmatrix}$. This led to a tabulation

of all triplets of letters occurring in a $\begin{smallmatrix} N \\ WX \end{smallmatrix}$ configuration, and it was found that in

a large majority of case the letter occupying the X position was predictable from the letters in the N and W positions. (The names of these variables are meant to represent the letter at the spot marked by X , the letter to its *North*, and the letter to its *West*.)

This led to discovery of an equation of form:

$$X = N + f(W)$$

where $f(W)$ is a function of W and the addition is taken *modulo* 23. Here the letters are assigned numerical values according to their positions in the 23-letter Latin alphabet: $a = 1$, $b = 2$, [...], $u = 20$, $x = 21$, $y = 22$, $z = 23$, so that $z + 2 = b$, etc. The final ingredient in this formula, the auxiliary function f , is known to us only by a table of values determined empirically.

Table 2. Auxiliary function values

W	$f(W)$	W	$f(W)$	W	$f(W)$	W	$f(W)$
a	2	g	6	n	14	t	8
b	2	h	5	o	8	u	15
c	3	i	14	p	13	x	15
d	5	k	15	q	20	y	15
e	14	l	20	r	11	z	2
f	2	m	22	s	8		

Expressed another way: a letter is obtained by counting a certain number of letters after the letter immediately above (i.e., north of) it in the table. The number of letters to count is determined by the letter standing to the immediate left (i.e., west). If the letter to the left is an f , for instance, we are to count two letters past the letter above. So, continuing the example, if the letter above is an l , then the letter in question

must be n , which is two letters past l :

	l
f	n

. If the end of the alphabet is reached in this letter counting, one starts over at the beginning, treating a as the letter after z , and so on.

For letters in the top row of a *Soyga* table, for which there is no N letter, the following formula holds:

$$X = W + f(W)$$

where the addition is again performed *modulo* 23. That is, for letters in the top row one applies the rule for letters in the interior of the table, acting as if the letter appearing to the left also appears above.

4. DIRECTIONS FOR CREATING THE TABLES

This, then, is a recipe for recreating the tables, although almost certainly not expressed in the same terms the *Soyga* author would have used. Starting with a code word, such as NISRAM, and an empty grid of 36 rows and columns:

4.1. *Left Column*

Write the code word followed by its reverse into the cells of the left hand column, starting at the top and working downwards, repeating the process until the column is full.

4.2. *Top Row*

Fill in the remaining 35 cells of the top line, working from left to right, repeatedly applying the formula $X = W + f(W)$.

In our example, the first application of this formula yields $n + f(n)$, that is, the letter $f(n) = 14$ places after n in the 23-letter alphabet, which is d . (Thus: n is the 13th letter; $13 + 14 = 27$; reduced *modulo* 23, 27 is 4, which is d .) Write the letter d in the second cell in the top row, just to the right of the n of NISRAM.

The second application yields $d + f(d)$. Since $f(d) = 5$, this gives us i , the fifth letter after d . Write an i in the third cell of the top row.

The third application yields $i + f(i)$. Since $f(i) = 14$, this gives us z , the 14th letter after i . Write a z in the fourth cell of the top row.

The fourth application yields $z + f(z) = 23 + 2 = 25 = 2 = b$; put a b in the fifth cell.

The fifth application yields $b + f(b) = 2 + 2 = 4 = d$; put a d in the sixth cell. At this point we have fallen into a cycle: the next application yields $d + f(d)$ which we have already seen before is i , and the rest of the first row will continue to repeat $dizb\ dizb\ \dots$

At this point the top few rows of the partially filled in table will look like this:

```
ndizbdizbdizbdizbdizbdizbdizbdiz
i.....
s.....
r.....
```

4.3. Interior of Table

Now, starting with the second row and working left to right within rows, fill in the interior cells as follows. With each blank cell encountered, if the work has progressed in normal European page-reading order, the cell just above the blank cell and the cell to the left have both been filled in. Call the letters appearing in those cells N and W , respectively, and use the formula $N + f(W)$ to determine what to write into the blank cell under consideration.

For example, the first blank cell in row 2 is the second cell. It has a d above it and an i to its left. So the letter $d + f(i) = 4 + 14 = 18 = s$ is written in that blank cell.

The next cell, cell 3 in row 2, has an i above it and an s to its left (the s which we just wrote). So we put $i + f(s) = 9 + 8 = 17 = r$ in cell 3 of row 2. The next cell gets $z + f(r) = 23 + 11 = 11 = l$, and so on. The top few rows now look like this:

```
ndizbdizbdizbdizbdizbdizbdizbdizbdiz
isrl.....
s.....
```

This process, carried out row by row, left to right, will eventually fill the table.

Alternatively, instead of working row-by-row, left-to-right in each row, as described here, one could equivalently work column-by-column, working downwards within each column. The final results would be the same.

Of course I make no claim that the *Soyga* author intentionally used my $X = N + f(W)$ formula. Whatever means were actually used to construct the tables clearly had this formula's mathematical structure implicitly "built in", but we can only guess at its implementation. The arithmetic *modulo* 23, for instance, could have been effected equally well by paper-and-pencil computations, by consultation of charts, by letter counting on finger tips, or by the use of Lullian wheels.

5. ERROR ANALYSIS AND GENEALOGY

In fact the tables found in the two extant manuscripts of the *Book of Soyga* are not identical with those I produced by a computer programmed to carry out the above rules, starting with the same code words as in the manuscripts. This is for two reasons:

1. The law of formation for the tables is sufficiently intricate that the *Soyga* author occasionally made mistakes in working out the original tables.
2. The copyists made new mistakes when transcribing so much apparently unpatterned text.

Fortunately for us, these two kinds of errors have radically different consequences. If a cell in the original is miscalculated, the mistake spoils the calculation of the cells to its right and below it, resulting in an avalanche of error with an easily recognizable rectangular shape. A mere copying error, however, will not have a cumulative effect, and will be classifiable into one of several familiar types: transposition, deletion, eye skip, and replacement.

In short, the constraints placed on the tables by the $X = N + f(W)$ formula allow an aggressive form of textual emendation of the received tables in Bodley 908 and Sloane 8. A similar technique has been used to trace copying of logarithm tables by Charles Babbage (1792–1871), but is of course not generally applicable.²³ Only texts with a well-defined mathematical structure are amenable to this method of detecting and correcting errors of generation and transcription.

5.1. Principles of Error Diagnosis: An Artificial Example

This can all be seen in an artificial example, concocted so as to display every kind of pathology in the first few lines of the table. Suppose the code word is SARTON. Ideally, the first few lines of the table would be:

```
scfhndizbdizbdizbdizbdizbdizbdizbdiz
aeuzprupprupprupprupprupprupprupprup
rqrlmqrcsbygxiilmobygxiilmobygxiilmobyg
tattuhyscenxznzncrnnxznzncrnnxznzncrnnx
oiklrtgaetxndedhyedcqueredsfndhyedc
nzmkiqyqbxditmetmbsetbgkxgtmetmb
noublgeghcqalqixuliqpsdgnamuylixuliq
oym anxuyzeggrdofycmpeispcdrhdqfzycmp
tgsidczabgnxisyxolifgphusmqesahenr zr
rscmcfbcexemhzazqhoopeymrzsnipxueheh
...
```

Call this the *ideal original table*. Suppose, however, that in working this out a mistake was made: an e was put down instead of a p in the fifth cell of the second line. This mistaken letter will cause mistaken values to be calculated for the sixth cell of the second line and for the fifth cell of the third line, and those mistakes will beget others. The resulting *actual original table* will be (with the erroneous e capitalized):

```
scfhndizbdizbdizbdizbdizbdizbdizbdiz
aeuzEsrllytrlytrlytrlytrlytrlytrlytrl
rqrlbuibaxibaxibaxibaxibaxibaxibaxib
tattkmhggdokqsrnplfdzlyqsrnplfdzly
oiklgsqdmcrxhztxgrphtqtauiducisohqt
nzmkykhicftfkpimftbrgoaxqruterukfkha
noubamgpqcyxbrudlqyixfcasbylbteahpxq
```

```

oymacpugysgdgzyttaalsolxkrkcekuqefzs
tgsirczinixtpnnklxqhzqhcnpqbmtagmyk
rscmqzblkazxgtxbnmpxpfksxzrdgsdficbm
...

```

Finally, suppose we receive this table, derived from the actual original but with a variety of copying errors:

```

scfhudizbdizbdhzbdisbdizbdkzbdizbdiz
aeuzefrlytrlyutlyttlyrtlyttlytrlytrl
rqrlbnibaxibaxibaxibxibaxibaxiibaxib
rattkmhggdokqstnplfdzlyqfrnplfdzly
oikglsqdmcrxhztgxrrpthqranidueisohqt
nzmkykhiestfkipmstyixfeafbylbcahpxq
uoubamgpqpyxbiudlqalsolxkrkcckuqefzf
oymacpugyfgdgzyrtaqhzqhcnpqbmtagmek
tgfirczinixtpnnzlxqhzqhcnpqbmtagmyk
rfcmqzblkazxgtxbnmpxpsksxztgdgsdsicbm
...

```

Our task is to recover the ideal original and actual original and diagnose the copying errors.

First we inspect the left margin, where we see SARRON UOTR [...], etc, which is a damaged version of SARTON NOTRAS, etc.; the code word is SARTON. (The left margin contains in all six copies – forward and reversed – of the code word, so in practice there is no doubt about what the code word is.)

From this we work out the ideal original table, and examine those positions where the received table differs from it. This diagram displays places where the received table agrees with the ideal original with a dot and places where they disagree with the value seen in the received table:

```

....u.....h.....k.....
....efrlytrlyutlyttly.tlyttlytrlytrl
....bnibaxibaxibaxib..baxiba..ibaxib
r...kmhggdokqstnplfdf.lyqfrnplfdzly
...glsqdmcrxhztgxrrpthq.anidueisohqt
....y.hicstfkipims.yixfeafbylb.cahpxq
u...amgpqpyxbiudlqalsolxkrkcckuqefzf
....cp.gyf.dgzyrtaqhzqhcnpqbmtagmek
..f.r...inixtpnnzlxqhzq.cnhpqbmtagmyk
.f...qz.lkazxgtxbnmpx.sksx.tdgsdsicbm
...

```

Here we see an essentially solid rectangular region of disagreement, starting in the fifth cell of row 2, with the value *e*, which is due to an error in the original. The “pepper and salt” pattern of sporadic disagreements elsewhere is characteristic of

copying errors. So we conclude that an e was put down by mistake in row 2, cell 5 in the original.

Now we work out the corresponding putative original, and display the disagreements between it and the received copy:

```

.....u.....h.....k.....
.....f.....ut...t..rt...t.....
.....n.....xibaxibaxi.....
r.....t.....f.....
...gl.....r.n...e.....
.....s.....s.yixfeafbylbtcahpxq
u.....p...i....alsolxkrkcckuqefzf
.....f.....r..qhzqhcnhpqbmtagmek
..f.....z.....
...

```

Since the remaining rectangular regions of disagreement do not reach to the bottom of the table, we conclude that they are not due to errors in the original. (Further examination will show they are due to eye skip.) No further errors seem to have been made in the original, so our putative original table is finished.

We are now in a position to diagnose the copying errors. The mistakes in cells 21 through 30 of line 3 are easily seen to be due to elision of an a from one of the repeating *baxi* groups; the pattern ends on the right foot again in cell 31 by the insertion of an extra *i*. We might term this a *horizontal eye skip* error. The errors in cells 19 through 36 in lines 6, 7, and 8 are seen to result from a *vertical eye skip* error, as follows. The rightmost 18 cells of lines 6, 7, 8, and 9 of the original are:

```

brgoaxqruterukfkha
yixfcasbylbteahpxq
alsolxkrkcckuqefzs
qhzqhcnhpqbmtagmyk

```

and of the received copy are:

```

yixfeafbylbtcahpxq
alsolxkrkcckuqefzf
qhzqhcnhpqbmtagmek
qhzqhcnhpqbmtagmyk

```

so we see that the copyist deleted the right half of line 6 and duplicated the right half of line 9. There is a transposition error in row 5, cells 4 and 5: the original has *lg* and the copy has *gl*. The remaining errors are simple replacements of one letter by another.

5.2. Summary of Actual Errors

In fact all of the types of errors illustrated above occur in both the Sloane 8 and Bodley 908 versions of the tables. There seems to have been one set of original tables which I call A. Our extant versions, Bodley 908 and Sloane 8, seem to have been derived independently from a flawed intermediate version which I call C.

The originals A were constructed with the code words as listed in my Table 1, by application of the $N + f(W)$ formula; the errors in applying the formula are listed in my Table 3. Since errors in applying the $N + f(W)$ formula propagate and spoil everything below and to the right of the error locus, we can be sure that this is the complete list of errors in A. Out of the 46,656 cells in the complete set of tables, only 13 errors were made in applying the formula.

Table 3. Errors in Originals

Table	Row/Col.	Error	Row/Col.	Error	Row/Col.	Error
T5	15/24	t				
T8	28/25	r				
T10	18/11	t				
T12	15/9	y				
T13	18/2	t				
T19	19/29	e	20/28	g		
T29	18/11	m	17/16	h		
T32	6/25	l	7/24	e	34/27	k
T35	19/23	d				

The alternative, that Bodley 908 and Sloane 8 did not share a common original, would require us to believe that exactly these same particular errors (and no others) were committed in working out the originals for both Bodley 908 and for Sloane 8. This is so unlikely under any reasonable model for errors that I reject this alternative in favour of a single shared common original A.

A number of gross eye skip errors were committed in the descent of Bodley 908 and Sloane 8 from A. In Bodley 908's version of T2, row 3, cells 20–35 read

axibaxibaxibaxib instead of xibaxibaxibaxiba; that is, an a was inserted at cell 20. In both Bodley 908's and Sloane 8's versions of T24, the right hand half of row 35 was elided and the right hand half of row 34 was duplicated. In both Bodley 908's and Sloane 8's versions of T36, row 3, cells 30–36 read baxibax instead of A's ibaxiba, and row 12 is elided.

I detected seven transposition errors, some unique to Bodley 908 and to Sloane 8, and some shared, as listed in my Table 4.

Table 4. Transposition Errors

<i>Table</i>	<i>Row</i>	<i>Col.</i>	<i>Actual</i>	<i>Correct</i>	<i>Where found</i>	
T3	22	29	kq	qk	Bodley 908	
T12	6	8	cp	pc		Sloane 8
T25	14	34	ms	sm	Bodley 908	
T30	33	28	nm	mn	Bodley 908	Sloane 8
T31	35	16	lf	fl		Sloane 8
T35	22	21	nh	hn	Bodley 908	Sloane 8
T35	27	34	rs	sr	Bodley 908	Sloane 8

A tabulation was made of all corresponding places where Sloane 8, Bodley 908, or A were all legible but failed to give unanimous readings of cell entries, except for those involved in the gross eye skips noted above. The tabulation was made again, where all differences explainable by mere confusion of *i/l*, *u/n*, *f/s*, *e/c*, or *t/r* were censored, in an attempt to compensate for possible transcription errors on my part (especially in reading Sloane 8).

Table 5. Summary of cell reading disagreements

<i>Type of Disagreement</i>	<i>Raw</i>	<i>Censored</i>
A, Bodley 908, and Sloane 8 all differ	10	6
A and Bodley 908 same; Sloane 8 different	266	115
A and Sloane 8 same; Bodley 908 different	144	75
Bodley 908 and Sloane 8 same; A different	394	223
A, Bodley 908, and Sloane 8 all agree	45541	45936

The results, in my Table 5, again show Bodley 908 and Sloane 8 each have a large number of unique errors in addition to a larger number of shared errors. If either of Sloane 8 or Bodley 908 were copied from the other, the errors unique to the ancestor would have had to have been corrected in the child. Because the text is incoherent, there is no natural “self repair” mechanism analogous to a scribe’s knowledge of orthography or grammar allowing emendation of errors, at least in the large areas of the tables lacking repeating motifs. If both Bodley 908 and Sloane 8 were independently derived from the original A, the 394 (or 223) shared errors would all be the result of accidental occurrence of precisely the same mistakes, independently committed in copying Bodley 908 from A and in copying Sloane 8 from A. This is very unlikely under any reasonable model of copying errors. So we

conclude instead that both Bodley 908 and Sloane 8 were derived from a common flawed copy, which I call C, of the originals. Because Bodley 908 seems to have fewer disagreements with A than Sloane 8 does, we conclude that Bodley 908 is a more accurate copy of C than Sloane 8 is. Overall, there seems to be a 3/4% copying error rate in going from A to C, a 1/2% error rate in going from C to Sloane 8, and a 1/3% error rate in going from C to Bodley 908.

The same techniques can be used to see what relation Dee's copy of the eight *Soyga* tables appearing in Sloane 3189, the *Book of Enoch*, has to Bodley 908 and Sloane 8.

In the first place, the T13 of Sloane 3189 shows the same mistake in applying the $N + f(W)$ formula (in row 18, column 2) present in the T13 of A. Hence even if not copied directly from Bodley 908 or Sloane 8, the *Soyga* tables in Sloane 3189 are, like those of Bodley 908 and Sloane 8, ultimately derived from A. *A fortiori*, they are copies of the *Soyga* tables, rather than simply creations inspired by, or in the same style as, the *Soyga* tables.

Secondly, the T2 of Sloane 3189 lacks the gross eye skip error found in row 3 of T3 of Bodley 908. This suggests Sloane 3189 was not copied from Bodley 908, but not strongly so: the eye skip error occurs in the repeating *baxibaxi* area and could have been corrected by a naive but alert copyist.

Thirdly, looking only at locations where all four of A, Bodley 908, Sloane 8 and Sloane 3189 supply legible values, I found the results in my Table 6. The agree-disagree counts seem to make Sloane 3189 slightly but insignificantly closer to Bodley 908 than to Sloane 8.

Table 6. Summary of cell differences between Sloane 3189 and A, Bodley 908 and Sloane 8.

Sloane 3189, Compared with	Raw		Censored	
	Disagree	Agree	Disagree	Agree
A	288	9877	209	9956
Bodley 908	203	9962	149	10016
Sloane 8	208	9957	155	10010

Fourth, and more tellingly, the transposition error in T3 of Bodley 908, where there is a *kq* instead of the correct *qk* in row 22, is not present in the T3 of Sloane 3189. Unlike the T2 eye skip error, this error is well outside the area of repeating motifs, and so uncorrectable by a naive copyist.

On balance, then, it seems that the *Soyga* tables in Dee's *Book of Enoch*, Sloane 3189, are closer in manuscript transmission to Sloane 8 than to Bodley 908.

Assuming that the Sloane 3189 *Soyga* tables were copied from Sloane 8, the most common copying error was replacing *z* by *x*: out of the 477 occurrences of the

letter z in the Sloane 8 tables which have corresponding Sloane 3189 versions, it was rendered correctly 441 times, rendered as an x 34 times, and as a q and an r each once. There are 9 instances where an i was written instead of a y. Overall, there is a 1.5% copying error rate from Sloane 8.

Regardless of which particular manuscript the *Book of Enoch* got its *Soyga* table copies from, the questions of *why* they were copied and what relation they have to the Enochian system are central to furthering our understanding of Dee's relation to the *Book of Soyga*. On the one hand it is possible that Dee deliberately copied them (or had them copied) into his notebook (in rearranged sequence: T1, T13, T2, T14, and so on, so both "Aries" tables were visible on an opening, both "Taurus" tables visible on the next, etc.) for ready reference, possibly with motives similar to mine in section 3 of this paper, or possibly in order to use them in magical operations. This might have happened some time before 1582, that is, before his "Enochian" period, in which case their appearance with the Enochian material in Sloane 3189 would be the accidental result of reuse of a largely blank notebook. On the other hand, they might have a more direct connection with the Sloane 3189 Enochian material: they might have been revealed the same way the rest of the *Book of Enoch* material was (in which case the copying errors could be attributed either laudably to angelic emendation or deplorably to mundane data-entry-clerk error), or they might have been accorded a semi-privileged status, not themselves revealed but worthy of inclusion as an appendix to the *Book of Enoch* by a principle of virtue-by-association. Even though I see no way to use the methods of this paper to distinguish between these possibilities, I do not hesitate to speculate in the next section about one possible stylistic connection between the *Soyga* tables and the rest of the *Book of Enoch*.

6. COMPARISON WITH OTHER TABLES

Large square tabular arrays of letters are quite common in early modern magic works, exhibiting a variety of forms as yet unsurveyed in the scholarly literature. Here I present a brief taxonomy of magic tables according to their internal structure.

The more usual point of view, represented by Yates, pays primary attention to the authors' theories of magic and scant attention to the actual form of the tables:

[...] in Agrippa's Third Book [on Occult Philosophy] there are elaborate numerical and alphabetical tables for angel-summoning *of the type* [my emphasis] which Dee and Kelley used in their operations [...] These can be seen in Dee's manuscript 'Book of Enoch', British Museum, Sloane MSS. 3189. Cf. the 'Ziruph Tables' in Agrippa's *De occult. phil.*, III, 24. Agrippa was not Dee's and Kelley's only source for practical Cabala, but their minds run on these things within the Agrippan framework.²⁴

In fact Dee's tables and Agrippa's have completely different forms (as can be seen by glancing at Plates 12 and 13), so Yates must be using "of the type" to refer to the authors' intentions and not to their tables' actual appearance or formation.²⁵

My tentative taxonomy begins by crudely dividing all square magic tables into two classes, the small and the large, according to whether they have, say, fewer than

fifteen rows and columns or more. Among the small tables are those with letters forming words when read either vertically or horizontally, as in the famous square found at Herculaneum,

S	A	T	O	R
A	R	E	P	O
T	E	N	E	T
O	P	E	R	A
R	O	T	A	S

which are nowadays known as “word squares”. Word square charms have been in continuous use from Roman times to the present. Many such squares appear in Abraham ben Simeon’s *Cabala Mystica*, which Patai concludes – based in part on an analysis of the text in the squares themselves – was written around 1400.²⁶

Small numerical tables like

11	24	7	20	3
4	12	25	8	16
17	5	13	21	9
10	18	1	14	22
23	6	19	2	15

nowadays known as “magic squares”, have also been used since the late middle ages in Europe and in Asia for far longer as charms or arithmetical amusements.²⁷ (The numbers in each of the rows, columns, and two main diagonals all add up to the same sum, in this case 65.) Such a small numerical square appears in the 1514 print *Melencolia I* of Albrecht Dürer (1471–1528); many others are to be found in Agrippa’s Book II, where each planet is assigned its own magic square, each square being presented in both Arabic and equivalent Hebrew numerals.²⁸

As far as I know, all large magic tables in mediaeval or early modern sources are alphabetic. We may divide them into unpatterned and patterned; the latter are subdivided into those in which the form of the pattern is obvious and those in which the pattern is hidden.

Most of Dee’s tables in the *Book of Enoch* are unpatterned: squares and lozenge shaped arrays with 49 rows and columns filled with text in the “Enochian” language described by Laycock and Whitby.²⁹ One of these is illustrated in Plate 12. The text is inscribed in the tables line by line, left to right, one letter per cell, with no space between words. The eight *Soyga* tables appearing in the same book are of course patterned, but with a hidden pattern; it is tempting to believe that Dee’s favourite table size, 49, was inspired by the size of the *Soyga* tables, 36, since $49 = 7 \cdot 7$ is the next perfect square after $36 = 6 \cdot 6$. Similarly there are 36 *Soyga* tables and, as Kelley informed Dee on 24 March 1582/1583, there were to be 49 Enochian tables.³⁰

Plate 12: *Book of Enoch*, non-Soyga, 'Bapporgel bvrioldepnay' table. Department of Manuscripts, British Library, MS 3189, fol. 56^v. (By Permission of the British Library).

There are many large patterned tables in one of Agrippa's Cabalistic chapters.³¹ They include: an angel chart of no interest to us, a "right table of commutation", an "averse table of commutation", an "irrational averse table of commutation", a "table of Ziruph", and a "rational table of Ziruph".

The three tables of commutation are examples of what are nowadays known as "Latin squares", N by N tabular arrays of symbols from an N symbol alphabet – in this case the $N = 22$ letter Hebrew alphabet – arranged in such a way that each letter appears just once in each row and in each column.³²

It is possible that Agrippa received the idea of the "tabula commutationum recta" from Trithemius. Book 5 of Trithemius's *Polygraphia* (written in 1508 but printed in 1518) contains a "recta transpositionis tabula" and a "tabula transpositionis aversa" of exactly the same form as Agrippa's but based on a hybrid 24 letter alphabet formed by adjoining "w" to the end of the standard 23 letter Latin alphabet.³³ These Latin squares are of a particularly simple type, where each row is a shift of its predecessor, giving the table an overall barber-pole pattern of diagonal stripes.

Agrippa's third table of commutation, the "tabula aversa dicatur irrationalis" is a more complex Latin square. The top row and right-hand vertical margin contain the alphabet in its usual order; the bottom row and the left-hand vertical margin contain the alphabet in reversed order. The interior of the table is partially patterned. Most rows contain blocks of letters in consecutive alphabetical order. Because most of these blocks are shifted by one square from corresponding blocks in neighbouring rows, much of the area of the table has a diagonally striped pattern. But there does not seem to be a simple rule specifying the overall conformation of the table. It seems to be the result of an attempt to construct a Latin square as diagonally striped as possible, consistent with the given normal and reversed alphabets appearing in the margins.

Agrippa's table of Ziruph, illustrated in Plate 13, is possibly copied from Johann Reuchlin (1455-1522), who in turn owes much to the thirteenth century Cabalist Abraham Abulafia (1240-1292).³⁴ It consists of 22 rows, each with 11 cells per row. In each cell is a pair of Hebrew letters, placed in such a way that each letter appears exactly once in each row. Each row represents a reciprocal substitution alphabet: the letters in each of the 11 pairs are to be substituted for each other. One of these rows gives the "Atbash" alphabet according to which the first and last letters of the Hebrew alphabet (*aleph* and *taw*) are interchanged, the second and second from last (*beth* and *shin*), and so on.³⁵ Successive rows are obtained by alternately shifting all the left hand elements of the pairs to the pair to the left or all the right hand elements to the pair to the right (with a provision for reversing direction when the end is reached) in a kind of *contredanse*.³⁶

Such substitution alphabets are used in the branch of the practical Cabala known as *temurah* (permutation) in connection with the operation of *tseruf* (combination). The intent is to enlarge the scope of Cabalistic correspondences between words and phrases: two words are related not only if they have the same numerical sum, as in

CCLXII. DE OCCULTA PHILOSOPHIA,
TABVLA COMBINATIONVM ZIRVPH.

Plate 13: H. C. Agrippa von Nettesheim, *De Occulta Philosophia Libri Tres*, 'Ziruph' Table: III, 25, sig. y iii^v. Reproduced courtesy of Robert O. Lenkiewicz.

usual *gematria*, but also if the one is equal to the Atbash-transformed version of the other, and so on. The “rational table of Ziruph” is possibly Agrippa’s invention. The size, shape, and general appearance of this table are the same as the Ziruph table, but the pattern by which the letters shift from row to row is slightly different.

Not all large patterned tables appearing in the early modern period are magical, however. For instance, a manuscript of Thomas Harriot (1560-1621) contains letter squares intended to illustrate a combinatorial calculation.³⁷ These tables, like the *Soyga* tables, are derived from a key word or phrase, but unlike the *Soyga* tables, the pattern is completely obvious. Harriot used the key phrases HENRICVS PRINCEPS FECIT and SILO PRINCEPS FECIT to form squares of 21 and 17 rows respectively. The following artificial example based on the key word VERITAS illustrates the pattern. (The key phrase starts at the centre and emanates in concentric lozenges towards the corners.)

S	A	T	I	T	A	S
A	T	I	R	I	T	A
T	I	R	E	R	I	T
I	R	E	V	E	R	I
T	I	R	E	R	I	T
A	T	I	R	I	T	A
S	A	T	I	T	A	S

Each of these tables is accompanied by a numerical calculation, which turns out to give the number of ways the given key phrase can be spelled out in the square, following a path of vertical and horizontal moves to adjacent cells, starting in the centre and finishing in a corner. (The present VERITAS specimen has 80 such paths; the general formula is 4 times the binomial coefficient $2n$ choose n when the key phrase has $2n + 1$ letters.)

And finally we have the tables in the *Book of Soyga* as our sole examples of large patterned tables whose pattern is hidden. None of the other tables, intricate as they are, have so complex an underlying pattern as that given by the $N + f(W)$ formula used in the *Book of Soyga*. It is no wonder that Dee found them perplexing.

ACKNOWLEDGEMENTS

I gratefully acknowledge the Bodleian Library, University of Oxford, for permission to publish the illustration of Bodley 908, fol. 180^r; the Department of Manuscripts, British Library, for permission to publish the illustrations of Sloane 8, fols. 102^v and 103^r, and Sloane 3189, fols. 56^v and 58^v; and Robert O. Lenkiewicz, for permission to publish the illustration of the “Tabula combinationum Ziruph”. I am most grateful to Drs. S. Clucas, K. de León-Jones, J.V. Field, D.E. Harkness, J.C. Lagarias, and K. M. Reeds for their generous help, advice, and encouragement. I am also grateful to Clay Holden, Dr David Kahn, Joseph H. Peterson, Dr Muriel Seltman, and Dr Allan Wilks. All mistakes are of course my own.

NOTES

¹ *Lib.Myst.*, fol. 9^r.

² All of these examples: Christopher Whitby, *John Dee's Actions With Spirits*, 2 vols (New York: Garland, 1988), I, 146-147.

³ Scrying, a cooperative magical operation during which privileged visual and aural information – in this case from angels – is conveyed to the participants, was much used by Dee. Three differing views of what “really went on” are presented in Meric Casaubon, *A True and Faithful Relation* (London, 1659) (which I have not seen), in Whitby, *Actions with Spirits*, I, and in D. E. Harkness, “Shows in the Showstone: A Theater of Alchemy and Apocalypse in the Angel Conversations of John Dee (1527–1608/9)”, *Renaissance Quarterly*, 49 (1996), 707-737.

⁴ *Lib.Myst.*, fol. 9^r, transcribed in Whitby, *Actions with Spirits*, II, 17-18 and translated in Whitby, *Actions with Spirits*, I, 211-212.

⁵ A marginal note on *Lib.Myst.*, fol. 9^r, transcribed in Whitby, *Actions with Spirits*, II, 18, seems to suggest that Kelley and Dee had met for the first time two days previous to this: “Note: he had two dayes before made the like demaunde and request vnto me: but he went away vnsatisfied. For, his coming was to entrap me, yf I had any dealing with Wicked spirits as he confessed often tymes after.” See my note 16 for evidence of Kelley’s continued ignorance of basic facts about the *Book of Soyga* a month later.

⁶ Whitby, *Actions with Spirits*, I, 146-147; Deborah Elizabeth Harkness, “The Scientific Reformation: John Dee and the Restitution of Nature” (Unpublished Ph.D. dissertation, University of California, Davis, 1994), 317-318, 415. Both guess that the *Book of Soyga* might well have influenced Dee or Kelley. Harkness, 415, suggests that the *Book of Soyga*’s Adamic association – in particular its use of an Adamic language, discussed by Uriel and Il, in *Lib.Myst.*, fols. 9^r and 89^v – would have especially appealed to Dee. Whitby, *Actions with Spirits*, I, 147, cites I.R.F. Calder as conjecturing that the *Book of Soyga* is the Voynich manuscript (Yale University, Beinecke Rare Book & Manuscript Library, MS 408), the notorious cipher manuscript described by J.M. Manly, “Roger Bacon and the Voynich MS”, *Speculum*, 6 (1931): 345–391; if true, this would be a case of solving one mystery by replacing it with a greater. I see no connection between the two books, other than their probable ownership by Dee. The *Book of Enoch*, also called *Liber Logaeth* and *Liber mysteriorum sextus et sanctus*, British Library, Sloane MS 3189, was in effect Dee’s lab notebook, written concurrently with Sloane MS 3188. Whitby, *Actions with Spirits*, I, 143, gives a description of its contents.

⁷ Deborah Harkness, personal communication, 1996, and “The Nexus of Angelology, Eschatology, and Natural Philosophy in John Dee’s Angel Conversations and Library” in this volume.

⁸ Oxford, Bodleian Library, Bodley MS 908; British Library, Sloane MS 8.

⁹ The description of Bodley MS 908 is based on examination of a microfilm copy, not on the manuscript itself.

¹⁰ “Zadzaczadlin”: Bodley MS 908, fol. 69^v and Sloane MS 8, fol. 70^v.

¹¹ Robert Turner, *Henry Cornelius Agrippa His Fourth Book of Occult Philosophy* (London, 1655; reprinted London: Askin, 1978).

¹² Bodley MS 908, fol. 51^v.

¹³ Both in Bodley MS 908, fol. 42^r.

¹⁴ As described by, say, Richard Kieckhefer, *Magic in the Middle Ages* (Cambridge: Cambridge University Press, 1989).

¹⁵ “Geber”: Bodley MS 908, fols. 116^v and 126^r; “Steganographia”: Bodley MS 908 fol. 123^v.

¹⁶ Bodley MS 908, fol. 4^r; Sloane 8, fol. 6^r. But this directly contradicts what the spirit “Il” said during a scrying session with Edward Kelley and John Dee on Thursday 18 April 1583, as recorded in *Lib.Myst.*, fol. 89^v, transcribed in Whitby, *Actions with Spirits*, II, 332: “Soyga signifieth not Agyos. *Soyga alca miketh*.” (Dee’s – or Il’s – emphasis.) One might take this as evidence of Kelley’s unfamiliarity with the *Book of Soyga* at this early stage in his residence in Dee’s household.

¹⁷ Wayne Shumaker, *The Occult Sciences in the Renaissance: A Study in Intellectual Patterns* (Berkeley, California: University of California Press, 1972).

¹⁸ D.P. Walker, *Spiritual and Demonic Magic from Ficino to Campanella*, (London: Warburg Institute, 1958) and Frances A. Yates, *Giordano Bruno and the Hermetic Tradition* (London: Routledge and Kegan Paul, 1964). It is certain that Hermeticism and Cabalism were important formative influences on early modern magic, even if Yates’s claims about their influence on early modern science are rejected.

¹⁹ Karen de Léon-Jones, personal communication, 1998. I have not found a single table or chart or discussion of such anywhere in the works I have seen of the two great modern historians of the Cabala, Gershom Scholem and Moshe Idel.

²⁰ In Bodley MS 908, at fols. 180-197; in Sloane MS 8, at fols. 102-138; see my Table 1.

²¹ *Book of Enoch*, Sloane MS 3189, in four openings of the book, between fols. 58-65, as shown in my Table 1.

²² In Bodley MS 908, fols. 167^r-168^v; in Sloane MS 8, fols. 138^v-140^v. The Bodley MS 908 version seems to contain many mistakes.

²³ Charles Babbage, "Notice respecting some Errors common to many Tables of Logarithms", *Memoirs of the Astronomical Society*, 3 (1827): 65-67, which I have only seen reprinted in Charles Babbage, *The works of Charles Babbage*, edited by Martin Campbell-Kelly, 11 vols (London: W. Pickering, 1987), II, 67-71. Summarized in Dr Dionysius Lardner, "Babbage's Calculating Engine", *Edinburgh Review*, July 1834, no. 120; which I have only seen as reprinted in Philip Morrison and Emily Morrison, eds., *Charles Babbage and his Calculating Engines, Selected Writings by Charles Babbage and Others*, (New York: Dover, 1961), 163-224; the discussion of errors in logarithm tables appears on 177-183.

²⁴ Yates, *Giordano Bruno*, 149 and note. The tables are in Agrippa, *De Occulta Philosophia*, III, 25, not III, 24.

²⁵ That is, Yates did not care to pay attention to the differences between the tables, possibly because she did not know how to. It is also possible that for Yates, magic tables – unlike texts or images – are not subject to the processes of copying, emulation, improvement, and confusion; that is, they are neither vehicles for ideas nor potential sources of evidence in intellectual or cultural history.

²⁶ Raphael Patai, *The Jewish Alchemists* (Princeton: Princeton University Press, 1994), 277-288.

²⁷ Menso Folkerts, "Zur Frühgeschichte der magischen Quadrate in Westeuropa", *Sudhoffs Archiv*, 65 (1981): 313-338 gives a detailed survey of the genre. Vladimir Karpenko, "Between Magic and Science: Numerical Magic Squares", *Ambix*, 40 (1993), 121-128, surveys alchemical magic squares; in this connection, also see Patai, *The Jewish Alchemists*, chapter 26.

²⁸ Heinrich Cornelius Agrippa of Nettesheim, *De Occulta Philosophia libri tres* (Cologne, 1533). I rely on the edition of V. Perrone Compagni (Leiden: Brill, 1992). In a supercilious scholium, Shumaker, *The Occult Sciences in the Renaissance*, 139, takes Agrippa to task for a mistake in one of his magic squares. However the mistake is clearly a typographic error present only in the Arabic numeral form of the square, and only in the particular edition Shumaker looked at. (Shumaker, 158, note 70, seems to say he relies on "Henricus Agrippa ab Nettesheym, *Opera* (Lugduni, c.1650?)", which he understands to be printed in London instead of Lyons!). For a discussion of Agrippa's magic squares, see K. A. Nowotny, "The construction of certain seals and characters in the work of Agrippa of Nettesheim", *Journal of the Warburg and Courtauld Institutes*, 11 (1949): 46-57 and I.R.F. Calder, "A note on magic squares in the philosophy of Agrippa of Nettesheim", *Journal of the Warburg and Courtauld Institutes*, 11 (1949): 196-199.

²⁹ Donald C. Laycock, *The Complete Enochian Dictionary: A Dictionary of the Angelic Language as Revealed to Dr. John Dee and Edward Kelley*, revised edition (York Beach, Maine: Samuel Weiser, 1994); Whitby, *Actions with Spirits*, I, 144-146.

³⁰ Sloane MS 3189, fol. 62^v, transcribed in Whitby, *Actions with Spirits*, II, 227. Apparently one of the tables is not to be written, leaving only 48 to be put in the *Book of Enoch*. It is tempting to compare this with the *Book of Soyga*'s T36 "Magistri", which has a missing row.

³¹ Agrippa, *De Occulta Philosophia*, III, 25, sigs. yii.^r-yiii.^r. These tables are surveyed in a modern re-issue of the John French translation (London, 1651) of Agrippa: *Three Books of Occult Philosophy*, edited by Donald Tyson (St. Paul, Minnesota: Llewellyn Publications, 1993), appendix VII, 762-767.

³² J. Dénes and A. D. Keedwell, *Latin Squares and their Applications* (New York: Academic Press, 1974).

³³ Johannes Trithemius, *Polygraphiae libri sex* (Oppenheim, 1518), V, sigs. oij.^r and oij.^v. It is most unlikely that Trithemius received the idea of such tables from Agrippa when they met in the winter of 1509/1510 as both of the 1508 *Polygraphia* manuscripts (Wolfenbüttel, Herzog August Bibliothek, Cod. Guelf, 8 Aug. 2^o, and Vienna, Österreichische Nationalbibliothek, Cod. 3308) contain these tables. In 1510 Agrippa sent Trithemius a draft of his *De occulta philosophia* which, according to Compagni (58), lacked the chapter containing the Ziruph tables and tables of commutation. Trithemius's use of the *tabula recta* is purely cryptographic, and most printed works on cryptography ever since include such diagrams, often under the name of "Vigenère table". Since Agrippa's text does not discuss his tables of commutation it seems more likely, in the absence of further direct evidence, that Agrippa copied from Trithemius.

³⁴ Johann Reuchlin, *De Arte Cabalistica* (Hagenau, 1517), Book III, sig. Nvi.^r; I rely on the parallel-text translation of M. Goodman and S. Goodman, of 1983, reissued with introduction by Moshe Idel (Lincoln, Nebraska: University of Nebraska Press, 1993). For gematria and the Reuchlin-Abulafia connection see Gershom Scholem, "Gematria" in *Encyclopaedia Judaica* (Jerusalem: Macmillan, 1971) and Gershom Scholem, *Major Trends in Jewish Mysticism*, second edition, reissued (New York: Schocken, 1995), 127.

³⁵ A somewhat similar table of reciprocal substitution alphabets occurs in Giovanni-Battista della Porta, *De Occultis Literarum Notis* (Naples, 1563) II, 16; I rely on a facsimile (Zaragoza: Cátedra de Cripto-

grafía del Centro Politécnico Superior de la Universidad de Zaragoza, 1996) of the 1593 Montbéliard edition. This is a cryptographic work, and Porta tables are almost as much a fixture in cryptographic literature as Vigenère tables. Porta's table is based on a 22-letter Latin alphabet with the letter K omitted. In Porta's table but not in the Ziruph table letters from the first half of the alphabet are paired only with letters from the last half.

³⁶ There appears to be one deviation from this pattern. In the seventeenth row of both Reuchlin's and Agrippa's tables the letters *sade* and *resh* are paired, as are *tet* and *taw*. The rule used to produce the rest of the table would pair *taw* with *sade* and pair *tet* with *resh*.

³⁷ British Library, Additional MS 6782, fols. 27, 28, with associated calculation on fol. 57. These are briefly described in John W. Shirley, *Thomas Harriot: a Biography* (Oxford: Oxford University Press, 1983), 419–420, who apparently did not understand the calculation on fol. 57. I intend to address these Harriot tables in a subsequent paper.

GYÖRGY E. SZÖNYI

PARACELSUS, SCRYING,
AND THE *LINGUA ADAMICA*

*Contexts for John Dee's Angel Magic**

1. DEE, HISTORY OF SCIENCE, AND MAGIC

Two recent monographs have shown once again that John Dee is worthy of the attention of scholars from many different fields of studies, since he was himself involved in the whole spectrum of Renaissance scholarship.¹ In his early career he had had a humanistic orientation and focused on mathematics but from the 1580s he gave up these endeavours and almost entirely involved himself with angel magic, that is to say spiritual séances, or in Dee's terminology "angelic conversations". During these "conversations", Dee – aided by certain rituals, paraphernalia (including a crystal ball or "shewstone"), and a medium, or "scryer" – tried to gain various pieces of information from the celestial beings. This last activity of his, documented in his spiritual diaries written for the most part during his sojourns in East-Central Europe, is also of interest for scholars of Poland and Hungary, and his séances have often been commented upon by historians. Researchers have nevertheless been perplexed by the apparently sudden turn which transformed the venerable scientist into an eccentric enthusiast. Approaches from the viewpoint of the history of science – which, until recently constituted the majority of Dee scholarship – found this phenomenon difficult to come to terms with, and at best a superficial explanation was advanced, according to which the humanist became disappointed in science (based on rational principles and logic), and – in a similar way to Doctor Faustus, although avoiding the direct contact with Satan – could only imagine achieving his intellectual goals with the help of supernatural powers.² This explanation seems to have some grounding in Dee's own statement addressed to Emperor Rudolph II in which he tried to summarise his mission:

Hereupon I began to declare that All my life time I had spent in learning: but for this forty years continually, in sundry manners, and in divers Countries, with great pain, care, and cost, I had from degree to degree sought to come by the best knowledge that man might attain unto in the world: and I found (at length) that neither any man living, nor any Book I could yet meet withal, was able to teach me those truths I desired and longed for: And therefore I concluded with my self, to make intercession and prayer to the giver of wisdom and all good things, to send me such wisdom, as I might know the natures of his creatures; and also enjoy means to use them to his honour and glory.³

* I wrote this paper at the Herzog August Bibliothek in Wolfenbüttel, Germany. I am grateful to the Mellon Foundation for the three months' scholarship and the staff of the Library for their most helpful assistance in my work. Special thanks are due to William H. Sherman and Stephen Clucas whose comments on the draft have contributed to the improvement of the final version.

Very few efforts have been made to embrace Dee's scientific experiments and angel magic in their entirety and interconnectedness, especially given that such an examination would seem to promise little benefit for the history of science. Until recently, interpreters of Dee's magic have tried to underline the importance of magic as a vital precondition to the development of the scientific revolution, and with this consideration in mind, Frances Yates invented the term, "Rosicrucian enlightenment".⁴ After some initial enthusiasm the Yates thesis was severely challenged by historians of science,⁵ and, although Clulee and Sherman have to some extent successfully restored Dee's place in the distinguished gallery of the history of science, this would hardly work for his magic. My suggestion is to shift the focus of interest from history of science to cultural anthropology and the history of mentality, by asking in what way Dee's scientific activities inspired his visionary and occult programme. Seeking the company of angels may seem an eccentric monomania for the enlightened researcher; indeed, some historians have even suggested that Dee had become mentally ill.⁶ By contrast, anthropologists and historians of mentality have learnt how deep the roots of occult thinking were in the world picture of the sixteenth century. Such an approach may throw fresh light on the strange ambitions and practices of this extraordinary Englishman. Furthermore, it may also provide us with relevant tools to measure the lasting attraction of the occult in our own age.

In the following essay I am going to examine Dee's shift from natural to occult science from the viewpoints of both the history of science and historical anthropology and I will argue that the gulf between the two is much less significant than it may appear from existing studies. First I shall look at the pre-modern traditions of gaining magical knowledge and in this respect I believe it is relevant to re-explore Paracelsus's epistemology. An examination of the magic of Agrippa and Paracelsus leads us to the interrelatedness of Renaissance intellectual magic and popular occultism, with the latter having been entirely neglected by the great Warburgian intellectual historians. A typological analysis of the visions in the angelic diaries will prove that Dee's ultimate "scientific" goal remained unchanged throughout his life: he aspired to universal knowledge, trying out alternative ways of investigation, finally ending up in the search for the angelic language. In the concluding sections I shall try to re-map Dee's standing in intellectual history in relation to two great seventeenth-century trends: the scientific revolution and the new esotericism (or, as Frances Yates somewhat simplistically referred to it, the "Rosicrucian Enlightenment").

Recent studies have done a lot to refine the crude divide between the "scientist-Dee" and the "magus-Dee", and this also applies to the chronology of his career.⁷ Yewbrey and Whitby called attention to the fact that Dee did not start his angel magic in 1581, as had been earlier supposed. According to his first angelic diary he had already employed a scribe in 1579 and, commenting on this, he even added:

From the year 1579 usually in this manner: in Latin, or English; (but around the year 1569 in another and special way: sometimes on behalf of Raphael, sometimes on behalf of Michael it has been most pleasing to me to pour out prayers to God: God works his wonderful mercy in me (est circa annum 1569 alio et peculiari modo: interdum pro Raphaele, interdum pro Michaelae ad Deum preces fundere: mihi gratissimum fuit).⁸

This fact is important because in that year, during 1569 and 1570, Dee wrote one of his most ambitious scientific works, the *Mathematicall Praeface*, in which – on the occasion of introducing the *Elements* of Euclid to the English reader – he attempted a synthetical survey of all the mathematical sciences. The question thus becomes even more relevant: what was the relationship, if any, between Dee’s scholarly thinking and the angelic conversations?

The *Mathematicall Praeface* offered a scheme for presenting a general hierarchy of sciences and Dee made it clear that the ultimate end of any science should be the understanding of God’s creative genius. This means that Dee’s work is not in any sense a technical textbook or a manual for engineers, although it does not entirely lack a practical dimension. In the *Praeface* Dee emphasised the cosmic significance of mathematics and suggested that the mathematical practitioner had the power to become a magus, capable of *exaltation*, the emulation of God. The “Mathematicien” is represented as a priest of the new science:

By *Numbers* [...] we may both winde and draw our selues into the inward and deepe search and vew, of all creatures distinct vertues, natures, properties, and *Formes*: And also, farder, arise, clime, ascend, and mount vp (with Speculatiue winges) in spirit, to behold in the Glas of Creation, the *Forme of Formes*, the *Exemplar Number* of all thinges *Numerable*: both visible and inuisible, mortall and immortall, Corporall and Spirituall.⁹

When mapping the hierarchy of the sciences, Dee gave first place to a discipline called *archemastrie*. “So that, this Art, is no fantastical Imagination: as some Sophister might [...] dash your honest desire and Courage, from beleuing these thinges, so vnheard of, so meruaylous, & of such Importance.”¹⁰ Dee also mentions the auxiliary sciences completing the work of *Archemastrie*:

To this Science, doth the *Science Alnirangiat*, great Seruice. Muse nothyng of this name. I chaunge not the name, so vsed, and in Print, published by other: beyng a name, propre to the Science. Vnder this, commeth *Ars Sintrillia*, by *Artephius*, briefly written. But the chief Science, of the Archemaster, (in this world) as yet knowen, is an other (as it were) OPTICAL Science: wherof, the name shall be told (God willyng) when I shall haue some, (more iust) occasion, therof, to Discourse.¹¹

Nicholas Clulee, writing about Dee’s natural philosophy, has identified all three of the above-mentioned sciences as magical practices. The expression “alnirangiat” derives from Arabic sources: the term “nīrangīyāt” meant a certain magical procedure; in the Arabic version of the *Picatrix* the term “nīrang” referred to magical incantations used to invoke heavenly powers. It is also used in connection with magical images or talismans. Dee’s source for this term, as Clulee has shown was Avicenna’s *De divisionibus scientiarum*, in which “scientia alnirangiat” is listed among the subordinate branches of natural science. Here it is a form of natural magic, for the manipulation of the hidden virtues of things. Dee possessed Avicenna’s work in his library and from the surviving copy we know that he underlined the word *alnirangiat* and glossed it in the margin: “magicæ”.¹²

The next science mentioned by Dee is the *ars sintrillia* which has been connected with the name of a medieval author, Artephius, who is often referred to in numerous treatises but whose identity is unclear. According to Dee’s catalogue, in 1556 he possessed a manuscript which contained Artephius’s *Ars sintrillia* but this treatise is not

extant.¹³ The only clue scholars have been able to track down is a remark of William of Auvergne, who mentions a certain Artesius known for his ability to conjure up visions by placing a glossy sword over a water-basin so that the glittering of the two caused the viewer to see strange sights.¹⁴ The context of Dee's note makes this conjecture plausible since immediately after the reference to Artephius he lists "optically science" which, as Clulee rightly points out, involved not only physics but also crystallogancy, or as it was more commonly known, "scrying". As we have seen, Dee started his scrying experiments around the time of the writing of the *Mathematicall Praeface* and his scientific treatise suggests that, at this point in time, he saw no fundamental division between natural philosophy and spiritualism.

Before touching upon the various traditions of crystallogancy in the Renaissance, I want to refer to another aspect of "optically science" which is also pertinent in Dee's works. As early as 1558, in his first synthesising work (*Propædeumata Aphoristica*) he refers to "catoptrics" of which he wrote:

If you were skilled in 'catoptrics', you would be able, by art, to imprint the rays of any star much more strongly upon any matter subjected to it than nature itself does [...]. And this secret is not of much less dignity than the very august astronomy of the philosophers, called inferior [i.e. alchemy], whose symbols, enclosed in a certain Monad and taken from my theories, I send to you along with this treatise.¹⁵

Catoptrics in classical natural philosophy meant the study of the radiation and reflection of light and it was Roger Bacon in the Middle Ages who devoted much work to this field.¹⁶ As we know, Dee was most interested in Bacon's work and it was partly this influence which raised his ambition to catch the power of the stars by the help of mirrors, interpreting this activity as a scientific version of ancient talismanic magic. Talismanic magic which had been much discussed in medieval Arabic and Latin sources, was reinvented by the Florentine neoplatonists,¹⁷ and its scientific application was proposed by Heinrich Cornelius Agrippa and Paracelsus. Of these magical images, or "sigils" Agrippa noted:¹⁸

So great is the extent, power and efficacy of the Celestiall bodies, that not only natural things, but also artificiall when they are rightly exposed to those above, do presently suffer by that most potent agent, and obtain a wonderfull life which oftentimes gives them an admirable Celestiall vertue [...]. Such an image, best prepared to receive the operations and powers of the Celestial bodies and figures, and instantly receiveth the Heavenly gift into it self; then it constantly worketh on another thing, and other things do yeeld obedience to it.¹⁹

Agrippa developed an intricate typology of these magical symbols from direct emblematic representations of celestial demons through traditional signs of planets, metals and zodiacal signs to the numerologically symbolic cabalistical characters or sigils. One of his notable examples describes the power of planetary amulets:

This fortunate Moon being engraven on Silver, renders the bearer thereof grateful, amiable, pleasant, cheerful, honored, removing all malice, and ill will. It causeth security in a journey, increase of riches, and health of body, drives away enemies and other evil things from what place thou pleasest; and if it be an unfortunate Moon engraven in a plate of Lead, where ever it shall be buried, it makes that place unfortunate, and the inhabitants thereof, as also Ships, Rivers, Fountains, Mills, and it makes every man unfortunate.²⁰

2. PARACELSUS AND MAGICAL WAYS OF KNOWING

Dee scholars have only recently become aware of the fact that Paracelsus may have had a much greater influence on the English doctor's natural philosophy than has previously been believed. Frances Yates systematically overlooked Paracelsus in her accounts of Christian magic, and Peter French, although he noticed Dee's massive holdings of Paracelsica, gave only superficial references to the philosophy of Paracelsus and its influence on Dee's system of thought.²¹ More surprisingly, Paracelsus has only one mention even in Clulee's monograph on Dee's natural philosophy. Roberts and Watson, in their edition of Dee's library catalogues, have revealed the fact that Dee possessed an unusually large collection of Paracelsica which he neatly grouped according to size and language in his inventory: "Paracelsi libri compacti" (*R&W* 1461-1501), "Paracelsici libri latinè compacti" (*R&W* 1502-1522), "Paracelsici libri non compacti" (*R&W* 2220-2240), "Germanici" (*R&W* 2241-2275), etc.²² Dee's interest in Paracelsus can also be seen in his entry in the *album amicorum* of the famous Swiss natural scientist, Conrad Gesner whom Dee visited in Zurich in April 1563. In the album, next to Dee's signature, Gesner commemorated his English guest's great knowledge of and interest in Paracelsus.²³ From a 1562 edition of Paracelsus (*R&W* 1476) annotated by Dee in 1594, we learn that he was preoccupied with the German sage even in his later career and discussed it with his disciples, Mr. Barker and Mr. Alped. The names of his good angels, Anchorus, Anachor, and Anilos, noted in the same book, indicate the interrelatedness of Dee's interest in Paracelsus and angel magic.²⁴

In this context, it is pertinent to juxtapose Agrippa's remarks on "sigils" with what Paracelsus wrote about images and his definition of *Gamaaea*:

OF IMAGES [IMAGINUM]. This science represents the properties of heaven and impresses them on images, so that an image of great efficacy is compounded, moving itself and significant. Images of this kind cure exceptional diseases, and avert many remarkable accidents, such as wounds caused by cutting or puncturing. A like virtue is not found in any herbs.

OF GAMAHEI [GEMAHEORUM]. These are stones graven according to the face of heaven. Thus prepared they are useful against wounds, poisons, and incantations. They render persons invisible, and display other qualities which, without this science, Nature of herself cannot exhibit.²⁵

Let us compare this to Dee's thesis in *Propædeumata Aphoristica*:

The stars and celestial powers are like seals whose characters are imprinted differently by reason of differences in the elemental matter [...]. You will therefore consider talismans rather attentively, and other still greater things [*Hinc Gamaeas considerabis attentius, aliaque maiora*].²⁶

and with the *Monas Hieroglyphica*, written in 1564:

This our hieroglyphic monad possesses, hidden away in its innermost centre, a terrestrial body. It [the monad] teaches without words, by what divine force that [terrestrial body] should be actuated [...]. When this Gamaaea has (by God's will) been concluded, [...] he who fed [the monad] will first himself go away into a metamorphosis [*quo finito Progressu: qui aluit, in METAMORPHOSIM, Primus Ipse abibit*] and will afterwards very rarely be held by mortal eye.²⁷

It becomes clear from this otherwise obscure passage that the monad as a symbol has two levels of reference. One points to the earthly material which during the

alchemical process is clarified and becomes supernatural. In its other meaning the monad is a talisman (“Gamaaea”) by the help of which the magus, who so far has been feeding and fuelling the oven of the *opus magnum*, undergoes a transmutation himself, and escaping the prison of matter ascends to the level of transcendental reality. The above quotations from Dee redirect us to Paracelsian contexts, since in his various tracts connected with his great later work, the *Astronomia magna sive Philosophia sagax* the German doctor made it clear:

Man is born of the earth, therefore he also has in him the nature of the earth. But later, in his new birth, he is of God and in this form receives divine nature. Just as man in nature is illuminated by the sidereal light that he may know nature, so he is illuminated by the Holy Ghost that he may know God in his essence. For no one can know God unless he is of divine nature.²⁸

And indeed, it is in this similarity to God that man can himself become a creator of things, even more powerful than the upper and lower firmaments:

Thoughts create a new heaven, a new firmament, a new source of energy, from which new arts flow [...]. When a man undertakes to create something, he establishes a new heaven, as it were, and from it the work that he desires to create flows into him [...]. For such is the immensity of man that he is greater than heaven and earth.²⁹

Creation, the establishment of wondrous things, happens through magic – “after all, God has permitted magic, and this is a sign that we may use it; it is also a sign of what we are”,³⁰ and Paracelsus in his writings introduces magic according to the three tiers of the Agrippan model, from *magia naturalis* through planetary, astrological magic up to mystical rebirth: “He who imitates the image of God will conquer the stars”.³¹ This is nothing else but the doctrine of *exaltatio*, or Man’s deification through white magic, also proposed by Paracelsus’s contemporary and compatriot, Agrippa, in his *De occulta philosophia*:

Man being united to God, all things which are in man, are united, especially his minde, then his spirits and animal powers, and vegetative faculty, and the Elements are to the matter, drawing with it self even the body, whose form it hath been, leading it forth into a better condition, and an heavenly nature, even until it be glorified into Immortality. And this which we have spoken is the peculiar gift of man, to whom this dignity of the divine image is proper, and common to no other creature.³²

At this point Agrippa connects the topic of deification with an alchemical parallel which can be related to the alchemical subtext of Dee’s *Monas Hieroglyphica*:

Geber in his summ of Alchimy teacheth, that no man can come to the perfection of this art, who shall not know the principles of it in himself; but by how much the more every one shall know himself, by so much he obtaineth the greater power of attracting it, and by so much operateth greater and more wonderfull things, and will ascend to so great perfection, that he is made the Son of God, and is transformed into that Image which is God, and is united with him, which is not graunted to Angels, the world, or any creature, but to man only.³³

The highest magic is angel-magic and in both Agrippa and Paracelsus we find Dee’s ambitions prefigured:

He who inherits God’s wisdom walks on water without wetting his feet; for in the true art inherited from God, man is like an angel. But what will wet an angel? Nothing. Similarly, nothing will wet the wise man. God is powerful and He wills it that His power be revealed

to men and to angels in the wisdoms of the arts. He wills it that the world and the earth be like Heaven.³⁴

In fact, this was Dee's most ambitious magical programme: he aspired to this state of *exaltatio* in order to fully understand the work of Creation and become God's partner. His whole scientific program was subordinated to this goal, and this is why he was experimenting with astrological catoptrics as well as with the monad, extracted and transmuted from talismanic magic into geometry and alchemy.

3. FROM NEOPLATONIC TO POPULAR CONTEXTS OF MAGIC

It would be a mistake, however, to see the source of Dee's magic lying solely in the hermetic neoplatonism of Agrippa or Paracelsus. What makes his esoteric experiments fascinating is the ease of syncretism with which he freely exploited quite distinct traditions, from medieval Baconian magic through Old Testament traditions to some semi-scientific, semi-popular practices of dubious origin. I have already mentioned the technique of Artephius ("ars sintrillia") which operated with glittering mirrors in order to bring the viewer into a trance where logic is suspended. The ancient and venerable nature of this practice derived its authority from the Bible where, in Genesis 44.5, we read about Joseph who hides a silver chalice in Benjamin's pouch saying, "Is not this it in which my lord drinketh, and whereby indeed he divineth?"³⁵ In the Second Book of Moses we learn that the priestly garment made for Aaron contained a golden breastplate with twelve shining jewels, symbolizing the twelve tribes of Israel. This shining breastplate could also be used for purposes of divination (helping the gazing prophet to fall into a trance) and it is in this sense that medieval lapidaries refer to it.³⁶ Paracelsus also speaks about a particular way of divination by using shining surfaces. He calls it *ars beryllistica* which aims at gaining visions from diamonds, mirrors and other glossy materials, such as black coal:

VISIONS. This species sees in crystals, mirrors, polished surfaces, and the like, things that are hidden, secret, present or future, which are present just as though they appeared in bodily presence.³⁷

The most important difference between *catoptromantia* and *crystallomantia* was that in the former the operator – after proper preparations and sufficient fasting – did not want to conjure spirits in the mirror, rather he expected visions relating to the future. In scrying, the magus or his medium definitely aimed at calling spiritual beings (angels or the spirits of already dead persons), hoping to gain information, not necessarily about the future. It looks as though Dee possessed instruments for both kinds of magic: a shining black obsidian mirror may have been used to practise *ars sintrillia* or *catoptromantia*, that is divination from mirrors,³⁸ while his much exploited crystal ball served the purposes of scrying. What becomes perplexing for the cultural historian is that Dee, having been acquainted with the most complex magical theories and techniques, finally ended up practising the crudest divination, that is *crystallomantia*, and, having pursued it till the last days of his life, lost no faith in it at all.

Crystallomantia, or scrying, was relatively neglected in the works of Renaissance humanists, although some references can be found in the works of Trithemius and others, in a context following the anti-magical condemnations of medieval authorities

and encyclopedias, such as John of Salisbury's *Policraticus*, or Gregorius Reisch's *Margarita philosophica nova*.³⁹ It seems that by the sixteenth century, *crystallomantia* had become most widespread in popular culture as a common form of magic. We have two groups of sources to document such practices. Humanist literature, on the one hand, has anecdotes recording these kinds of magical practices. Girolamo Cardano, for example, tells a story about the conjuration of a young scryer who sees angels in a crystal by the help of Saint Helena.⁴⁰ Another type of source-material for the popular usage of the crystal ball (or *beryl*, or *sphera*) is the protocols of witchcraft trials and ecclesiastical visitations. In my own city, Szeged in Hungary, judges would regularly ask the suspect as late as 1730: "Wie hast du aus Kristall, aus Glas, Spiegeln den Menschen (ohne Schaden) gewahrsagt?"⁴¹

Needless to say, scrying was strictly damned by both secular and ecclesiastical law. In England law-court processes took place in 1467, 1534, and 1549 and the 1541 statute against conjuration and witchcraft specifically prohibited it.⁴² Since scrying was mostly used for finding lost or stolen property, the possibility of financial gain meant that the law was often disregarded. Although such practices were strictly private, almost all astrologers and alchemists can be suspected of having exercised them. Another Elizabethan astrologer and "magus", Simon Forman kept a journal not unlike Dee's, and he noted about the year 1584: "a reasonable, good, and quiet yere; but I had certain braulles and sclaunders fell out against me aboute detecting of one that had stollen certain thinges, whereby I was like to have bin spoiled". As if he were dissociating himself from scrying at this point but by 1588 he openly admitted that he "began to practise necromancy and to call angells and spirits."⁴³

It is worth noting that the sixteenth- and seventeenth-century manuscript literature abounds in secret diaries, notes and copies of grimoires, revealing the widespread magical practices of the day. Journals of actual divination are nevertheless more of a rarity: interested amateurs seemingly did not get much beyond collecting and copying magical materials, prayers, incantations, and books of rituals which, at least theoretically, were intended to equip the reader for contacting the spirit world.⁴⁴

Dee seems to have become interested in divination in 1569 and started scrying in 1579. His "glass" is first mentioned on 10 March 1575, when he notes a significant event in his diary:

The Queens Majestie with her most honourable Privy Councell, and other her lordes and nobility, came purposely to have visited my library; but finding that my wife was within four houres before buried out of the house, her Majestie refused to come in; but willed me to fetch my glass so famous, and to shew unto her some of the properties of it, which I did; her Majestie being taken downe from her horse (by the Earle of Leicester, Master of the horse, by the wall of Mortlack), did see some of the properties of that glass, to her Majestie's great contentment and delight, and so in most gracious manner did thank me, &c.⁴⁵

The first well-documented instance of scrying with the help of a medium, Barnabas Saul, took place on 22 December 1581.⁴⁶ Prior to this, Dee may have developed more interest in this kind of magic during his continental journey in 1578, when he visited some German courts with the purpose of consulting medical doctors about the Queen's

condition. Stopping over in Hamburg and Berlin, finally, on 15 December 1578, he met Leonhard Thurneysser, the famous doctor, alchemist and interpreter of Paracelsus in Frankfurt-am-Oder.⁴⁷ He might have taken the meeting as an omen, since at that time the learned doctor came under attack of conjurations and crystal-magic. A year later Franz Joel, a doctor of Greifswald published a book about witches and black magic in which he openly attacked Thurneysser as a stubborn sorcerer whose source of knowledge – especially of foreign languages, including Chaldee, Hebrew and Sanskrit – was a *dæmon*, appearing in his showstone.⁴⁸ Thurneysser had to write a passionate apology, very much in the manner of Dee's own "Digression Apologeticall" in the *Mathematicall Preface* of 1570: "And for these, and such like marueilous Actes and Feates, Naturally, Mathematically, and Mechanically, wrought and contriued: ought any honest Student, and Modest Christian Philosopher, be counted, & called a Coniurer?"⁴⁹

Barnabas Saul – a household servant or a laboratory assistant – became Dee's scryer after having complained to his master about a spirit which had tortured him at midnight.⁵⁰ Dee, being himself ready for the parapsychological experience, employed the following prayer-formula, (suggesting that he had had vague experiments with mediums before) "perceived by some slight experience, with two diverse persons, that thou [God] hadst a special care to give me thy light, and truth, by thy holy and true ministers Angelicall and Spirituall."⁵¹

Another entry from the period prior to meeting Saul reinforces this hint: "I had sight in κρυσταλλῳ [i.e. *crystallo*] offered me, and I saw".⁵² This early personal experience was not continued later: he scarcely saw the visions himself, they remained communicated through his scryers.

4. SCRYING AND THE *LINGUA ADAMICA*

As has been mentioned, Dee pursued angel magic until his death. During these years he had three regular scryers, of whom he worked longest with Edward Kelley who accompanied him on his journey to East-Central European courts. As for the general contents of the angelic conversations, they differed significantly from the average scrying sessions, which usually aimed at finding thieves or lost property. Dee hoped to gain mystical knowledge through the angelic conversations which would arm him with universal knowledge. To possess this knowledge, he believed, one had to learn the lost primordial language, the *lingua adamica*, a medium of direct communication with God which Adam spoke when he named the parts and things of the created universe.⁵³ Consequently, his ultimate scientific programme became centred on the acquisition of this universal language because, as he wrote, "the logos of the creative universe works by rules so that man, godly minded and born of God, may learn by straightforward work and by theological and mystical language".⁵⁴

Dee's ideas on primitive language seem to have been influenced by one of his favourite authors, Johannes Trithemius, Abbot of Sponheim, and a future task for Dee scholarship would be to look at his speculations on the angelic language in the context of sixteenth- and seventeenth-century deliberations on a universal or artificial language.

It is noteworthy that Dee hardly appears in studies on this topic,⁵⁵ perhaps because of the curious turn of his thinking, namely, that since his pursuits concerning the above goal in the terrain of natural sciences remained futile, he turned to angel magic and during the conversations repeatedly and passionately petitioned God to order his heavenly servants to share secret knowledge with him. Umberto Eco's recent book is the first attempt to place Dee in the context of universal language schemes and Eco also offers interesting links between Dee and his acquaintance, Guillaume Postel, who also asserted that every "demonstration of the world" results from geometric elements, such as point, lines, circles and triangles.⁵⁶ One immediately remembers Dee's argument in the *Monas Hieroglyphica* concerning the origin of the alphabet: "the first and mystical letters of the Hebrews, the Greeks, and the Latins, issued from God alone and were [by Him] entrusted to mortals; [also] the shapes of all those [letters] are derived from points, straight lines and the circumference of circles,"⁵⁷ and these considerations again clearly establish the link between Dee's scientific and magical programmes.

In this respect, the most interesting parts of the angelic diaries are the so-called *Book of Enoch*,⁵⁸ the *48 claves angelicæ* (1584) and *De heptarchia mystica* (1588)⁵⁹ in which one finds invocations and complicated tables, summarizing the orders of angels. Most of this is written in hardly comprehensible "angelic language", although some scholars of occultism claim to have already penetrated into the depth of its meaning.⁶⁰ Since most of the Enochian magic material has been included in Meric Casaubon's printed edition of the angelic diaries,⁶¹ one can use this collection to set up a typology of Dee's angelic visions:

1. Verbal descriptions of visions of the divine cosmic order and the world of angels sustaining it. On 20 June 1584, Dee and Kelley received such a vision in Cracow:

There appeared to him [E.K.] four very fair Castles, standing in the four parts of the world: out of which he heard the sound of a Trumpet [...]. Out of every Gate then issued one Trumpeter, whose Trumpets were of strange form, wreathed, and growing bigger and bigger toward the end [...]. After the Trumpeter followed three Ensign bearers. After them six ancient men, with white beards and staves in their hands [...]. *The 4 houses, are the 4 Angels of the Earth, which are the 4 Overseers, and Watch-towers, that the eternal God in his providence hath placed, against the usurping blasphemy, misuse, and stealth of the wicked and great enemy, the Devil [...]. In each of these Houses, the Chief Watchman, is a mighty Prince, a mighty Angel of the Lord: which hath under him 5 Princes [...]. The seals and authorities of these Houses, are confirmed in the beginning of the World. Unto every one of them, be 4 characters, Tokens of the presence of the Son of God: by whom all things were made in Creation.*⁶²

2. Descriptions of rituals and magical invocations, either verbally communicated by the Angels – mediated by Kelley, or seen by Kelley as visions in the crystal:

E.K. There appeareth in the stone, like a white Curtain all over the stone: After awhile it was drawn, and layed on the back-side of the stone, on a heap together. Now here standeth one in a white Garment, with a white Cerclet about his head like a white smock, I remember not that ever I saw this Creature before, his Garment is tucked up [...]. Now is there fire come, and hath consumed this Creature all to pieces, and he is fall'n down to ashes. Now he riseth up, and he is brighter then he was before.
[margin: Δ: *Quasi figura de terra renovanda.*] [...] *So doth the Glory comfort the just, and they rise again with a threefold glorie.*

Δ. A place was made.

E.K. Now he spreadeth the aire, or openeth it before him, and there appeareth before him a square Table. Now he taketh off the Table a black Carpet. Now he taketh off a green Carpet. Now he taketh off a white Carpet. Now he taketh off a red Cloath. And now the Table appeareth to be made of earth, as Potter's Clay, very raw earth.

[margin: Δ. The Table of the Earth. He taketh off the coloured cloaths in due order, respecting the four parts of the World.]

E.K. The Table hath four feet, of which two touch the ground, and two do not [...]. The Table is square. E.K. On the left corner (farthest from E.K.) did a T appear on the Table: Out of the top of this T do four beams issue of clear collour bright).⁶³

3. A considerable portion of the angelic communications consists of obscure historical prognostications in the Enochian style of prophecy. The predictions foretell the coming of a new age in which Dee and Kelley would have an important role since they have been chosen by God to perform certain rituals. Dee is quite explicit about this when he tells Emperor Rudolph:

[God's] holy Angels, for these two years and a half, have used to inform me: and have finished such works in my hands, to be seen, as no mans heart could have wished for so much: yea they have brought *me a Stone* of that value, that no earthly Kingdom is of that worthinesse as to be compared to the vertue or dignity thereof, &c. [...] The Angel of the Lord hath appeared to me, and rebuketh you for your sins. If you will hear me, and believe me, you shall Triumph: if you will not hear me, The Lord, the God that made Heaven and Earth, (under whom you breath, and have your spirit) putteth his foot against your breast, and will throw you headlong down from your seat. Moreover, the Lord hath made this Covenant with me (by oath) that he will do and perform. If you will forsake your wickidnesse, and turn unto him, your Seat shall be the greatest that ever was: and the Devil shall become your prisoner: Which Devil, I did conjecture, to be the Great Turk, (said I) This my Commission, is from God.⁶⁴

4. Finally, those pieces of angelic information belonging to the fourth category, which were meant as a direct instruction of the *lingua adamica*. These messages communicated names of angels as well as ritualistic expressions in the Enochian language of a cabalistic nature, each letter having numerical equivalents. Dee's *idée fixe* was that the comprehension of these numerical relations would lead to the ultimate enlightenment. That Dee's mathematical expertise did not desert him during his visionary episodes, can be seen in the following passage where he accuses the angel Nalvage of arithmetical miscalculation. Kelley was certainly a far less able mathematician than his master, but his (or the Angel's) wit was more than a match for Dee's suspicion:

Nal[vage]. Pray [...] Δ. We prayed.

There is an error in the last, not in the Number, but in the Letter. I will first go through the Letters, and after come to the Numbers. How many words have you received this day?

Δ. Thirteen, where of *Iaida* was said to be the last of the call.

Nal. [...] *They be more worth than the Kingdom of Poland. Be patient, for these things are wonderful.*

N (*The number must needs go to*) *the sixth, descending 309.*

A *The 7th ascending 360.*

O *The 9th ascending 1000.*

O *The 13th ascending 1050.*

V *The 17th ascending 2004. It is Vooan. It may be sounded Vaoan.*

Adde those last Numbers [...]

Δ. *Vooan is spoken with them that fall, but Vaoan with them that are, and are glorified. The devils have lost the dignity of their sounds.*

Δ. They make 4723.

NAL. [...] *It is called the Mystical roote in the highest ascendent of transmutation.*

Δ. These phrases are dark; when it shall please God they may be made plain.

NAL. [...] *It is the square of the Philosophers work.*

Δ. you said it was a roote.

NAL. [...] *So it is a roote square.*⁶⁵

After this somewhat humorous quotation it is worth returning to a longer passage which deals with more theoretical issues concerning the power of numbers and the Cabalistical ur-language. At the session held in Cracow on 21 April 1584 it was the Archangel Gabriel himself who joined Nalvage to deliver the teachings to Dee and his scribe:

Gab[riel]. [...] *Every Letter signifieth the member of the substance whereof it speaketh. Every word signifieth the quiddity of the substance. The Letters are separated, and in confusion: and therefore, are by numbers gathered together [...].*

E.K. Whether is this Language known in any part of the World or no? if it be, where and to whom?

Gab. *Man in his Creation, being made an Innocent, was also authorised and made partaker of the Power and Spirit of God: whereby he not onely did know all things under his Creation and spoke of them properly, naming them as they were: but also was partaker of our [i.e. the angels'] presence and society, yea a speaker of the mysteries of God; yea, with God himself: so that in innocency the power of his partakers with God, and us his good Angles [sic], was exalted, and so became holy in the sight of God until that Coronon (for so is the true name of that mighty Devil) envying his felicity, [...] began to assail him and [... Man] was driven forth (as your Scriptures record) unto the Earth [...] where being as dumb and not able to speak, he began to learn of necessity the Language in the which [...] he uttered and delivered to his posterity, the nearest knowledge he had of God his Creatures: and from his own self divided his speech into three parts, twelve, three, and seven: the number whereof remaineth, but the true forms and pronounciations want; and therefore is not of that force that it was in his own dignity, much lesse to be compared with this that we deliver, which Adam verily spake in innocency, and was never uttered nor disclosed to man since till now, wherein the power of God must work, and wisdom in her true kind be delivered: which are not to be spoken of in any other thing, neither to be talked of with mans imaginations; for as this Work and Gift is of God, which is all power, so doth he open it in a tongue of power [...].*⁶⁶

This “tongue of power” became the ultimate object of Dee’s investigation, and he grew so obsessed with his search that he not only abandoned his scientific experiments, but also neglected his humanist philological caution and overlooked the serious warnings against angel magic to be found even in the works of his favourite occult authors. I have already referred to the Bible’s reservations concerning divination,⁶⁷ but he could have easily found similar warnings in Trithemius or in Paracelsus:

Spirits often teach those persons who deal with them to perform certain ceremonies, to speak certain words and names in which there is no meaning, and they do all such things [...] to have some sport at the expense of credulous persons. They are seldom what they pretend to be, [...] on the whole, all these spirits surpass each other in deception and lies.⁶⁸

5. HISTORICAL ANTHROPOLOGICAL PERSPECTIVES

The Eastern-European context of Dee's prophecies has been discussed elsewhere.⁶⁹ The present paper aims at exploring the pertinence of the angelic conversations to the history of mentality and to cultural anthropology in relation to what we know about the systems of science, knowledge, and beliefs in the Renaissance. Areas of further investigation might include:

1. An examination of the reasons why Dee, who began his career as a serious natural scientist, could devote himself entirely to crystal gazing, and how this activity satisfied his desire for universal knowledge. This question would benefit from more extensive comparative study of Dee's prophecies in the context of a wide range of sixteenth-century traditions and practices: the revived interest in Enochian writings as well as in medieval prophecies such as those of Joachim of Fiore; Paracelsus's obscure *Papstbilder* prophecies; Guillaume Postel's highly idiosyncratic visions; some trends of Reformation chiliastical mysticism; and, last but not least, the humanist interest in classical prophecy as manifested especially in Psellus and Iamblichus.⁷⁰
2. An equally interesting question to address is why, although Dee's Continental mission was far from successful, he was never branded a charlatan, or locked up in an asylum like his fellow enthusiast, Guillaume Postel a few decades earlier? Apparently Dee, in spite of his occasional financial and existential difficulties, managed to retain his dignity and in 1589 he returned to England in relatively luxurious circumstances.⁷¹
3. Another task is to examine Edward Kelley's role in generating the visions and the whole system of Enochian magic, since Dee appears to have been only a scribe who noted down the angelic messages dictated by Kelley. Although many interpreters have considered Kelley a fraud who ruthlessly cheated the credulous Dee,⁷² a recent unorthodox trend of Dee-criticism has suggested that it was actually Dee who victimized his scryer. As Geoffrey James writes, "Kelley was forced to stay with Dee because the money that the doctor gave him supported Kelley's wife and brother. It was Dee, not Kelley, who was gaining the benefit from the magical ceremonies, for it sated his lust for 'radical truths'."⁷³ Whichever interpretation we choose (the extraordinary and strained psychotic symbiosis in which the two men spent their days invites rather a combination of arguments) we cannot help feeling that Kelley either must have believed in the prophecies he was communicating or, if it was all pretence and invention, he successfully deceived himself, too. A characteristic and recurring episode was recorded by Dee on 24 May 1584 in Cracow:

Δ. Because *E.K.* came not (according as it was bidden yesterday) to follow the Action: I went to his Study door, and knocked for him: And I requested him to come; and he refused so to do, and gave me a short and resolute answer, That he would never more have to do with these Actions [...]. After half an hour and lesse, he came speedily out of his Study, and brought in his hand one volume of *Cornelius Agrippa* his works, and in one Chapter of that Book he read the names of Countries and Provinces collected out of *Ptolomeus* (as the Author there noteth). Whereupon he inferred, that our spiritual Instructors were *Coseners* to give us a description of the World, taken out of other Books: and therefore he would have no more to do with them. I replied, and said, I am very glad that you have a Book of your own, wherein these Geographical names are expressed, such as (for the most part) our Instructors had delivered unto us: and that, [...] they (our Instructors I mean) are very greatly to be thanked, and to be deemed (in all reasonable

mens judgements) most friendly [...] I had here brought [Gerardus's] [...] description Geographicall of the whole earthly Globe [...] to the intent he might see the verity of their words yesterday delivered unto us.⁷⁴

Dee's naive logic is wonderful but Kelley's behavior is no less perplexing if we suppose him to have fabricated the visions. In this case he found himself in a situation similar to that of Edward Alleyn, leading actor of the Elizabethan age, who had once so perfectly identified himself with Doctor Faustus that at the appearance of the stage devils he stopped the performance and together with the whole audience spent the rest of the evening in fervent prayers.⁷⁵

According to Whitby, Dee's firm belief in scrying had two principal motivations. One was his disappointment in the ordinary natural sciences, in comparison with which he considered his crystallomantic operations successful. The other was a paradigm-shift which took place within magic during the sixteenth century. Whereas for the fifteenth-century Neoplatonic Magus there were clear boundaries between white and learned magic on the one hand and popular, superstitious practices on the other, after the all-embracing syntheses of Agrippa and Paracelsus the boundaries had become less distinct and unambiguous.⁷⁶ The Renaissance transformation of natural philosophy and science produced an epistemological vacuum which was temporarily filled by various kinds of magic. This explains the great popularity and prestige of magic during the sixteenth and the first half of the seventeenth centuries, and also the readiness of patrons to support such experiments. The development of such complex and intellectually ambitious alchemical patronage was most characteristic of the German *kulturkreis* of Central Europe, as seen in Emperor Rudolph's Prague or in some of the German princely courts which all had strong connections with their local universities and always had a supply of learned enthusiasts (Heidelberg, Kassel, Weikersheim, Wolfenbüttel). John Dee, who never enjoyed that kind of patronage in England (as Sherman has recently noted, Dee's rather modest house was his own castle, museum and academy), may have easily found such scholarly and intellectual prospects attractive.⁷⁷ In fact, he had already had first hand experience of European courts before setting out on his long journey to Central Europe, since in 1562 he had visited Pozsony (today's Bratislava in Slovakia) and witnessed Emperor Maximilian's coronation as King of Hungary; then, in 1578 he had taken a rather mysterious journey to Berlin and Frankfurt-am-Oder, allegedly in connection with the Queen's health.⁷⁸ On his way to Frankfurt he must have visited several German princely courts and Kassel would have been a natural stop. Kassel was the location of the intriguing court of William of Hesse-Kassel which his son, Moritz, soon turned into a centre of hermetic and alchemical research. As we know Dee briefly visited Kassel in 1586,⁷⁹ and later exchanged letters with both father and son (1589 and 1595),⁸⁰ and the prospect of German alchemical patronage haunted his imagination until his death. It was probably the court at Kassel which was the subject of one of his last scrying sessions. Between 11 July and 15 July 1607, during the last recorded conferences with Bartholomew Hickman as scryer, the ailing doctor asked his angel, Raphael, whether he should put up one more journey to the continent to spread God's message delivered to him in the angelic conversations. The answer was ambiguous, as befitted a message from spiritual beings of dubious origin:

Raph[ael]. John Dee, *thou hast been a Traveller, and God hath ever yet at any time provided for thee in all thy Journeys [...]* John Dee, *he that hath commanded thee to take this Journey in hand, he will provide for thee in Germany, or any other Country wheresoever thou goest. Therefore let thy good will and liking be in placing thy self, if thou wilt be near unto England or far off [...]* And for the good health of thy body, God will so carry thee in good health, that thou shalt set forth such service when thou art there placed, that shall be thy great comfort unto Gods honour, in making of his marvellous works to be known. And thus much for thy comfort through Gods merciful goodness.⁸¹

The journey never took place, Dee died on 26 March 1609.

6. BACK TO THE HISTORY OF SCIENCE AND HISTORIOGRAPHY

Looking at the relationship between magic and science in the early modern age it would be a simplification to claim, as Frances Yates did, that Renaissance neoplatonist magic, let alone hermeticism, fostered the scientific revolution of the sixteenth and seventeenth centuries in a direct way. On the other hand, it is possible to say that in the works (as well as in the mind) of Dee and his fellow scientists/magi layers of discursive logic and irrationalism, scientific thinking and occultism happily coexisted in a variety of ways which would be dangerous to generalize. Each case should be approached individually: some of them have magical conceptions which complement their scientific thinking (Bruno, Bacon), in others the two orientations show an almost total discontinuity (Kepler, Newton), in other cases science and magic are intermixed in a disorderly concoction (Paracelsus) and in Dee's case it seems that his magical ideas totally absorbed his scientific orientation, although in his middle career one can still see independently functioning subsystems in his thought (his geographic interests, or his ideas about public science, for example).

If one contrasts the last three important views on Dee in modern scholarship – those of Yates/French, Clulee, and Sherman – one sees that each of them has contributed at least one important proposal to our understanding of Dee. The Yates School brought magic into the awareness of historians of science, legitimising a pre-occupation which had previously been considered no more than obscurantism. Clulee highlighted the diachronic reorientation during Dee's career and brought into the discussion the medieval roots of sixteenth-century magic and science which had been overshadowed by Yates's enthusiasm for neoplatonic hermeticism.⁸² Sherman's approach has revealed a synchronic multiplicity in the English doctor's diverse interests and activities. If we look at this historiographical line, we see a direction of scholarship moving from a somewhat static and simplistic interpretation of Dee as an English magus towards a more complex contextualization in intellectual history in which elements of discontinuity have become emphasized and in which the originally proposed "master narrative"⁸³ has become subverted by more and more – often conflicting and contradictory – subtexts. It may seem surprising, but at this point I would still avow a return to the Yatesian "master narrative", albeit with some modifications. I am inclined to see Dee as a "magus", who had an amazingly wide range of interests but who also increasingly had a focusing obsession, a magical program, not necessarily to improve the sciences in order to prepare for the scientific revolution, but rather to find an alternative system of knowledge. And we are really talking about alternative systems of knowledge, since Dee clearly distinguished between science after the Fall and that of

the primordial wisdom. His aim was to restore the Adamic or Enochian wisdom of the Golden Age and that would not be compatible with the methods and means of fallen science relying on discursive logic.

Dee's program is by no means exceptional in the intellectual spectrum of the Late-Renaissance. The humanists of the sixteenth and seventeenth centuries – with their passion for the restoration of all ancient thought and texts – rediscovered a number of alternative systems of knowledge: the Chaldean prophecies, the Zoroastrian writings, the corpus of the hermetic and pseudo-hermetic treatises, and the mystical speculations of the cabala.⁸⁴ Some of the Renaissance *intellecti*, such as Erasmus, abhorred and deeply mistrusted these “lunacies”. Others entertained a scholarly philological interest, combining it with a religious program to prove the general superiority of Christianity over Judaism and Islam (Reuchlin and the early Postel).⁸⁵ It is interesting to note that while in sixteenth-century Germany heterodoxy manifested itself primarily in religious mysticism (Sebastian Franck, Kaspar Schwenckfeld, Valentin Weigel, and Johann Arndt), there was also a more active and less abstract trend of speculative thinking, often taking its impetus from classical humanism, occasionally dabbling with magic, and finally definitively rejecting the logical sciences in favour of intuitive and revelatory ancient wisdom. Dee's somewhat older contemporary, Guillaume Postel, is one of the best examples of this kind of active enthusiasm and his stubborn insistence on his visionary ideas parallels Dee's unshakeable belief in his angels.⁸⁶ This sort of alternative thinking has not often been examined in its own terms. It has mainly been looked at as “proto-science” or religious dissent and this approach may be highly misleading. The course of alternative thinking becomes especially interesting around the turn of the sixteenth and seventeenth centuries, when the rapid development of the natural sciences destroyed the conceptual foundations of the animistic universe, the correspondences, and the great chain of being. In spite of these assaults, amazingly, esoteric or occult thinking has not completely disappeared; on the contrary, it has persisted up to the present day. The only sensible account of this phenomenon must come from the area of anthropology and what Gershom Scholem decades ago wrote about the significance of mystical-cabalistical trends within Judaism perfectly applies to the whole early modern esoteric movement:

It is characteristic of Kabbalistic theology that it attempts to construct and describe a world in which something of the mythical has again come to life. [...] Mystics and philosophers are as it were both aristocrats of thought; yet Kabbalism succeeded in establishing a connection between its own world and certain elemental impulses operative in every human mind. It did not turn its back upon the primitive side of life, that all-important region where mortals are afraid of life and in fear of death, and derive scant wisdom from rational philosophy. Philosophy ignored these fears, out of whose substance man wove myths, and in turning its back upon the primitive side of man's existence it paid a high price in losing touch with him altogether.⁸⁷

Since this esoteric movement heavily relied on primordial wisdom, an important source of which, besides the Enochian legends and gnostic and neoplatonic speculations, was the Egyptian-Hellenistic *Corpus Hermeticum*, I do not share Clulee's and Sherman's serious reservations about using the term “hermetic philosopher” for Dee.⁸⁸ Dee was, or at some point *became*, a hermetic philosopher who went beyond science and when we situate him in the context of the seventeenth-century epistemological paradigm-shift we should not see him as a predecessor of the members of the Royal

Society, but rather as a forefather of those seventeenth-century thinkers – Heinrich Khunrath, the Rosicrucians, Jakob Böhme, Robert Fludd, Athanasius Kircher – who, in spite of the advancement of learning, preferred to adhere to an alternative system of knowledge and work for a spiritual (if not a corporeal) restitution of the lost Golden Age and the exaltation of man.

For a flexible approach to John Dee's intellect and psyche I can recommend the attitude of Wayne Shumaker, who came to the following conclusion while reading four seemingly bizarre Renaissance magical texts, including Dee's angelic diaries:

Evidently the consciousness of learned Renaissance men [...] was structured in ways I had failed to imagine. [...] I began to perceive that, far from being eccentric, such ideas have characterized most times and cultures – an insight corroborated by anthropology. [...] Dee, Cardan, Trithemius, and Dalgarno all demonstrate that intelligent men could, and did, hold ideas that now seem extraordinary; and I should think that a reader [...] would lay the book aside with an enhanced realization of the possible varieties of intellectual orientation.⁸⁹

A modification of perspective from evolution-oriented history of science to anthropology seems particularly useful in Dee's case and opens up further vistas of research.

NOTES

¹ See NP and William H. Sherman, *John Dee: The Politics of Reading and Writing in the English Renaissance* (Amherst: University of Massachusetts Press, 1995).

² A typical example of this sort of argumentation can be found in PA, 12.

¹⁰ MP, sig. A.iii^v.

¹¹ MP, sig. A.iii^v.

¹² NP, 167 and 285 (notes 55-58). Avicenna's *De divisionibus scientiarum* can be found in Dee's copy of *Avicennae [...] compendium de Anima* (Venice, 1546), R&W, no. 395, which is presently in the Bodleian Library, Oxford. Dee purchased it in 1557. See also Toufic Fahd, *La divination arabe: Études religieuses, sociologiques et folkloriques sur le milieu natif de l'Islam* (Leiden: Brill, 1966).

¹³ Cf. Dee's booklist in Oxford, Corpus Christi MS 191: *J. Dee Libri antiqui scripti quos habeo anno 1556*. According to Roberts and Watson the "Ars sintrillia" was originally included in the codex (R&W, no. CM4), which has been identified with parts of Oxford Corpus Christi MS 233, but the "Ars sintrillia" is missing from

the extant manuscript (*R&W*, 126; *NP*, 167-68). For scholarly literature on Artephius see Clulee's references.

¹⁴ *NP*, 168, gives a detailed description of the complicated interrelatedness of medieval manuscripts and sixteenth-century references by Gianfrancesco Pico, Cardanus and others to Artephius. As John Ferguson notes, Artephius has always been regarded by the alchemists as one of the masters. By virtue of the elixir he is reputed to have lived a thousand and twenty-five years; see John Ferguson, *Bibliotheca Chemica: A Catalogue of the Alchemical, Chemical and Pharmaceutical Books in the Collection of the late James Young of Kelly and Durris, Esq., LL.D., F.R.S., F.R.S.E.*, 2 vols (Glasgow, 1906), I, 50-51. Although Ferguson cites mostly seventeenth- and eighteenth-century sources for this legend, it is interesting to note that Dee's contemporary and personal acquaintance, Postel, was also fascinated by Artephius and compared the magus's long life to his own "restitution". Cf. Guillaume Postel, *De orbis terrae concordia libri quatuor* (Paris, 1543), 90-91. See also François Secret, "Alchimie, palingénésie et metempsychose chez Guillaume Postel," *Chrysopaëia* 3 (1989): 50-51.

¹⁶ See Hero of Alexandria, *Mechanik und Katoptrik*, eds. Ludwig Nix and Wilhelm Schmidt (Leipzig, 1900). For mediaeval optics and Roger Bacon's experiments in this field see David C. Lindberg, *Theories of Vision from Al-Kindi to Kepler* (Chicago: Chicago University Press, 1976), and Urszula Szulakowska, *The Alchemy of Light: Geometry and Optics in Late Renaissance Alchemical Illustration, Symbola et Emblemata*, 10 (Leiden: Brill, 2000).

¹⁷ A few pertinent works among the extensive scholarly literature on Renaissance talismanic magic include Franz Boll and Carl Besold, *Stern Glaube und Sterndeutung: Die Geschichte und das Wesen der Astrologie*, ed. Wilhelm Gundel (Berlin, 1926); Richard Hans Laars, *Das Buch der Amulette und Talismane: Talismanische Astrologie und Magie* (Leipzig, 1932); Karl A. Nowotny, "The Construction of Certain Seals and Characters in the Work of Agrippa of Nettesheim," *Journal of the Warburg and Courtauld Institutes*, 12 (1949): 46-57; D.P. Walker, *Spiritual and Demonic Magic from Ficino to Campanella* (London: The Warburg Institute, 1958); E. A. Wallis Budge, *Amulets and Talismans* (New York: University Books, 1961); Frances A. Yates, *Giordano Bruno and the Hermetic Tradition* (London: Routledge and Kegan Paul, 1964); Liselotte Hansman and Lenz Kriss-Rettenbeck, *Amulett und Talisman: Erscheinungsform und Geschichte* (Munich: Callwey, 1966), etc.

¹⁸ In Henricus Cornelius Agrippa, *De occulta philosophia* (1533). I am quoting the seventeenth-century English edition: *Three Books of Occult Philosophy* (London, 1651).

¹⁹ Agrippa, II, xxxv, 290-1.

²⁰ Agrippa, II, xxii, 242.

²¹ Cf. Frances Yates, *Giordano Bruno and the Hermetic Tradition* (London: Routledge and Kegan Paul, 1964), 150-1, 251; Peter J. French, *John Dee: The World of an Elizabethan Magus* (London: Routledge and Kegan Paul, 1972), 76-78; 127-8. French, however, must be credited with being the first to label Dee as an English Paracelsian. Another pre-Roberts and Watson scholar to associate Dee with Paracelsus was Charles Webster (see his "Alchemical and Paracelsian Medicine" in Charles Webster, ed., *Health, Medicine and Mortality in the Sixteenth Century* (Cambridge: Cambridge University Press, 1979).

²² As Roberts and Watson remark, collecting Paracelsica "must have been one of his chief preoccupations in the twenty years before his departure for Europe" (*R&W*, 36). It seems that Dee started collecting the works of Paracelsus from 1562 and a heavily annotated German edition (*R&W* no. 1476 – "*Libellus de balneis*", 1562) with marginal translations proves Dee's command of that language. All in all, there are ninety-two editions of Paracelsus in 157 copies mentioned in Dee's catalogue and the concordance with Sudhoff's catalogue (*Bibliographia Paracelsica*, Berlin, 1894); cf. *R&W*, Appendix 5, which documents Dee's possession of works covering the whole spectrum of Paracelsian thought. The author of the only post-Roberts and Watson monograph, William Sherman, has acknowledged Dee's interest in Paracelsus but since his book is not primarily concerned with Dee's natural philosophy, his remarks are restricted to the technical aspects of Dee's book-collecting habits and marginal annotations (Sherman, 43-44, 76-79 & 98-99).

²³ This *album amicorum* has been acquired by the National Library of Medicine (Bethesda, Maryland) and reviewed by Richard J. Durling in *Gesnerus: Revue trimestrielle, publié par la Société suisse d'histoire de la médecine et des sciences naturelles*, 22 (1965): 134-59. Roberts and Watson knew about this inscription in Gesner's album (*R&W*, 20, n.23) but thought that it had been lost. Sherman refers to Durling, (Sherman, 215, n.83).

²⁴ *R&W*, 101. The book – *Libellus de balneis germanicè*, today in New York Society Library – contains extensive notes by Dee, including translations from the German.

²⁵ *Erklärung der ganzen astronomei*, in Karl Sudhoff and Wilhelm Mathiessen, eds., *Paracelsus, Sämtliche Werke. Abteilung I: Medizinische, naturwissenschaftliche und philosophische Schriften*, 14 vols (Vols. 6-9 Munich, 1922-5; Vols. 1-5 and 10-14 Berlin, 1928-33), X, 656. After the Sudhoff edition numbers, I am also giving the references to the definitive sixteenth-century edition by Johann Huser, *Der Bücher und Schriften [...] Philippi Theophrasti Paracelsi: Jetzt auff's new auß den Originalien, und Theophrasti eigener Handschrift, soviel derselben zu bekommen gewesen* [etc], 10 vols (Basel, 1589-90), X, 464. See also: A. E. Waite, ed., *The Hermetical and Alchemical Writings of Aureolus Philippus Theophrastus Bombast* (London, 1894), II, 295. I have also used the following English compendiums of the writings of Paracelsus: Franz Hartmann, *The Life and the Doctrines of Philippus Theophrastus Paracelsus, extracted and translated from his rare and extensive works and from some unpublished manuscripts* (New York, 1891) and Paracelsus, *Selected Writings*, ed. Jolande Jacobi, Bollingen Series 28 (Princeton, NJ: Princeton University Press, 1951).

²⁶ *PA*, 134-135.

³³ Agrippa, III, xxxvi, 460.

³⁴ Paracelsus, *De fundamento scientiarum sapientiaeque, Sämtliche Werke*, XIII, 306; Huser, IX, 430. On Agrippa's magical notions see Charles G. Nauert, *Agrippa and the Crisis of Renaissance Thought*, Illinois Studies in the Social Sciences, 55 (Urbana: The University of Illinois Press, 1965); Alexandre Koyré, *Mystiques, Spirituels, Alchimistes du XVIe siècle allemand* (Paris: Gallimard, 1971); Wolf-Dieter Müller-Jahncke, "Von Ficino zu Agrippa: Der Magie-Begriff des Renaissance-Humanismus im Überblick" in Antoine Faivre and Rolf Christian Zimmermann, eds., *Epochen der Naturmystik* (Berlin: Erich Schmidt, 1972), 24-51; Paola Zambelli, "Le problème de la magie naturelle à la Renaissance" in *Magia, astrologia e religione nel Rinascimento, Convegno polacco-italiano, Varsavia 1972* (Warsaw: Ossolineum, 1972), 48-82; Charles Webster, *From Paracelsus to Newton: Magic and the Making of Modern Science* (Cambridge: Cambridge University Press, 1982); Michael Keefer, "Agrippa's Dilemma: Hermetic 'Rebirth' and the Ambivalences of *De vanitate* and *De occulta philosophia*," *Renaissance Quarterly*, 41:4 (1988): 614-53. On Paracelsus's concepts of the mystical rebirth (*corpus glorificationis*) I have consulted the following studies: Carl Gustav Jung, "Paracelsus as a Spiritual Phenomenon" in Jung, *Paracelsica: Zwei Vorlesungen über den Arzt und Philosophen Theophrastus* (Zürich, 1942); cf. Jung, *Alchemical Studies* (London: Routledge and Kegan Paul, 1983), 109-91; Ernst W. Kämmerer, *Das Leib-Seele-Geist-Problem bei Paracelsus und einigen Autoren des 17. Jahrhunderts*, Kosmographie, 3 (Wiesbaden: Steiner, 1971); Wolf-Dieter Müller-Jahncke, *Astrologisch-magische Theorie und Praxis in der Heilkunde der frühen Neuzeit*, Sudhoffs Archiv, Beiheft 25 (Wiesbaden: Steiner, 1985); Massimo Luigi Bianchi, *Signatura rerum: Segni, magia e conoscenza da Paracelso a Leibniz*, Lessico Intellettuale Europeo, 43 (Roma: Edizioni dell'Ateneo, 1987); and Elisabeth Ann Ambrose, "Cosmos, Anthropos, and Theos: Dimensions of the Paracelsian Universe", *Cauda Pavonis*, 11:1 (1992): 1-7.

³⁵ *The Holy Bible [...] translated out of the original tongues [...] by His Majesty's special command* (Cambridge: Cambridge University Press, 1833). It should be noted, however, that such divination in the Bible is most of the time condemnable and condemned: "And he made his son pass through the fire, and observed times, and used enchantments, and dealt with familiar spirits and wizards: he wrought much wickedness in the sight of the Lord." (2 Kings 20.21). Dee seems to have tendentiously overlooked such warnings whether in the Bible or in his much admired Paracelsus (see later on the angelic conversations).

³⁶ Exodus 28.15-31. It was Christopher L. Whitby who first called attention to the Biblical context (in the article referred to in footnote 6 above). For lapidaries see the following items from Dee's library: Albertus Magnus, *De lapidibus mineralibus*, – *R&W*, nos. 2290, M24a, M107, M149a, M196a; Lazar Ecker, *Beschreibung allerfürnemsten mineralischen Ertzt und Berckwerksarten* (Prague, 1574) – *R&W* no. 5; "Gesnerus & alii varii de lapidibus & gemmis, 1565" – *R&W*, no. 765; Paracelsus, "De metallis; de mineralibus; de gemmis, germanicè" = *Ettliche Tractatus [...] Von Natürlichen Dingen; Beschreibung etlicher Kreütter; Von Metallen; Von Mineralen; Von Edlen Gesteinen [...]* (Strassburg, 1570) – *R&W*, no. 1485, etc. On the medieval lapidaries see Joan Evans, *Magical Jewels of the Middle Ages and the Renaissance, particularly in England* (Oxford, 1922, repr. New York: Dover Press, 1976); on the twelve symbolic jewels

see György Szönyi, "Mannerist Imagery and Thinking in the Prose of András Prágai," *Acta Litteraria, Academiae Scientiarum Hungaricae*, 26 (1984): 207-32.

³⁷ Arthur Edward Waite, *The Hermetic and Alchemical Writings of Paracelsus*, II, 296. Cf. also: "Visiones, das sind gesicht so man mit künsten macht in spiegeln, crystallen, negeln und der gleichen", *Erklärung der gantzen Astronomie, Sämtliche Werke*, XII, 500, Huser, X, 485. Cf. also *Die 9 Bücher de natura rerum, Sämtliche Werke*, XI, 307 and Waite, *The Hermetic and Alchemical Writing of Paracelsus*, I, 171. One of Dee's Paracelsica, "De rebus naturalibus; descriptio aliquot stirpis de metallis, de mineralibus, de gemmis, germanici, Argentoratum, 1570" – *R&W*, no. 1485 (S120 in Karl Sudhoff's *Bibliographia Paracelsica*, Berlin, 1894) can be identified with *Die 9 Bücher*. That Dee must have known the "ars beryllistica" concept of Paracelsus is shown by the fact that in the *Monas Hieroglyphica* he had already used the term "beryllisticus" (See *MH*, B3v, 137 and *NP*, 141). There are a great many useful studies on *crystallomantia* in Polish. See for example, Roman Bugaj, *Nauki tajemne w Polsce w dobie Odrodzenie* (Warsaw: Ossolineum, 1976), 120 et seq., and Ryszard Gansiniec, "Krystalomancja," *Lud*, 41 (1954): 1-83. This latter is the most extensive and relatively up-to-date article on crystal gazing I have found.

³⁸ This mirror, at present in the British Museum, was donated by the eighteenth-century eccentric aristocrat, Horace Walpole. See Hugh Tait, "The Devil's Looking Glass: the Magical Speculum of Dr John Dee" in Warren Hunting Smith, ed., *Horace Walpole, Writer, Politician and Connoisseur. Essays on the 250th anniversary of Walpole's birth* (New Haven and London: Yale University Press, 1967), 195-212. Clulee reproduces this precious item (*NP*, figure 8.1).

³⁹ Gansiniec, "Krystalomancja" gives an excellent summary of these remarks. I am adopting a few of his citations: "Nonnunquam ad quod vocantur demones praenunciant diversis figuris quas miseri homines videre solent vel in polito lapide, ferro, calibe, speculo [...]." Gregorius Reisch, *Margarita Philosophica* (Strassburg, 1512), 7:23 – Dee had the 1504 edition, *R&W*, no. 1385; "Hinc est quod multi profanis artibus dediti demones ad circulum, ad speculum, sive ad quaelibet alia receptacula horrendis conjurationibus convocare laborantes. [...] Daemones terrestres commurantur interdum et pollicentur vesanis in vitro vel in crystallo sive in speculo [...]." Trithemius, *Tractatus de reprobis atque maleficis* (Cologne, 1566), *R&W*, nos. 468 and 472. See also "Joh. Trithemii libellus octo quaestionum, 1564", *R&W*, no. 897.

⁴⁰ "[Q]uidam sic experiuntur: in crystallo sedens conversus ad orientem, crucem facito cum oleo olivæ, et sub cruce scribe nomen sanctæ Helenæ hoc modo: Sancta Helena. Inde puer natus ex conjugibus, ætatis annorum decem vel circa, virgo, capiat crystallum dextra manu et tu genibus flexis post illum stans supplicationem ter, dices: 'Deprecor te, domina sancta Helena, quæ crucem domini nostri Iesu Christi invenisti et per illam sanctissimam devotionem [...] debeas demonstrare in hoc crystallo quidquid peto et scire cupio, Amen.' Et cum puer videbit angelum in hoc crystallo, rogabit quæcunque volueris angelusque respondebit." in Girolamo Cardano, *De rerum varietate* (Lyons, 1663), cited by Gansiniec, 12. Dee had the 1557 edition, *R&W*, no. 60. Cardano's example was taken over by Johann Wier in *De præstigiis dæmonum*, Ch. 5. Dee had two copies of this work (*R&W*, nos. 456 and 862); he even lent it to help the clarification of a witchcraft case as late as 1597.

⁴¹ János Reizner, *Szeged története* (Szeged, 1900), IV, 390. For further examples cf. Gansiniec, 11ff.

⁴² For more information on these statutes see the introductory section of Whitby's thesis.

⁴³ James O. Halliwell, ed., *The Autobiography and Personal Diary of Dr Simon Forman* (London, 1849), 17, cit. Whitby, 31.

⁴⁴ Whitby mentions two spectacular examples of such manuscript compendia. One is British Library, Additional MS 36,674 which contains magical journals by Dee's associates, Humphrey Gilbert and John Davies, and has marginal notes by Gabriel Harvey. In the neighborhood of these texts, this codex also accommodates a holograph draft of Dee's primer for his Enochian magic, "De heptarchia mystica". The other, Sloane MS 3851 contains standard texts, such as "The Magick of Arbatel", "Signum pentaculum Solomonis", and "The Fourth Book of Agrippa" as well as private incantations and rituals ("Invocations to call a spirit into a chrystall Stone and to keep him there", fols. 92-109; and "To have conference with spirits", fols. 129-31). Some infamous rituals of ceremonial and black magic have been published by Arthur Edward Waite, *The Book of Ceremonial Magic: A Complete grimoire* (London, 1911, repr. Secaucus, NJ: The Citadel Press, 1961). For German examples of magical manuscripts see the Herzog-August Bibliothek, Wolfenbüttel, HAB MS 115 Aug fol (3903), *Allerhand in Kreise gestellte magische oder kabbalistische Figuren*, sixteenth century; *Arbatel, d.i. die Heylige Geistkunst, darinnen der grundliche unfehlige Weg angezaigt würt, wie man zu der rechten wahren Erkenntnis Gottes, auch sichtigen vnd vnsichtigen Geschöpf, aller Künsten, Weyssheyten vmd Handwercken khomen solle*, seventeenth century, HAB MS 48.2 Aug 4to; *Razijel. Das Edle Buch von der Gottlichen Magia. Unserm Ersten Vater Adam stracks nach dem er auss dem Paradeiss*

verstossen von dem Engell selbstn Offenbahett. Nebenst anderer Mehrer Cabalistischen und Magischen Maistere Schönen, herlichen und geheimeren Additionibus, seventeenth century, HAB MS 246.5 Extravagantes.

⁴⁵ John Dee, *Autobiographical Tracts*, ed. James Crossley, Remains Historical and Literary of Lancaster and Chester Counties, 1 (Manchester, 1851), 17.

⁴⁶ *Lib. Myst.*, fol. 8.

⁴⁷ *Private Diary*, 5, *R&W*, 53. Halliwell's transcript is incorrect and must be checked against the original entry in Stadius's *Ephemerides* (1570), which is now available on microfilm: Elisabeth Leedham-Green and Julian Roberts, eds., *John Dee, Renaissance Man: The Reconstructed Libraries of European Scholars, 1450-1700. The Books and Manuscripts of John Dee. Manuscripts from the Bodleian Library* (Marlborough: Adam Matthews, 1991), reel 4. Dee purchased several of Thurneysser's books: his Paracelsus dictionary, published in Berlin in 1574 (*R&W*, no. 2275), a 1569 edition of the *Archidoxa* (*R&W*, no. 1455), and a 1560 edition of the *Quinta essentia* (*R&W*, no. 1445).

⁴⁸ Franciscus Joel, *De morbis hyperphysicis et rebus magicis* (Rostock, 1579) cit. Hermann Kopp, *Die Alchemie in älterer und neuerer Zeit: Ein Beitrag zur Kulturgeschichte* (Heidelberg, 1886), I, 117.

⁵⁷ *MH*, 5^r, 127.

⁵⁸ John Dee, *Liber mysteriorum, sextus et sanctus*, 1583, British Library, Sloane MS 3189.

⁵⁹ Both in manuscript, in British Library, Sloane MS 3191. *De heptarchia mystica* was recently published by Robert Turner (Wellingborough: Aquarius Press, 1986). A not uninteresting compendium of Dee's Enochian magic was edited and translated by Geoffrey James, *The Enochian Magic of Dr. John Dee* (St. Paul, Minnesota: Llewellyn Publications, 1994). In this compilation the Enochian passages scattered in Dee's diaries are taken out of their original context and are arranged into a logical sequence, which, obviously, is the invention of the editor.

⁶⁰ See, for example, Donald C. Laycock, *The Complete Enochian Dictionary of John Dee* (London: Askin, 1978).

⁶¹ Except for the early diaries in Sloane MS 3188, which until recently have remained unstudied. From the early 1980s on, Yewbrey made use of this manuscript, and later Whitby wrote a doctoral dissertation (University of Birmingham, 1981) which included a full transcription of this material. A facsimile edition of Whitby's thesis was published by Garland (New York) in 1988.

⁶² *T&FR*, 168-70.

⁶³ *T&FR*, 172-3.

⁶⁴ *T&FR*, 231.

⁶⁵ *T&FR*, 80.

⁶⁶ *T&FR*, 92.

⁶⁷ See footnote 35 above.

⁶⁸ *Astronomia magna*, as quoted by Hartman, 149. An influential source of these kinds of warnings is Augustine, *De civitate Dei*, Book 10, Chapters 9-10, where he attacks Porphyrian theurgy – an attack repeated almost verbatim in Chapter 46 of Cornelius Agrippa's *De vanitate scientiarum* (Cologne, 1533).

⁶⁹ See Luigi Firpo, "John Dee, scienziato, negromante e avventuriero," *Rinascimento*, 3 (1952): 25-84; Robert J.W. Evans, *Rudolph II and His World* (Oxford: Clarendon, 1973; London: Thames & Hudson, 1997), 214-28; and my articles: "John Dee i jego związki ze Środkową Europą" (John Dee and his Contacts with Central Europe), *Odrodzenie i Reformacja w Polsce*, 25 (1980): 99-111; "Traditions of Magic: From Faustus to Dee at European Universities and Courts," *Cauda Pavonis*, 10:2 (1991): 1-8; and "'Eastward Ho!' John Dee a kelet-közép-európai udvarokban" (John Dee at Eastern European Courts), in Monok István, ed., *A III. Hungarológiai Kongresszus előadásai* (Budapest-Szeged: JATE, 1993), 1063-1074.

⁷⁰ Some of Dee's books related to prophetic traditions: for Joachim of Fiore see "Joachimi Abbatis Vaticinia" – *R&W*, nos. 436 and M18; "Pauli Scalichii explanatio imaginum abbatis Joachim & Anselmi, Cologne, 1570" – *R&W*, no. 2028; for Psellus and Iamblichus see *R&W*, no. 256. This fascinating *colligatum* (now in the Folger Shakespeare Library) of mystical and pneumatological literature is heavily annotated by Dee; for the Paracelsus prognostications see "Paracelsi expositio magicarum figurarum, germanici, 1569" – *R&W*, no. 956 [Sudhoff 106], "Paracelsi expositio imaginum magicarum, 1570" – *R&W*, no. 844 [Sudhoff 115]. For Postel's prophecies see "Configuratio signorum coelestium, 1553" – *R&W*, no. 432 and *De orbis terrae concordia*, (Basel, 1544) – *R&W*, no. D18; etc.

⁷¹ On Postel's alleged madness, see William J. Bouwsma, *Concordia mundi: The Career and thought of Guillaume Postel, 1510-1581* (Cambridge Mass.: Harvard University Press, 1957), 26-27 and Marion L. Kuntz, *Guillaume Postel: Prophet of the Restitution of All Things: His Life and Thought* (The Hague: Martinus Nijhof, 1981), 162. On the circumstances of Dee's return to England, see *Private Diary*, 31, and *Autobiographical Tracts*, 14.

⁷² This is echoed in Casaubon's elaborate preface to the *True & Faithful Relation* (see *T&FR*, "The Preface", sig. D3^{rv} and "Postscript", sig. I2^r), and in almost all monographs on Dee which aimed at placing him in the venerable tradition of hermetic magi of the Renaissance (Calder, Yates, French).

⁷³ James, xxv. This is implied by Clulee in relating to the vagaries of patronage, then explicitly stated by Susan Bassnett in her studies of Kelley and Elizabeth Weston (see "Revising a Biography: A New Interpretation of the Life of Elizabeth Jane Weston based on her autobiographical poem on the occasion of the death of her mother," *Cahiers Elisabéthains*, 37 (1990): 1-8 and her article in the present volume).

⁷⁴ *T&FR*, 158-159.

⁷⁵ This anecdote is mentioned by Anthony Burgess, *Shakespeare* (London: Penguin, 1970), 103. According to the legend, in order to commemorate the event, Alleyn later founded Dulwich College on the site where that amazing revelation had taken place.

⁷⁶ Whitby, 33-34.

⁷⁷ This is a strong argument, and is by no means invalidated by the sceptical – and somewhat simplistic – references to the general shortage of money and greed of the aristocratic patrons. On the magical contexts of some German courts see Yates, *The Rosicrucian Enlightenment*; Robert J.W. Evans, *Rudolph II and his World*; Wolf-Dieter Müller-Jahncke, *Astrologisch-magische*; Bruce T. Moran, *The Alchemical World of the German Court: Occult Philosophy and Chemical Medicine in the Circle of Moritz of Hessen, 1572-1632*, *Sudhoffs Archiv*, 29 (Stuttgart: Steiner, 1991); Jost Weyer, *Graf Wolfgang II von Hohenlohe und die Alchemie. Alchemistische Studien in Sloss Weikersheim, 1587-1610* (Sigmaringen: Jan Thorbecke, 1992); Debra L. Stoudt, "'Probatum est per me': The Heidelberg Electors as Practitioners and Patrons of the Medical and Magical Arts," *Cauda Pavonis*, 14:1 (1995): 12-18. On Dee's "academy", see French, 126-188; and Sherman's more modern approach (Sherman, chapters 2 and 3).

⁷⁸ See *Private Diary*.

⁷⁹ In June, when he was banished from Prague and took temporary refuge in Germany, see *T&FR*, 429; and *R&W*, 77-78.

⁸⁰ *R&W*, Appendix I, nos. 2 and 3.

⁸¹ *T&FR*, (new numbering), *37, *39.

⁸² The medieval contexts have recently been explored by Stephen Clucas in a study of Dee's interest in Solomonic magical manuscripts. See his essay in the present volume.

⁸³ Sherman uses this term in his book. See Sherman, 12-19.

⁸⁴ In spite of all recent criticism, I find the best summary of these discoveries in D.P. Walker's *Spiritual and Demonic Magic from Ficino to Campanella* (London: The Warburg Institute, 1958) and Frances A. Yates,

Giordano Bruno and the Hermetic Tradition (London: Routledge Kegan and Paul, 1964). On hermeticism, see André Marie Jean Festugière, *Hermétisme et mystique païenne* (Paris: Louvain, 1967); Raymond Marcel, "La fortune de l'Hermès Trismégiste à la renaissance" in André Stegman, ed., *L'humanisme français au début de la renaissance* (Paris: Vrin, 1973), 137-54; Konrad Eisenbichler and Olga Zorzi Pugliese, eds., *Ficino and Renaissance Neoplatonism*, University of Toronto Italian Studies, 1 (Ottawa: Dovehouse Editions Canada, 1986); Ingrid Merkel and Allen G. Debus, eds., *Hermeticism and the Renaissance: Intellectual History and the Occult in Early Modern Europe* (Washington: The Folger Institute, 1988), etc. On the cabalistic interpretations, see Joseph Blau, *The Christian Interpretation of the Cabala in the Renaissance* (New York: Columbia University Press, 1944); and François Secret, *Les Kabbalistes Chrétiens de la Renaissance* (Paris: Dunod, 1964, repr. Milan: Arché, 1985); on Dee and the Cabala, Michael T. Walton, "John Dee's *Monas Hieroglyphica*: Geometrical Cabala," *Ambix*, 23 (1976): 116-23, and Karen De Léon-Jones's article in the present volume.

⁸⁵ See, for example, Erasmus to Albert of Brandenburg, 19 October 1519 in P. S. Allen, ed., *Opus epistolarum*, 12 vols (Oxford: Clarendon Press, 1906-58), IV, 100. On Erasmus's attitudes to magic and Judaism, see Werner Gundersheimer, "Erasmus, Humanism and the Christian Cabala", *Journal of the Warburg and Courtauld Institutes*, 26 (1963): 38-52; Paola Zambelli, "Cornelio Agrippa, Erasmo e la teologia umanistica", *Rinascimento*, 21 (1969): 29-88; and Charles Zika, "Reuchlin and Erasmus: Humanism and Occult Philosophy", *The Journal of Religious History*, 9 (1976-77): 223-246 (242-6). For a near-contemporary review of the possible role of the cabala in philosophy, see Johann Pistorius, *Artis cabalisticæ, hoc est Reconditæ Theologiæ et Philosophiæ Scriptorum* (Basel, 1587). On Reuchlin's troubles in connection with his alleged Judaism, cf. Max Brod, *Johannes Reuchlin und sein Kampf: eine historische Monographie* (Stuttgart: W. Kohlhammer Verlag, 1965). On Postel, see the next footnote.

⁸⁶ For some time I have been preparing myself to engage in a comparative study of the alternative occult thought of Postel and Dee. For more on Postel's esotericism, see Bouwsma and Kuntz, also François Secret, "Notes sur Postel", *Bibliothèque d'humanisme et renaissance*, 37 (1975): 101-19; 39 (1977): 115-32, 573-90; Secret, 'Alchimie'; Frank Lestringant, "Cosmologie et mirabilia à la Renaissance: l'exemple de Guillaume Postel", *Journal of Medieval and Renaissance Studies*, 16 (1986): 253-79.

⁸⁷ Gershom Scholem, *Major Trends in Jewish Mysticism* (Jerusalem: Schocken Publishing House Ltd., 1941, repr. New York: Schocken Books, 1974), 35.

⁸⁸ I would argue with Sherman's typological argument according to which magic is passive and contemplative while humanism is active (Sherman, 14-5). These are two different and rather independent paradigms each having a scale from passive to active. In the esoteric tradition this would range from passive mysticism through occult knowledge to active and assertive magical manipulations. In humanism, which is based on explication and discursive logic, one again finds a wide range of attitudes from enthusiasm through stoicism to scepticism. I do not, however, contest Sherman's central argument which considers Dee *both* as a humanist and as a magus.

⁸⁹ Shumaker, *Renaissance Curiosa*, 11. These remarks are the more noteworthy since Professor Shumaker had previously written an acerbic and sceptical monograph on the occultism of the Renaissance: *The Occult Sciences in the Renaissance: A Study in Intellectual Patterns* (Berkeley: The University of California Press, 1972).

STEPHEN CLUCAS

JOHN DEE'S ANGELIC CONVERSATIONS AND THE *ARS NOTORIA*

Renaissance Magic and Mediaeval Theurgy

On 27 June 1584 John Dee records that he and his “scryer” Edward Kelley were in conference with an angelic spirit named “Ave” in their lodgings in Cracow. The spirit instructed them on the use of a magical “Table” they had been given, inscribed with “the names of God”:

Four dayes [...] must you onely call upon those names of God, or on the God of Hosts, in those names: And 14 dayes after you shall (in this, or in some convenient place) Call the Angels by Petition, and by the name of God, unto which they are obedient. The 15 day you shall Cloath your selves in vestures made of linnen, white: and so have the apparition, use, and practise of the Creatures.

Kelley observed that these prescriptions were “somewhat like the old fashion of Magick.”¹ While it has been commonplace to characterise Dee’s angel conversations (along with the works of Heinrich Cornelius Agrippa, Johannes Reuchlin, and Johannes Trithemius) as a form of neoplatonic magic, I would argue that we must turn to “the old fashion of Magick” – the Pseudo-Solomonic *ars notoria* or theurgic magic which flourished virtually unabated from the thirteenth to the seventeenth century,² in order to come to a clearer understanding of the origins of Dee’s practices, and the “Christian Cabalistic” tradition of Northern Europe as a whole. Examining works from this abundant manuscript tradition make it apparent that pseudo-Solomonic theurgy forms the most significant precedent for Dee’s “angelic magic”, and dictates many of the ritual, instrumental and linguistic forms of his “Actions”, especially its combination of magical “angelic language” and operative Christian prayer.

1. DEE'S ANGELIC CONVERSATIONS AND INTELLECTUAL HISTORY

The precise nature and disciplinary province of Dee’s conversations has been a thorny issue amongst intellectual historians, who have approached them with varying degrees of open-mindedness and historical imagination. As an example of how early-modern intellectual formations can be intelligently misunderstood or mis-categorised, the angelic conversations make an instructive historiographical case study. Long dismissed as either weak-minded and foolish superstition,³ or misguided “spiritism,”⁴ Dee’s “occult” or “magical” beliefs and activities were initially recovered by historians who subscribed to the influential thesis that Renaissance neoplatonism anticipated the themes of emergent modern science.⁵ This was certainly the view of I.R.F. Calder,

whose monumental unpublished thesis, *John Dee Studied as an English Neoplatonist*, stressed the continuities between Dee's neoplatonic beliefs and the themes of seventeenth-century natural philosophy. Although Calder was historically sensitive to the normative character of Dee's beliefs in spiritual creatures,⁶ and provided a patient descriptive account of the conversations (albeit with an imbalance in favour of the printed texts), he was patently frustrated by their intractability to his attempts at characterising Dee as an "English Neoplatonist". Commenting on Dee's records of the conversations held during his continental journeys, he says:

many are totally unintelligible, nor do they seem to be closely enough related to any usual Kabbalistic or numerological system to be even partially "interpreted" on any ordinary methods.⁷

While he notes that they are "made up of prayers, charms and incantations," Calder can find precious little evidence for their basis in the "usual" Neoplatonic or Cabalistic sources.

Published in the same year as Calder's thesis was submitted, Luigi Firpo's essay "John Dee, Scienziato, Negromante e Avventuriero,"⁸ shares some of the strengths and weaknesses of Calder's account of the angelic conversations. Like Calder, his account is meticulously descriptive, but utterly unsympathetic to the nature and objectives of Dee's dealings with the angels. While he rightly sees Dee's career as a "particularly revealing document of the beliefs, aspirations and culture of the sixteenth century,"⁹ his anachronistic depreciation of the values underlying Dee's practices are an insurmountable obstacle to the historical recovery of the milieu which he claims to be investigating, and prevents a proper historical appreciation of their culturally representative character. Like many subsequent commentators, Firpo becomes too embroiled in uncovering the "dissimulation" of Kelley, or the "credulity" of Dee, ignoring the very real opportunity which the conversations offer to explore the *mentalités* or cultural formations which made the deception possible (and credible) in the first place. Thus, while he notes that Dee's motives were "sustained by an exalted conception of his own intelligence and by a profound religious spirit [...] and the certainty of God's special favour towards him,"¹⁰ these motives are not investigated but disprized. Dee is principally criticised for his failure to unequivocally embrace "scientific" principles (a modern category which would have been incomprehensible in Dee's time). He is accused, for example, of having "no understanding of the infinite humility and patience which experimental researchers have to submit to in order to attain – at the cost of tedious labour – small provisional and partial truths", instead he sought a "quick, infallible way to ascend to a total knowledge, which coincided with man's limitless power over nature". This was, in Firpo's view, simply "the sin of impatient pride, reducing natural philosophy to occultism."¹¹ This prejudice is the undercurrent of Firpo's whole account, and prevents any serious attempt to assess or understand Dee's practices. He scoffs at Dee's "prolix" prophetic discourse, and belittles his "verbose and vacuous" orations to God, and his "fastidious rituals".¹² He speaks of Dee's "fraudulent 'mysteries'"¹³ and his "inspired and histrionic expressions."¹⁴ While he meticulously records the events of Dee's career, Firpo is ultimately unable to disguise his contempt for the proceedings as a whole:

The supposed revelations of the future turned out to be completely false, they are full of geographical and scientific errors, with ungrammatical Latin, used sparingly, because the angels preferred to speak in English [...]. The angelic style was a trivial parody of Biblical language, with frequent and obvious borrowings of scriptural phrases. In some séances [...] the invisible spirits spoke a meaningless language, claiming that they spoke the language used by Adam before the fall. In conclusion, the learning which is reflected in the pseudo-revelations is the patched-together, defective and imperfect learning of Kelley, and it is always the urgent, material (and sometimes shameful) interests of Kelley which the angels endeavour to safeguard.¹⁵

Firpo shows no ability to understand that Dee's practices might have been viewed as legitimate in their own historical context, and in the final analysis he represents Dee as a "fractured personality" whose work in mathematics, geography and astronomy were "suddenly eclipsed and extinguished by a blind superstitious infatuation".¹⁶ Thus, while Firpo rehearses the historical and biographical facts concerning the angelic actions, he does nothing to explain or elucidate the conversations as a cultural or intellectual formation.

The most influential (though not necessarily the best documented) account of Dee's conversations has probably been that of Calder's research supervisor, and exponent of the "Hermetic Tradition," Frances Yates. In her study of "Elizabethan Neoplatonism", *The Occult Philosophy of the Elizabethan Age*, Yates argued that Dee's angelic conversations were largely based on Agrippa's *De occulta philosophia*, which she claimed was Dee's "main guide in such operations."¹⁷ This view no doubt emerged from her earlier characterization of Dee as participating in "that powerful stream of influence, descending from Marsilio Ficino and Pico della Mirandola, in which the so-called Renaissance Neoplatonism is strongly imbued with Hermetic and Kabbalist elements." In her view, Dee's philosophy represented "a delayed infiltration into England of the Hermetic tradition."¹⁸ As Agrippa had formed an important part of her initial formulation of the "Hermetic Tradition,"¹⁹ the identification of Agrippa subordinates Dee's magical practices to her vision of an essentially Hermetic and Christian Cabalist "Elizabethan occult Philosophy". Yates's account, however, makes no attempt to describe or analyse what she calls his "sensational angel-summoning," and she does not quote a single word of the angelic materials, concentrating instead on the "Christian Cabalist" elements of the *Monas Hieroglyphica*. Peter French (another of Yates's students), whose *John Dee, The World of an Elizabethan Magus* (1972) has exerted a powerful influence over many later accounts of Dee, followed Yates's lead in seeing the angelic conversations as primarily Hermetic. Although he notes the importance of prayer in Dee's dealings with the angels, and briefly acknowledges the existence of mediaeval precedents,²⁰ in deference to Yates's account of the "Hermetic Tradition" he prefers to shift the focus on to comparisons with later thinkers. Thus Dee's "intense inner piety" is seen as comparable to that of Agrippa and Bruno, and Dee's overall project is characterized as Hermetic:

Dee must be classed with such unorthodox religious thinkers as Pico, Agrippa and Giordano Bruno. Bruno died as a Heretic after trying to get to the roots of all religion by embracing the magical Hermetic religion of the world in its most extreme Egyptian form as outlined in the Asclepius. Bruno thought that the revival of true Egyptian religion offered a means of reuniting Christendom, and John Dee's attempts at religious magic reveal a similar concern.²¹

Christopher Whitby, in a 1981 PhD thesis,²² whilst deferring to Calder, French and Yates's accounts of Dee's intellectual affiliations,²³ worked more extensively on the angelic materials than any of his predecessors, and provided some critical new contextual evidence on the question of Dee's angelic practices – focussing particularly on the art of “scrying,” or catoptromancy and crystallogomancy. Thus while he initially accepts that “the greatest influences upon Dee and Kelley appear to have been Agrippa and Reuchlin,”²⁴ he goes on to observe that Dee's actions “differed in method from the daemonic magic catalogued by Agrippa.”²⁵ The use of the “shew-stone”, he argued, were not consistent with an “intellectual” neoplatonic magic, but belonged to a “popular tradition of magic” which “had changed little since the Middle Ages.”²⁶ Looking at mediaeval accounts of scrying and sixteenth and seventeenth century accounts of the practice by Martín Del Río and Jules César Boulenger, and accounts of English trials, Whitby shows that a substantial part of Dee's practices owed more to popular mediaeval magic than to Hermetic and Neoplatonic precedents.²⁷ “Despite Dee's acceptance and propagation of the doctrines of natural magic,” Whitby concluded, “the art of scrying which he practised was not based upon any tradition of natural magic nor upon a mathematical conception of the universe.”²⁸ In his 1985 article on “Renaissance scrying” he put it even more forcefully: “[Dee was a] practitioner, virtually up to his dying day, of a form of magic that seems to have no connection with Hermeticism and the intellectual tradition.”²⁹ While Whitby's work at recovering the early modern art of scrying marked a substantial advance in understanding the context from which Dee's angelic conversations sprang, in the final analysis he attributes the ceremonial side of Dee's actions – the “seals, talismans, combinations of letters, numbers, divine names and ritual invocations” – to Agrippan influence,³⁰ ignoring their common roots in the practices of mediaeval theurgy.³¹

Wayne Shumaker in his 1982 essay on “John Dee's Conversations with Angels,” embraces both French's characterisation of Dee as “Elizabethan magus,” and Calder's idea of Dee as “neoplatonic sage” despite the fact that Calder himself was unable to render the conversations intelligible in terms of his model.³² Shumaker is quite vague about the details of Dee's angelic practices. Using an approximately contemporary typology of magic drawn from Giordano Bruno's *De magia*, Shumaker saw Dee as a mixture of the various categories, including divination and “the veneration or invocation (*cultus seu invocatio*) of angels by prayers, consecrations and other ceremonies.”³³ While, like Calder, he acknowledges that belief in Spirits was “by no means peculiar to Dee,”³⁴ and that his religious motivations were not untypical amongst pious individuals of the period,³⁵ Shumaker also places an unhelpful emphasis on what he calls the “comical insanity” or “weirdness” of the angelic revelations,³⁶ and despite his evocation of contemporary categories of explanation, like Firpo he allows his impatience with the “unreliable prophecies”³⁷ to interfere with his historical account of Dee's thought. Although he has an avowed interest in the occult sciences, and stresses the fact that the conversations “deserve attention because they absorbed much time and energy,”³⁸ he is unable to assess the motivations behind them: “nowhere in the large book are we struck by observations that look forward to later discoveries or are even insightful”, he says, “Not much is learned, and little usefulness can be perceived in it.”³⁹ Shumaker allows his belief that the occult sciences are an anticipation of modern science to interfere with his assessment of the conversations,⁴⁰ and his main

criticism is that (regardless of what Dee himself might have believed) the conversations are “not a disciplined and responsible understanding of the physical universe,” and that “the information of the kind obtained by Dee in the séances could [n]ever, no matter how copiously elaborated, add up to ‘science’.”⁴¹ Concurring with Firpo’s “decisively negative judgement” of “the whole later part” of Dee’s career, Shumaker ends by consigning Dee to the historical scrap-heap of psychologism. Dee’s story, he says, “is full of interest for readers who are bemused by psychological curiosities as well as by the possible varieties of intellectual organization.”⁴² But it is precisely the “varieties of intellectual organization” which are lost in Shumaker’s approach, which insists on evaluating the worth of activities with historically alien modes of explanation. By foregrounding Dee’s “personality”, “gullibility” and “credulity”, Shumaker leaves Dee’s “intellectual orientation [...] [and] occultist assumptions” unexamined.⁴³

A far more historically imaginative account of the conversations is rendered in Nicholas Clulee’s *John Dee’s Natural Philosophy* (1988). Although Clulee distinguishes the angelic conversations from what he calls Dee’s “*significant* work in natural philosophy and science,”⁴⁴ his account represents one of the most informed and sympathetic attempts to understand Dee’s actions, and he makes a number of illuminating observations about the nature of the practices involved which form the starting point for my investigations here. Clulee’s argument begins by suggesting (like Shumaker) that Dee’s conversations “cannot be considered as science or natural philosophy in its own right,” albeit there are “elements that reflect Dee’s concerns in natural philosophy.” Although he begins by suggesting that Dee’s actions are “a kind of spirit magic,”⁴⁵ he sees these practices as anomalous within the occult tradition of Renaissance magic,⁴⁶ and goes on to suggest that “Dee did not consider these actions a type of magic but as a variety of religious experience.”⁴⁷ Dee’s angelic manuscripts, he argues, are a record of “what he thought were divine revelations through the angels and not a kind of magic”.⁴⁸ While I agree that “magic” might be an inappropriate way of defining Dee’s practices, I do not subscribe to Clulee’s belief that the conversations are essentially *passive* or *petitionary*. “The practice of the actions”, Clulee says, “takes place in the simple religious atmosphere of Dee’s oratory following a period of silent prayer [...]. There is no element of invoking angels and compelling their services.” Neither are there “elaborate ritual preparations, quasi-sacramental ceremonies, or incantations”, familiar from Agrippa’s magical practices.⁴⁹ “Dee’s objective”, he concludes “is not the attraction of beneficial influences or the invocation and manipulation of spirits for specific purposes; rather it is to learn and follow God’s will”.⁵⁰ Clulee sees Dee’s conversations as speculative (or contemplative) rather than operative, a form of experience rather than a form of agency. It is precisely on this issue that I disagree with Clulee’s treatment of the conversations, which are – above all – *practices*. That is to say, attempts at acting upon, and manipulating the world (both natural and political) through supernatural means. While I believe he is right to direct us back to religious contexts, I think Dee’s conversations prompt a re-assessment of the boundaries between the agentive and the experiential in devotional practices, and rather than being anomalous in the magical tradition are in fact directly descended from the religious practices of mediaeval theurgy.⁵¹

In her 1996 article, “Shews in the Shewstone,” Deborah Harkness sets out to examine the conversations “as cultural artefacts deeply immersed in their own time,” in need of “relevant cultural and intellectual contexts” in order for them to become legible to modern readers.⁵² “To the modern mind”, she says, Dee’s conversations appear “to be a confused jumble of strong, though mysterious images conveyed by a flat narrative that moves through a series of circumscribed actions.” “But how,” she asks, “would it have appeared to its participants?”⁵³ Although I have some reservations about Harkness’s claims that the crystallomantic aspects of Dee’s conversations are directly connected to his interest in the mediaeval radiation theories of Robert Grosseteste and Roger Bacon, and that this differentiates his spiritual exercises from other sixteenth-century practices of this kind,⁵⁴ her emphasis on the conversations as “multi-dimensional dramatic events,” in which Dee found “symbolic confirmation that his work was of great importance”⁵⁵ is a sophisticated advance on previous attempts at characterising these practices, where the dialogic and performative nature of the conversations have been ignored, or dismissed. In her 1999 book, *John Dee’s Conversations with Angels: Cabala, Alchemy and the End of the World*, as I have already indicated, Harkness develops some of the ideas of her “Shewstone” article into a rich, detailed and sympathetic account of the conversations as a phenomenon. In her book-length study she presents a cogent and well-argued case for seeing Dee’s angelic conversations as continuous with the natural philosophical and alchemical interests of Dee’s earlier career, and shows how his library formed an important intellectual resource for his work of recording (and understanding) angelic revelations.⁵⁶ Where my treatment differs from that of Harkness – as will become clear – is on the question of the extent to which Dee was indebted to mediaeval magical practices.⁵⁷

Despite the advances made by Whitby, Clulee and Harkness, in their contextualization of Dee’s scrying practices, the “Yates thesis” still exerts a considerable influence over intellectual historians, and while there have been critical qualifications of her characterization of the “occult philosophical tradition,”⁵⁸ there has been little progress in assessing the vital continuities between mediaeval and Renaissance magical traditions, so evident from even a cursory examination of the major European archives. In order to achieve a fuller understanding of early modern magic we need to expose some of the rhetorically compelling presuppositions of Yates’s history of magic and critically re-assess their validity. At the heart of Yates’s account of the “Hermetic Tradition” is her characterization of the “barbarous” mediaeval magical traditions being superseded and reformed by the “learned” neoplatonic or Cabalist traditions of the Renaissance. In this Burckhardtian narrative of the civilizing force of Renaissance culture triumphing over narrow mediaevalism, Yates consistently underestimates the continuity and persistence of mediaeval magical practices and techniques in early-modern magic. In her influential *Giordano Bruno and the Hermetic Tradition*, for example, Yates simultaneously acknowledges and dismisses the similarities between mediaeval and Renaissance magical practices:

There was also a type of mediaeval magic which used names of angels, names of God in Hebrew and curious magical arrangements of letters and diagrams. Magicians ascribed such magics as these to Moses, and more particularly to Solomon, and one of the most characteristic text books of this type of magic was the work known as the *Clavis Salomonis* which was widely circulated surreptitiously in variant forms. It is probably of this type of work that Pico is thinking when he says that his practical Cabala has nothing to do

with wicked magics going under the name of Solomon, Moses, Enoch, or Adam, by which demons were conjured by bad magicians. When seen in the context of the lofty philosophical mysticism of Cabala and from the stand-point of some real knowledge of the Hebrew alphabet, those old magics were seen to be not only wicked, but also ignorant and barbarous. They are replaced by practical Cabala, the learned Hebrew magic which takes its place beside the learned Neoplatonic magic as one of the two disciplines which together make up the Renaissance Magus.⁵⁹

Comparing the “extraordinary change in the status of the magician” to the “change in status of the artist from the mere mechanic of the Middle Ages to the learned and refined companion of princes of the Renaissance,” she vividly dichotomises the two magical traditions:

Who could recognise the necromancer studying his *Picatrix* in secret in the elegant Ficino with his infinitely refined use of sympathies, his classical incantations, his elaborately Neoplatonised talismans? Who could recognise the conjuror, using the barbarous techniques of some *Clavis Salomonis*, in the mystical Pico, lost in the religious ecstasies of Kabbalah, drawing archangels to his side?⁶⁰

Although immediately after this she talks of a “kind of continuity” between mediaeval and Renaissance magic, the rhetorical force of her presentation sweeps aside the possibility that these continuities might have a constitutive function in Renaissance magic. Moving briskly through a sketch of the “mingling” of “pagan and Jewish sources” in the early mediaeval period, she emphasises the recourse of Renaissance magic and Cabala to the “Hermetism, or pagan gnosticism,” which preceded them, characterising “Renaissance Magia and its Kabbalah” as “reformed revivals of magics ultimately derivable from [ancient] pagan and Jewish gnosticism.”⁶¹ Yates suggests a filiation for Renaissance magic which stresses the continuity of the “learned” Hermetic tradition which she was establishing, and ignores the assimilation of mediaeval traditions. Thus she says “Through Reuchlin, Pico’s kabbalist magic leads straight on to the angel magic of Trithemius or of Cornelius Agrippa, though these magicians were to work it in a more crudely operative spirit than the pious and contemplative Pico.”⁶² If one examines the canonical texts of Yates’s renaissance magic, a different picture emerges (as Yates perhaps involuntarily registers in her uneasy reference to the “more crudely operative spirit” of Agrippa). Ficino’s *De vita triplici*, for example, makes repeated references to mediaeval magical sources, particularly to those of “the Arabic fraternity,” (*in quodam Arabum collegio*) such as Al-Kindi and Thebit ben Corath, alongside Neoplatonic authorities such as Plotinus, Porphyry and Iamblichus,⁶³ while Johannes Trithemius, the “learned abbot” singled out by Yates as a vital influence on the “Cabalist magic” of Cornelius Agrippa (and thus a representative of the “new elegant magic”),⁶⁴ drew almost exclusively on mediaeval sources in his *Steganographia*.⁶⁵ Yates’s basic argument that “mediaeval magic was reformed and superseded in the Renaissance by the new style philosophic magic,”⁶⁶ needs serious re-assessment, and the persistence of mediaeval magical traditions and their manuscript transmission in the Renaissance need to be seriously investigated. Nicholas Clulee acknowledges the necessity of these kinds of investigation in his book on Dee’s “natural philosophy”:

Although it has become a convention of Renaissance scholarship that magic assumed a considerably enhanced intellectual status in the fifteenth and sixteenth centuries, the process of assimilating and accommodating the magical heritage of late antiquity began in the Middle ages.⁶⁷

Clulee rightly emphasises the need for looking more closely at the Renaissance re-appropriation and transformation of mediaeval science and magic, and in the case of John Dee, the results are particularly instructive. Rather than seeing Renaissance magic as “superseding” mediaeval magic, we might consider how the new philosophical influences were absorbed into the pre-existing forms of mediaeval magic. Although Yates saw the advent of the Hermetic tradition as a privileged moment in the parallel histories of religion and magic,⁶⁸ it was precisely the fact that Renaissance practitioners did not see mediaeval magic as “barbarous” or “dirty” which enabled it to persist into the seventeenth century and beyond.⁶⁹ When Johann Wier attacks these kinds of magic in the middle years of the sixteenth century, his critique involuntarily reveals some of the reasons for its continued survival. “Theologians and physicians,” Wier argued, should:

strive by every effort to banish this most pernicious and deceitful art far from the sacred rites of our Religion and drive it wholly away from the camp of divine Medicine, since it has befouled both disciplines with its specious exorcisms, its barbarous invocations, its litany of unknown names, its abuse of the Sacred Word, and its amulets, peripats and charms.⁷⁰

It is precisely the *comfortable co-existence* of magic with the “sacred rites” of Christianity, the co-optation or adaptation of devotional practices, which Wier is attacking. Comparing the spurious attributions of mediaeval magical arts to patriarchs and saints to the apocryphal pseudo-Gospels attacked by Jerome and Augustine,⁷¹ he objects to what he sees as the profane appropriation of Christian rites in mediaeval magic. The magicians are “architects of abomination” who have “fabricated these books from certain pagan observations, with ceremonies of our own religion designedly mixed in – the better to deceive, as though from ambush.”⁷² He objects to what he calls the “misuse” of sacred scriptures and prayer in these arts: “if any verse from Psalms or any other section of Sacred Scripture is thought apposite for [the] desired purpose, it is mixed in with the [magical] prayers.” He also condemns the “invocation of good spirits,” in which, “after much ranting and raving, Psalm 119 “Blessed are the undefiled in the way” is recited on bended knee, along with the divine names of the angels.”⁷³ But while Wier condemns these “blasphemous prayers to God” as an abuse, it seems clear that it was precisely the religiosity and piety of these practices (and their continuities with more “orthodox” forms of devotion) which ensured their survival. The legitimacy of mediaeval theurgy was endorsed by the continued validity of the religious structures of experience upon which they were based, and while some religious practitioners (such as Wier in Germany, or William Perkins in England) energetically sought to inscribe “magic” outside of the legitimate domains of religious praxis, the possibility of construing theurgy as a legitimate form of devotion remained open. It is precisely the intricate relationship between the fields we now define as “religion” and “magic”, and the boundaries between them, which cause the most difficulty for modern commentators. In his influential 1958 study, *Spiritual and Demonic Magic*, D.P. Walker suggested that there were real disciplinary problems in accounting for Renaissance magic as an intellectual or practical activity because magic was often “on the point of turning into art, science, practical psychology, or, above all, religion,” because there was a “real overlapping of the fields of all these activities” in the Renaissance.⁷⁴ While this is substantially true, it seems likely that the “overlapping” (and the definitional distinctness of the “fields”) is

more a product of our anachronistic inability to account for the uniqueness of Renaissance intellectual, practical and cultural formations, than a real characteristic of those formations. Did Renaissance practitioners experience their activities in terms of “overlapping fields,” or procedural hybridity, or did they view them as integrated practices?

This brings me to my own characterisation of Dee’s angelic conversations, in which, as far as possible, I shall attempt to reconstruct the ways in which Dee perceived and defined his own activities. It is with this objective in mind that I shall begin with an interrogation of some of the terms which Dee used to describe his practices, before going on to consider the extent of his reliance on the theurgical tradition. It is worth bearing in mind, given Clulee’s characterisation of Dee’s conversations as “a variety of religious experience”, that Dee himself tended to use a religious and devotional vocabulary when discussing his activities. At various points Dee refers to his dealings with the angels as “exercises” or “actions” (or uses the Latin “*actio*”). He refers to his “mysticall exercises,”⁷⁵ or to the “Exercise HEPTARCHICAL.”⁷⁶ The word “exercise” (and the Latin “*exercitium*”) designated a wide range of devotional practices, including acts of preaching or prophesying, or other forms of public and private worship.⁷⁷ Archbishop Whitgift, for example, referred to “exercises” as “praying, singing of psalms, interpreting and prophesying,”⁷⁸ and Dee himself refers to the inspired Biblical interpretation of the puritan Roger Edwardes as “spiritual exercises.”⁷⁹ Even more frequently he talks of each particular session of angelic colloquy as an “Action,”⁸⁰ and refers to one of his sessions with the scribe Barnabas Saul as “Actio Saulina.”⁸¹ The words “Action” and “Actio”, besides their judicial and theatrical usages, had a particular set of ecclesiastical meanings in the mediaeval and Renaissance period. In Cicero and Quintilian “*actio*” designated an oratorical act or utterance or its accompanying physical gestures,⁸² and this rhetorical usage carried over into ecclesiastical Latin to designate liturgical orations, sung or spoken masses, benedictions, and prayers and orations.⁸³ The related verbal noun “*actio*” meant to discuss, to transact, or to enact,⁸⁴ and Dee’s “conversations” seem to invoke all of these overlapping senses at various times. Dee’s designation of his records of his angelic colloquies of 1581-3 as the *Liber Mysteriorum*, or “Book of Mysteries”, continues the religious orientation implied by exercise and action. “Mystery” or “Mysterium,” although originally applied by Church fathers such as Eusebius and Clement of Alexandria to refer to the religious secrets of the pagans, was gradually appropriated in the middle ages to designate eschatological or providential mysteries, revelations, sacred teachings, scriptural truths (especially allegorical or anagogical meanings), and ecclesiastical rites and ceremonies, such as the mass and the Eucharist.⁸⁵ Dee talks about his angelic transactions as “the HEPTARCHICAL Mysterie” or “the whole Heptarchicall Reuelation,” and refers to “these revealed mysteries,”⁸⁶ and it is clear from the many and varied acts of prophetic self-fashioning,⁸⁷ that Dee saw his angelic dealings as a prophetic dispensation, a “special gift” or extraordinary election or grace from God granting him “mercifull cumfort and instruction, through the ministry of his holy and myghty Angels.”⁸⁸ But this “Comfortable Instruction,” as the continual stress on “heptarchy” (or “rule by sevens”)⁸⁹ as the basis of an “art” suggests, is conceived by Dee as a praxis or instrumental discipline as well as a divine revelation. The heptarchical revelation is presented to him as a “boke of [...] secrets” which is also a “key of this world,”⁹⁰ and

the angels promise not only understanding but “use”. The angel Carmara assures Dee that the “gouvernement of the [angelic] Princes,” which is being revealed to him is both “a Mystery to a farder matter,” and “a purpose to a present vse,” – “Thow desyrest vse, I teache use,” Carmara tells him, revealing that the “Art is to the farder Vnderstanding of all Sciences, that are past, present or [...] yet to com[m]e.”⁹¹ A similar ambiguity underlies Dee’s presentation of the occult secrets of the *Monas Hieroglyphica*, which are seen as “Mysteries,” (*Mysteria*)⁹² and refers to his art in terms of a revelation or “Mystagogy” (*Mystagogiam*),⁹³ but also relates it to occult practices or instrumental arts such as alchemy, referring to his teaching as “a kind of adeptship” (*ADEPTIVO genere*),⁹⁴ or even a “mechanical magic” (*Mechanica nostra [...] Magia*).⁹⁵ Dee never uses the word “magic” when referring to his dealings with the angels, and given his persistent self-definition of his practices in terms of religious exercise, it would seem that we need to re-position Dee’s heptarchical art within his own sense of Christian profession or devotional practice. In a letter to William Cecil in 1574, defending his interests in practical arts based on “vision” or “iterated dreames,” Dee asserted that it was his conviction that he should “do nothing, but that, which may stand with the profession of a true Christian,”⁹⁶ and in his correspondence with the puritan Roger Edwardes insisted on the “other Christian allowable means of discussing and deciphering the manifold mysteries, by the holy Spirit deliuered and left to our instruction,” than simple biblical interpretation.⁹⁷ It is clear that for Dee Christian “profession” entailed a variety of “allowable means,” which could encompass both prophetic-visionary and practical-instrumental activities.⁹⁸ The heptarchical art was essentially an act of prophecy which encompassed a set of operative and instrumental desires, it is an “art” as well as a “reuelation”, a “purpose to a present vse” in the natural world as well as a religious “exercise”. As a specific intellectual and practical formation, then, Dee’s angelic conversations are characterised by an inextricable co-involvement of what we think of as the separate spheres of “orthodox” religious practices and a set of instrumental desires. The inseparability of these apparently separate spheres or domains in Dee’s art suggest that we should try to conceptualise it as a form of operative practice which has its constitutive roots in religious forms, as a development or expansion of “allowable means”. Such “expanded” religious techniques were not a recent innovation in sixteenth-century England, and I would suggest that the procedures and practices which constituted Dee’s “exercises” closely adhere to the forms and techniques of mediaeval theurgy, in which the boundaries of devotional practice and operative desire are similarly ill-defined. Pseudo-Solomonic theurgy was itself a premonitory “mysticall exercise” (viewed by its practitioners as “an inestimable sacrament” and “great mistery”)⁹⁹ which stressed its continuities with devotional practices, and played a vital, albeit neglected role in shaping many operative “arts” or practices which we have come to think of as Renaissance “magic”.

2. “ISTIUS SACRATISSIMAE ARTIS VEL OPERACIONIS”: THE PSEUDO-SOLOMONIC TRADITION

One of the principal reasons for the omission of the *ars notoria* from earlier accounts of Renaissance magic is undoubtedly the fact that it was primarily a manuscript phenomenon. In the early-modern period, the only printed version of this magical

tradition I have been able to find was a translation by Robert Turner in 1657.¹⁰⁰ The large number of surviving manuscripts (many of them dating from the sixteenth and seventeenth centuries), shows, however, that this lack of printed editions by no means reflects a lack of interest in this tradition on the part of Renaissance scholars. I would suggest, however, that John Dee's own theurgic practices were shaped at every level by a knowledge of the Pseudo-Solomonic tradition, rather than by what Yates calls the "Occult" or "Hermetic" Philosophy of Neoplatonic magic. Nicholas Clulee has already shown the central importance of the mediaeval inheritance for characterizing Dee's occult scientific outlook.¹⁰¹ I propose to show that mediaeval theurgy was an equally important component of his "spirit actions". I shall begin with an outline of the practices described in some of the surviving Pseudo-Solomonic manuscripts, before going on to compare them to the magical practices of Dee's *Liber Mysteriorum* and related manuscript records of his angelic conversations in Europe.

The tradition of Pseudo-Solomonic theurgy includes a number of closely related texts, variously known as the *Liber Sacer*, the *Flos aureos*, the *Liber Virtutis*, the *Liber Sefer Raziel*, the *Ars Notoria*, and the *Clavis Salomonis*. Although there is some variation in the practices described in these texts, there is a common core of attributes. All of them claim to pass on techniques and mysteries which had originally been revealed to King Solomon through a ministering angel sent to him by God. The various practices promise the practitioner or operator a means of attaining a vast knowledge and power by mediate or immediate revelation. This revelation is attained through a mixture of ceremonial ascetic preparation, prayers and orations (including the use of a mystical language, unhelpfully described by Lynn Thorndike as "gibberish"),¹⁰² and the use of a variety of talismanic instruments, including "shew-stones", carved rings, tables, angelic "seals", pentagonal, quadrangular and other elaborately inscribed diagrams.

The Pseudo-Solomonic texts are particularly insistent on the need for ascetic regimen – the *regimen animarum* which Gregory had bequeathed to the middle ages as the *ars artium*¹⁰³ – with its attendant mortifying corporeal practices. The practitioner must be "well confessed, and fast on bread and water for three days, and he must not eat until all the stars are in the sky [...] and give alms to the poor".¹⁰⁴ He must "fast during the days which he looks upon the diagrams".¹⁰⁵ He must only call on the angels and God "after having acquired the grace of God" by "good works, confession, fasting [and] chastity".¹⁰⁶ He must be "pure and unpolluted, and make his devotions disingenuously, neither eating nor drinking".¹⁰⁷ He must be "very penitent and trewly confessed of all his sinnes, he must vtterly forbere *the* company of women and all there intycements, in so much *that* he may nott looke upon them [...] [nor] kepe no company *with* wicked or sinfull men [...] [and] lett not his apparryll be filthe but rather new, or elles very cleane waschyd."¹⁰⁸ Some of the texts also call for purifying suffumigations with amber, musk, aloe, mastick, thyme, myrrh, balsam, and other herbs or spices,¹⁰⁹ and the use of pure materials such as "virgin parchemyn[t]" of "silke or [...] parchemyn[t] of a lambe or of a kidde virgin or of a [...] fawne virgin" or ink made from "cleane galls & [...] good white wine."¹¹⁰ The seventeenth-century physician Arthur Gauntlett of Grays Inn Lane, records two schedules of "Instructions" for operators, attributed to St Cyprian and Ptolemy, which draw on these precepts, which include the injunction to "cleane thy Hands and feete before the sight of the

Signes and Characters of Salomon”, and cleaning “thy hands and face and par[ing] [...] thy nailes both of Hands and feete”.¹¹¹

The texts also specify that the practice must be undertaken in a secret, private and purified place: “a secret place, such as in a church, a private courtyard, or a garden”,¹¹² “an house or a cleane place made cleane well with beesomes & washen & watred & suffumed.”¹¹³ One must “do ne saye with thys booke in none vncleane place [...] but fastinge earlye in hollye ether priuie place; as with greate devotion kneelynge in holly churche, ether in thy chambre priuyle.”¹¹⁴ The operator must be “alone [...] unless he is a master of the art who is giving instructions in the operation”.¹¹⁵ It must be a “secret room, clean, pure and free from cobwebs and dust, secure – only you shall sleep there, it shall be neatly bolted, and contain a small table like an altar covered with clean linen, and a candelabra on it with two candles which have been blessed burning on it for purification.”¹¹⁶

The *ars notoria* is also heavily indebted to mediaeval astrology – the earliest texts (and some of the later exemplars) stress its astrological basis. A thirteenth-century manuscript of the *Flores aureos*, for example, sees the *ars notoria* as one of the “liberal arts” (*Artium [...] liberalium*) for the attainment of knowledge and learning in all the sciences (*eruditionem et cognitionem omnium scientiarum*), based on “the understanding of astronomy or astrology” (*de cognitione astronomiae siue astrologiae*).¹¹⁷ A late fifteenth-century text of the *Sefer Raziel* suggests that “The key of this booke is to knowe & wile the places of the 7 [planetary] bodies aboue & their natures”.¹¹⁸ Many of the practices thus include stipulations as to the time of practice, especially in relation to the lunar calendar,¹¹⁹ and involve angelic spirits identified with planetary bodies.¹²⁰ Many of the texts also stipulate that the practitioner must face eastwards, sometimes on his knees or prostrate.¹²¹

Having made these elaborate preparations, the operator then undertakes a series of orations and prayers. These include conventional precatory genres, such as the seven penitential psalms, and Sabbath orations,¹²² hymns to the Virgin Mary,¹²³ or liturgical texts,¹²⁴ but also prayers and orations which are fashioned specifically as *petitions for revealed knowledge* or for *the fulfilment of particular desires*, which are texts in Latin combined with “mistica verba sanctaru[m] orationu[m] et [...] nomina sanctoru[m] angeloru[m]”¹²⁵ which are variously seen as a primordial Adamic language, or ur-Hebrew, or Chaldee,¹²⁶ although to the modern reader many of the words seem to be corruptions of Greek, Hebrew and Arabic words for God, divine attributes, angels or virtues. To give you an example of this, at the same time as illustrating the textual continuity of the *ars notoria* manuscript tradition, I have chosen two virtually identical passages from a Pseudo-Solomonic oration, the first from a thirteenth-century and the second from a late-sixteenth or early seventeenth-century manuscript:

angeli sancti diuini dei quos eligit ad intellectem hominibus ad augendum qui dei estis
arcangeli propter potestatem sanctorum dei. Potestas angelorum deus virtutes eorum
Geloc Gesomoloc monepimar. anainemom. zemaloi.¹²⁷

Angeli sancti Dei viui, quos eligit ad intellectum hominibus ad augendum; dum estis
archangeli propter potestates angelorum sanctorum et virtutes eorum, Heloy,
Gessemolyc, Nepaymo, primai, Hauenos, Zamalay.¹²⁸

Although there is pronounced evidence of textual corruption (or adaptation and reinvention) at work here, both in the Latin and in the “mystical names,” we can still see strong resemblances between the two orations.

The action-specific prayers and precatory orations which intersperse these “magical orations” can be classified into various kinds of precatory themes. The most important are 1) Protestations of humility and righteousness, (or *legitimizing* clauses),¹²⁹ 2) Vehement requests for revealed knowledge or fulfilled desires (or *desiderative* clauses),¹³⁰ 3) Requests for protection from evil incursions, especially from evil spirits or demons (i.e. *protective* clauses),¹³¹ 4) Pleas for aid or help (i.e. *auxiliary* clauses),¹³² 5) Insistence on divine rather than human agency in the subsequent actions (i.e. *mediatory* clauses).¹³³ Obviously there is a degree of overlap here with the themes and clauses of conventional precatory genres, and I feel that the operative dimensions of traditional prayer need more careful consideration as a structural prehistory of Christian theurgy.¹³⁴

The “holy mystical characters” used in the magical orations include the names or “seals of angels”, the “signs” of planetary spirits, and also the “names of god” (*nomina dei*) or *semaphoras* (*schemphoras*, *sememphoras*, *semoforax*),¹³⁵ which are presumably drawn from contemporary mediaeval Jewish mystical texts. A late fifteenth-century manuscript of the *Liber Raziel*, for example, includes seven *semophoras*, “written in the book of life” (*scriptum in lib[er] vitae*),¹³⁶ the “seven keys of the world”,¹³⁷ which are the “lettres & words and names [...] which god the Creator gaue to Adam in paradise”, including *yana* the “semofor in which the creator formed Adam in [...] paradise” and “*yeferaye*”, a word given to Adam when he “spake with the Angell”.¹³⁸ The utterance of these “semofors” (or *semaphoras*) allows mortals to speak with angels, and grants them operative powers.¹³⁹ The arts also include a variety of talismanic instruments, “tables”, “figures”, “rings”, “seales”, etc, the most important of which was an elaborate series of interlocking polygons decorated with letters known as the *nota* or *sigillum dei*.¹⁴⁰

The practice of Pseudo-Solomonic magic, then, appears to have involved the burning of suffumigations, the pronunciation of the orations, prayers and magical names of God and his angels, and the contemplation, or “inspection” of the talismans or “figures”, and sometimes the use of “stones”, “glasses”, or “crystals”.¹⁴¹ What was it that the magical operators hoped to achieve using these techniques? This varies slightly according to the particular Pseudo-Solomonic text, but can be divided between the attainment of revealed knowledge, and the attainment of magical operative powers. The *ars notoria* in particular, was presented – like contemporary Lullist arts or magical *ars memorativa* – as a means of magically attaining proficiency in the liberal arts in an unusually short time.¹⁴² By “inspecting” (rather than *reading*)¹⁴³ a variety of diagrams inscribed with orations, together with magical prayers, knowledge of the various arts would be infused directly into the heart of the practitioner by the angels.¹⁴⁴ He would possess, acquire and retain in the memory the arts he desired to master.¹⁴⁵ Thus the *ars notoria* included a series of discipline-specific “figures” – for grammar, dialectic, rhetoric, music, physics, arithmetic and astronomy.¹⁴⁶ The art culminates in a figure of “general science”, an art of arts, which

would include knowledge of all subordinate disciplines.¹⁴⁷ This encyclopaedic ability to “obtainne all syences”, is augmented in other Pseudo-Solomonic texts to include a variety of divinatory and operative powers, potentially unlimited in scope. They can include the ability to “know all thinges present past and to come”, to “alter or chaunge the influence of the planettes and sterres”, to attain “Knoledge off the nature of man and of all his dyedes and his thoughtes”, or “to distroy a kingdome or an empire”.¹⁴⁸

Having outlined the techniques and intentions of the Pseudo-Solomonic magical practitioners, let us now turn back to John Dee’s angelic conversations. What, if any, are the shared characteristics of Pseudo-Solomonic theurgy and Dee’s “heptarchicall art”? First of all, we should note a number of explicit references to Solomon in the *Liber Mysteriorum*. Dee is told by the angel Uriel, for example, that “As truly as I was with Salomon, so truly I be with the[e]”,¹⁴⁹ while one of the angelic “Princes”, Befafes, also claims: “I was with Salomon; [and] was also (vnknown) with Scotus [i.e. Michael Scot].”¹⁵⁰ Dee is also presented with a vision of “a Ring of Gold: with a seale graued in it,” which “was neuer reuealed since the death of Salomon [...] wherewith all Miracles, and diuine works and wonders were wrowght by Salomon.”¹⁵¹ Despite the fact that Dee relates this seal to a printed reference in Reuchlin’s *De Verbo Mirifico*,¹⁵² we should also be conscious of a considerable mediaeval manuscript literature on Solomon’s rings – the *De quatuor annulis* – from which this type of “seal” is ultimately derived.¹⁵³ Dee’s art also imitates the ritual preparations of the Pseudo-Solomonic tradition, including its prescriptions regarding bodily hygiene, diet, and spatial seclusion: “Thow must prepare thy self, to prayer and fasting”, he is instructed, “In all thy doings be Secret: and in all thy doings praying, tyll thow hast thy desyre.”¹⁵⁴ Just as the Pseudo-Solomonic operator can only work with a single associate (*a vero socius*),¹⁵⁵ so Dee is told by his angelic interlocutors that “None shall enter into the knowledge of these Mysteries with the[e] but this worker [i.e. Kelley].”¹⁵⁶

Dee’s art also draws some of its most important techniques and instruments from the mediaeval tradition. Although the prayers and orations used in the actions which are recorded in the *Liber Mysteriorum* do not incorporate complete orations written in the “magical language”, the prayers collected in the *De Heptarchia Mystica* from this period show Dee incorporating the divine names (*nomina Dei*), or *semaphoras* (revealed angelic names) of the Pseudo-Solomonic type, and the “parcells of Inuitations very pleasant to good Angels” communicated in the spring of 1583 are written entirely in the “Angelical Language”,¹⁵⁷ written in a revealed alphabet of hieroglyphic characters,¹⁵⁸ and we know that on at least one occasion Kelley used this “angelic language” whilst praying during the actions.¹⁵⁹ The *Claues Angelicae* (angelic keys), or “booke of secrets”, which was dictated to Dee at that time, was a series of angelic names purporting to be a “key of this world,”¹⁶⁰ which were designed to be used operatively in much the same way as the magical language of the *ars notoria*. The “49 partes of this booke” which supposedly contained 49 languages spoken simultaneously, were voices “wherevnto the so many powres [...] shalbe obedient”. Uttering these angelic words would transform him “from a mortall creature,”¹⁶¹ and upon hearing them God’s angels would be “forced [...] to render obedience and faithful society. Wherein they will open the mysteries of their creation [...] and give [...] understanding of many thousand secrets”.¹⁶² Dee was also given divine names in the form of talismanic figures, such as

the combinatorial “Tablet” given to Dee by Michael, the seven component letters of which were supposed to be “the 7 seats of the one and euerlasting GOD [...] euery letter conteynyn an Angel of brightnes,” which “expelleth euyll spirits, qualifieth the Waters, strengtheneth the Iust, exalteth the righteous, and destroyeth the wicked,” and were a “sufficient BOND to vrge all Creatures to life or death.”¹⁶³ This stress on the angelical and mystical significance of seven, while it is not uniquely found in Pseudo-Solomonic theurgy, is a definite structural characteristic which links the mediaeval practices to Dee’s heptarchical art which also “governs by sevens”.¹⁶⁴ The most significant link between Dee’s heptarchical art and the practices of Pseudo-Solomonic theurgy, however, is his use of a talismanic instrument known as the *sigillum dei* or the *sigillum Æmeth*.¹⁶⁵ Dee’s own *sigillum* (Plate 14) seems to have been closely modelled on the seal in his own manuscript copy of the *Liber sacer* (or *Liber juratus*) which dates from the late-fourteenth or early-fifteenth century,¹⁶⁶ (Plate 15) although his reference to having “considered diuers fashions of this seal: and [...] found them much differing,” seems to confirm that he had access to a number of manuscript sources for his proposed imitation.¹⁶⁷ It seems clear, then, that while Dee glosses the passage in his manuscript dealing with the *sigillum dei* with references to printed works by Reuchlin and Agrippa,¹⁶⁸ he was using Pseudo-Solomonic manuscripts as his primary source, and neither Reuchlin nor Agrippa contain visual representations of the seal which Dee could have copied.

Dee’s heptarchical art also seems to have included some of the aims and intentions of the *ars notoria*. The heptarchical art is, for example, conceived in part as a universal science, or “ars generalis”, being the key “to the farder vnderstanding of all Sciences, that are past, present or [...] yet to comme”,¹⁶⁹ a “Threefold Art” which promises “knowledge of the ¹WORLDE, the ²GOVERNEMENT of his Creatures, and the ³SIGHT of his Maiestie”.¹⁷⁰ That is, a universal art which would give Dee control over the natural and the political world, as well as a privileged revelation of God’s presence. Just as the *Liber sacer* taught how “a man shulde obteyne his will by euery angell”,¹⁷¹ so Dee is promised that this practice will be the “ende and consummation” of all his desires.¹⁷² Just as Pseudo-Solomonic magic promises knowledge of natural things, such as alchemy and astrology, as well as political powers, such as “to haue power over euery man”, “to cause unyte and concorde”, or “to haue a 1000 armed men [...] [and] forme a castell that shall neuer be dystroyed”,¹⁷³ so Dee is promised not only powers over the natural world but powers which will enable him to be “profitable to your Cuntrie”,¹⁷⁴ by “quietting of [...] estates [...] [and] pacifying of the Nobilitie”, by access to those angels which govern the “Exaltation and Gouvernement of Princis [...] Cownsayle and Nobilitie”, and those responsible for “Gayne and Trade of Merchandise”.¹⁷⁵

3. “THE KEY OF PRAYER”: JOHN DEE AND THE PSEUDO-SOLOMONIC ORATION

Even in the absence of such explicit associations of Dee’s practices with the Pseudo-Solomonic tradition as the use of the *sigillum dei*, we could identify its affinities by a close examination of its precatory techniques. Like the Pseudo-Solomonic operators, Dee’s “mysticall exercises” utilize a combination of conventional and “action-specific”

Plate 15: A 'Sigillum Dei' from Dee's own fourteenth-century copy of the Pseudo-Solomonic *Liber Juratus* [R & W, DM 70], Department of Manuscripts, British Library, Sloane MS 313. f. 4^r. (By permission of the British Library).

prayers and orations requesting angelic revelation. In a prefatory apologetic prayer, “Ad omnipotentiam Deum protestatio fidelis <ad> p[er]petuam rei memoriam,” dated 1582, Dee described his active pursuit of revealed “radicall truthe” by “extraordinary guift” in the fashion of “Salomon the wise” and other prophets who had “enjoyed [... the] fauor & conuersation” of God rather than rational knowledge. He rejects the “vulgar schole-doctrine or humane invention” and “reasonable discourse,” reminding himself

what good Counsell the Apostle James giveth, saying, Si quis vestrum careat sapientia, postulat a Deo, &c. And that Salomon the wise, did so, euen immediately by thy self, attayne to his wonderfull wisdom.¹⁷⁶

During one of his conversations of April 1584, Dee reassures himself of the legitimacy of his communications with angels, whose truthfulness is guaranteed by prayer:

seeing I have many years desired, and prayed for wisdom (such as these Actions import) at his hands, and by such means as to his Divine Majesty seemeth best, [I believed] that he would not either mislike my prayer, or abuse my Constant hope in his goodnesse and mercy: Therefore I concluded that I referred all to the mercifull will of God, and doubted nothing at the length to be satisfied of my request, and prayer made unto him.¹⁷⁷

For Dee the faithfulness of his prayer, and his submission to divine will are indisputable warrants of the success of his ventures, granting him an assurance which is secured on gospel teachings concerning faith and its powers. Like the Pseudo-Solomonic operator who relied upon the power of operative prayer,¹⁷⁸ Dee’s “exercises” relied on immediate precatory communication with God and his angels. “I did fly vnto thee by hearty prayer”, he says in the “Protestatio fidelis”, “in sundry manners, sometime crying unto thee, Mitte lucem tuam, & veritatem, quae me ducant, & sometime Recte sapere & intelligere docete me, nam sapientia tua totum est quod volo: Sometime da verbum tuum in oro meo & sapientiam tuam in corde meo fige.”¹⁷⁹ Such prayers for “True knowledge” (*Recte sapere*) and the infusion of knowledge by “extraordinary gift,” are characteristic of the precatory orations of the Pseudo-Solomonic art. In the *ars notoria*, for example, the operator prays for illumination in the science of astronomy with the following prayer:

Deus qui multitudinem stellaru[m] solus numeras et terra[m] palmo mensuras, et montiu[m] altitudine[m] conspicias: *Da mihi recte sapere*, et cognita subtili indagatione perquirere, et intelligere, et discernere, vt Astronomiae habita scientiae notitia, cognoscendo et intendendo eius magnitudinem et subtilitatem.¹⁸⁰

It is interesting to note, however, that Dee’s “hearty prayers” for wisdom are in fact drawn verbatim from a collection of psalmic prayers written by the Henrican Catholic martyr, John Fisher (whom Erasmus had praised as a “man of singular piety and erudition”).¹⁸¹ Fisher’s *Psalmi seu Precationes* was a collection of extemporary prayers, modelled on the psalms, frequently referred to by Dee as a text being used as part of the precatory fabric of his angelic conversations.¹⁸² Fisher’s fifth Psalm, “Pro impetranda sapientia diuina,”¹⁸³ like the Pseudo-Solomonic prayers for wisdom, is a fervent request for the direct infusion of wisdom by God:

Domine Deus misericordiae qui omnia uerbo tuo fecisti, & sapientia tua constituisti hominem. [...]

Cor nouum & spiritum rectum intra me pone,

omneque desiderium prauum procul à me repelle. [...]

Mitte de caelo spiritum sapientiae tuae,
& sensu illius cor meum imple.
Sapientia tua dat veram scientiam,
& ex ore tuo consilium & intelligentia. [...]

Firmetur sapientia in animo meo,
& legem tuam in corde meo scribe.¹⁸⁴

The occurrence of such a prayer in Bishop Fisher's collection of extemporary prayers (which also includes a number of orthodox prayers for the remission of sins, and protection from temptation), suggests that the precatory orations of the Pseudo-Solomonic art developed out of pre-existing modes of extemporary prayer and private forms of devotion. The plea for personal illumination, a permissible use of conventional private prayer, became the primary focus and objective of the Pseudo-Solomonic exercises. We are fortunate to have a number of extant examples of Dee's own extemporary prayers of this type, which, like the Pseudo-Solomonic prayers, combined general requests for wisdom, and more particular and specific requests for certain kinds of knowledge. An early example, dated 1579, is a Latin petitionary "evening and morning oration" – "Pro sapientia,"¹⁸⁵ which, beginning with his quotation from Fisher's psalm, develops into a more specifically "philosophical" prayer (in the sense that it explicitly invokes a philosophical community: "the pious, wise and expert Philosophers"), and requests the aid of specific angels (Michael, Gabriel, Raphael and Uriel) to instruct him perfectly and exactly in God's "arcana and miracles." Similar prayers recorded in his *De Heptarchia Mystica*, make his debt to Pseudo-Solomonic oration even clearer. These "pious and devout invitations" (*Pia, Deuotaque Invitationes*),¹⁸⁶ are a series of prayers addressed to God, the "good Heptarchical angels" (*Bonorum Angeloru[m] Heptarchicoru[m]*), and other groups of angels with specific responsibilities (those with knowledge of stones and metals, medicine, the four elements, the mechanical arts, etc),¹⁸⁷ requesting various kinds of knowledge and power "for the auancing of the Honor and Glorie of our Almighty God."¹⁸⁸ These prayers are clearly invocations (he requires the presence of the various angels), and requests (albeit mediated) for instrumental power:

In the Name of Almighty GOD, the King of Kings, And for his honor, and Glory, to be aduanced by my faithfull service, I require the[e] O Noble Prince, (N.) to COM[M]E presently, and to shew thy self, to my perfect and Sensible eye Iudgment, With thy Ministers, servants and subiects, to my cumfort, and help, in wisdom, and Powre, according to the propertie of thy Noble Office: COM[M]E, O Noble Prince (N.) I say COM[M]E, Amen.

We have here the same concatenation of precatory clauses to be found in the Pseudo-Solomonic orations: the *legitimizing* clauses ("by my faithful service"), *desiderative* clauses ("I require the[e] [...] to shew thy self [...] to my cumfort and helpe, in wisdom and Powre"), *mediatory* clauses ("In the Name of Almighty God [...] and for his honor, and Glory"). Most of the prayers include *protective* clauses, insisting on the presence of "true and faithfull Angels of light," who come "in a godly and frendly manner,"¹⁸⁹ and Dee frequently records the use of prayers "contra demones" in addition to these general calls for protection from conversation with evil spirits.¹⁹⁰ The most significant feature which Dee's "heptarchical invitations" share with Pseudo-Solomonic

oration, is their employment of “divine names” (*nomina dei*) as instruments, and particularly “revealed” divine names (i.e. names not drawn from scriptural sources). The prayers in the *De Heptarchica Mystica* feature, for example, the “Twelve names of God [...] which govern the visible and invisible creatures of the earth,” drawn from a cruciform table of divine names known as the “line of the holy spirit,” revealed by the angel Ave in June 1584,¹⁹¹ these “names” are “MOR, DIAL, HCIGA, OIP, TEAA, PDOCE, MPH, ARSL, GAIOL, ORO, IBAH, AOZEI,” and are invoked in the course of precatory expostulations in the manner of the Pseudo-Solomonic oration.¹⁹²

These “invitations” can only be understood fully in the generic context of the Pseudo-Solomonic theurgical rites, whose Latin petitionary orations are Dee’s model. These “fervent prayers made to God, for [...] instruction, throwgh the ministry of his holy and myghty Angel[s]”, became a fundamental part of Dee’s practice from his first recorded dealings with angels in December 1581 with Barnabas Saul as his “seer”.¹⁹³ Dee constantly refers to prayers which he calls “particular invitations,” or “Ejaculations appropriate to the action.”¹⁹⁴ These are “action-specific” prayers of the kind recorded in the *Heptarchica Mystica*. Like the Pseudo-Solomonic prayers on which they are based, these prayers are essentially requests for divine illumination or wisdom, or help,¹⁹⁵ and include variations on the phrases “Mitte lucem tuam” (send [me] your light) and “Da mihi Recte sapere” (give me right knowledge), which Dee appropriated from Fisher’s fifth Psalm, but also feature prominently in Pseudo-Solomonic orations.¹⁹⁶ While many of the prayers are general requests for illumination, Dee (like the Pseudo-Solomonic “magister,” or “operator”) often made requests for knowledge or help of a highly specific and instrumental nature. For example, when Dee is asked for specific guidance by Edward Kelley and John Husey concerning a “moniment of a boke and a skroll” which they had supposedly found at “Northwik hill”, he uses a variation of the “mitte lucem” prayer to ask for help with this specific task: “O beata Trinitas, mitte lucem et veritate[m] tuam, vt ip[s]a me ducant ad montem sanctum, et ad tabernacula tua,”¹⁹⁷ and during his political involvements in Eastern Europe he would often pray for advice on worldly matters, making a “motion for the Lord Al[bert] Las[key] how to deal with the Chancelour,” for example.¹⁹⁸ More often his requests relate to help with particular aspects of the angelic revelations, asking, for example, for help with collating the texts of the conversations,¹⁹⁹ supplying missing words, characters, or numbers, or simply for the granting of a particular audience or vision. The angels who appear in the visions constantly exhort Dee and Kelley to prayer, sometimes offering them prayers to imitate. Thus during the Cracow conversations of 1584, the angel Gabriel offers a conventional prayer for mercy and fortification, and Dee and Kelley “pray the same prayer.”²⁰⁰ The angels also confirm Dee in his precatory practices by describing to him the prayers and angelic “Calls” of the prophet Enoch which, like the Pseudo-Solomonic theurgy, are based on prayers “desiring” the ministry of the angels “in and through [the] holy names” of God.²⁰¹

While these action-specific prayers are fundamental to the conversations, it is important to acknowledge the vital role played by “conventional” forms of prayer in Dee’s dealings with the angels, and the *continuities* between these conventional forms and “magical” prayer. As we have seen, Wier attacked the “blasphemous prayers” of these magicians, who “designedly mixed” incantations, psalms, and other conventional

prayers, and Dee, like the Pseudo-Solomonic magicians before him, also depended heavily on the operative power of conventional prayer, and especially the psalms in his theurgical practices. In one of Dee's first recorded scrying sessions he asks the angel Uriel for "a meanes or order to vse in the invocating of Michael," and is told:

He is to be invocated by certayn of the psalmes of Dauid, and prayers. The which psalmes, are nothing els, but a means vnto the seat and Maiestie of God: Whereby you gather with your selues due powre, to apply yowr natures to the holy Angells. I mean the psalmes, commonly called the seven psalmes. You must vse pleasant sauours: with hand and hart: whereby you shall allure him and wynn him (thorowgh Gods fauour) to atteyn vnto the thing, you haue long sowght for. There must be Coniunction of myndes in prayer, betwyxt you two, to God, contynually. Yt is the Wyll of God, that you shold, ioinctly, haue the knowledge of his Angells together.²⁰²

"Invoke this name, or we can do nothing," (*Imuocate Nomen eius, aut nihil agere possumus*) Michael tells him later, because "The key of prayer openeth all things".²⁰³

This belief in the power of prayer, and especially the psalms, was a central tenet of early-modern religious life. Dee's contemporary, Anthonie Gilbie, for example, in his *Psalmes of Dauid* of 1581 told his readers, that

this Book of Psalmes [is] most necessarie for euerie Christian [...] to meditate them in their hearts, and so by earnest continual inuocation and hartie praiers to moue the Lord our God to mercies, as his holie seruants haue by the like meanes alwaies found mercies before vs.²⁰⁴

These "mercies" could cover a wide range of practical helps as well as spiritual consolations and directions. An anonymous contemporary translation of a work by St Athanasius, *A Treatise [...] concerning the vse and vertue of the psalmes*, which was routinely appended to editions of Sternhold and Hopkins's *Whole booke of Psalmes*, for example, offered a variety of tasks for which the use of Psalmic invocation was deemed appropriate, which included the frustrating and driving away of enemies, requests for the prospering of the Church, the blessing of a new dwelling, the curing of illnesses, and prayers against "the nobility, the counsel, the magistrates and princes not geuen to religion".²⁰⁵ Calvin also stressed the virtue of the psalms, which he saw as an "infallible rule for directing us with respect to the right manner of offering to God the sacrifice of praise, which he declares to be most precious in his sight, and of the sweetest odour."²⁰⁶ However, he also insisted on certain limits to the use of these "precious" sacrifices. "Whoever would follow [David] aright," he said

must not allow himself to break forth with reckless and blind impetuosity into the language of imprecation; he must, moreover, repress the turbulent passions of his mind, and, instead of confining his thoughts exclusively to his own private interests, should rather employ his desires and affections in seeking to advance the glory of God.²⁰⁷

As a request for divine aid, prayer could become involved in the "private interests" and illegitimate desires of individuals, who might not exercise due restraint in respect of the mercies sought from God. Dee himself, believed his own prayers to be of miraculous efficacy. Dee is told by his angelic interlocutors that he has been granted particular "force in prayer" by God,²⁰⁸ and that the mystical tables or "calls" which are revealed to him give him the special privilege of compelling angelic visitation (a privilege not granted to the prophets and apostles).²⁰⁹ The "utterance" of the "holy and

mysticall Call” compells the angelic “Kings and Ministers” who rule the earth to obedience:

[This Call] is of force, and moveth them to visible apparition [...] they are forced (by the couenant of God delivered by his spirit) to render obedience and faithful society. Wherein, they will open the mysteries of their creation [...] and give you understanding of many thousand secrets.²¹⁰

While these powers might seem to fall within the sphere of Calvin’s proscriptions with regard to private interests, it is also clear that, given Dee’s faith in the authenticity of his revelations, he saw the extraordinary mercies as expressions of the divine will (“by the couenant of God”). Thus, in seeking miraculous powers he believed he was “seeking to advance the glory of God,” rather than seeking private power. Dee frequently insists on his unworthiness and humility, and his desire to be an instrument of God, rather than an autonomous agent. He makes frequent use of the formula “Let thy will, and not ours, be done” (*Non nostra sed Dei voluntas fiat*),²¹¹ and other mediatory clauses in his prayers, requesting God, for example, “to deale with vs, so, as might be most for his glory, in his mercies: not according to our deserts, and frowardnes: &c.”²¹² and one of the angels tells him: “you are become servants of God: Not for your own sakes; but in that it is the Glory of him, which hath called you to this exercise.”²¹³ Thus while Dee’s belief in his entitlement to quasi-divine powers seem extraordinarily arrogant to the modern reader, they seem less audacious when viewed in the light of the contemporary doctrines of grace and providentialism. There is no question that Dee saw his access to “magical” powers as firmly circumscribed by divine will. Thus while he is told by the angels that “All wants shall be opened vnto you,”²¹⁴ he is also warned to “abuse not this Excellency.”²¹⁵ He is permitted, for example, to make “vse” of the angels governing the seas and the earth, but he must only “vse them to the glory [of God].”²¹⁶ Thus whatever Dee believed was done for the glory of God was divinely willed and warranted, and he asks only for “the performing of som[m]e artes such as myght sett forth his glory.”²¹⁷

There is no doubt that Dee’s faith in the conversations and their continued success was underpinned by a fervent regime of private devotion. When Dee asked the angel Ave about the “form of our Petition or Invitation to good Angels”, he was told that correct invocation arises from “the good will of man, and of heat and fervency of the spirit,”²¹⁸ and his conversations are characterised by a performative “heat and fervency” and intense precatory zeal.

Whilst engaged in angelic invocations at his house in Mortlake, the chamber of practice (which rather quaintly appears to have been a converted spare bedroom)²¹⁹ was set out as a ceremonial space dedicated to private worship, furnished with candles and other “holy furniture”, and equipped with a desk at which he recorded the communications. It appears to have been contiguous with the space which Dee used for his private prayers, as he often mentions going to, or coming from his “oratorie”.²²⁰ On his European travels he appears to have replicated this ceremonial space in his various lodgings – in Cracow, for instance, he describes his room as containing a “Table with a white Cloth, a Candlestick, and Taper on it, with a Desk and Cushions (which I had caused to be made with red crosses on them).”²²¹ In this conventional oratorical space, much of the daily practice of the conversations consisted in conventional forms of

worship, the “diuerse [...] eiaculations and pangs of prayer and thanks vnto God,”²²² which were the staple of sixteenth-century Christian worship.

On Holy Thursday 1583, for example, Dee goes to his “oratorie” to pray for “comfort and [a] token of free forgiuenes,” he vents his “vows” in “harty sorrowfull paines” and “prayed the 22 Psalm in the conclusion of the pang”.²²³ On another occasion he records: “EK prayed the 145 and 146 Psalm kneeling reverently; and I likewise in heart consenting thereto, attentively listening.”²²⁴ He and Kelley would frequently pray together on their knees, and he talks of them reciting psalms *mora interposita*,²²⁵ (that is with Dee and Kelley reciting alternate lines),²²⁶ or silently following Kelley’s recitation of a psalm in his mind (“I joyning my mind to his pronounciation thereof.”)²²⁷

The operative dimensions of conventional prayers in Dee’s angelic conversations are clearly visible in the close links between prayer and the appearance of visions in the shew-stone. Dee and Kelley are told by the spirit Madimi that they must: “Always pray that *you may hear truly and receive faithfully*,”²²⁸ and these prayers are frequently in a conventional form. Thus after a brief recitation of Psalm 33, Dee notes the sudden appearance of Gabriel and Nalvage in the “crystal”.²²⁹ On another occasion, Dee notes: “we prayed severally; and at length [...] I prayed in the hearing of EK, (by my desk, on my knees) in great agony of mynde, and Behold there appeared one standing vpon, or rather somewhat behynde the Heptagonall clowde.”²³⁰ Prayer often helps him to overcome difficulties in the progress of the visions; thus a hiatus in one of the actions is ended by the deployment of a psalm: “*I prayed Roffensis Psalm 9 and the Lords Prayer*, and the stone became clear,”²³¹ while the angel Nalvage is helped to overcome an inability to reveal one of the letters of a Table by the recitation of the Lords Prayer.²³²

A great deal of the angelic conversations relies on the ritual performativity of these conventional forms of Christian devotional piety. Thus when Dee and Kelley are shunned by the angel Ave, and are reproached by a cherubic spirit (“a face, very great, with wings about, adjoynd to it”) for their lack of faith and belief, Dee falls to intense prayer, “Cum maximis lachrymis hæc à me & valde serio ad Rem dicta erant,” entering into desperate dialogue with the angelic interlocutor:

Δ: *O Lord, shall we continue in this wavering or stiff-necked willful blindness, and frowardly keep out thy mercies and graces by our fleshly sense, and unreasonable perswasion against the verity of thy true Ministers?*

1. All things are committed to thy charge.

Δ: *O Lord as much as ever I can do by prayer, or otherwise, I do, and yet I enjoy no fruit of my long travel.*

2. Thou hast ground, sow if thou can.

Δ: *How can I without further instructions and help? and now when I require Ave to come, he cometh not: O Lord comfort me.*

3. A V E shall come when thou hast need of him.

*Δ: In te Domine speravi, & spero, & sperabo. In die Tribulationis exaudies me. Refugium meum, spes mea, vita & beatitudo mea Jesu Christe, tibi cum Patre & Spiritu Sancto sit omnis honor, laus, Gloria & Gratiarum actio. Amen.*²³³

This spiritual drama, in which Dee acts out his penitential remorse at their “willful blindness” and “fleshly sense”, and begs for comfort, and gives traditional precatory expression to his trust and hope in God’s help and guidance, is closely modelled on the traditional forms of private devotion.

The mixture of “action-specific” (or “magical”) prayer and conventional prayer forms, and the extemporary and improvisational openness of private worship (“I rehersed part of my intent, vtred to god by prayer and half turned my speche to god him self, as the cause did seme to require”)²³⁴ makes Dee’s angelic conversations into a series of complex ceremonies, or “precatory events”. Take for example, the prayers recorded before the conversation held on the morning of Tuesday 31 July 1584: “The Lords prayer finished, and various ejaculations made both to Gabriel, and to Nalvage, Ave, Mapsma and Ilemer, and above all to God himself for his light, help and protection, both in the present action, as well as for our present and future journey to the court of Caesar [i.e. Rudolph II].”²³⁵ This mixture of conventional prayer and a variety of action-specific prayers (“invitations” to particular angels, and prayers to God for knowledge, help and protection) is a typical assemblage, which on other occasions may be supplemented by liturgical prayers, the seven penitential psalms,²³⁶ short extemporary prayers (*pretiunculas* or *oratiunculas*) for the remission of sins or for God’s grace, or protection from Satan’s deceptions,²³⁷ prayers of humility and obedience,²³⁸ prayers of thanksgiving and for strengthening faith,²³⁹ or prayers asking for help with specific questions or actions.²⁴⁰

These highly variegated and idiomatic prayer structures, in combination with the scrying stone, and the “holy table”, and the various “tables”, “seals” and “characters” which make up the instruments of the heptarchical art, give the conversations their peculiar character. Dee himself was aware that his method of using prayer was distinctive. The angel Raphael refers to Dee’s “Philosophicall Harmonie in prayer,” which Dee identifies as “the prayer which I dayly vse, & often”.²⁴¹ Dee himself talks about his form of prayer as a distinct method: “Copious prayers to God, according to our method.” (*Precibus ad deum fuis, ex more nostro*).²⁴² But this distinct method, these quasi-ceremonial precatory events – like the Pseudo-Solomonic arts of the middle ages – seem to have developed out of (and in parallel with) pre-existent forms of private worship, and the heightened sense of “magical” (or theurgic) agency seems to have been a natural extension of traditional beliefs regarding the power of prayer and the “mercies” extended by God to the faithful.

John Fisher, for example, in his treatise on prayer, *De necessitate orandi*, argued that the granting of requests (*impetratio*) was one of the three chief fruits of prayer.²⁴³ The instrumental nature of prayer rests, however, on a foundation of deep humility, and the “unworthy soul,” (*animus indignum*) acknowledges that the gifts it receives by means of prayer are effected through the grace of God, and not through any power on the part of the devotant.²⁴⁴ The good effects which might result from such prayers, are

the result of God using us as his instrument, not the result of our own virtue or desire. “Whenever we do something right,” Fisher says, “we are in the hand of God, like a hammer in the hand of a workman [...]. God uses us as an instrument to do good works. Whenever we seem to be acting virtuously it is not us, but God in us, who is acting.”²⁴⁵ While God will not grant requests which might be harmful to us, if prayer is undertaken in the right spirit, virtually anything will be granted by God to the faithful:

Anybody’s prayer, provided that it is based on humility, and is uttered freely before God, and provided that nothing which is asked for is repugnant to his own well being, and provided that he proceeds in the name of the Lord, without any doubts, then that which he asks for will be granted.²⁴⁶

Provided that one possessed the requisite sense of piety, and was prepared to submit oneself to being an instrument of the divine will (or to consider one’s own will to be such an instrument) the scope of this kind of prayer was virtually unlimited, and it is here that the boundaries between prayer and incantation, religion and magic become fluid and ill-defined. Dee’s contemporary and putative co-author of the Rosicrucian *Fama Fraternitatis*, Julius Sperber, for example, in his *Kabalisticae Precationes*, published in 1600, produced a series of psalmic prayers which, like Dee’s, were petitions for divine wisdom.²⁴⁷ Such prayers for illumination were an accepted part of conventional Protestant worship in the late sixteenth century,²⁴⁸ but the limits of such requests were not subject to doctrinal proscription, and Sperber’s interpretation of the New Testament promises, suggests that he views prayer as a kind of Christian magic.²⁴⁹ The Cabala, he says, is “the chiefest of the sciences and their summit,” a primacy which it enjoys because it is based on the sacred revelation of the divine names which can be found in the Old and New Testaments.²⁵⁰ The wise man, Sperber says, can expect to receive spiritual and corporeal benefits from God when he prays. Through God’s gift, he will be able to

truly understand God and the inner man (that is, the soul of Man); to foresee the future: to understand the Mysteries hidden in sacred scripture: to uncover secrets, to acquire the glory of the true name and perpetual memory: to cure the sick: to perform miracles: to receive Visions and Revelations [...] and rise up beyond the limits of the mind, and be elevated to heaven, uniting and joining with GOD himself, and be illuminated by the Holy Spirit.²⁵¹

While a limited concept of operative prayer had been widely accepted throughout the Middle Ages and early Renaissance,²⁵² the potential for exceeding these narrow limits had always been present in the existing belief system, and here we can see how belief in the granting of requests could result in a quasi-magical, quasi-prophetic sense of exalted agency.

4. “ONE GOD, ONE KNOWLEDGE, ONE OPERATION”: SECRET MEANS AND APOCALYPTIC ENDS

This brings me to my final observations on Dee’s heptarchical art, and the extent to which it departs from its Pseudo-Solomonic models and becomes an intellectual and practical formation which is *sui generis*. These differences are of a technical and a teleological nature. The technical differences are minor, but not insignificant. As a practitioner, Dee saw himself as both a *philosophus* and a *mathematicus*, and the exalted vision of the mathematician who could “ascend and mount vp (with speculatiue

Winges) in spirit, to behold [...] the Glas of Creation", ²⁵³ was never far from his mind during his dealings with the angelic spirits. While there is a shared mathematical basis underpinning both Dee's angelic conversations and Pseudo-Solomonic theurgy – a rudimentary numerological mysticism – Dee brings a greater degree of mathematical sophistication and facility to his proceedings than one finds in his mediaeval sources. In this he is a beneficiary of the neoplatonic scholarship of the Renaissance, with its complex syntheses of Greek, Hebrew, Christian and Arabic doctrines on the cosmological significance of number. The second, and more significant difference, is the millennial or apocalyptic teleology of Dee's art. Whereas the *ars notoria* and other Pseudo-Solomonic arts were intended for the amelioration of daily life, and were therefore chronic quotidian practices, Dee's art was devoted toward a single action, an action of staggering eschatological significance: "we procede to one God, one knowledge, one Operation". ²⁵⁴ This one operation was to be the Last Judgement, with Dee and Kelley as earthly agents of the divine will, executed through the mystical instruments revealed to them. While the Pseudo-Solomonic arts promised powers to perform wonders, for Dee these particular actions were a peripheral aspect of a single action, an action which was in itself the horizon of all human actions, the end point towards which the whole providential design of the creation had been tending since the resurrection. In May 1583, the angel Uriel tells Dee that the "frute" of his "boke" (i.e. the *Liber Mysteriorum*) would be the restoration of "the holy bokes, which haue perished euen from the begynning." The doctrine revealed in this ur-scripture, was to "towche the skyes, and call the sterrs to testimonie thereof", and Dee is told that in the course of practising his art his "fotesteps shall viset (allmost) [all] the partes of the whole world." The "Vse" of the "Table of practise", however, was to be "onely for one Month". The revelation was not just a communication, but an instrument, designed to bring about the perfection of religion, but also the perfection of human arts:

herein shalbe deciphred perfect truth from imperfect falshode, True religion from fals and damnable errors, with all Artes; which are prope to the Vse of man, the first and sanctified perfection: Which when it hath spred a while THEN COMMETH THE ENDE. ²⁵⁵

The miraculous arts promised by Pseudo-Solomonic theurgy, fantastic and presumptuous as they often are, are actions intended to have effects within historical time. Dee, on the other hand, saw his "action" or "practise" as the culmination of all actions, a last act which would inaugurate the *end* of history and historical time. The boundaries between prophecy and "magic" collapse in Dee's heptarchical art – the "sanctified perfection" of all the practical arts are not seen as acts of personal aggrandisement or empowerment, but as a necessary prelude to the apocalyptic catastrophe. The "holy boke" or "boke of secrets" was to be "the key of this World", which has been "browght to the wyndow" of Kelley's senses and the "dores" of his imagination, "to the end that he may, see and performe the tyme of God his Abridgeme[n]t". A "great miserie" is imminent, Uriel tells them, they must "nedes attend vppon the Will of God: Things must then be put in practise. A thing that knitteth vp all", which "conteyn[s] many Celestiall Vertues". ²⁵⁶ The practice of the heptarchical art would thus subsume all other human actions within itself, it would "knitteth vp all." In comparison with Dee and Kelley, the angel Ave tells them, the theurgists of the past, who practised the "old fashion of Magick", were "only playing". ²⁵⁷

The contrast between Dee's heptarchical art and the magical arts that preceded it (and those which were contemporary with it) is perhaps, from a modern standpoint, illusory. The parallels between Christian magic, or theurgy, and Biblical prophecy are constitutive of these arts, their legitimacy for contemporary practitioners was bound up in the idea of angelic transmission. As "revelations" from spiritual beings, the arts are, *ex definitio*, prophetic. What sets apart Dee's art from his predecessors, perhaps, is his willingness to believe that God was willing him to be an *instrumentum instrumentorum*. But in the light of contemporary beliefs about the imminence of the apocalypse in the 1570s and 80s (and the primacy accorded to faith and revelation in religious experience) even this should be comprehensible, if not credible. Dee was certainly not alone among his contemporaries, either in his belief in the properties of the "shewstone", or in taking Pseudo-Solomonic theurgy as a model for his magical practices. Christopher Whitby has carefully documented reports of English "scryers" in the 1540s-60s,²⁵⁸ and we know that at least one contemporary, Simon Forman, had been practicing a "New method [...] of magic" which, according to Gabriel Harvey, was "inspired by the *ars notoria*", and (like Dee's conversations) apparently made use of an "all-seeing mirror".²⁵⁹ Although some of Dee's contemporaries were sceptical about angelic communications,²⁶⁰ such views were not predominant, and many others disapproved of his practices precisely because they *believed* in his spiritual communications. Other English and European scholars are known to have worked within the same tradition as Dee. Heinrich Khunrath, for example, in the text accompanying his sequence of theosophical-alchemical engravings, the *Amphitheatrum Sapientiae Aeternae*, describes an art or doctrine which he calls "Hyperphysical magic" (*Hyperphysicomageia*), which is "pious and useful conversation with good Angels, God's fiery ministers, mediately or immediately, while we are either waking or sleeping, in accordance with the task delegated to them by God."²⁶¹ He also defines "Theosophy" (*Theosophia*) as "a threefold Theology (that is, Biblical, Macro- and Microcosmic)" and includes the "spiritual conversations" of Hebrew prophets and cabalists amongst the highest accomplishments of "Magic" (*Mageia*).²⁶²

For devout Christian practitioners like Dee and Khunrath, then, the boundaries which modern commentators draw between practices which are "magic" and those which are "religious" or "devotional" seem to have been less clearly distinguishable. The widespread belief in God's willingness to grant requests to the faithful (*impetratio*) while it was often the subject of debate and controversy,²⁶³ had no settled limits or boundaries, and as such offered a mediated form of instrumental agency which could easily be reconciled with orthodox Christian faith. As we have seen, Dee saw the heptarchical art as a form of religious "exercise", a "holy action", during which "mysteries" and divine secrets are revealed. To this extent his art is an *ars prophetica*, and even (given the momentous nature of the supposed prophetic knowledge) an *ars apocalyptic*. In this he was not far removed from some of his religious contemporaries. The puritan Roger Edwardes, who sought (and gained) Dee's support against the Bishops on the matter of apocalyptic prophecy laid claim to a comparable apocalyptic authority in his scriptural interpretations, and was sympathetic to Dee's claims to be dealing with angelic spirits.²⁶⁴ But Dee's art was also an *ars operativa* or *instrumentiva* and his "desired thirst" for "perfect knowledge" was not restricted to purely divine or eschatological illuminations. Dee's requests included requests for

alchemical, medicinal, and natural philosophical knowledge, and help with locating a hoard of buried treasure. While these actions do not seem to fit our perceptions of what a “religious” practice, might be, we should bear in mind both the eschatological horizon within which Dee located his practices, and the latitude of his conception of “Christian allowable means”. Provided that Dee saw no contradiction between his practices and “the profession of a true Christian,” and provided that he construed his actions as dedicated to the glory of God, a wide array of practical and operative activities were available to him in his capacity as a “Modest Christian Philosopher”.²⁶⁵ Like the theurgic practitioners before him, what Dee ultimately sought was a sanctioned form of operative agency, access to arts whose “sanctified perfection” was assured. The “key” of prayer and the “ineffable sacrament” of angelic conversation seemed to him, in the final analysis, the highest and most legitimate form of pursuing both theoretical knowledge and operative practice. Dee spent most of his long scholarly career pursuing “wonderfull divine and secret Sciences”²⁶⁶ and his sense of calling and vocation, is perhaps the most important framework within which he organised and pursued a wide range of practical and theoretical activities. In the broadest religious sense, vocation or calling signified the dedication of all actions to the glory of God or a sacramentalization of human action.²⁶⁷ The doctrine of vocation demanded that “all the religion we haue, all the grace and goodnesse of our hearts, must shew it selfe in the workes of our particular callings,”²⁶⁸ and this belief shaped and formed early modern individuals’ lives in ways which are not comprehensible in terms of the modern, secular conception of “career”. The unique intellectual and cultural formations of early modernity, in which apparently diverse practices are drawn together under the aegis of a unique vocation, are problematic for modern disciplinary historians, for whom the classification (or lawful fragmentation) of theoretico-practical domains of knowledge is a given.²⁶⁹ In order to understand Dee’s angelic visions and their purpose it is, perhaps, less useful to ask whether they are occult science, or magic, or religion, than it is to ask, what an “exercise”, a “conversation” or an “action” is – to locate them, that is to say, within the conceptual vocabulary which presided over their emergence.

If nothing else this reappraisal of the character of Dee’s “mysticall exercises” has, I hope, shown that there is a real need to rethink the conceptual foundations and contemporary categorization of the bewildering array of early-modern practices which have been designated by the term “Renaissance magic” or “occult science”. I also hope that it has signalled a need to extend the study of early-modern “magical” or “occult” practices back into the middle ages. The accounts of Dee’s angelic conversations we find in Yates, Calder and French suggest that they were largely the product of a “Hermetic-Neoplatonic” worldview, whose primary components were derived from the printed philosophical works of Pico, Ficino, Trithemius, Reuchlin and Agrippa. There are a number of references in Dee’s angelic conversations which show that he made use of the printed works of Agrippa, Reuchlin, Trithemius and others, but it is a large argumentative liberty to move from the statement “Dee speaks of the book of Agrippa as lying open on [his ...] table” to concluding “Agrippa was Dee’s main guide in such operations”,²⁷⁰ or that his angelic magic is reliant on “Agrippa on the three worlds”,²⁷¹ or that his “outlook” was predominantly “Renaissance Neoplatonism as interpreted in Pico della Mirandola”.²⁷² As an explanatory model for Renaissance magic neoplatonism has long been dominant, and to a certain extent this is justified, but we must also assess the

influence of the widespread manuscript transmission of earlier magical and religious traditions, particularly in Northern Europe where Italian neoplatonism arrived relatively late, and was often read synthetically together with mediaeval works which already enjoyed prestige and esteem amongst interested scholars. The ascetic, talismanic, cabalistic and incantatory aspects of the works of Northern scholars such as Agrippa, Reuchlin and Trithemius may also be re-illuminated by placing them in the context of mediaeval theurgical manuscript traditions, rather than viewing them simply as conduits for the print tradition of Ficino and Pico. Dee's own practices, as I hope I have shown, are far more indebted to the former than the latter, and my preliminary analysis would suggest that we must look much more closely at the character of mediaeval theurgy and its relation to orthodox forms of religious practice, in order to come to a closer understanding of the nature of Dee's "actions".

APPENDIX 1

John Dee's Oration "Pro Sapientia"
(British Library, Sloane MS 3188, fol. 5^r)

Praeter alias meas extemporaneas preces, et eiaculationes ad Deum vehementiores: Haec vna, maximè vsitata fuit.

Or[ati]o mea Matutina, Vespertinaque: pro Sapientia.

In nomine Dei Patris, Dei Filij, Dei Spiritus Sancti

Amen

Omnipotens, Sempiterna, Vere, et Viue Deus, in adiutorium meum intende: Domine Dominantium, Rex Regum, Iehouah Zebaoth, ad adiuvandum me festina:

Gloria Deo, Patri, Filio, ~~Spi~~rit et spiritui Sancto: Sicut erat in principio, et nunc, et semp[er]: et in saecula saeculoru[m]: Amen

Recte sapere, et intelligere doceto me, (ô rerum o[mni]um Creator,) Nam Sapientia tua, totum est, quod volo: Da verbum tuum in ore meo, ô rerum o[mni]um Creator,) et sapientia[m] tua[m] in corde meo fige.

O Domine Iesu Christe (qui sapientia vera es, aeterni et Omnipotentis tui Patris) humilimè tuam oro Diuinam Maiestatem, expeditum mihi vt mittere digneris, alicuius pij, sapientis expertique Philosophi auxilium, ad illa plenissimè intelligenda perficiendaque, quae maximi Valoris erunt ad tuam laudem et gloriam amplificandam: Et si Mortalis nullus iam in terris viuat, qui ad hoc munus aptus sit: vel qui ex aeterna tua providentia, ad istud mihi praestandu[m] beneficium assignatus fuerit: Tunc equidem humilimè, ardentissimè et constantissimè a tua Diuina Maiestate requiro, Vt ad me de caelis mittere digneris bonos tuos Spirituales Ministros, Angelosque, Videlicet Michaëlem, Gabrielem, Raphaëlem, ac Vrielem: et (ex Diuino tuo fauore) quoscumque alios, fidelesque tuos Angelos, qui me plene et perfecte informet et instruant, in cognitione, intelligentiaque vera et exacta, Arcanorum et Magnalium tuoru[m] (Creaturas omnes tuas, illarumque naturas, proprietates, et optimos vsus, concernentium) et nobis Mortalibus. Scitu necessarium; ad tui no[mi]nis laudem, honorem, et gloriam; et ad solidam meam, aliorumque, (per me) plurimorum tuorum fidelium consolationem: et ad Inimicorum tuorum confusionem, et subversionem. Amen. Fiat Iehouah Zebaoth: Fiat Adonay, fiat Elohim. O beata, et superbenedicta Omnipotens Trinitas, Concedas mihi (Ioanni Dee) ~~petitione~~ petitionem hanc, modo tali, qui tibi maximè placebit.

Amen

[*Flourish*]

Ab anno 1579. hoc ferè modo: Latinè, vel Anglicè; (est circa annu[m] 1569 alio et peculiari, particulari modo: interdum pro Raphaële, interdum pro Michaële) ad Deum preces fundere: mihi gratissimum fuit: ~~et est~~ Mirabilem in me faciat Deus Misericordia[m] sua[m]. Amen. [*Flourish*]

APPENDIX 2.

John Fisher, *Psalmi seu Precationes D. Io. Episcopi Roffensis*
(Cologne: Heronem Alopecium, c.1525), Psalmus V, pp.95-109.

Psalmus V. Pro Impetranda sapientis diuina.

Domine, Deus misericordiae, qui omnia uerbo tuo fecisti, & sapientia tua constituisti hominem.

Deus aeternae, & absconditorum cognitor, qui omnia nou- [p. 96] eris, priusquam fiunt.

Aperi labia mea & os meum ut nunciem laudes nominis tui.

Cor nouum, & spiritum rectum intra me pone, omneque desiderium prauum procul à me repelle.

Stultus sum ego domine & rerum ignarus, & scientia tua non est mecum.

Nescio ego nec intelligo, quoniam hebetudo tanta, ut non uidian oculi mei, & cor meum non cognoscat.

Et iam puer sum & paru- [p. 97] lus, ignorans ingressum & exitum meum.

Vir pollutis labijs ego, exiguique temporis, & minor ad intellectum legis tuae.

Da obsecro cor docile seruo tuo, ut sciam quid acceptum sit coram te omni tempore.

Mitte de coelo spiritum sapientiae tuae, & sensu illius cor meum imple.

Sapientia tua dat ueram scientiam, & ex ore tuo consilium & intelligentia.

Sapientia tua os mutorum [p. 98] aperit, & linguas infantium eloquentes reddit.

Si quis uidetur perfectus inter filios mortalium, si tamen effugerit ab illo sapientia tua, in nihilum computabitur.

Hominibus thesaurus indeficiens est sapientia tua, quae qui usi sunt, participes facti sunt amicitiae dei.

Quam bene se habet homo ille qui ingeniosus est, & qui animam sortitus est sapientia predictam. [p.99]

Quisnam inter homines consilium tuum noscit, aut quis poterit cogitare quid uelis tu?

Sensum tuum quis intelligat nisi tu dederis sapientiam illi, & instruas eum per spiritum tuum sanctum?

Nam rationes hominum in multis deficiunt, & parum securae adinuationes eorum.

Corruptibile enim corpus animum grauat & terrenum domicilium retardat mentem multa cogitantem.

Superné, consilium & succes- [p. 100] sus, & illic prudentia ac etiam uirtus.

Tecum sunt diuitiae & gloria, opes incorruptibiles & iustitia.

Qui te inuenerit, inuenit uitam, & te qui non amat, diligit mortem.

Domine Deus tange os meum, ut recedat iniquitas mea, inhabita cor meum ut peccata mea purgentur.

In maliuolam animam sapientia non intrat, nec manebit in corpore quod peccatis subditur.

Doce me domine Deus, ne [p. 101] augescat ignorantia mea, & delicta mea multiplicentur.

Spiritus me doceat quae tibi placita sunt, & ducat in uiam rectam, nam in erroris uia diutius errauit.

Firmetur sapientia in animo meo, & legem tuam in corde meo scribe.

Super omnia quae speciosa sunt, & pulchra, sapientiam desidero in comparatione illius diuitias non aestimo.

Quam amo sapientiam tuam domine, quae unica medi- [p. 102] tatio mea est.

Quam dulcia cordi meo eloquia tua? multo magis quam mel ori meo.

Verbum tuum pedibus meis lucerna est, & uijs meis lumen.

Magis mihi placet sapientia tua, quam milia auri uel argenti.
 In uia sapientiae tuae delector magis quam ingenti diuitiarum copia.
 Vtinam dirigantur uiae meae, ut sapientiam tuam, & sermones tuos discam.
 Eloquium tuum ignitum est, hinc [p. 103] fit ut uehementer illud cupiam.
 O beatum illum quem tu instruis domine, & in lege tua doctum facis.
 Anima eius sapientiam meditabitur, & lingua eius loquetur iudicium.
 Lex dei in corde suo scribetur, & non supplantabuntur gressus eius.
 O domine Deus salutis meae, exaudi precem meam: & lingua mea misericordias tuas semper loquetur.
 Da sedium tuarum adistri- [p. 104] cem sapientiam, ut bonum & malum discernere possim, & occulta tua cognoscam.
 Reuela oculos meos, ut ad miranda perspiciam quae in tua lege sunt.
 Memor esto verbi tui te inuocanti, nam in illo spem meam posui.
 Viam sapientiae notam fac mihi, & scientiam tuam ne coeles à me.
 Fac mecum iuxta misericordiam tuam, & ne confundas me ab expectatione mea.
 Recte sapere & intelligere [p. 105] doceto me, nam sapientia tua totum quod uolo.
 Da uerbum tuum in ore meo, & in corde meo sapientiam tuam fige.
 Sapientia tua cogitationes meas regat, ut placeant coram oculis tuis semper.
 Mirabilia sunt eloquia tua, quapropter delectatur in eis anima mea.
 Sapientia tua perfecta est, scientia tua lucida, & oculos illuminans.
 Amabiliora super aurum [p. 106] & gemmas, & dulciora quam mel de fauo.
 Sapientia tua immaculata, animas confortans, eloquium tuum uerax, intellectum docens paruulos.
 Quando sciet errans spiritu intelligentiam? & ignorans doctrinam discet?
 Quando effundetur de excelso spiritus tuus quando cor insipientis scientiam callebit, quando lingua balbutiens deserta erit?
 Paruulus & insipiens sum domine, auxilio sit mihi ma- [p. 107] nus tua fortis.
 Noui quod omnia potes, & nihil est tibi difficile.
 Tu magnus es incognoscibilis, & sapientiae tuae nullus est numerus.
 Annunciaui coram te causam meam, fac cum seruo tuo iuxta magnam misericordiam tuam.
 Respice ad me & miserere mei, ut hoc quod credens per te posse fieri cogito, perficiam.
 Viam sapientiae tuae notam fac mihi, & intellectu illius cor meum imple. [p. 108]
 Vocem meam audi secundum misericordiam tuam domine, secundum iudicium mecum agito.
 Da gloriam nomini tuo domine, tu enim solus es bonus & sapiens, & non est alius praeter te saluator.
 Exaudi me domine, propter nomen tuum, & ne contineas me misericordiam tuam.
 Eructabunt labia mea laudem, cum docueris me sapientiam tuam.
 Tum enarrabo mirabilia tua, ut alij etiam ad te conuertantur. [p. 109]
 Et benedicant nomen tuum in sempiternum & in seculum seculi, Amen.

⁸ Luigi Firpo, "John Dee, Scienziato, Negromante e Avventuriero," *Rinascimento*, 3 (1952): 25-84.

⁹ Firpo, 25: "un documento singolarmente rivelatore delle credenze, delle aspirazioni e della cultura del Cinquecento."

¹⁰ Firpo, 29: "Nel Dee questo avvio è sostenuto da un altissimo concetto del proprio ingegno e da un profondo spirito religioso [e ...] la certezza di uno speciale favore di Dio."

¹¹ Firpo, 29: "non ha la consapevolezza dell'infinita umiltà e pazienza cui dovranno ormai piegarsi i ricercatori sperimentali per conseguire a prezzo di penose fatiche piccole verità parziali e provvisorie: quella ch'egli affanosamente ricerca è una via rapida, breve, infallibile, per assurgere ad una conoscenza totale, che coincida con un illimitato potere dell'uomo sulla natura. Questo peccato di superbia impaziente risolve la filosofia della natura nell'occultismo[...]."

¹² Firpo, 48: "un prolisso discorso [...] una verbosa e vacua orazione a Dio e [...] un minuzioso rituale."

¹³ Firpo, 41: "[i] suoi truffaldini 'misteri'."

¹⁴ Firpo, 45: "[gli] atteggiamenti ispirati e istrioneschi del Dee."

¹⁵ Firpo, 40-41: "Le presunte rivelazioni del futuro risultano tutte grossolanamente false, vistosi gli errori geografici e di scienze naturali, sgrammaticato il latino qua e là usato con parsimonia, chè gli angeli preferiscono parlar l'inglese [...]. Lo stile angelico è una triviale parodia di quello biblico, con frequenti e ovvie intrusioni di locuzioni scritturali in talune sedute [...] gli spiriti invisibili parlano un linguaggio affatto privo di senso, proclamando che si tratta della lingua usata da Adamo prima del peccato originale. In conclusione, la cultura che nelle pseudo-rivelazioni si riflette è bene la cultura raffazzonata, monca e approssimativa di Kelley, e sono sempre gli interessi suoi più urgenti e concreti, turpi talvolta, che gli angeli si affannano a tutelare."

¹⁶ Firpo, 83: "v'è soprattutto in questa personalità [...] una frattura profonda che sgomenta: l'uomo che aveva dato prove tanto degne in molteplici campi di studio, il matematico, il geografo, l'astronomo, si eclissa subitaneamente e si annienta in una cieca infatuazione superstiziosa."

²¹ French, *John Dee*, 119. Cf. also 2-3: "Hermeticism, the gnostic philosophy based on the rediscovered texts of the legendary Hermes Trismegistus is basic to Dee's thought."

²² Christopher Whitby, "John Dee's Actions with Spirits 1581 to 1585" (Unpublished PhD thesis, University of Birmingham, 1981). A two volume facsimile of Whitby's thesis was published by the Garland Press, New York in 1988). The thesis includes a full transcription of the *Liber Mysteriorum* (see Whitby, II, 1-407).

²³ Whitby, "John Dee's Actions with Spirits", I, 181.

²⁴ Whitby, "John Dee's Actions with Spirits", I, 71.

²⁵ Whitby, "John Dee's Actions with Spirits", I, 75. But see also his later contradictory statement: "the magical system [...] bears a great similarity with the kind of magic described in the third book of Agrippa's *De occulta philosophia*." (Whitby, "John Dee's Actions with Spirits", I, 116).

²⁶ Whitby, "John Dee's Actions with Spirits", I, 74-75.

²⁷ Whitby, "John Dee's Actions with Spirits", I, 79-93.

²⁸ Whitby, "John Dee's Actions with Spirits", I, 74.

²⁹ Christopher Whitby, "John Dee and Renaissance Scrying", *Bulletin of the Society for Renaissance Studies*, 3:2 (1985): 25-37 (26).

³⁰ Whitby, "John Dee's Actions with Spirits", I, 116.

³¹ He does, however, note that the design of Dee's "Holy Table" may have been "derived from a manuscript copy of the Key of Solomon," I, 151. While he notes the circulation of Pseudo-Solomonic manuscripts during the sixteenth century (I, 78 and fn. 27, 95) he does not pursue the possibility that they may have been a model for Dee's ceremonial practices.

- ³² Wayne Shumaker, *Renaissance Curiosa* (Binghamton: Mediaeval and Renaissance Texts and Studies, 1982), 15-52. Cf. *ibid.*, 15: "Essentially Dee's life was that of the Neoplatonist sage portrayed by Calder, and by intention at least, of the *magus* saluted by French."
- ³³ Shumaker, *Renaissance Curiosa*, 20-21.
- ³⁴ Shumaker, *Renaissance Curiosa*, 24.
- ³⁵ Shumaker, *Renaissance Curiosa*, 40.
- ³⁶ Shumaker, *Renaissance Curiosa*, 22, 48.
- ³⁷ Shumaker, *Renaissance Curiosa*, 27.
- ³⁸ Shumaker, *Renaissance Curiosa*, 33.
- ³⁹ Shumaker, *Renaissance Curiosa*, 29, 38.
- ⁴⁰ Wayne Shumaker, *Natural Magic and Modern Science: Four Treatises 1590-1657* (Binghamton: Mediaeval and Renaissance Texts and Studies, 1989), 3-4.
- ⁴¹ Shumaker, *Renaissance Curiosa*, 44, 46.
- ⁴² Shumaker, *Renaissance Curiosa*, 44, 49.
- ⁴³ Shumaker, *Renaissance Curiosa*, 46, 48.
- ⁴⁴ *NP*, 204. (My emphasis)
- ⁴⁵ *NP*, 203.
- ⁴⁶ *NP*, 214: "It is a magic that is far removed from both the philosophical magic and occult philosophy of the Renaissance and the natural magic he seems to have derived from Roger Bacon."
- ⁴⁷ *NP*, 206.
- ⁴⁸ *NP*, 214. This is a simplification of some of the nuances of Clulee's argument. Later he submits that there are magical elements or tendencies in Dee's practices (212), but suggests that these can be traced to the influence of Kelley, who – Clulee claims – was more knowledgeable than Dee in "mediaeval manuals of ritual magic" (211). His claim that Dee ends up practising a kind of magic by default to Kelley's influence (214), is, I think, untenable.
- ⁴⁹ *NP*, 206.
- ⁵⁰ *NP*, 207.
- ⁵¹ Clulee notes the sixteenth-century vitality of this tradition, but does not relate it to Dee's conversations. See *NP*, 133-5.
- ⁵² Deborah E. Harkness, "Shews in the Showstone: John Dee's Angelic Conversations," *Renaissance Quarterly*, 49 (1996): 707-737 (709, 711). For more on Harkness's cultural contextualization of Dee's angelic conversations see "The Scientific Reformation: John Dee and the Restitution of Nature" (Unpublished PhD Thesis, University of California Davis, 1994).
- ⁵³ Harkness, "Shews in the Showstone," 709.
- ⁵⁴ Harkness, "Shews in the Showstone," 715-716. These claims are repeated in her book. See Deborah E. Harkness, *John Dee's Conversations with Angels: Cabala, Alchemy and the End of the World* (Cambridge: Cambridge University Press, 1999), 77, 96, 100-101, 117, etc.
- ⁵⁵ Harkness, "Shews in the Showstone," 718, 732.
- ⁵⁶ See my introduction to this volume, 9-10, *supra*.
- ⁵⁷ See, for example, *Conversations with Angels*, 40, where Harkness argues that Solomonic magical works "contribute little" to our understanding of Dee's angelic diaries. In my view, Harkness tends to exaggerate the differences between Dee's conversations and mediaeval magical practices by distinguishing too readily between "prayer" on the one hand and "conjunction" and "invocation" on the other. See, for example, *Conversations with Angels*, 96, 120, 123, etc.
- ⁵⁸ See Brian Copenhaver, "Natural magic, hermetism, and occultism in early modern science" in David C. Lindberg and Robert S. Westman, eds., *Reappraisals of the Scientific Revolution* (Cambridge: Cambridge University Press, 1990), 261-302.
- ⁵⁹ Yates, *Giordano Bruno*, 107.
- ⁶⁰ Yates, *Giordano Bruno*, 107. Cf. her contrast between Ficinian natural magic and the mediaeval magical tradition, *Giordano Bruno*, 80: "How elegant, how artistic and refined is this modern natural magic! If we think of the Neoplatonic philosopher singing Orphic hymns, accompanying himself on the lira di braccio [...] and then compare this Renaissance vision with the barbarous mutterings of some invocation in *Picatrix*, the contrast between the new magic and the old is painfully evident. [...] If we think of the flowers, jewels, scents with which Ficino's patients are advised to surround themselves, of the charmingly healthy and wealthy way of life which they are to follow, and compare this with the filthy and obscene substances, the

stinking and disgusting mixtures recommended in the *Picatrix*, the contrast is again most striking between the new elegant magic [...] and that old dirty magic.”

⁶¹ Yates, *Giordano Bruno*, 108.

⁶² Yates, *Giordano Bruno*, 102.

⁶³ See Marsilio Ficino, *Marsilius Ficinus Florentinus de triplici vita* (Paris, 1491), III, xvi, sigs. n.viii^f-iii^v. The reference to the “Arab fraternity” is at sig. n.viii^v.

⁶⁴ Yates, *Giordano Bruno*, 140, 145-6; idem, *Occult Philosophy*, 38, 116.

⁶⁵ Clulee, 138: “Trithemius’s sources were almost entirely mediaeval works of the notory art, such as the *Clavicula Salomonis*, the *Ars Notoria*, the *Liber Razielis* [...]. Another of Trithemius’s sources, [was] the Latin *Picatrix*.” See also Trithemius’s *Liber Polygraphiae* (Argentinae, 1600), 597 where he gives an “alphabetum Honorij cognomento Thebani” (i.e. the purported author of the Pseudo-Solomonic *Liber sacer*, also known as *The Sworn Book of Honorius*), commenting that “his operations had been clouded over by (or concealed in) foolish magic as it is revealed in Book Four of Petrus de Apono” (*cuius ministerio suas in magicis fatuitates abscondit, sicut Petrus de Apono restatur in suo maiore libro quarto*).

⁶⁶ Yates, *Giordano Bruno*, 107.

⁶⁷ *NP*, 132-3.

⁶⁸ Yates, *Giordano Bruno*, 83: “When Hermes Trismegistus entered the Church, the history of magic became involved with the history of religion in the Renaissance.”

⁶⁹ There are numerous extant transcriptions of Pseudo-Solomonic magical texts made in the eighteenth century. See, for example, the manuscript copies of the *Clavicula Salomonis Regis* and the *Sefer Raziel* collected by General Charles Rainsford (1727-1809), Lieutenant Governor of Gibraltar, in the library of the Duke of Northumberland at Alnwick Castle. See *Third Report of the Royal Commission on Historical Manuscripts* (London, 1872), 122-3.

⁷⁰ Johann Wier, *De Praestigiis Daemonum, et incantationibus* [etc.] (Basel, 1566), II, iii, in *Witches, devils and doctors in the Renaissance*, trans. John Shea (Binghamton: Mediaeval and Renaissance Texts & Studies, 1991), 104.

⁷¹ Wier, *De Praestigiis Daemonum*, II, iii, 104-5. Cf. II, v, 110: “Furthermore these magicians not only claim that eminent men, holy patriarchs, and angels of God are the authors of such wicked and execrable doctrines; they do not even blush to make a display of books passed down by Raziel and Raphael, the angels of Adam and Tobias – seeking by this ruse to give a more attractive appearance to their own monstrous creation [*Empusa*].”

¹⁰⁴ *Ars notoria*, British Library, Harleian MS 181, fol. 19^r: "ieiunabis in pane et aqua tribus diebus, non manducando, quosque in celo stelle videan[tur] [...] et da pauperibus".

¹⁰⁵ *Ars notoria*, BL, Harleian MS 181, fol.26^r "ieiunandu[m] est in ipsis diebus, quibus inspiciun[tur] figure".

¹⁰⁶ *Ars notoria*, BL, Harleian MS 181, fol. 57^r.

¹⁰⁷ *Liber Sacer*, British Library, Royal MS 17.A.XLII, fifteenth century, fol. 13^v: "Primo sit mundus operans non pollutus, et cum devocione faciat non astute non commedat neque bibat".

¹⁰⁸ *Liber Sacer*, BL, Royal MS 17.A.XLII, fol. 14^v.

¹⁰⁹ *Liber Sacer*, BL, Royal MS 17.A.XLII, fol. 13^v. Cf. *Liber Salomonis (Sefer Raziel)*, British Library, Sloane MS 3846, sixteenth-seventeenth Century, fol. 130^r: "he that shall write this booke oughte to be cleane & fasting & bathed & suffumed with precious aromatikes, that is with spices well smelling".

¹¹⁰ *Liber Salomonis (Sefer Raziel)*, BL, Sloane MS 3846, fol. 130^r.

¹¹¹ *Magical Tracts*, British Library, Sloane MS 3851, seventeenth century, collected by "one Mr Arthur Gauntlet, who professed Phisick, and lived about Graies Inn Lane" (fol. 2v). The quotes are from the "Instructions of Ptolomie", fol. 3^r.

¹¹² *Ars notoria*, BL, Harleian MS 181, fol. 19^r: "locu[m] secretu[m], videlicet in ecclesia[m], vel in atriu[m], vel in ortu[m]".

¹¹³ *Liber Salomonis (Sefer Raziel)*, BL, Sloane MS 3846, fol. 130^v.

¹¹⁴ *Liber virtutis*, British Library, Harleian MS 181, sixteenth century, fol.

¹¹⁵ *Ars Notoria*, BL, Harleian MS 181, fol. 26^r: “Item solus sit [...] qui opera[tur] in eis [...] nisi esset magister artis, qui instrueret operantem”. Nobody “other than the true partner of the teacher is allowed to be present whilst the orations are pronounced, or the figures are viewed” (*Aliu[m] vero sociu[m] praeter mag[istru]m non licet habere in inspectione figuraru[m], nec in pronu[n]ciatione orationu[m] suaru[m]*), *ibid.*

¹¹⁶ *Ars notoria*, BL, Harleian MS 181, fol. 76^r: “Et camera[m] habeas secreta[m], nitida[m], munda[m], ab immunditijs aranearu[m], et pulueris, et clausa[m]: Eisque solus dormiens in ea: Erit etia[m] seratus mundus; et in ea in modu[m] altaris mensula mundis lintheis cooperta, et super eam duo candelabra cu[m] cereis benedictis in *Purificatione* ardentes.” Although this quote is from a text (the *De arte crucifixi Pelagij Solitarij*) which belongs to another genus of magical art, it is nonetheless closely related to Pseudo-Solomonic practices. For more on the Pelagian “art of the crucifix” see Stephen Clucas, “*Regimen Animarum et Corporum*: The Body and Spatial Practice in mediaeval and Renaissance magic”, in Daryll Grantley and Nina Taunton, eds., *The Body in Late Mediaeval and Early Modern Culture* (Ashgate: Aldershot, 2000), 113-129 (esp. 116-119).

¹¹⁷ *Ars notoria*, British Library, Sloane MS 1712, thirteenth century, fol. 1^r

¹¹⁸ *Liber Salomonis (Sefer Raziel)*, BL, Sloane MS 3846, fol. 131^r. Cf. also fol. 129^r: “the 7 treatises of this booke be these. The first is said *Claui*, for that in it, is determined of *Astronomy*, & of the starrs for without them we may doe nothing”.

¹¹⁹ See, for example, *Ars notoria*, BL, Harleian MS 181, which gives detailed prescriptions concerning the correct phases of the moon (*lunationes*) for each segment of the magical operation it describes.

¹²⁰ See, for e.g. *Liber Salomonis (Sefer Raziel)*, BL, Sloane MS 3846, fol. 131^v, which names “7 bretheren” and their planets: Sabaday (Saturn), Zedet (Jupiter), Madin (Mars), Hamina (Sun), Noga (Venus), Cocab (Mercury), and Labana (Moon).

¹²¹ *Ars notoria*, BL, Harleian MS 181, fol. 19^v: “verte faciem tua[m] versu[m] oriente[m]: et in terra[m] prosterne manus”.

¹²² See *Ars notoria*, BL, Harleian MS 181, fol. 19^v: “in terra[m] prosterne manus, dicendo 7. psalmos poenitentiales, cum .7. orationibus dominicalibus, et [...] totidem *Credo in Deu[m]*, humiliter implorando”.

¹²³ See *Liber sacer*, BL, Royal MS 17.A.XLII, fols. 29^r-31^r, which includes three orations dedicated to the Virgin Mary – “Ave Maria”, “Salve Regina” and “O gloriosa domina virgo”.

¹²⁴ See *Ars notoria*, BL, Harleian MS 181, fol. 20^r: “*Pater noster: Aue Maria: Et ne nos inducas &c [...]* *Pater de coelis Deus, miserere nobis: det sic tota litania est dicenda [...]*” and *Liber virtutis*, BL, Harleian MS 181, fol. 5^r: “*Miserere mei Deus*; all the verses, with *Gloria patri sicut erat. Kyrie eleson, [Christe] eleson, Kyrie eleson Pater noster* and *Aue Maria 3. Credo in Deum. Confiteor. Misereatur nostri.*”

¹²⁵ *Ars notoria*, BL, Harleian MS 181, fol. 18^r. See also the description of the art at fol. 56^v: “This art or operation consists in orations in which are invoked, recited and named the names of the holy ones dwelling in the celestial abodes of the living God.” (*istius artis vel operac[i]onis consistit in orac[i]onibus; inter quas no[m]i[n]ant[ur] recitant[ur] et inuocant[ur] n[om]i[n]a sanctoru[m] Dei uiui in supernis sedibus residentium*).

¹²⁶ See for example, *Liber Salomonis (Sefer Raziel)*, BL, Sloane MS 3846, fol. 129^v: “The name [of this book] expanded in Latin is *Angelus magnus secreti Creatoris*. That is to say the great Angell of the secret creator. And in hebrue Cephar Raziel that is the booke of hollines & of fullfillinge & it was the first booke after Adam written in language of Caldey & afterwards translated in hebrue”. See also the marginal glosses to *Ars Notoria*, Bodleian MS Ashmole 1515, sixteenth century, fol. 5^{r-v}, where the magical orations are described variously as “oratio hebraica”, “chald[ai]ca” or “Arabic[a]”.

¹²⁷ *Ars notoria*, BL, Sloane MS 1712, fol. 16^v.

¹²⁸ *Ars notoria*, BL, Harleian MS 181, fol. 39^r.

¹²⁹ *Ars notoria*, BL, Harleian MS 181, fol. 50^{r-v}: “q[uam]vis indignus sum, mihi concedas, et in mente[m] mea[m] confirma et corrobora,” and fol. 39^r: “da mihi ea quae [...] credo absque malignitatis intentione scientiam.”

¹³⁰ See for example, *Ars notoria*, BL, Harleian MS 181, fol. 37^r: “viuifica intellectu[m] meu[m] foecunda mihi memoria[m] mihi. Exalta co[n]scientia[m] mea[m],” and fol. 38^r: “augmentetur sensus meus, et memoria mea [...] aperta mihi scientiae ianua gratuletur cor meu[m], et confirmatu[m], et emundatu[m] per vos percipiet, et conseruet scientia[m] et sapientia[m] [...] da mihi ea quae desidero.”

¹³¹ See for example, *Ars notoria*, BL, Harleian MS 181, fol. 19^r: “addens vnique corpori spiritu[m] propriu[m] et veracem, ad custodiendu[m] illum, et defendendum ab incursionibus spiritu[m] immundoru[m] et illusionibus eorum”, and fol. 20^v: “Obsecro te angelice spiritus; cui ego ad prouidendum

com[m]issus sum; vt custodias me indefinenter; et protegas ab incursu diaboli, vigilantem, et dormientem, nocte et die [...] repelle a me omnem temptatione[m] Sathanae.”

¹³² See, for example, *Ars notoria*, BL, Harleian MS 181, fol. 46^r: “Deus exaudi preces meas; et adiuva me in opere sancto isto,” and fol. 48^r: “Te domine suppliciter imploro, deosco, flagito et supplico.”

¹³³ See *Ars notoria*, BL, Harleian MS 181, fol. 38^r: “mitte mihi sanctos angelos tuos de excelso coelo, qui custodiant me, et sensu[m], et memoria[m] et intelligentia[m] mea[m] et adimplea[m] praecepta tua” and fol. 55^r: “Funda Domine in me, illum quadrangulare philosophiae palaciu[m].”

¹³⁴ See Stephen Clucas, “Wondrous force and operation: magic, science and religion in the Renaissance” in Philippa Berry and Margaret Tudeau, eds., *Textures of Renaissance Knowledge* (Manchester: Manchester University Press, 2003), 35-57.

¹³⁵ See, for example, *Liber sacer*, BL, Royal MS 17.A.XLII, fol. 4^v: “the first chapter is of the composysyon of the greate name of god which the hebrues call sememphoras which doth consist of .72 [...] letters which is the beginning of the arte”, and *Liber Salomonis (Sefer Raziel)*, BL, Sloane MS 3846, fol. 129^v, where it is claimed that it contains “all semoforax, that is the great name compleate with all his names whole & even & with his vertus and sacraments”. See also Johannes Reuchlin, *De arte Cabalistica libri Tres* (Hagenau, 1517), 58^v: “Sunt itaque lxxii nomina sacra quod unum Semhamphores id est sanctissimi Tetragrammati nomen expositorum d[icitu]r per invocationes angelorum ab hominibus deo deditis, deuotisque cum timore ac tremore sic enuncianda.”

¹³⁶ *Liber Salomonis (Sefer Raziel)*, BL, Sloane MS 3846, fol. 155^v.

¹³⁷ *Liber Salomonis (Sefer Raziel)*, BL, Sloane MS 3846, fol. 132^r.

¹³⁸ *Liber Salomonis (Sefer Raziel)*, BL, Sloane MS 3846, fol. 155^v.

¹³⁹ See, for example, *Liber Salomonis (Sefer Raziel)*, BL, Sloane MS 3846, fol. 155^v-156^r: “this is the name thou shalt name when thou wilt speake with angells & they thy question & thy worke without doubt shall fulfill”, and fol. 156^r: “these names thou shalt name when thou wilt that the Elements & winds fulfill thy will in all things.”

¹⁴⁰ See, for example, *Ars notoria*, British Library, Sloane MS 313, fourteenth-fifteenth century, fols. 2^v-4^v, and *Liber sacer*, BL, Royal MS 17.A.XLII, fols. 9^v et seq., which describes “the makinge off the seale off the true and lyuinge god.”

¹⁴¹ See, for example, *Liber Sacer*, BL, Royal MS 17.A.XLII, fol. 6^r, which refers to “a glasse wherein thou shalt see the whole worlde.”

¹⁴² See *Ars Notoria*, BL, Harleian MS 181, fol. 18^r: “incipit sanctissima ars Notoria [...] vt per eam omnes scientias liberales, mechanicas et exceptiuas, et earum facultates per breue spatium[m] temporis posset acquirere et habere.”

¹⁴³ See, for e.g. *Ars notoria*, BL, Harleian MS 181, fol. 30^v: “Non debent legi sed inspici tantum.” On the theme of magical “inspection” in the Pseudo-Solomonic tradition see Clucas “Inspectival knowledge and the visual logic of John Dee’s *Liber Mysteriorum*”, 115-121.

¹⁴⁴ See *Ars notoria*, BL, Harleian MS 181, fol. 38^r.

¹⁴⁵ *Ars notoria*, BL, Harleian MS 181, fol. 43^v, re. the “figure of the dialectical art” (*figura artis dyalecticae*), which allows one to “acquire and possess perfect knowledge [of dialectics] and retain it in the memory” (*acquirere, et habere, et memoriter retinere perfecta[m] scientiam*).

¹⁴⁶ *Ars notoria*, BL, Harleian MS 181, for example, gives the figures and orations for “artis Grammaticae” (fols. 25^r et seq.), and orations for “Dyalectica” (fols. 39^r et seq.), “artis Rethoricae” (fols. 46^v et seq.), “artis phisicae” (fols. 59^v et seq.), “artis musicae” (fols. 60^r et seq.), “artis arismetriae” (fols. 61^v et seq.) and “Astronomia” (fols. 65^v et seq.). The accompanying figures for dialectic through to astronomy are missing, although spaces have been reserved for their inclusion. This manuscript seems to be a late copy of a much earlier text, it has substantial points of textual overlap, for example, with *Ars notoria*, BL, Sloane MS 1712, (cf. fol. 16^v, and *Ars notoria*, BL, Harleian MS 181, fol. 39^r, for example). The thirteenth-century manuscript does, however, include figures for theology, geometry and jurisprudence, which are absent from the later manuscript.

¹⁴⁷ See *Ars notoria*, BL, Harleian MS 181, fol. 69^r et seq. for a description of the “figura generaliu[m]” or “Nota Dei”, and fol. 30^v for “4 signa a Deo Data Salomoni omni[bus] artibus communia.” For earlier examples of this “general figure” see *Ars notoria*, BL, Sloane MS 1712, fol. 20^v and Bodley MS 951, fifteenth century, fol. 10^v.

¹⁴⁸ *Liber sacer*, BL, Royal MS 17.A.XLII, fols. 5^r-6^v.

¹⁴⁹ *Lib. Myst.*, fol. 13^v.

¹⁵⁰ *Lib. Myst.*, fol. 55^r. Cf. also *T&FR*, 178, where Dee says “I do know assuredly that there is very much matter in this table”, and his angelic interlocutor replies “*It is true: for hitherto*, stretched the knowledge of Solomon,” and Dee notes in the margin: “*Solomon his knowledge*.”

¹⁵¹ *Lib. Myst.*, fol. 12^r. On the rabbinical tradition of Solomon’s magic ring and its alleged relation to earlier Parsi traditions, see Moncure Daniel Conway, *Solomon and Solomon’s Literature* (London, 1899), 185–6.

¹⁵² *Lib. Myst.*, fol. 12^r (marginal note): “Vide Reuchlini libru[m] de Verbo Mirifico de nomine PELE.”

¹⁵³ See, for example, the *De quatuor annulis*, British Library, Sloane MS 3847 sixteenth-seventeenth century, fols. 66^r–81^v, which presents a series of “seales” which bear a generic resemblance to some of Dee’s talismanic “tables” or “scutcheons”.

¹⁵⁴ *Lib. Myst.*, fol. 8^r. For a fuller account of Dee’s ascetic regime see Gabriel’s injunction on 13 October 1583 in *T&FR*, 39–40. Cf. *T&FR*, 53: “Fight [...] and cast off the world. Make flesh subiect, and strangle your Adversary. For unto such belongeth the entrance into my Chambers, and the use of my will”.

¹⁵⁵ *Ars notoria*, BL, Harleian MS 181, fol. 26^r.

¹⁵⁶ *Lib. Myst.*, fol. 51^r. Cf. also fol. 17^r, where Dee and Kelley are required to take a “vow [r]equired for secrecie”. Dee is frequently worried by domestic intrusions on his actions, and there are many references to the closing of outer doors, etc.

¹⁵⁷ *Lib. Myst.*, fol. 70^v. Dee is told that the 49 prayers of the book have “49 manner of Vnderstandings. Therein is comprehended so many languages They are all spoken at ones.” However, he is also told that “Vntill thou com[m]e to the Citie [i.e. the new Jerusalem] thou canst not behold the beawty thereof.” (Ibid.)

¹⁵⁸ *Lib. Myst.*, fol. 64^r.

¹⁵⁹ *Lib. Myst.*, fol. 74^r: “[EK] Prayed perfectly in this Angel’s language.”

¹⁶⁰ *Lib. Myst.*, fol. 80^r.

¹⁶¹ *Lib. Myst.*, fol. 70^v.

¹⁶² *T&FR*, 88.

¹⁶³ *Lib. Myst.*, fol. 24^r. This is a circular figure containing a cross, and the letters g, m, l, l, e and e (clockwise). The angels’ names are to be produced by combining each letter with the cross in turn: “7 secrett Angels proceeding from euery letter and cross so formed”. Cf. fol. 17^v et seq., in which 40 tablets carried by “40 white creatures” are identified as being “Nomen dei vel No[m]i[n]a Diuina”.

¹⁶⁴ See, for example, *Lib. Myst.*, fol. 25^r: “In 7 must you work all things”, fol. 28^v: “Let us praise the God of 7”. Cf. *Liber Salomonis (Sefer Raziel)*, BL, Sloane MS 3846, fol. 131^r: “the 7 wordes [of the key] be 7 angells which han might in the 7 heauens & in the 7 dayes of the weeke”. The *Sefer Raziel* is said to contain seven books (fol. 129^v), and there are seven “semaphoras” which “god the creator gaue to Adam in paradise” (fol. 155^v).

¹⁶⁵ *Lib. Myst.*, fol. 30^r. In many Solomonian texts there is a lengthy description of how to construct such a seal, see for example *Liber sacer*, BL, Royal MS 17.A.XLII, fols. 9^v et seq.: “here folowithe the makinge off the seale off the true and lyuinge god”.

¹⁶⁶ See *R&W*, 168 for details of Dee’s copy of Honorius Magister Thebarum’s *Liber Juratus* (*R&W*, no. DM70). This manuscript also bears the inscription “Sum Ben: Jonsonij liber”.

¹⁶⁷ *Lib. Myst.*, fol. 12^r: “I need to know, which of them I shall imitate: or how to make one perfect of them all”.

¹⁶⁸ *Lib. Myst.*, fol. 12^r: “De Sigillo Emeth vide Reuchlini Cabalisticae Lib 3 et Agrippa[m] Lib. 3 cap. 11”.

¹⁶⁹ *Lib. Myst.*, fol. 51^r. Cf. *Liber sacer*, BL, Royal MS 17.A.XLII, fol. 5^r: “to knowe the seales [...] [and] offyce of euery angell [...] to obtayne all syences [...] and] to know all thinges present past and to come.”

¹⁷⁰ *Lib. Myst.*, fol. 57^v.

¹⁷¹ *Liber sacer*, BL, Royal MS 17.A.XLII, fol. 5^v.

¹⁷² *Lib. Myst.*, fol. 68^r.

¹⁷³ *Liber sacer*, BL, Royal MS 17.A.XLII, fol. 6^r.

¹⁷⁴ *Lib. Myst.*, fol. 36^v.

¹⁷⁵ *Lib. Myst.*, fol. 39^v.

¹⁷⁶ *Lib. Myst.*, fols. 7^{r-v}, and fols. 118^r–121^r. Cf. *Libri Cracoviensis Mysticus Apertorius, Julii, 12 1584*, *T&FR*, 219: “Behold, those that dig into Nature with dull mattocks, and dull Spades, are such, as of every congeled substance can imagin, but not judge: are foolish, and of the world: whose imaginations, are become the instruments of vanity [...]. Wo be unto them, for their disputations and doctrines, are dogma’s and dull [...]. But by him you are lifted up, that is the God of Justice, and the Discloser of his own secrets: and the headlong drawer of things to an end.” See also the spirit Madimi’s condemnation of the venality of

human scholarship, *T&FR*, 216: “Wo be unto the books of the earth, for they are corrupted; and are become a wrasting stock, and firebrand to the conscience.”

¹⁷⁷ *Mensis Mysticus Saobaticus, pars prima ejusdem*, *T&FR*, 91. Cf. *Lib. Myst.*, fol. 24^r, where Dee asks the angel Michael for “Perfect knowledg and vnderstanding”, noting in the margin: “My continuall and auncient prayer.”

¹⁷⁸ See *Ars notoria*, Oxford, Bodleian Library, Ashmole MS 1515, sixteenth century, fol. 9^r: “Of this Oration he sayth, yⁱ is the mistery thereof yⁱ it moveth even the caelestiall sp[er]its to doe some grett thing by p[er]mission of ye divine pow[e]r.”

¹⁷⁹ *Lib. Myst.*, fols. 119^r and 120^r. Cf. *T&FR*, 172.

¹⁸⁰ *Ars notoria*, BL, Harleian MS 181, fol. 68^r [my emphasis].

¹⁸¹ Desiderius Erasmus, “Vita D. Ioannis Phisceri Rofensis Episcopi ex D. Erasmi Rotherdami scriptis elicit”, in *Incomparabilis Doctrina, Trium item Linguarum peritissimi uiri D. Erasmi Rotherodami, in sanctissimorum martirum Rofensis Episcopi, ac Thomae Mori* (Haganau, 1536), sig. Bii^r: “uero singulari pietate atque eruditione”. Cf. sig. Biiij^r, where he describes Fisher as “Episcopus uerae pietatis unicu[m] Exemplar.”

¹⁸² See, for example, *T&FR*, 32: “We prayed the Psalm of thanksgiving 14 of Roffensis for E.K. his deliverance from Barma and his 14 companions,” and *T&FR*, 171-2: “as the Lord A[lbertus] L[asky] was reading *Rofensis psalm. de Fiducia in Deum*, suddenly upon E.K. his right shoulder did a heavy thing seem to sit, or rest, whereof he told the Lord A. L. And afterward was this voyce uttered by that Creature in *Latine*. Lasky, *veniet tempus, cum tu portabis versum sedecimum, illius. Psalmi undecimi, in vexillo tuo, & vinces inimicos tuos*. Then A. L. sought in *Davids* Psalter for the eleventh Psalm, and sixteenth verse thereof: and while he was so about that Psalm, The voyce said that he meant not that Psalm of *David*, but the eleventh Psalm of *Roffensis*: which Psalm the Lord A. L. was then in reading to E.K. and was about the verse, *Hic labor ac dolor, &c.* being the sixth verse.” See Fisher, *Psalmi et Precationi*, “Psalmus XI. De fiducia in Deum”, 67-72.

¹⁸³ John Fisher, *Psalmi seu Precationes D. Ioan. Fisheri Episcopi Roffensis. Accessit Imploratio diuini auxilij contra tentationem ex Psalmis Davidis, per Th. Morum* (London, 1572), Psalmus V, 44-49. For the relevant passage see 48: “Recte sapere & intelligere doceto [*sic.* for docete] me, / nam sapientia tua totum quod volo. / Da verbum tuum in ore meo, & in corde meo sapientiam tuam fige.” See Appendix 2 for the full text of Fisher’s fifth psalm as it was published c. 1525.

¹⁸⁴ Fisher, *Psalmi*, 44-6.

¹⁸⁵ *Lib. Myst.*, fol. 5^r. See Appendix 1 for the complete text of the oration. Although it dates “ab anno 1579”, Dee had obviously been using others for some time, as he refers to other prayers of this type, addressed to Raphael and Michael, which he had written in both Latin and English “circa annu[m] 1569”.

¹⁸⁶ *De Heptarchia Mystica*, BL, Sloane MS 3191, fol. 46^r.

¹⁸⁷ *De Heptarchia Mystica*, BL, Sloane MS 3191, fols. 61^r-80^v.

¹⁸⁸ *De Heptarchia Mystica*, BL, Sloane MS 3191, fol. 46^r.

¹⁸⁹ *De Heptarchia Mystica*, BL, Sloane MS 3191, fols. 45^v-46^r.

¹⁹⁰ See, for example, *T&FR*, 4: “Me protege [...] qua diabolus & Sathanicae fraudem,” and *T&FR*, 54: “We beseech him that we may [...] overcome all other Diabolical assaults or sophistical, or untrue perswasions,” and *T&FR*, 183: “Oratione contra Tentationes Sathanae.”

¹⁹¹ See *T&FR*, 175-180. The characters of the table were supposedly the “true Images of God his creatures” (175), which would allow Dee to “work all the world over at one time” (178). For a full account of the table’s putative properties see *T&FR*, 179-180.

¹⁹² *De Heptarchia Mystica*, BL, Sloane MS 3191, fol. 57^r: “Quater Tria, Nomina Dei, (ex quatuor lineis Spiritus sancti extracta), quae, omnes super Terram Creaturas, (tam Invisibiles, quam Visibiles).” See for example the invitation to the “six senior angels of the East” (SEX SENIORUM Orientalium Invitatio”, *ibid.*, fol. 59^r: “O vos sex SENIORES, Orientales [...] In Nomine eiusdem DEI, (Vnius et Trini) O vos (in quam) ABIORO, siue HABIORO, AAOXIAF, HTMORDA, HAOZPI, siue AHAOZPI, HIPOTGA et AVTOTAR [etc].”

¹⁹³ *Lib. Myst.*, fol. 8^r.

¹⁹⁴ *T&FR*, 62, 91. The “particularity” of these invitations refers to their being addressed to particular angels. See, for example, *T&FR*, 222 where Dee records a prayer to Uriel: “I invite Uriel, to illuminate us, direct us and console us, etc.” (*invito Vrielle ut nos illuminaret, dirigeret, consolaretur etc.*)

¹⁹⁵ See, for example, the prayer in *De Heptarchia Mystica*, BL, Sloane MS 3191, fol. 45 which begins: “O Almighty, Aeternall, the True and Living God: O King of Glory: O Lord of Hoasts,” which requests

“the obteyning of somme convenient portion of True Knowledg, and understanding of thy lawes and Ordonances.” Cf. also *Lib. Myst.*, fol. 42^r: “I [...] called vnto God, for his diuine help for the vnderstanding of his laws and vertues, knowing and vnderstand[ing] which he hath established in and amongst his Creatures, for the benefyt of mankinde, in his seruice, and for his glorie etc.” The underlining is in the original MS.

¹⁹⁶ See, for example, *T&FR*, 118: “Mitte lucem tuam & veritatem, O Deus &c.” and 102: “Precibus ad deum finitis, pro luce & veritate, in hanc formam, mitte nobis spiritum sanctum & veritatem tuam, ut sapienter, fideliter & constanter tibi seruiamus, omnibus diebus vitae nostrae. Amen.”

¹⁹⁷ *Lib. Myst.*, fol. 61^r.

¹⁹⁸ *T&FR*, 145. In the “Protestatio fidelis” (*Lib. Myst.*, fol. 7^r) Dee noted that God had sent “good Angells” to the Biblical prophets “to instruct them, informe them helpe them, yea in worldly domesticall affaires.”

¹⁹⁹ See *T&FR*, 162.

²⁰⁰ *T&FR*, 104-5: “Gab[riel] [...] *O thou eternal foundation and strength of all things, mortal and immortal, which delight in thy face and in the glorie of thy name*, Consider the foundations of our fragility, and enter into the weaknesse of our inward parts: for we are become empty; whose salt is not, nor hath any savour: Fortifie, and make us strong in thee, and in thy strength; Have mercy upon us, Have mercy upon us, Have mercy upon us; that in this world our strength may be in patience, and after this life, that we may ascend unto thee.” Cf. *T&FR*, 82, where Gabriel recites a similar prayer and orders Dee and Kelley to “Say so unto God kneeling.”

²⁰¹ *T&FR*, 196-7.

²⁰² *Lib. Myst.*, fol. 9^v.

²⁰³ *Lib. Myst.*, fol. 26^r. Cf. fol. 34^r: “Pray and that vehemently, For these things are not reuealed without great prayer”.

²⁰⁴ Anthonic Gilbie, *The Psalmes of Dauid, truly opened and explained by paraphrasis [...] set foorth in Latine by that excellent learned man THEODORE BEZA. And faithfully translated into English* (London, 1581), sig. a3^v.

²⁰⁵ *A Treatise made by Athanasius the greate wherin is set forth how and in what manner ye may vse the psalmes, according to the effect of mynde*, in Thomas Sternhold and John Hopkins, *The Whole booke of Psalmes collected into Englyshe Meter* (London, 1564), sigs. Aviii^r-Bv^v. On the tradition of using prayer for practical and operative purposes see Keith Thomas, *Religion and the Decline of Magic, studies in popular beliefs in sixteenth- and seventeenth-century England* (London: Weidenfield and Nicolson, 1971, repr. Harmondsworth: Penguin Books, 1991), 45-9, and 133-151, and Eamon Duffy, *The stripping of the altars, traditional religion in England c.1400-c.1580* (Newhaven and London: Yale University Press, 1992), Chapter 8, “Charms, Pardons and Promises: “Superstition” in the Primers”, 266-298.

²⁰⁷ Calvin, *Commentary on the Book of Psalms*, III, 67-8

²⁰⁸ *T&FR*, 82.

²⁰⁹ *T&FR*, 74: “the Lord appeared unto them in a vision: But he cometh when you are awake: Unto them he came unlooked for, unto you he cometh requested.”

²¹⁰ *T&FR*, 88.

²¹¹ See, for example, *T&FR*, 40.

²¹² *Lib. Myst.*, fol. 92^r. Cf. *T&FR*, 67: “O Jesu Christ, we have committed our selves into thy hand; and do submit our wills to thy governement.”

²¹³ *T&FR*, 58.

²¹⁴ *Lib. Myst.*, fol. 75^r.

²¹⁵ *Lib. Myst.*, fol. 39^v.

²¹⁶ *Lib. Myst.*, fol. 55^v.

²¹⁷ *Lib. Myst.*, fol. 91^r.

²¹⁸ *T&FR*, 188.

²¹⁹ *Lib. Myst.*, fol. 43^v: “What say you concerning the Chamber, for our practise may my farderest little Chamber, serue, yf the bed be taken downe.”

²²⁰ See, for example, *Lib. Myst.*, fols. 42^r, 79^v, 98^v, etc.

²²¹ *Libri Mystici Apertorii Cracoviensis sabbatici, An. 1584*, in *T&FR*, 115.

²²² *Lib. Myst.*, fol. 103^r.

²²³ *Lib. Myst.*, fol. 105^v.

²²⁴ *T&FR*, 138.

²²⁵ See, for example, *T&FR*, 186.

²²⁶ See *Lib. Myst.*, fol. 18^v: “Herevppon we prayed a psalme; <my skryer> saying one verse, and I the other etc.”

²²⁷ *T&FR*, 146. “Ex Psalterio post 67 Psalmum.”

²²⁸ *T&FR*, 67

²²⁹ *T&FR*, 82: “Oratione Dominica finita, & brevi oratione Psalmi 33. inspecto Chrystallo apparuere utrique *Gabriel & Nalvage*.”

²³⁰ *Lib. Myst.*, fol. 89^v.

²³¹ *T&FR*, 101. See Fisher, *Psalmi*, 60-63: “Psalmus Novus. Contra inimicos.”

²³² *T&FR*, 83: “With great difficulty this Letter was discerned [...] Nalvage denied it to be an X. and said he knew not yet the mystery: say the Lords prayer, for I cannot open it [...] At length he said it was V.”

²³³ *T&FR*, 186.

²³⁴ *Lib. Myst.*, fol. 98^v.

²³⁵ *T&FR*, 211: “Oratione Dominica finita, & variis ejaculationibus factis tam ad Gabrielem, quam Nalvage, Ave, Mapsma & Ilemer, quam maximè ad Deum ipsum pro sua lumine, auxilio & protectione; tam ipsa actione, quam itinere praesenti, futuro, versus aulam Caesaris.”

²³⁶ *T&FR*, 62: “prayers of the 7 Psalms, and my particular invitation and calling for God his help, and the ministry of his good Angels.”

²³⁷ *T&FR*, 89: “a short prayer to God for remission of sins, and sending of his graces, and his good ministers assigned for our instructions: and for the avoiding away of the great enemy &c.”

²³⁸ See *T&FR*, 210: “I made a short discourse to God of my sincere and just dealing”, and *ibid.*, 73: “divers prayers and contestation of our humility, obedience and credit in these Actions.”

²³⁹ *T&FR*, 165: “prayers due, and thanks to the almighty for his great mercies and power shewed in the conversion of E.K [...] and divers our short discourses of faith, hope, patience, constancy, humility, and other duties requisite to this action.”

²⁴⁰ See, for example, *T&FR*, 111: “short prayers for the success of Albert Lasky [...] queries and requests concerning his rights of inheritance, and other very brief ejaculations, for success in this action.” (*precatiumcula pro prospero successo A[lberti] L[askii] [...] quaeritantis & petentis jus suum hereditarium, & aliis brevissimis ejaculationibus, pro prospero successu in hac actione.*)

²⁴¹ *Lib. Myst.*, fol. 68^v. Cf. Bodley MS 951, *Ars notoria*, fol. 19^v: “Ph[ilosophi]ce dicas istam orationem”.

²⁴² *T&FR*, 219.

²⁴³ John Fisher, *Tractatus de necessitate orandi*, in *Ioannis Fischerii, Roffensis in Anglia Episcopi Opera* (Wirceburg, 1595), col. 1718: “Sunt enim tria praecipua fructum genera qui nobis ex oratione proveniunt. Et primum sane, meritum ipsum est [...]. Alterum est rei (quam orantes postulamus) impetratio. Tertium est mirae cuiusdam dulcedinis gustus quo dum oramus afficimur.”

²⁴⁴ Fisher, *De necessitate orandi*, “De rei postulatae impetratione, qui secundus fructus dicebatur”, cols. 1719-1720.

²⁴⁵ Fisher, *De necessitate orandi*, col. 1720: “Nos vtique quoties recte operamur, in Dei manu positi sumus, quemadmodum in fabri manu tenetur malleus. Et vt faber inter operandum suo malleo velut instrumentum quodam vtitur, sic Deus nobis tanquam instrumentis vtitur, quoties recte operamur. Nam quaecunque per nos recte agi videntur, non ipsi ex nobis sed Deus in nobis operatur.”

²⁴⁶ Fisher, *De necessitate orandi*, col. 1721: “Si precatio igitur cuiusuis super humilitatis basi fundata fuerit, & pro seipso ad Deum fusa sit, nihilque postulans, quod proprie saluti repugnet, pergat in nomine Domine quisquis eiusmodi fuerit, nihil haesitans, quin (quod ita postulat) sit impetraturus.” Like Dee, Fisher cites the authority of the New Testament in support of this belief: “Iacobus pollicetur: Postulet (inquit) in fide nihil haesitans & dabituri ei. Et Dominus item in Evangelio: Quicquid (inquit) orantes petitis, credite quia accipietis & fiet vobis.”

²⁴⁷ Julius Sperber, *Kabalisticae Precationes, siue Selectiores Sacrosancti Nominis Divini Glorificationes. E sacrarum Bibliorum fontibus, & praesertim ex medulla Psalmorum Davidis haustae, & ita concinnatae, vt ijs Deus opt. Max. facilius placari, & ad exaudiendum atque auxiliandum melius commoueri, Mens etiam orantis ardentius in Deum eleuari possit* (Magdeburg, 1600). See especially, “Postulatio pro sapientia impetranda”, 136-141 and “Gratiarum Actio pro sapientia”, 141-146.

²⁴⁸ See, for example, Edward Dering’s *Godly Priuate Praiers, for Householders to meditate vpon, and to saye in theyr Families* (London, 1575), “A prayer to be saide before the studying or reading of holie Scripture”, sig. Dir-v: “O Father, this power of full knowledge & perfect reuelation, passeth all power

naturall, and remaineth onely in thy power, & the light of thy spirite: O Lord doo thou whatsoeuer it shall please thee to open vnto mee [...] so much of the light of thy countenance as may be most for thy glory and our comfort.”

²⁴⁹ See Sperber, *Precationes*, 136, where he quotes the same text as Dee uses in his “Protestatio fidelis”, James I, 5: “Si quis autem indiget sapientia, postulet à Deo, qui dat omnibus affluenter, & non impropere.”

²⁵⁰ Sperber, *Precationes*, “Ad Lectorem”, sig. *3^v.

²⁵¹ Sperber, *Precationes*, sig.*7^v: “Homo se ad acquirendam DEI sapientiam digne & iustè prae preparare, eamque vna cum alijs tam corporalibus quam spiritualibus bonis a DEO impetrare, debeat: Qua impetrata postea facilius erit: Deum ac interiorem hominem (id est Animam hominis) verè cognoscere; Futura praevidere: Mystera in sacris Eloquijs abscondita intelligere: secreta inuestigare: veris gloriam nomenque ac memoriam perpetuam acquirere: Aegrotos curare: Miracula edere: Visiones ac Reuelationes accipere [...] In excessu mentis esse, id est, ad coelum eleuari vel ascendere, cum ipso DEO vniri seu coniungi, & à Spiritu Sancto illuminari.”

²⁵² For an example of this traditional form of instrumental prayer see *T&FR*, 210, where Dee prays for his son Rowland to recover from illness, making a bargain with God that he will only eat one meal on Saturdays for the rest of his life, if he spares his son’s life. On petitionary prayer and the “vow of reciprocal service” see Thomas, *Decline*, 49.

²⁵³ *MP*, sig. *j^r.

²⁵⁴ *Lib. Myst.*, fol. 36^v.

²⁵⁵ *Lib. Myst.*, fol. 101^v.

²⁵⁶ *Lib. Myst.*, fol. 79^v-80^r.

²⁵⁷ *T&FR*, 184.

²⁵⁸ Whitby, “Renaissance Scrying”, 30-31.

²⁵⁹ Simon Forman, “An excellent booke of the arte of Magicke, first begoone the xxiith of Marche Anno Domini 1567”, British Library, Add. MS 36,674, fol. 47, cit. Virginia F. Stern, *Gabriel Harvey: His Life, Marginalia and Library* (Oxford: Clarendon Press, 1979), 242: “Nova methodus, et praxis magica Academici philotechni [...] (Ad artem notoriam inspiratam.) Speculum omniscium.” See also the copious sixteenth-century annotations to the fifteenth-century *Ars notoria*, Bodley MS 951. On Forman see Lauren Kassell, *Medicine and Magic in Elizabethan London: Simon Forman – Astrologer, Alchemist, and Physician*, Oxford Historical Monographs (Oxford: Clarendon Press, 2005).

²⁶⁰ The mathematician Andreas Dudith, for example, writing to Tadeáš Hájek in 1587, was bewildered at Dee’s activities: “De Anglis multa audivi; illud unum mihi et stupendum videtur et parum credibile: quod aliqui certo affirmant eos colloquia cum angelis nescio quibus miscere.” Dudith to Hájek, 3 January 1587, Ostréjov Astronomical Library, MS Akc. 1949/594 (Photograph of Wrocław University Library MS R 247), eighteenth-century copy by Samuel Benjamin Klose. I am grateful to Dr Robert Goulding for providing me with transcriptions of this correspondence. For other instances of contemporary scepticism regarding Dee’s conversations see Shumaker, *Renaissance Curiosa*, 48-9.

²⁶¹ Heinrich Khunrath, *Amphitheatrum Sapientiae Aeternae solius veræ, Christiano-Kabalisticum, Diuino-Magicum nec non Physico-Chymicum, Tertrivnum, Catholicon* (Hanau, 1609), 147 (sig. T2^r, mispaginated as 145): “HYPERPHYSICOMAGEIA [...] est cum Angelis bonis, flammeis DEI ministris, sub modo delegatæ à DEO administrationis, tam vigilando quam dormiendo, mediate & immediatè, pia & vtilis conuersatio.” I am grateful to Peter J. Forshaw for drawing my attention to Khunrath’s “angelic conversations”. For more on Khunrath’s theosophical magic (and a complete translation of the *Amphitheatrum*) see Peter J. Forshaw, “*Ora et Labora*: Alchemy, Magic and Cabala in Heinrich Khunrath’s *Amphitheatrum Sapientiae Aeternae*” (Unpublished PhD Thesis, University of London, 2003).

²⁶² Khunrath, *Amphitheatrum*, 144. See esp.: “quod studium apud Hebraeos Cabalae summe perfectum & absolutum, cum in Diuinorum cultu, Spiritualium tractatione atque cum iis conuersatione, & Naturalium inuestigatione, pie ac sapienter consisteret.”

²⁶³ See for example Whitgift’s defence of certain kinds of petitionary prayer (including prayers for protection during storms) against the criticisms of the puritan Thomas Cartwright in *The defense of the Aunswer to the admonition against the Replie to T[homas] C[artwright]* (London, 1574), Tract. IX, Cap. ii, first division: “An examination of the particular faults, either in matter or form, wherewith the Book of Common Prayer is charged.”

²⁶⁴ Edwardes promises Dee that he will explain the details of the apocalyptic prophecies to him: "I shall open vnto you all things for myne is the speciall office and Auctoritie to doe it eueue to open the booke of the Covenant which was [...] close sealed." Roger Edwardes to John Dee, 16 July 1580, British Library, MS Cotton Vitellius CVII, fol. 328^v. In his first letter to Dee, dated 31 March 1580, he alludes sympathetically to Dee's angelic visions: "what the common capacities of the lerned ar to atteyne to the excellencye of special spirites, that is well knowen, and when they cannot apprehende the high wiesdome and misteries of God, then falle they to maligne and to contempne, the vesseles that god vseth at his owne good choise and pleasure" (ibid., fol. 312^v).

DEBORAH E. HARKNESS

THE NEXUS OF ANGELOLOGY, ESCHATOLOGY,
AND NATURAL PHILOSOPHY IN JOHN DEE'S
ANGEL CONVERSATIONS AND LIBRARY

In Cracow on 24 May 1584 John Dee went from the room where he usually conversed with angels to fetch his assistant, a scryer and alchemist of mysterious antecedents named Edward Kelley.¹ Kelley was shut up in his personal study in the house they shared, and was obstinately refusing to come out and join Dee around the crystal showstone which gave them access to the fascinating world of angels. Kelley's reluctance may have been expected since on the previous evening he had expressed distaste for their angelic instructors, and even went so far as to doubt their revelations concerning a true, uncorrupted geography which promised to help Dee master the intricacies of the terrestrial world. Dee and Kelley had been partners in the angel conversations since March 1582, and though Edward Kelley had experienced misgivings before about the worth of the angels' lengthy and time-consuming messages, his adamant refusal to return to the stone and the angels was somewhat unusual.²

If Kelley's refusal to scry was unusual, his subsequent behaviour was unprecedented in their relationship. A short time later, after Dee had returned alone to his own study, Kelley appeared brandishing a volume of "Cornelius Agrippa his works." He then proceeded to read out of the book the names of various terrestrial regions which Agrippa had collected out of Ptolemy, but which bore a disturbing resemblance to the "uncorrupted" and divinely-revealed geography conveyed only the day before by the angels. What are we to make of this confrontation between Dee's angelic revelations and his scryer's presentation of Agrippa's Ptolemaic geography?

This episode in the long and often sordid relationship between Dee and his scryer has typically been seen as particularly damaging evidence both of Kelley's duplicity and Dee's extreme gullibility. I would like to suggest an alternative interpretation, one that is based on Dee's reaction to Kelley's announcement rather than our own. It is clear from the transcript diaries that Dee didn't lose his composure, he expressed no shock, dismay, surprise and, most importantly, no doubt concerning the reliability of their angelic instructors after Kelley's dramatic gesture. Instead, in a tone which hints at pity, Dee chided Kelley for thinking that their angelic instructors were not to be trusted simply because they gave them "a description of the World, taken out of other Books." Dee expressed pleasure with his scryer's find, saying "I am very glad that you have a Book of your own, wherein these Geographical names are expressed, such as (for the most part) our Instructors

had delivered unto us.” Dee, it turns out, had also been searching for references to the angelic geography in everything from Mercator’s “description Geographical of the whole earthly Globe” to a geographical work by Pomponius Mela “set forth in English with the Chartes thereunto belonging, fairly described by hand.”

I chose this brief interlude in the angel conversations, this battle between books and revelation, because it brings us face-to-face with many of the thorniest issues confronting Dee scholars who attempt to decipher the significance of the angel conversations within the context of Dee’s other, more orthodox, intellectual interests.³ The modern mind finds itself at a loss to explain why a natural philosopher such as Dee, with a superb education and a strong interest in the observation of nature, would resort to divine revelation. Yet it is equally mystifying to us that Dee, having made such an effort to communicate with the celestial hierarchies, would then turn to the world of books to help him master those same revelations.

Today, however, Dee scholars have an unprecedented opportunity to resolve the dilemmas embedded in this story, particularly the odd relationship between Dee’s scholarship as revealed to us in his library, and the information the angels shared with Dee and Kelley. Both the library and the angel conversations have occupied a similar place in the historiography surrounding Dee – their importance has long been acknowledged, but their contents have not been fully understood. Thanks to the work of Christopher Whitby, Nicholas Clulee, Julian Roberts, Andrew Watson, and William Sherman, however, both the angel conversations and the library are beginning to yield their secrets.⁴ We now have a greater appreciation of how the angel conversations fit into broader cultural and intellectual contexts, especially other magical systems. We also now appreciate the significant place that the library occupied in the formulation and expression of Dee’s interests. Today I hope to continue to probe the connections between these two seemingly contradictory aspects of Dee’s intellectual life by suggesting that the gulf between revelation and the knowledge found in books is not as vast as we might expect.

In fact, the library provides the ideal starting point for an investigation of the angels’ revelations because both the library and the angel diaries represent an enormous investment of Dee’s intellectual energies and material resources. By the time Dee began contacting angels – certainly by 1581 and possibly in the late 1560s, as Clulee has suggested – he had amassed the finest personal library in England.⁵ Within Dee’s library existed a forest of ideas. Treatises on military engineering and Greek literature jostled on the shelves with books on the Jewish cabala, astrology, optics, and obscure ancient languages. As we know from the recovery efforts of Roberts and Watson, Dee did not simply own these books. In many cases there is evidence from marginalia and annotations that he had read and carefully digested their contents, adding his own opinions as warranted.⁶ In his library Dee was able to come into contact with wisdom that had been handed down through the ages, sometimes in need of repair and restitution as every good humanist of the time knew, but in many cases still retaining traces of God’s divine inspiration – the root of all earthly wisdom.

By 1579, however, Dee had entered into a period of intellectual crisis so profound that he began to doubt whether the information he could find in his books could really help him to achieve certain knowledge. In a prayer from that year which occupies the first leaves of the earliest surviving angel diary Dee shared his despair with God and reminded Him of his long-held and fervent desire for “pure and sound wisdom and understanding” as well as his dedicated study of nature for “many years, in many places far and near, in many books and sundry languages.” Finally, however, Dee admitted he had reached a scholarly impasse and “could find no other way to true wisdom” without the gift of divine revelation.⁷

In this prayer Dee explains why he turned from his books to the heavens, but two other questions still face us. First, what was there about the late 1570s that led Dee to seek revelation? And second, why did Dee seek to converse specifically with angels, rather than directly with God through mystical contemplation? The answers, I would argue, can be found in Dee's great library – from which he may well have turned, but was never able to divorce himself completely. There are two classes of books in Dee's library that can shed light on these questions: books concerned with angelology and books dedicated to eschatology. I will also suggest that it is Dee's library catalogue and early library lists which provide a map of sorts which can help to explain Dee's progress from an optimistic Cambridge undergraduate in the 1540s to a disappointed and increasingly desperate natural philosopher still in search of answers to his deepest questions in the 1570s and 1580s.

If we turn to the first question – why in the 1570s did Dee seek revelation? – and then open the library catalogue, it becomes clear that Dee owned a number of titles concerned with the end of the world and how best to decipher the natural signs that might foretell this event. Dee purchased, for example, the Harvey-Spenser letters which refer to the London earthquake of 1580, Cornelio Frangipani on the new star of 1572, and Cyprian Leowitz on grand conjunctions as well as other similar works.⁸ This interest of Dee's, which may first have manifested itself in library purchases, is also evident in the angel conversations of the 1580s. As early in their relationship as 23 March 1583 Dee and Kelley were listening to revelations concerning the long-awaited apocalypse, and warnings about the end of days continued until their partnership was finally dissolved.⁹

Both Clulee and Whitby have remarked upon the apocalyptic tenor of Dee's angel conversations.¹⁰ I would go further and argue that it was the specifics of late sixteenth-century apocalypticism that provided the essential context for Dee's fervent prayers to God to send to his aid “good spiritual ministers and angels [...] who may fully and perfectly inform me in the true and exact knowledge and understanding of your great mysteries and works (concerning all your creatures, their natural properties, and best employments).”¹¹ When Dee turned his eyes from his books to the heavens in prayer, most of Western Europe had their eyes fixed anxiously in the same direction. As the 1570s turned into the 1580s western Europeans were able to catalogue an alarming number of comets, new stars, earthquakes, grand conjunctions and other strange natural events that seemed to offer irrefutable

proof that something cataclysmic was about to happen in the terrestrial sphere. Author after author cried out for people to take notice that the world was growing weary and decaying, just like the texts in Dee's library. Nature had lost its original meaning, they argued, and had become corrupted through original sin. Humanity drew further away from divinity as each day passed. For Dee, intent on serving God by understanding His greatest visible work – the Book of Nature – this widespread attention to decay made his inability to open the secrets of nature all the more frustrating and frightening.

Much of Dee's frustration stemmed from the fact that he was not only interested in the end of his world, but in the beginning of a better, purer, and restored world where humanity, divinity, and nature would live in harmony and communication. The model for this post-apocalyptic world was the Edenic past – the life that Adam and Eve had in Paradise before original sin brought corruption and decay into the world. Dee believed that it might be possible for humanity to return to this state, and also that it might be possible to restore the natural world. The "reformation of the world" figures prominently in the angel conversations of the 1580s when Dee was given a vital role to play in the new age of peace, prosperity, and communication between God and his creation. Biblical references are sprinkled liberally through the angel diaries, further evidence that the world of books had a role in the angel conversations along with revelation.¹² In page after page of the angel conversations Dee demonstrated that what he was trying to achieve was a grand synthesis of previously revealed information and the newly revealed angelic messages.

Despite the frustration generated by years of study, Dee could not, finally, put aside his books completely, but drew them into his interactions with angels to complement and increase his understanding of God's instructions for the future. There were even occasions when the angels instructed Dee in the significance of items already in his collection, most notably the mysterious book *Aldaraia* also known as the *Book of Soyga*. The first reference we have to this work appears in Dee's personal diary on 17 January 1582, and the *Book of Soyga* is mentioned in the angel diaries a few months later on 10 March 1582.¹³ On that date Dee asked the angels "ys my boke, of Soyga, of any excellency?" The angel Uriel replied that it was a book that "God's good angels revealed to Adam in Paradise." Dee was understandably absorbed in deciphering his "Book of Soyga" because it represented another book where God's plan for the cosmos – or at least parts of that plan – had been revealed, recorded, and preserved for future generations. That Dee had an Edenic book – part of Adam's lost knowledge of the world – also meant that he had another key revelation that might help in the redemption and restitution of the world.

The book was later discredited by the angels, and was lost or stolen around 18 April 1583.¹⁴ Dee recovered the work on 19 December 1595, and after Dee's death Elias Ashmole reported that the Duke of Lauderdale had "a folio MS. which was Dr. Dee's with the words in the first page: 'Aldaraia sive Soyga vocor.'" ¹⁵ It was believed that this manuscript was lost, but recently I located two sixteenth-century Latin copies, one in the Bodleian Library at Oxford and one in the Sloane Manuscripts at the British Library.¹⁶ That the manuscripts are Latin appears to contradict

Dee's description of the work as "Arabik," although it is still possible that Dee was using the term Arabic to refer to its antecedents, and not its actual language. Other features of the description are consistent with the two Latin copies, including Dee's reference to the book's tables of letters and numbers which are strikingly similar to the tables found in a book revealed to Dee by the angels, the *Liber Logaeth*.¹⁷

Why, however, did Dee focus so much on specifically angelic revelations? One immediate response might be to point back to Dee's knowledge of apocalypse, for increased communication with God through angels or other messengers was one of the most commonly anticipated signs that the world was ending. We can, however, open the library catalogue once more for additional insights. First, the catalogue reveals that Dee's interest in angels was not sudden – there is evidence from as early as July 1550 when he purchased a copy of Pompilius Azalus's encyclopaedic treatment of the natural world, *De omnibus rebus naturalibus* (Venice, 1544), that the world of angels was deeply compelling to him.¹⁸ This work, though not primarily concerned with angels, does, as its title proudly suggests, attempt to explicate all features of the cosmic system including angels. Dee thoroughly underlined and marginally annotated passages relating to the angels' functions as ministers of God in the natural world, including their role as guiding spirits. This was not the last library purchase that had to do with angelology. By the time Dee made a list of his growing library collection in 1557, he had acquired a comprehensive assortment of classical, Christian, and contemporary works germane to angelology including Ficino's collection of neo-Platonic texts which contained treatises on spirits, dreams and divination, a collection of the works of Dionysius the Areopagite including treatises on "The Celestial Hierarchy" and "The Divine Names," Tommaso Rangoni's study of spiritual visitations, and complex works which combined Christian angelology with esoteric Jewish cabala such as Francesco Giorgi's *De harmonia mundi*, Agrippa's *De occulta philosophia*, Reuchlin's *De verbo mirifico*, and Trithemius' *De septem secundeis*.¹⁹

Not all of these works have been recovered, and not all which have been recovered are signed or annotated. Despite these limitations, however, it is clear that Dee read several of these works about angels very carefully, most notably items in the Dionysian corpus. Both the "Celestial Hierarchy" and "The Divine Names" reveal corollaries between Dee's library books and the revelations of the angel conversations. Throughout the angel conversations for example, Dee noted carefully the appearance of each angel as Kelley conveyed it to him.²⁰ In the "Celestial Hierarchy" Dee underlined Dionysius's descriptions, emphasizing the angels' many feet and their tendency to appear in the guise of a lion or a horse.²¹ Other simple annotations – underlinings and marks of emphasis – demonstrate Dee's familiarity with the organization of the celestial hierarchies and their relationship with the Deity.²²

More complex cross-referencing took place in the margins of Dee's books, as well. In Dionysius's treatise "The Divine Names," for example, Dee noted the name "Pele" in the margins against a passage that referred to the marvellous name of God which is above all other names.²³ The name "Pele" does not in fact appear in the Dionysian corpus, but it did figure in an angel conversation which took place on 14

March 1582.²⁴ On that day the angel Michael revealed to Dee the design for a ring not seen on earth since the days of Solomon, which Solomon used for “divine works and wonders.” The ring was inscribed with the name Pele, and Dee noted in the margins “See Reuchlin’s book *De verbo mirifico* about the name PELE.” Unfortunately, Dee’s powers of exact recall were faulty – the name does not, as Whitby points out, actually appear in *De verbo mirifico*. In the pages of the Dionysian corpus, however, the connection between marvellous powers and the name Pele were clearly described.

Dee’s angel conversation of 14 March 1582 continued with further bibliographic references. Dee noted that he needed to look in Reuchlin not only for the name “PELE” but also for the name “NA” which the angel Michael told him was a divine name to use in times of trouble. Even the angel Uriel appeared briefly and told Dee that some called him Nariel – Dee noted that this information could be found in Agrippa’s *De occulta philosophia*, Book III, chapter 24. Finally the angel Michael revealed a design for a seal – referred to as the “Sigillum Dei” or seal of God – whose true name was “Emeth”. Dee, his bibliographic abilities unwavering, gave two citations for this revelation: one referring to Reuchlin’s *De Arte Cabalistica*, and another to Agrippa’s *De occulta philosophia*.

It is no wonder, then, that Dee was consulting Mercator and Mela for help with his angelically revealed geography – books and revelation jostled on the pages of Dee’s angel diaries just as Greek and astrological texts jostled on the shelves of Dee’s library. This juxtaposition forces us to reconsider once more the status of Dee’s angel conversations in relation to his other intellectual projects. Many more connections exist between the angel conversations and the library: alchemical, cabalistic, linguistic, and cosmological, to name only a few. The angel diaries and the library offer us a new opportunity to assess the conceptual boundaries of Dee’s natural philosophy. Those boundaries are destined to shift and challenge us once this new information about Dee’s ideas and the connections he himself made between seemingly different intellectual enterprises comes into the light.

NOTES

¹ Dee’s angel conversations are now accessible through scattered and imperfect manuscripts at the British Library, London and the Bodleian Library, Oxford: British Library, Sloane MSS 3188-3189; British Library, Sloane MS 3191; British Library, Cotton MS Appendix XLVI, 2 vols.; British Library, Add. MS 36674; and Bodleian Library, Ashmole MS 1790. Printed editions of selections from the manuscripts are available, but their reliability varies. Meric Casaubon was the first to print excerpts from the angel diaries in 1659, (*T&FR*), but the work includes only conversations dated after 1583 and is not without textual inaccuracies. Elias Ashmole, the seventeenth-century collector who was deeply interested in Dee, made corrections in the Casaubon edition, Bodleian Library Ashmole MS 580. The earliest angel diaries, which date from 1581 to April 1583, have received much less attention. A complete edition of the earlier diaries was available only in manuscript until Christopher Whitby’s careful transcript of *John Dee’s Actions with Spirits*, 2 vols (New York: Garland Press, 1988), made them available to a wider audience. For this episode, see *T&FR*, 158-159.

² For more on the relationship between Dee and Kelley, see *NP* especially 204-214; Peter French, *John Dee: the World of an Elizabethan Magus* (London: Routledge, 1972), especially 113-122; Deborah E. Harkness, *John Dee’s Conversations with Angels: Cabala, Alchemy and the End of Nature* (Cambridge:

Cambridge University Press, 1999); Deborah E. Harkness, "The Scientific Reformation: John Dee and the Restitution of Nature" (Unpublished PhD thesis, University of California, Davis, 1994), 329-342. Kelley's often disruptive presence in the Dee household is recounted in Deborah E. Harkness, "Managing an Experimental Household: the Dees of Mortlake and the Practice of Natural Philosophy," *Isis*, 88 (1997): 247-262.

³ The angel conversations have not received as much scholarly attention as other aspects of Dee's life and career, and reconciling the "mathematical" Dee with the "magical" Dee has proved particularly difficult. See *NP*, 203-230; French, 110-125; Harkness, *Talking with Angels*; Wayne Shumaker, *Renaissance Curiosa* (Binghamton: Medieval and Renaissance Texts and Studies, 1982), 1-52; Whitby's "Introduction" in the first volume of *John Dee's Actions with Spirits*.

⁴ Whitby focuses primarily on the angel conversations themselves in his *John Dee's Actions with Spirits*. Clulee, Roberts and Watson, and Sherman, however, were the first systematically to use the contents of Dee's library to illuminate his thinking on a wide range of issues. For further insights into the ways in which Dee's library shaped his intellectual program see *NP*; *R&W*; William H. Sherman, *John Dee: the Politics of Reading and Writing in the English Renaissance* (Amherst: University of Massachusetts Press, 1995). Recently, I have used the library specifically to shed light on the angel conversations. See Harkness, *John Dee's Conversations with Angels*.

⁵ *NP*, 141.

⁶ For a detailed discussion of Dee's annotation practices, see Sherman, 79-100.

⁷ Dee in Whitby, II, 8-12.

⁸ Dee's library books concerning the new star were: Marcus Manilius, *Astronomica* (Basel, 1533), *R&W*, no. 251, which contains annotations by Dee; a work by Dee's landlord in Prague, Tadeáš Hájek, *Dialexis de nova stella* (Frankfurt, 1574), *R&W*, no. 438; Theodorus Graminaei, *Erklärung oder Auslegung eines Cometen* (Cologne, 1573), *R&W*, no. 703; Jeronimo Munoz, *Du nouveau comete de l'an 1572* (Paris, 1574), *R&W*, no. 842; Georg Busch, *Die andere Beschreibung von dem Cometen welcher in 1572 Jar erschienen* (Erfurt, 1573), *R&W*, no. 1291; two copies of Cornelius Gemma and Guillaume Postel, *De peregrina stella 1572* (Basel, 1572/3), *R&W*, no. 1876; Cornelio Frangipani, *Sopra la stella dell' anno 1572* (Venice, 1573), *R&W*, no. 2137; Augustus, Elector of Saxony et al., *De publica poenitentia [...] exorta peregrina stella 1572* (n.p., 1578), *R&W*, no. 2217; Joannes Sommerus, *Refutatio scripti Petri Carolii editi Wittebergae* (Cracow, 1582), *R&W*, no. D20; for the Harvey-Spenser letters, see, *R&W*, no. 1720; for Dee's copy of Leowitz, see *R&W*, no. 631.

⁹ Whitby, II, 220-238.

¹⁰ *NP*, 220-230; Whitby, I, 161-177.

¹¹ Dee in Whitby, II, 5-6; translation by Whitby from the Latin. The literature on early modern eschatology and apocalypticism continues to grow. A selection of relevant titles would include: Bryan W. Ball, *A Great Expectation: Eschatological Thought in English Protestantism to 1660* (Leiden: E. J. Brill, 1975); Robin Bruce Barnes, *Prophecy and Gnosis: Apocalypticism in the Wake of the Lutheran Reformation* (Stanford, CA: Stanford University Press, 1988); Richard Bauckham, ed., *Tudor Apocalypse: Sixteenth-Century Apocalypticism, millenarianism, and the English Revolution* (Oxford: Oxford University Press, 1978); Norman Cohn, *The Pursuit of the Millennium: Revolutionary Millenarians and Mystical Anarchists of the Middle Ages* (New York: Oxford University Press, 1970); Katharine R. Firth, *The Apocalyptic Tradition in Reformation Britain 1530-1645* (Oxford: Oxford University Press, 1979); Richard Foster Jones, *Ancients and Moderns: a Study of the Rise of the Scientific Movement in Seventeenth-Century England* (Berkeley, CA: University of California Press, 1965); C.A. Patrides and Joseph A. Wittreich, Jr., eds., *The Apocalypse in English Renaissance Thought and Literature* (Ithaca, NY: Cornell University Press, 1984); Laura Ackerman Smoller, *History, Prophecy, and the Stars* (Princeton, NJ: Princeton University Press, 1994); Ernest L. Tuveson, *Millennium and Utopia: a Study in the Background of the Idea of Progress* (New York: Harper and Row, 1964). For an analysis of how apocalyptic ideas helped to shape Dee's angel conversations, see Deborah E. Harkness, "Shows in the Showstone: a Theater of Alchemy and Apocalypse in the Angel Conversations of John Dee", *Renaissance Quarterly*, 49 (1996): 707-737.

¹² See, for example, *T&FR*, 59-60, 213.

¹³ Dee's marginal notes in the *Ephemerides* of Stadius (Cologne, 1570), now Bodleian Library, Ashmole MS 487, entry for 17 January 1582; Dee in Whitby, II, 16-20. The scholarly edition of Dee's personal diary, *Private Diary*, does not include this reference. The inaccuracies that pepper Halliwell's edition have long hampered Dee scholars. William Sherman's forthcoming edition of the diary (also for the Camden Society) will become the standard text.

¹⁴ Dee in Whitby, II, 327-339.

¹⁵ *Private Diary*, 54. For a discussion of Ashmole's remarks see Whitby, I, 146-47; Harkness, *Scientific Reformation*, 317-318.

¹⁶ British Library, Sloane MS 8 and Bodleian Library, Bodley MS 908. I am indebted to Julian Roberts and Andrew Watson for discussing these finds with me and offering their expertise concerning the possible ways in which the books came to be in the possession of these libraries. Roberts believes that the Sloane manuscript at the British Library was probably that mentioned by Ashmole and sold in the Lauderdale sale of 1692. The Bodleian copy was given to the Library in 1605 by William Dunn, an alumnus of Exeter College.

¹⁷ The *Liber Logaeth*, or "The Book of the Speech of God," was the first book revealed to Dee and Kelley. It is now British Library Sloane MS 3189. For a discussion see Whitby, I, 143-44; Harkness, *Scientific Reformation*, 313-314; on Dee and the *Soyga* tables, see Jim Reeds, "John Dee and the Magic Tables in the *Book of Soyga*" in the present volume.

¹⁸ *R&W*, no. 134; now at Emmanuel College, Cambridge. The work is heavily annotated in Dee's hand in the sections on angels, especially 15^r-19^v.

¹⁹ Sadly, Dee's copies of these works have not all been recovered. Dee's extant copies are: Dionysius the Areopagite, *De mystica theologica* (Rome, 1525), *R&W*, no. 271, now Cambridge University Library, H*8.22 (c); Dionysius the Areopagite, *Opera* (Venice, 1556), *R&W*, no. 975, now Magdalene College, Cambridge, D.7.10; Tommaso Rangoni, *De visitatione* (Venice, 1553), *R&W*, no. 482, now Cambridge University Library, N*10.27(D). Most of Dee's Christian cabalistic works remain unrecovered: Henricus Cornelius Agrippa, *De occulta philosophia, libri tres* (Lugduni, 1543), *R&W*, no. 742; Francesco Giorgi, *De harmonia mundi* (Paris, 1545), *R&W*, no. 221; Johannes Reuchlin, *De verbo mirifico* (Cologne, 1532), *R&W*, no. 1043. One notable exception is Johannes Trithemius, *De septem secundeis*. Dee owned three copies: one copy of the 1545 Frankfurt edition (*R&W*, no. 678) now at the Cambridge University Library, Dd*4.511(E); and two copies of the 1567 Cologne edition (*R&W*, no. 969 and *R&W*, no. 1884), one of which is now at the Royal College of Physicians, D 146/2, 21C.

²⁰ Almost every conversation includes detailed descriptions; see, for example, Dee in Whitby, II, 139 and *T&FR*, 5. For a detailed discussion of the significance of these visual clues in the angel conversations, see Harkness, "Shows in the Showstone".

²¹ See Dee's copy of Dionysius the Areopagite, *Opera*, 48^v-54^v.

²² See, for example, Dee's annotations in his copy of Dionysius the Areopagite, *Opera*, sigs. B2^v, B3^r, and F6^v.

²³ Dee's annotations in his copy of Dionysius the Areopagite, *Opera*, 146^r.

²⁴ Dee in Whitby, I, 28-34.

SUSAN BASSNETT

ABSENT PRESENCES

Edward Kelley's Family in the Writings of John Dee

Edward Kelley has generally had a bad press. Frances Yates dismisses him as “a fraud who deluded his pious master”,¹ Charlotte Fell-Smith describes him as “an adventurer” with an “uncontrollable nature and overbearing ways”.² The generally accepted version of the Dee-Kelley relationship, based on Weever’s *Discourse of ancient Funeral Monuments*,³ sees Kelley as devious and fraudulent, a version borne out by the narrative offered in the *True & Faithful Relation*, with Meric Casaubon’s polemical preface that provides accounts of quarrels between the two men, Kelley’s temper tantrums and ungodly behaviour, his obsession with money and his generally volatile behaviour, that contrasts with Dee’s apparent steadfastness. But the problem with this version of events is that if Kelley is cast in the role of the deceiver, then Dee must be cast in the role of the deceived. Peter French sums up the dilemma quite well, as he considers the history of the summoning of spirits as related by Dee and by subsequent historians:

An insoluble problem concerning these actions, or spiritual conferences, presents itself. Did Kelley know Agrippa’s work so well that he was able to regurgitate the angel-magic of the *De Occulta Philosophia* and dupe his pious and credulous master? Or did Kelley have some form of mental illness that made him think he actually did see angel visitants? [...] Though Kelley has usually been pictured as a blatant charlatan – even worse than Dee – it is very difficult to believe that he saw nothing at all.⁴

Whatever he may or may not have seen, biographers wrote of him in lurid colours. From the hyperbolic style of Charlotte Fell-Smith, who announces that “the whole of Kelley’s story is so wildly and romantically coloured, it is so incredible and so full of marvels, that it is extremely difficult to know what to believe”⁵ to *The Dictionary of National Biography*, accounts of the life and death of Edward Kelley are heavily prejudiced in his disfavour.

Part of the problem is that so much information about him is missing. There is no record of his Oxford career, (which may be because the alumni lists of Gloucester Hall are missing) which has led to the assumption that he left without a degree. This is curious, since the record of his brother Thomas’s Oxford sojourn is unproblematic, and Thomas matriculated at Jesus College in 1582. The myth of Kelley’s alias as Talbot is linked to the absence of Oxford records, and since there appear to have been several Irishmen named Talbot whose dates could have fitted in the Gloucester Hall lists and a Talbot appears in Dee’s diary in 1582 shortly before the initials E.K. start to recur in that text, the assumption that Kelley used this alias

gained credence.⁶ Like the rest of Kelley's biography, though, there are conflicting versions. There are two Edward Kelleys listed in the Worcestershire records, Edward son of Patrick Kelley, christened on 2 August 1555 at St Swithin's, Worcester, and another Edward, also son of Patrick, christened on 5 October 1561 at St Helen's, Worcester.⁷ Thomas, the brother who accompanied him to Prague was born in 1564. Dee's diary gives Kelley's date of birth as 1 August 1555, which would appear to fit with the first Edward listed.⁸

The circumstances of his death are equally unclear. Dee's diary records news of Kelley's death on 25 November 1595, which is at least two years too early.⁹ Karel Hrdina and R.J.W. Evans record Kelley as having been imprisoned at Krivoklat in Bohemia between 1591-1594 for killing Jiri Hunckler, an imperial official in a duel, but on his release in 1594 he was pardoned and his lands restored (he had been knighted by the Emperor Rudolph II in 1589, taking the title of Sir Edward of Imany).¹⁰ In 1596 he was imprisoned again, this time at Most (Brux) in northern Bohemia where he held lands. His property was confiscated and sold to the imperial vice-chancellor, Krystof Zelinsky of Sebuzin (a Protestant who fell from grace in 1599 and was dismissed). In 1597, apparently following an unsuccessful escape attempt, he died.¹¹

The relationship between Dee and Kelley, according to Dee's diary, began in 1582. The two men travelled to Poland in 1583, moving on to Prague and thence to Trebon in Southern Bohemia in 1586, where they were under the protection of Vilem Rosemberk.¹² In 1589 Dee returned to England, Kelley moved back to Prague and their lives diverged. Kelley's decision to remain in Bohemia has sometimes been interpreted, by such partisan biographers as Charlotte Fell-Smith, as his fear of returning to England to be exposed as a fraud, but this somewhat xenophobic interpretation that sees Rudolph and the powerful Rozemberk as Kelley's gulls does not have much substance. Kelley did impress the Emperor, as his lands and title show, but he was also taken very seriously by prominent figures in the court of Elizabeth. When Kelley's relations with the Emperor deteriorated in 1591, a letter from an English agent in Frankfurt to Edward Wotton records that his household had been arrested and tortured, and "a great gard had been placed over the Lady Kelley and Mr Dyar."¹³

Sir Edward Dyer is recorded as having been a client and friend of John Dee's as early as 1566. Dyer visited Dee at Mortlake along with Sidney and Leicester in 1577 and was godfather to Dee's son Arthur in 1579.¹⁴ In 1588 Dyer visited Trebon, accompanied by Francis Garland (whom Kelley thought was a spy) and Edmund Cooper, Kelley's brother-in-law. He appears to have been sent by Lord Burghley to persuade Kelley and Dee to return to England, though he seems to have angered Dee who noted on 22 July (in Greek) that "Mr Edwarde Dier did injure me unkindly."¹⁵ Next day there was a reconciliation between the two men, thanks to the mediation of Kelley. Dyer spent several months with Kelley in Prague in 1591, acting upon his instructions from Burghley of 1588:

if you cannot obtain Sir Edwd. Kellie's return personally, yet that you would for maintenance of your credit, procure some small portion of the powder, to make a

demonstration in her majesty's own sight of this very perfection of his knowledge. But if I might have my wish, next to his coming home, I wish he would, in some secret box, send to her majesty for a token some such portion, as might be to her a sum reasonable to defer her charges for this summer for her navy, which we are now preparing to the sea, to withstand the strong navy of Spain, discovered upon the coasts between Britain and Cornwall within these two days.¹⁶

To Kelley directly, when the first appeals failed, Burghley wrote in 1589 in more forthright terms:

I would not have you ignorant that sundry men, being not acquainted with these your faithful offers and purposes [the messages of good intent Kelley had sent through Dyer], let it not in some sort, (since you came not with Mr Dyer) to divine variously of your stay. Some saying, that you do forbear to come because you cannot perform that indeed which hath been reported of you. Some, that you are inticed by such as bear not the queen nor this realm any good will, (not to come to benefit her majesty). Some allege, that your own profession of religion doth not agree with ours here. Yea, some, that are maliciously disposed, say that you are an imposter with your sophistications, as many heretofore, both here and in other countries, have been proved; and that you would fear to be proved such an one here, because of usurers severe punishment.¹⁷

The correspondence, and the use of Dyer as emissary to Kelley, would seem to imply that Burghley at least took Kelley's scientific claims seriously, or that he preferred to have him on English soil instead of in the open city of Prague, able to confer with a whole range of contacts from all over Europe. Moreover, once the relationship with Dee ended, so too do accounts of Kelley's contacts with spirits disappear, to be replaced with more overtly political intrigue. Burghley and Dyer were interested in Kelley's alchemical skills, not in his spiritual ones, and the amount of property he amassed in Bohemia (including a goldmine that was purchased by the Polish alchemist, Sendivogius) bears witness to the extent to which he had integrated himself into the life of the imperial court. His brother Thomas was married in 1587 to Ludmilla z Pisnice, daughter of a Bohemian knight and sister to Jinrich z Piznice who rose to become deputy Chancellor of the realm. Kelley had family connections to the emergent figures of the new Bohemian middle class.

The picture of Kelley starts to shift if we look at it from the Czech perspective and not through Dee's eyes. The picture painted by Dee is full of ambiguities and uneasiness, and perhaps nowhere more obviously than in the story of the exchange of wives. As detailed in *A True & Faithful Relation*, on 18 April 1587, Madimi proposed that the two men should have, as Dee puts it, "had our two wives in such sort, as we might use them in common", though he declares himself unsure as whether the "sense were of carnal use."¹⁸ Dee's notes tell us that when he broke the news to his wife, Jane Dee, "she fell a weeping and a trembling for a quarter of an hour".¹⁹ Nevertheless, a contract between the four was drawn up, dated 21 April 1587. What Joanna Kelley thought of the arrangement is never recorded, though there is an exhortation for her to be granted children with Kelley, following a statement by one of the spirits to Kelley on 4 April 1587 that "barrenness dwelleth with thee, because thou didst neglect me and take a wife contrary to my commandments." Kelley's wife disappears from Dee's narrative on 17 Oct 1588, riding away from Trebon to Prague.

Charlotte Fell-Smith, much given to expressing unsubstantiated opinions (she describes Father Pucci as “an anglicised Italian pervert”)²⁰ describes Joanna Kelley as follows:

Had it not been for the Dee’s kindness to her, and especially Jane’s, poor neglected Joan Kelley would have had but a sorry time. She was only twenty-four; lively and docile, she seemed to please everyone but her husband. Pucci, with perhaps a little flattery, calls her a “rarum exemplum juvenilis sanctitatis, castitatis, atque omnium virtutem.”²¹

Joanna Kelley first appears in Dee’s diary in the entry for 7 July 1583. She is mentioned again on 18 August, when Dee notes “A great tempest of wind at midnight. Maxima erat E.K. cum uxore eius.”²² He is more explicit about the disharmony between Kelley and his wife in *A True & Faithful Relation*. On 4 July 1583 he records Kelley as saying “I cannot abide my wife, I love her not, nay I abhor her; and there in the house I am misliked because I favour her no better.” Dee records his own conversation with Jane: “Jane, this man is marvellous out of quiet against his wife for her friends their bitter reports against him behind his back, and her silence thereat.”²³ In *A True & Faithful Relation* Dee records that on 5 June 1583 Kelley was in a rage after hearing from his brother Thomas that his wife “was gone from Mistress Freeman’s house at Blockley [...] and was at home with her mother at Chipping Norton.”²⁴

There is no evidence of when Kelley married Joanna Cooper. Fell-Smith, who is extremely unreliable, confidently relates how the spirits told Kelley to take a wife in April 1583, but that he was reluctant to do so, and quotes a non-existent reference that she claims is recorded in *A True & Faithful Relation*.²⁵ Many of the references to Kelley’s relationship with his wife in Dee’s writings appear to indicate that the marriage was problematic. It is interesting to speculate, given Kelley’s rebelliousness as depicted in Dee’s writings and his ability to outmanoeuvre the combined pressures of Dyer and Burghley a few years later, on the reasons why he married Joanna Cooper from Chipping Norton, whose date of birth Dee records as 23 June 1563 and who appears to have had neither money nor influence to bring as a dowry.

Let us leave that question in the air, and turn instead to a completely different narrative. In the cloisters of St Thomas Church, Prague there is an engraved tombstone to Elizabeth Jane Weston, which describes her as a noble Englishwoman, flower of Minerva, delight of the Muses, paragon of women.²⁶ Elizabeth Weston is best known as Westonia, author of *The Parthenicon*, an autobiographical collection of poems and letters written in Latin, first published in 1606,²⁷ who died at the age of 30, after giving birth to seven children, only three of whom survived. During her brief life she was highly regarded as an intellectual prodigy, respected by Humanist scholars and thinkers across Europe. She married Johannes Leo, a lawyer at the imperial court and the one extant portrait of her, in the Hessisches Museum, Darmstadt (Plate 16) shows a patrician figure, richly dressed, with dark hair and an intense, serious gaze.²⁸ Her poetry is equally serious: throughout her work there is strong line of grievance, and the influence of Ovid’s *Tristia* is marked. This elegiac note of loss, linked to the theme of exile, has been used by biographers in their attempts to trace her origins: a noble Englishwoman whose poetry recounts how she

Plate 16: Portrait of Elizabeth Jane Weston by an anonymous Dutch artist. Reproduced by courtesy of the Hessisches Landesmuseum, Darmstadt.

lost her father and was sent into exile in Bohemia, the land where she grew up. The generally agreed account of her family gives her a recusant background. Fuller in his *Worthies* places her in Surrey, where there was a family of eminent Westons, and subsequent biographers have followed this suggestion.²⁹

But Fuller merely guesses where she might have come from. He comments that her fame was “more known in foreign parts than at home”, and adds:

I am ashamed that for the honour of her sex and our Nation I can give no better account of her. However, that her memory may not be harbourless, I have lodged her in this County (Surrey) – where I find an ancient and worshipping family of the Westons flourishing at Sutton, ready to remove her at the first information of the certain place of her Nativity.³⁰

From the work of Czech scholars such as Hrdina, Ryba and Petru it is clear that Westonia was not connected to the Westons of Sutton.³¹ Tracing the lines through her poetry, making connections between dates, the suggestion was first posited by Hrdina in 1928 that Westonia may have been associated in some way with Edward Kelley. The dates fitted: Kelley’s death in 1597 coincided with the dramatic rush of poetry and letters by Westonia pleading the case for restitution of her family property from the emperor. Clearly something significant triggered this flood of appeals to powerful allies. Elizabeth Weston was not someone to keep silent when need arose: the edition of her *Parthenicon* held in the British Library contains a handwritten poem, assumed to be by the author, complaining about the treachery of editors who omitted some of her best work and inserted their own instead.³² When James I came to the throne in 1603, Westonia wrote a letter, included in the *Parthenicon*, demanding justice.³³ Johannes Leo, her husband (who was also an agent for Anhalt) fought her case through the courts.

The hints of a link between Westonia and Kelley become clear in a small collection of poems published on the occasion of her mother’s death in 1606, *In obitum nobilis et generosae foeminae, dominae Ioannae p[ost] m[ortem] magnifici et generosi domini Edovardi Kellei de Imany, equitis aurati sacraeque Caesare Maiestatis consilarii, derelicta viduae, matris suae honorandissimae charissimaeque, lachrymaebunda effudit filia*.³⁴ In her long poem, Westonia relates how her father died when she was only six months old; then both her grandmothers died, followed some time after by the man she loved as a second father. After that great loss came the death of her brother, of her two infant sons and finally of her mother. Her poem is a great cry of grief, as the poet recalls the mother who made the sign of the cross on her daughter’s forehead at night, the bitterness of hopes constantly raised and then cruelly destroyed. The manuscript also contains poems in praise of Joanna Kelley by Carolides of Karlsberg and Nicholas Maius.³⁵ All establish beyond any doubt that Westonia’s mother was Joanna Kelley, widow of the late Edward Kelley, revered as a loving stepfather who carefully cultivated the education of the woman who turned out to be a Renaissance prodigy.

Accepting this narrative causes several problems. Louise Schleiner, who agrees with my linking of Kelley and Westonia through Joanna Cooper, nevertheless rejects the hypothesis that Joanna Weston and Joanna Cooper might have been the

same woman. She argues that Kelley must have met and married for a second time in the late 1580s, and she notes that there is no mention of Elizabeth or her brother John Francis in Dee's writings, which is correct.³⁶ But the Oxfordshire county records confirm the Joanna Weston-Joanna Kelley connection: on 28 June 1563 Joanna, daughter of Thomas Cooper was baptized at the Parish Church of St Mary the Virgin in Chipping Norton. The same register records the marriage of Joanna Cooper to John Wesson [*sic*] on 27 June 1579, the baptism of their son John on 23 July 1580 and of their daughter Elizabeth at some point between the legible entries of 4 March and 31 October 1581.³⁷ On 6 May 1582, with timing that confirms Westonia's version of events, the burial of John Weston, clerk, is recorded at Chipping Norton. Whether significant or not, the mysterious Mr Talbot vanished from Dee's diary on 4 May 1582, and reappeared on 13 July.³⁸ He is not mentioned again, though E.K. enters the narrative on 22 November 1582.³⁹

What then are we left with? The evidence for Kelley only having one wife is overwhelming, but we now know that she had two children by one John Weston, who lived for a short time with their grandmothers. There is a prayer for Joanna Kelley to have children recorded by Dee, but it is oddly phrased, with emphasis in the Latin that suggests that what she is asking for is to have children with her present husband, i.e. with Kelley.⁴⁰ Westonia's affection for her stepfather as manifested in her poetry and her letters (particularly those to her brother who was studying at Ingoldstadt) shines out from her writings.⁴¹ Moreover, the attention paid to the education of the two children of the unknown John Weston and Joanna Cooper-Kelley reveals a high degree of commitment and expense on the part of Edward Kelley. Westonia's learning was deemed unusual in such a young woman, as witnessed by many contemporaries, and she probably shared her stepfather's interests in alchemy. The prefatory poem to Oswald Croll's *Basilica Chymica* of 1609 was written by Westonia.⁴²

The most curious aspect of the Westonia-Kelley story is the striking absence in Dee's writings of any reference to Kelley's stepchildren. This led me at first to speculate that he had deliberately concealed them from Dee, but this seems unlikely given the network of connections Kelley and his family had in Prague, and given also that Dee's diary confirms that both Kelley's brother Thomas and Joanna's brother Edward were regularly in Bohemia with them.

It is also the case that Dee's diary and *A True & Faithful Relation* are not straightforward linear narratives. Whatever else they are, they are not texts that can be read as historical accounts; they are full of omissions, contradictions, discrepancies, gaps. They raise more questions than they answer. Reading Dee's texts looking for clues to the Kelley-Westonia relationship has proved tantalizingly frustrating. The high level of education received by Westonia and her brother leads me to feel that these two children must have been educated along with Dee's own children, and there is one tenuous clue that might bear out such an hypothesis. In the Diary entry for 7 August 1588 Dee notes:

Aug 7th, this day I covenanted and hyred John Hammond, jentleman, to serve me in his honest servyces for one yere, and to have 30 dolers for his full and all manner of wages.⁴³

The entry for 21 August 1589 notes: “John Hammond to Stade”, and after this he disappears from Dee’s narrative.⁴⁴

In Westonia’s *Poemata* there is a poem addressed to the noble and educated man, Johannes Hammonius, described as her good friend and previously her most assiduous Master.⁴⁵ It is a short piece, heavily reliant on Ovid, but praises the skills of John Hammond who taught her all she knows about her art. This John Hammond may well be the same man who was a fellow at Trinity College Cambridge in 1579 and who then qualified as Doctor of medicine in 1605, moving on to become physician to James I and to Prince Henry.⁴⁶ The coincidence of Westonia’s master having the same name as the tutor employed by Dee to teach his children cannot be ignored.

In the absence of certain information, one drifts inevitably towards speculation. The stories are full of holes, and there is strong temptation to fill in the gaps. The point I have now reached, however, is to treat the negative accounts of Kelley with some scepticism and to view the Kelley-Dee connection more critically in the light of the Bohemian materials. A vital link in the chain would be provided if we knew who John Weston was, for then we might find answers to other questions, such as why Kelley felt compelled to marry his wife when he seems to have had such negative feelings about her, why he chose to educate her children to such a high level, why there is such silence about Kelley’s children in Dee’s writings. I find myself moving toward a reading of Dee’s version of his relationship with Kelley that is not altogether favourable to Dee – perhaps Kelley’s successes in Bohemia and his rapid upward social movement brought out feelings of resentment in Dee. Certainly all of them, Dee, Kelley and Westonia were obsessed with money and had constantly to compromise and to conceal in order to ensure survival and remain in favour with their patrons. It is the rediscovery of those processes of concealment that make this task of tracing patterns so difficult and yet so compelling.

³² See Elizabeth Weston, handwritten address to the reader dated 16 August 1610, in a copy of *Parthenicon* (Prague, 1606) in the British Library (Shelfmark C.61.d.2).

³³ *Sereniss. ac Potentiss. BRITANNIAE IMPERATORE IACOBO I. Scotiae, Hybernae ac Franciae REGI*. Letter with accompanying poem, dated 20 June 1609.

³⁴ For a discussion of the implications of *In obitum*, see Susan Bassnett, "Revising a Biography: A new interpretation of the life of Elizabeth Jane Weston (Westonia), based on her autobiographical poem on the occasion of the death of her mother," *Cahiers Elizabethains*, 37 (1990): 1-8.

³⁵ The *In obitum* manuscript contains three items: a long poem by Westonia, "Mortis inxpletæ quæ vis & quanta potestas", Nicholas Maius's epitaph, "Philosopho conjunx fuero qua Iana Kelæo" and Carolides's epitaph, "Hoc sita sub saxa est, animi Matrona viralis." The text is undated, but presumed to have been printed in Prague in 1606. The author consulted it in the Strahov Library, Prague, in 1988, but since that date scholars seeking to read it have been unable to trace it.

³⁶ Louise Schleiner, "Elizabeth Weston, Alchemist's Step-daughter and Published Poet," *Cauda Pavonis* 10:2 (1991): 8-19.

³⁷ There is a discrepancy between this date and that given on her tomb in Prague as 2 November 1582.

³⁸ *Private Diary*, 15-16.

³⁹ *Private Diary*, 17.

⁴⁰ In *T&FR*, 30-31 there is a Latin prayer for Joanna Kelley that asks for fecundity "cum hoc ejus marito". In the entry for 21 April 1587, Kelley is informed that "thou shalt have *the womb which thou hast barren, and fruitless unto thee*". The phrasing of both these entries is ambiguous: it could signify that Joanna Kelley was barren, or it could signify that she was unable to conceive with Kelley, with *this* husband, as opposed to her previous husband.

JAN BÄCKLUND

IN THE FOOTSTEPS OF EDWARD KELLEY

*Some Manuscript References at the Royal Library in Copenhagen
Concerning an Alchemical Circle around John Dee and Edward Kelley.**

My primary aim in this paper is to present a group of manuscripts in The Royal Library in Copenhagen which in one way or another are intimately related to the alchemical quest of a group of historically little-known persons associated with Edward Kelley and John Dee. My secondary aim will be to question the established opinion that Edward Kelley's alchemical and allegedly fraudulent career at the court of Rudolph II in Prague was so chaotic and adventurous that it led to his imprisonment and subsequent death in 1595 from injuries he is said to have suffered whilst attempting to escape. This is the common story, given for instance by Elias Ashmole, Anthony à Wood, and in the *Dictionary of National Biography*.¹ Let us first address the matter of Kelley's career in Prague.

I

We know that between 1583 and 1589, John Dee and Edward Kelley were travelling in Poland and Bohemia, occasionally staying at the court of Emperor Rudolph II in Prague. They both settled in Trebona in Bohemia, though Kelley seems to have been less sedentary than Dee. In the published edition of Dee's diary, Kelley's and other persons' travels to Prague are recorded, while Dee does not mention going there himself.² Instead Dee left Trebona for Nürnberg, Frankfurt am Main, Bremen, and finally England. Though Dee visited Prague and Rudolph at least once in 1584 during his stay in Bohemia,³ it is nevertheless obvious that it was mainly Kelley who undertook alchemical activities in Prague. To my knowledge, information about Kelley's activities from 1589 onward can be extracted solely from sources who were themselves "alchemically-initiated", and thus – if not unreliable – then at least far from informative. Ashmole, who seems to have had access to more information than we have at present, states therefore that "Whiles they lived at *Trebona*, *Sir Edward Kelley* went divers times to *Prague*, and the 15. of *Ian*. 1587, he went into *Poland*, but returned the 9 of *Febr.* after. And 'tis probable these *Journeys* were made in quest after some famous *Chemists*",⁴ but

* I am greatly indebted to Dr Stephen Clucas for his scrupulous proof-reading of my transcriptions in the descriptive part of this essay against the original manuscripts in Copenhagen, without which many errors would have passed. For any remaining errors and interpretations, however, the sole responsibility is mine.

even Ashmole seems to be uninformed about what Kelley, Carpio and Garland (names which are mentioned in Dee's diaries) actually did in Prague and Poland. However, Ashmole does recount a transmutation – though without revealing his source: “I also finde this *Note of Doctor Dee's*, Jan. 5. 1586. *Donum Dei* 2. ounces. E. K. Moreover, for neerer and later *Testimony*, I have received it from a credible *Person*, that one *Broomfield* and *Alexander Roberts*⁵ [both of whom are mentioned in Dee's diaries], told him they had often seen *Sir Ed: Kelly* make *Projection*, and in particular upon a piece of *Metall* cut out of a *Warming pan*,” and Ashmole continues shortly after: “The aforesaid *Person* hath likewise seen in the hands of one *Master Frye* and *Scroope*, *Rings* of *Sir Edward Kellyes Gold*, the fashion of which was onely *Gold wyre*, twisted thrice about the *Finger*: and of these fashioned *Rings*, he gave away, to the value of 4000l. at the *Marriage* of one of his *Servant Maides*.”⁶

There is, however, another source which seems to have some information about Kelley's alchemical activities. Unfortunately for us, this source is as “initiated” and discreet as Ashmole. I am referring to the American alchemist John Winthrop Jr. (1606–1676), who is the subject of a very informative study by Ronald Sterne Wilkinson.⁷ Winthrop took issue with Samuel Hartlib against Gabriel Platt's *Caveat for Alchymists*, and, in a letter to Hartlib, he wrote:

One thing that mr. Gabriell Platt in one of those little treatises brands Sir Edward Kelly with as the grand imposter of the world I cannot but take notice of, and inform your selfe (to whom I perceive mr. Plat hath addressed that relation, as per the title of the booke appeares) that I can give many very probable reasons to envince that Sir Edward Kellyes projections were not cousening projections but reall [...]. I shall only mention one particular which I had from one who was very intimate with Rudolphus the Emperour who had it from the Emperours owne mouth. That the said Rudolphus with his owne hands and all materialls and instruments for fusion provided by his apointment (*Inscio Kelleo*) transmuted nine pounds of quicksilver into pure gold with so little of the powder taken upon the point of his knife with his owne the Emperours hand out of a paper opened by Sir Edward Kelly at the further end of the room, he the said Kelly not coming neere the place where the fire was.⁸

The person “very intimate with Rudolphus the Emperour” could very well have been the “philosopher and naturalist Cornel[ius] Drebell”,⁹ whose son-in-law, Dr. Kuffler (1595–1677), was a close friend of Winthrop's. Cornelius Drebbel lived between 1572 and 1634, and from 1610 until Rudolph's death in 1612 was in Prague, where he conducted alchemical experiments before the Emperor, who then probably told him of the transmutations of Edward Kelley. This hypothesis is confirmed by a note by Samuel Hartlib, commenting on Winthrop's previous letter, saying that “Sir Edward Kelly is better known to many other judicious men, what he hath performed than Gabr. Plat. [...]. Dr Kuffler confirms your judgement about the truth in Kelly”.¹⁰ What makes Drebbel interesting in connection with our manuscripts, however, is that he wrote in Dutch and died in London. But these few anonymous sources are almost the only ones we possess regarding Kelley's late career at the court of Rudolph.

The uncertainty is further emphasized by the accounts of the date and circumstances of Kelley's death. I have found three or four different versions of his

death, but I am convinced that a few more could be found. The most frequently quoted account, given by Wood, in his *Athenæ Oxoniensis*, states that Kelley died in October 1595,¹¹ and this fits relatively well with Dee's entry at the bottom of the page for November that same year: "25 – Newes, that Sir Edward Kelley was slayne".¹² Ashmole's version is the story which, with some variations, is the most widely known: "he was clapt up againe into *Prison*, and attempting to make his *Escape* out of a high *Window*, by the teering of his *Sheetes*, which were tyed together to let him downe, he (being a weighty Man) fell and broke his *Legg*, and thereof *dyled*".¹³ Unlike Wood, Arthur Edward Waite gives the death date of Kelley as 1597, "when he attempted to escape by a rope, but, falling from a considerable height, sustained such injuries as resulted in his death at the age of forty-two",¹⁴ according to Waite, his second imprisonment was "in the castle of Zerner". Wood relates: "John Weever says that Queen Elizabeth sent, very secretly, Captain Peter Gwinne, with some others, to persuade Kelly to return to his native country. It is then said that attempting to escape from a wall *of his own house* at Prague, he fell, etc. [...] His house is said to bear his name to this day, and was once an old sanctuary."¹⁵

All these stories of Kelley's death are curious indeed, as we now know from the study of Evans, who bases his accounts mainly on Czech sources, that Kelley, was, in all considerable probability, alive as late as 1597 or 1598; and the document to which Evans refers makes no mention of Kelley's death or imprisonment, but quite to the contrary identifies Kelley as "dem Gestrengen Edlen Ernnesten Ritter unndt Herrn Edwardo Kelleo von Imanij undt auff New Lüben, [...] auffm Brüxner (= Most) Schloss".¹⁶ There are several things that simply do not fit: first, from whom does Dee receive the (probably) false news of Kelley's death? As is apparent from his diaries, Dee was rather well-informed about Kelley's activities on the continent, and, in addition to Edward himself, he also corresponded with his brother, Thomas Kelley, as well as Francis Garland, Albert Laski, one Rowley, and certainly some others (such as Dyer and Burleigh), who were in personal contact with Edward Kelley during these crucial years 1589-1595.¹⁷

It seems unlikely that Kelley's career was as fraudulent as is usually believed, since in 1589 or shortly thereafter he seems to have been knighted by Rudolph;¹⁸ in his diaries, Dee from that time onward consistently mentions Edward Kelley as "Sir Edward Kelley". Furthermore, from the years 1594 and 1595 there are, at least to my knowledge, no contemporary or near contemporary records of any imprisonment or arrest, either in his own house or in any castle, which of course does not mean that this did not occur;¹⁹ and even if Kelley was in prison or had been arrested by order of the Emperor, as a note in Dee's diaries of 4 October 1593 unambiguously states: "Libertie E: K:", and on top of the same page: "4. Sir Edward Keley set at liberty by the emperor",²⁰ he must nevertheless have regained the confidence of the Emperor rather quickly, as Dee notes on the 12 August the following year: "I receyued Sir Edw: Kellyes letters of the Emperor inviting me to his servyce again".²¹ Finally, we should pay attention to the fact that the only records of Kelley's death come from England, i.e. from Dee, Wood, and Ashmole, all of whom had to rely on other sources, unknown to us, while no other known record

makes any mention of that occurrence. In view of this, I would not take for granted the commonly accepted account of the date and the circumstances of Kelley's death. First, we do not have the slightest idea as to where the information on Kelley's death actually originates. Probably, the source was one or several of Kelley's colleagues, perhaps the Garland brothers, Dyer or Burleigh, or one of his alchemical friends not known to us, but: it could also be Kelley himself, as he had previously done something similar when he is said to have disguised himself as "Edward Talbot" due to some troubles with the authorities for counterfeiting money and digging up corpses before his association with Dee.²² Considering the lack of evidence, further speculations on this matter hardly seem justified, but it should however be kept in mind that fictitious and metaphorical "deaths" (not to mention "identities") are far from uncommon in the history and literature of alchemy.

II

Let us now take a look at the manuscripts in the Royal Library in Copenhagen which seem to have a connection to either Edward Kelley himself or to an English alchemical circle around him and John Dee. Even though they may not shed any new light on our obscure subject, they will, however, pose some new questions of relevance to the crucial years in Prague from 1589 until the death of the Emperor in 1612.

I would like to start with Old Royal Coll. 240 fol., written by 6–9 different English hands.²³ This manuscript seems to be made up of nine different books, written between 1550 and 1600, and bound together immediately after 1600. On the spine is written with a contemporary hand: "Liber Christopheri Taylour" and the "Monas hieroglyphica"-figure, which links this manuscript to a Dee-influenced circle. It is also interesting to note that this is a much earlier, and previously unknown, use of this mark of ownership, with which the aforementioned John Winthrop jr. later used to mark his books.²⁴ On the back cover a provenance signature: "Mr Powell" (most likely Griffith Powell, who lived between 1561 and 1620, and who seems to be the Powell jr. who made acquaintance with Dee and Walsingham around 1582).²⁵ The latest tracts, bound in the beginning of the manuscript, start with an English translation of Isaac Hollandus, with the date: "ffinis. / 22 maij / 1600 /". This is followed by an anonymous tract, possibly by the same author as the previous one: "Axiomata Philosophica Rules of Philosophers", fols. 69-70. Thereafter follows – on fols. 70-71^v – "The Physycall chemyck of Trythemius". On fols. 71v-74v, there is another Isaac Hollandus tract, with the title: "A Fragment of Isaach Holland concerning the Philosophers stone". On fols. 74v-75v: "23 A Portu St. Maria Aquitanus: Questiones & Answers Philosophicall by 23 of St. Mary Port in Aquitan", with the signature: "Pænotus A Portu Aquitanus | .V.M.D." after the explicit. On top of several of the tracts – throughout the whole manuscript – we find the annotation "Liber Christopheri Taylour", maybe referring to either the source of the material or a later provenance.²⁶ In any case, they are signatures of provenance and not of "scripsit", as one of the tracts with the "Liber Christopheri Taylour" signature is written and dated by Thomas

Newton. Though the contents seem to indicate a continental origin, this manuscript was obviously bought in England, as inferred by a note on the inside of the front cover “sum Habrechti qui me emit Londini 1616· 10 Martij pro ·4· Coronichi ·2· s 6[d]”.²⁷

Closely connected with the previous manuscript (with regard to provenance as well as to content) is Old Royal Coll. 1727 4°, written – according to the dates given in the manuscript – during the years 1593 to 1595 and bound in contemporary vellum. On the inside of the front board is a provenance signature: “Lond. Js. Habrechtt 1613”. This manuscript contains 27 items, all in English, beginning with Benedict Figuli [Benedict Töpfer] *Auriga benedictus* (fols. 1r-8v), and followed by twenty tracts, mainly from English philosophers (Thomas Charnock, George Ripley, and Roger Bacon among others) and, among other anonymous tracts and translations of Arnold Villanova, an English translation of Isaac Hollandus’s *Septem condiciones huius Materiae* (fols. 99-100v). But the most interesting feature of this manuscript is not the tracts but the long passages of notes, recipes, booklists and other memoranda and idle scribblings, i.e. items 2, 4–7, and 27. These parts of the manuscript contain a number of names, unfortunately often erased or crossed out so that they are practically illegible,²⁸ and when not illegible seemingly written in code. I have found no biographical information on several of the names that I have been able to read, e.g.: “Tisdale”, “Kessler”, “Turpin”, “Fouler”, “Smith”, “Edgcome”, “Bartholomeus”, and “Poole”. Other “names”, always following determined cancellations, for instance “of mr [percivale] kogpiavno”, “of captayne [davltre] Tvandgo”, “of mr [poole] keeno”, “of mr [dickenson] Tippolfel” or “of mr [miller] Minnog” are obviously written in code.²⁹ But other names, like “Garland”, “Digges”, “Hill”, and of course “Dee” on fol. 132, do suggest that this manuscript stands in some relation to English alchemists active in Europe. It is well within the bounds of possibility that the “Garland” mentioned mainly on fols. 15v-18 is identical with the friend of Kelley and Dee whose name frequently appears in Dee’s diaries (or with his brother). If so, then the “Nicolas Hill” mentioned on several occasions between fols. 21v-29v, would be Nicholas Hill, the English philosopher, about whom very little is known.³⁰ Hill was born in 1570 or 71 and died in 1621; in 1578 he entered Merchant Taylor’s School and matriculated as a scholar of St. John’s College Oxford in June 1587, and on 30 June 1590 he was elected a Fellow of his college, but was removed before 1592, apparently because he entertained Lullian ideas and perhaps for being too explicitly Catholic in his religious leanings.³¹ Of Hill’s whereabouts and activities the following years up until his death almost nothing is known apart from undocumented rumours. Evidently he did not travel abroad in the 1570s and function as secretary for Edward de Vere, the Earl of Oxford, as often said,³² but he seems to have lived under the patronage of Henry, the Earl of Northumberland in the 1590s and might very well have travelled on the Continent in the early 1600s, either to publish his work in Paris in 1601, or leave England due to some involvement in the conspiracy of Sir Robert Basset.³³ After his death, Hill left a number of texts about the essence of God, eternity, the infinity of matter and the like to his widow,³⁴ but only one of his works was published in his lifetime: *Philosophia Epicurea, Democritiana, Theophrastica proposita simpliciter non edocta* (Paris, 1601). Being influenced by Lullian and Brunian ideas as well as hermeticism,

and his connection with the Northumberland circle, the identification of Nicholas Hill with the one in this manuscript seems tenable.

If these conjunctions and conjectures are reasonable it would suggest that the “Mr. Digges” mentioned on fols. 18v and 21, could be identical with the Thomas Digges who died in 1595 and who was one of the more celebrated mathematicians of his time as well as a close friend of Dee’s.³⁵ It is interesting, then, that the notes in which his name occurs both date from precisely 1595, the year of his death; and the notes relating to his name also seem to be listings of his belongings, as on fol. 21: “the bookes of mr digges”, or, on fol. 18v: “A note of mr digges his worke, after his preparatione of his two Materials Sol and Mercury”. Like the aforementioned manuscript this one is also signed “Christopherei Taylour” at the top of some of the tracts.³⁶ As to the provenance of this manuscript, my guess would be that it was written in England, like the aforementioned one, but we should carefully consider the fact, known from Dee’s diaries, that at least one of the Garlands was in Prague around these years (1593–1595), and that the manuscripts could very well have been written by an Englishman on the continent and brought to London at the time of Emperor Rudolph’s death.

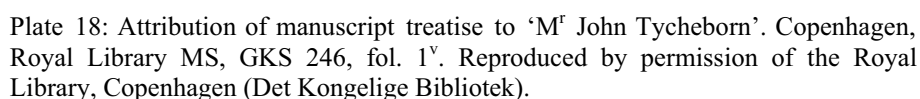

The name of Garland also figures in another manuscript, Old Royal Collection 1749 4°, in one hand, signed and dated on fol. 40v: “[...] Here endeth the practise of mr John Englishman deacon, and copied by me J: Metcalfe on the 11· & 12 daie of October 1594.”, and which on the front cover says: “mr garland the 12th Aprill 1595 | the 2d | of John Englyshman & y^e later end, y^e questions | of Henry tyler | of John Englyshe”. This manuscript only consists of two tracts, the first signed at the top by the intriguing “Liber Christopherei Taylour” (as manuscript 240) in another hand, the second, on pp.41^v-43, with an “ex libris” added later by the same hand who wrote the “Christopherei Taylor” signatures, but here it says: “Out of mr Garlandes book of y^e Earle of Trevisan./”.

Another manuscript, Old Royal Coll. 242 fol., dated 1579 and 1589, has a similarly interesting though uncertain provenance. After the explicit of the first tract, “Opus Isaaci Hollandi Vegetabil”, we read “a copie followinge the exemplaire cominge from coullongne / de / D / Brickman 1575 a Londres le ixth of april 1579”. “Brickman”, is the English spelling for “Birckmann”, and a reference to Birckmann’s in Cologne,³⁷ the book-dealer from whom Dee bought many of his books from 1564 onward.³⁸ This first tract could therefore very well have been copied from a book belonging to Dee. The manuscript also includes “Isaac Hollandus, Septem conditiones huius materie” (with the signature “Liber Christopherei Taylour”), “A correctory made by Richard the Englishe man How Arte followeth nature”, and a text of Edward Kelley’s, here with the title: “The praise of vniti for friendships sake made by astranger to further his frende his conceyts. 1589”, with the incipit “The heavenly cope hath in him natures foure | To hidden but the rest to sight apeare [...]”, and after the explicit, we read: “Sir Edward Kelle. Finis” (Plate 17). This text was included in Ashmole’s *Theatrum chemicum britannicum*, which was published in 1652, with the following title, and a dedication which is absent in our version: “Sir Ed: Kelley concerning the Philo-

sophers Stone written to his especiall good Freind, G. S. Gent”.³⁹ Even though published, this manuscript text of Kelley’s metrical tract is of particular interest, as it is dated 1589, the year that Kelley definitively left Trebona for Prague and Dee returned to England. Accordingly, I find it not unreasonable to assume that the first part of this manuscript was written in England and the last part, dated 1589, was written in Bohemia. This assumption is made pending a more thorough examination of the paper and other physical evidence which might either corroborate or invalidate this hypothesis. Apart from the final parting of Kelley and Dee in 1589, this year is important in Kelley’s career in another respect as well, as it was presumably sometime between February 1589 and January 1590 that Kelley was knighted by the Emperor. If then this dating and signature on fol. 37^v is not added later (which the hand and the rest of the material in the codex does not suggest), then this could very well be a holograph of Edward Kelley himself, and, equally important: if *not* a holograph of Edward Kelley, then (still if the hand is contemporary with the date) it must have been written by someone rather close to him in Prague (i.e. knowing his recently acquired title and having access to his papers). Nevertheless, to me the signature “Sir Edward Kelle” looks like an autograph and not like an author’s name given by a scribe, in which case it would be more natural to place it by the title as is usually done.⁴⁰

As will be shown later, the next manuscript, Old Royal Coll. 246 fol., was definitely written in Prague. It contains four tracts written and signed by one hand: “A Discours of the Quintessence (or rather the Mercury of Lune) / owt of a booke written by Mr. John Tychborn”, “Elixir de Monsier Violet”, “In nomine Domini nostri JESU CHRISTI Amen” (in Italian), and the same in an English translation. This tract (as the Italian original preceding it) is written with the explicit address to the Emperor: “I have thought good to shew only with briefnes of hart to your Imperiall Mayesty the true way ...” (fol. 6). Three of the tracts are signed, the first, “R. K. I wrot this A° 99 Sept[embr]is. Owt of a Booke written by Mr John Tychborn, about an. 1560” (Plate 18), the second: “A° 99. Oct[obr]is 12 finis huius Tractatus Ex chartis Sir Edw. K.”, and finally: “Ex chartis Sir Ed. K” (Plate 19). Due to the identical manner of the signatures it would be tempting to regard this manuscript as a holograph by Edward Kelley from 1599, and the first signature “R. K. I wrot this”, as a mere misspelling; and even though the signature “R.K.” occurs only once, and never in connection with the more unambiguous Edward Kelley-signatures, I find it safer to assume that this manuscript was written in 1599, by a person in Prague (the same hand has signed the Old Royal Coll. 1723 4° in Prague, as will be shown later) with the initials R. K.,⁴¹ and that the other two tracts in this manuscript are thus copied from “the papers of Edward Kelly”. It is clear, however, that the unidentified scribe R. K. must have been in relatively close contact with Edward Kelley or the alchemical circle around him in Prague, as he has obviously had access to Kelley’s papers.

As far as I can see, what appears to be the same hand has also written part of Old Royal Coll. 1723 4°, dated 1612 and 1613, with the signatures “Ex libro Johannis Carpionis de Kaprstein / Martis 28 Anno 1612” (Plate 20) and “Reliqua verò antecedentia ex manuscripto libro magna vetustissimo (et omnio de rebus vel

Plate 19: Attribution of manuscript treatise to 'Sir Edw[ard] K[elley].' Copenhagen, Royal Library MS, GKS 246, fol. 6^r. Reproduced by permission of the Royal Library, Copenhagen (Det Kongelige Bibliotek).

Plate 20: Attribution of manuscript treatise to 'Iohannis Carpionis de Kaprstein'. Copenhagen, Royal Library MS 1723, fol. 20^v. Reproduced by permission of the Royal Library, Copenhagen (Det Kongelige Bibliotek).

operibus Raym. Lullij) scripsi, apud Amicorum optimum D. Johannem C. Pragæ. Anno nostræ Salutatis 1613 Martis 28” (Plate 21), confirming that this scribe was active in Prague, and furthermore “apud amicorum Johannem C[arpionem]”, i.e. John Carpe, with whom Kelley travelled several times to Prague. The last historically established trace of Carpe is the previously mentioned entry in Dee’s diary, recording the departure of Kelley, Garland, and Carpe to Prague.⁴² After the John Carpe signature there is an erased name which very well could be read as “Roger Kock”, a Germanized spelling of Dee’s laboratory assistant Roger Cook (b. 1553).⁴³ Cook worked with Dee from 1567 to 1581, then left him after a violent quarrel, but eventually returned to Dee’s service in Manchester in 1600, and in 1606 he was building a still-house for the Earl of Northumberland. Especially interesting in our connection is that he is probably to be identified as the Roger Cock who was assisting Cornelius Drebbel as an alchemist at the court of Rudolph II up to the time of the Emperor’s death.⁴⁴ Not irrelevant in this connection is that it appears that the “John Carpe” signatures in the manuscript were added some years later by the same hand (which could explain why both are dated the 28 March, but of different years). This does not necessarily mean that the dating is inaccurate. In any case, this signature (John Carpe in Prague 1612 and/or 1613) as well as the, in my opinion, identical English hand do in fact strongly suggest that the production of English alchemical manuscripts stemming from a circle around Dee and Kelley in Prague did continue up to the year of the Emperor’s death in 1612. As we have seen, John Carpe was with Francis Garland and Edward Kelley in Prague in the years 1588-89, and, though Dee’s correspondence with Burleigh, Garland, Carpe and others with links to Prague seems to have ceased by 1595, the alchemical activities intimately connected to Kelley’s activities there obviously continued a good many years after 1595.

We possess yet another manuscript in the same hand: Old Royal Coll. 245 fol., written partly in German, partly in Dutch, with shorter sections in English and Latin, consonant with the assumption that this manuscript springs from the multilingual milieu of Prague. The manuscript is dated “Ex Libro Loogenhagij 1601”.⁴⁵ Aside from a number of obvious similarities, this assumption is supported by another fact: both manuscripts contain texts by the otherwise totally unknown alchemical writer John Tychborn (possibly related to the Tichborne family).⁴⁶ Here we have three texts, the greater part taken “ex libro Loogenhage”: “De vitriolo”, “A Discourse of Antymony, wrytten by Mr John Tychborn of London (Anno Domini 1560) After a duch Booke pertayning to Mr Albert of Brydewell”, and “De Antimonio vel Stibio”, which is a compilation of recipes gleaned from various authors. An interesting feature of this manuscript and Old Royal Coll. 1723 4° is that both have “flower signs” in the margins. From Julian Roberts and Andrew G. Watson we know that identical “flower signs” were employed by Dee.⁴⁷ Obviously, these signs were also in use by members of the alchemical circle around him.

The last of the Copenhagen manuscripts that I find relevant in this connection is also the most intriguing, although at the same time it is that which yields the least factual information. The manuscript in question is Old Royal Collection 247 fol., written by one English hand, with a title page: “Apotelesmata | The Phylosophycal

Plate 21: Note concerning a Lullian manuscript owned by 'D. Johanne[m] C[arpionem]', Prague 1613. Copenhagen, Royal Library MS 1723, fol. 17^r Reproduced by permission of the Royal Library, Copenhagen (Det Kongelige Bibliotek).

effects of Mercurye | in his Tryvmphe | concernynge | The trew & cheyfe
medycyne of the most | avncyent Phylosophers. In whiche is | containd the
openynge & keye | of the whole worke, done by | Arioponus Cæphalus of Eutopia",
with a dedication: "To the most myghty & Invincible Emperour | Rvdolphus 2.
Always Avgvstus. | M. C. M. D. the least of the | phylosophers. | ffrom forth the
most Inward affectyon of a devoted mynd, and humble observance, doth dedycate,
consecrate, and submytt This present worke".

Two Latin tracts have been published by this Arioponus Cæphalus of Eutopia, one with the title: *Mercurius Triumphans & Hebdomas Ecologarum Hermeticarum* (Magdeburg: Andreas Seydner, 1600).⁴⁸ The other work is *Apotelesmata Philosophica, Mercurii Triumphantis* (Magdeburg: Andreas Seydner, 1601).⁴⁹ I have previously vaguely suggested that the manuscript could have been composed or copied by Edward Kelley, but at the time I was not aware of the existence of the two printed editions – though both are included in Ferguson – and as I have not yet had the opportunity to collate these editions with our manuscript, I cannot say how the manuscript, numbering only 14 leaves, corresponds with the two editions respectively comprising 144 pages in octavo and 72 pages in quarto, but it is undeniable that elements from both printed titles appear on its own "titlepage". Pending a collation with the printed editions, we can at least note that this tract, as the previous ones, suggests a connection between the continent (possibly Prague, the hand being very similar to that in 245 fol., 246 fol., and the "apud amicorum optimum D. Johannem C." of Old Coll. 1723 4°), and a group of English writers, scribes and/or friends of alchemy. That this tract was in fact written, or later owned, by someone in the aforementioned circle, possibly around the time of Dee's and especially Kelley's travels from 1585 until at least 1597, follows from the signature on the upper part of the title page: "Liber Christopheri Taylour".

Taken individually, these manuscripts can hardly be said to prove anything, but considered as a whole, they suggest a pattern which could be a promising approach to research on the late career of Edward Kelley. If I may summarize: these eight manuscripts may be divided into two main groups, which could be labelled the "R.K." group and the "Christopher Taylour" group. Of the "R.K." group, two of the manuscripts, 245 and 246, are obviously written by the same English hand, in Prague, 1601 and 1599. Both contain tracts from the otherwise little known alchemist John Tychborn. The scribe, with the initials R.K., must have been rather close to Edward Kelley, as he or she by some means had access to Kelley's papers. In my opinion this scribe is to be identified with hand II of manuscript 1723 (fols. 9–20^v). If so, this R.K. refers to one of Kelley's alchemical travel companions in Bohemia, John Carpe, as "the best of friends", which implies that R.K. and John Carpe both were active in Prague up to the time of the Emperor's death. As hand II (i.e. R.K.) comprises only the half of quire C and hand III of the same manuscript continues directly after on leaf C₅ and ends on leaf D₈, hand III ought either to be the same person as hand II, or another person working together with hand II/R.K. on this manuscript book in Carpe's house. This R.K. further seems to have been familiar with John Dee's methods of annotating books, which follows from the

“flower signs” in the margin throughout manuscript 245, as well as in manuscript 1723, a fact that strengthens the identification of hand II with the signature R.K.

Two manuscripts in the “Christopher Taylour” group seem to have been written in Prague, 242 (partly) and 247; the relevant part of manuscript 242 is dated 1589 and manuscript 247 is written about 1600. But the first part of manuscript 242 is obviously written in London 1579 from a copy from the bookseller Birckmann. As we can regard the number of Englishmen interested in alchemical books and in contact with Birckmann in Cologne in 1579 as limited, we can assume that it was written by someone in the John Dee circle.⁵⁰ Furthermore, given the alchemical verses, dated 1589 and signed “Sir Edward Kelle”, possibly a holograph, and given the circumstances of the name and the year, which implies Prague, the provenance of this manuscript is as close to Edward Kelley as it can be without conclusive evidence. Still without conclusive evidence, this provenance is strengthened by the rest of the manuscripts which have the “Liber Christopheri Taylour” signatures, and which, apart from manuscript 247 (the Arioponus Cæphalus tract), all contain reference to persons in contact with Dee and Kelley: Mr. Powell (manuscripts 240 and 1727), Nicholas Hill and Digges (manuscript 1727), Garland (manuscripts 1727 and 1749), and further the “Monas hieroglyphica” sign on the spine of manuscript 240.⁵¹

The link between these two groups of manuscripts is that both are connected to alchemical activities in Prague during the years 1589-1612, and both are closely connected to Edward Kelley’s alchemical friends and travelling companions from 1589 onwards. The crucial question, not only in relation to the Copenhagen manuscripts, but more importantly, to Kelley’s and others’ activities in Prague between 1589 and 1612, must then be the identity and biography of R.K. and Christopher Taylour.

APPENDIX

A DESCRIPTION OF THE ROYAL LIBRARY MANUSCRIPTS.

Old Royal Coll. 240 fol.

English, last third of the sixteenth century, dated 1567 and 1600, paper, in-fol. 29-31 × 19-20 cm, made up of nine books: [A]¹² [B-E]⁸ [F]⁶ [G-H]⁸ [I]⁸ (I₁+2) [K]⁴ (80 leaves); [L]¹⁰ [M-Q]⁸ [R-X]⁶ (80 leaves); [Y]² [Z]³² (-Z₃₂) (33 leaves); [Aa]³⁰ (-Aa₂₉₋₃₀) (28 leaves); [Bb]⁶ [Cc]⁴ (10 leaves); [Dd]³⁰ (30 leaves); [Ee-Gg]⁸ [Hh]⁴ (Hh₂+2, 2+Hh₃, -Hh₄) (31 leaves); [Ii]⁸ (8 leaves); [Kk-Ll]⁶ (12 leaves). In total: 312 leaves + Flyleaf and Endleaf. No folio numbers, but quires [Z] and [Aa] with their own foliation: 1-30 [31], and 1-28 respectively, and quires [Bb-Cc] with own pagination 1-4 [5] 6 [7] 8 ... [19] 20. Due to extremely tight binding I have not been able to describe how quires [Ee-Gg] are made up, but

from the watermarks I can conclude that they are not gathered as ordinary eights. Bound in contemporary vellum, between 1600 and 1616, but probably immediately after 1600. On the spine: “Liber Christopheri | Taylour | [Monas hieroglyphica]. Old signature on front cover: “14”, and, by another hand: “quo mihi fortuna, si non conceditur vti?”. On the back cover: “M^r Powell./”, and another sentence: “Scientia non habet inimicum, nisi ignorantem./”, and, by another hand: “aeyreus”. A provenance signature on the inside of the front cover reads: “sum Habrechtj q[ui] me emit Londinj 1616· 10 Martij p[ro]·4· Coronichi ·2·s 6[d]”. On flyleaf: “Opus Isaaci Hollandi Mineral”.

Paper: 5 different papers (quire Ii without watermarks, quire Y unidentifiable). **A]** (quires A–K): chainlines 22 mm, watermark: pot with two handles with grapes on top 57 × 18 mm (Not unlike Briquet IV, 12.885, i.e.: C.M. Briquet, *Les Filigranes*, 4 vols (Leipzig: Karl W. Hiersemann, 1923), hereafter referred to as “Briquet” followed by a volume number. **B]** (quires M–T) chainlines 22 mm. Grapes 35 × 18 mm. (as in Briquet IV, 13.065 or 13.066, but far from identical). **C]** (quires A, L, V–X, Z–Aa–Cc, Ee, Hh, K–L) types of pots with one handle and a four-petalled flower on top, and some signs on the lower part of the pot (of which there exists a great variety, often of French or Flemish origin, cf. Briquet IV, 12.505–12.818); C₆₇: height 67 mm (quire X), not in Briquet. C₆₄: 64 × 24 mm (quires Z, Aa), with a “B” on the lower part of the pot, not in Briquet. C₆₁: with “D” and “reversed P” on the urn, height: 61 mm (quire V), identical with Briquet IV, 12.721 (Moscow 1594). C_{58a}: 58 × 26 mm circle, triangle above a “B” on the pot (quires A & L, M_{1/8}), not in Briquet. C_{58b}: circle, quadrate, and triangle, no letters (quires Bb–Cc), not in Briquet. C_{58c}: 58 × 25 mm (another variant) (quires Ee & Hh). C₅₀ height 50 mm, no flower at top (Kk–Ll). **D]** standard, bottom to top: two feet, a rod, a schematised man in a globe, a rod, on which a schematised man is sitting with arms and legs stretched out. 56 × 15 mm (quires Dd). I have found no similiar type of watermark in Briquet. **E]** a crudely drawn pot with two handles, on top a three-petalled flower. 60 × 31 mm (quires Ee–Gg). Not in Briquet.

Nine hands: Hand I (fols. 2-80^v). Hand II (fols. 81-160). Hand III (fols. 161-162). Hand IV (fols. 163-221), signed: “Thomas Newton 1567”. Hand V (fols. 222-231). Hand VI (fols. 232-261). Hand VII (fols. 262-291^v). Hand VIII (fols. 293-300). Hand IX (fols. 301-312). Some of these hands could however be identical.

1. fols. 2–69 (fol. 1 *blank*) [Isaac Hollandus. Opus minerale] *Tit.*: The book of the conditions or qualities of the Physical stone *with preface-title*: The p[re]face of the booke of the condytions or qualytyes | of the Physycall ston. | Wherin is rehearsed the seu[er]all labors of sondry | men, as also the Aucthors intent. *Inc. Old Royal Coll. 247 fol.

English, late sixteenth- or early seventeenth-century, paper, in-fol., 31 × 20.2 cm: [A]⁶ [B]⁸ (14 leaves), page number on pp.5, 9, 17 and 23 (the last erroneously as “25”). Written by one English hand. Bound in modern green boards by the Library. Text 27 × 14.7 cm., 48/61 ll., margins (drawn in red): 11 : 16 : 44 : 20 mm. Paper: vertical chainlines 22 mm, watermarks **A** pot with one handle, crown and four-petalled flower above crown 64 × 24 mm (seems to be close to C₆₄, quires Z and Aa, of manuscript 240); **B** grapes 42 × 20 mm. (cf. quires M–T of manuscript 240 and manuscript 245).

fol. 1-14^v [Arioponus Cæphalus of Eutopia, *Apotelesmata*] *Inscribed at head of fol. 1^r*: “~~Liber Christopher Taylour.~~” *Tit.*: Apotelesmata | The Phylosophycall effects of Mercurye | in his Tryvmphe | concernynge | The trew & cheyfe medycyne of the most | Avncyent Phylosophers. In whiche is | containyd the openynge & keye | of the whole worke / done by | Arioponus Cephalus of | Eutopia. | To the most myghty & Invyncible Emperour Rvdolphus 2^o Always Avgustus. | M[artinus] C[opus] M[edecinae] D[ocor] the least of the phylosophers. | ffrom forth the most Inward affectyon of a devoted | mynd, and humble observance, doth dedycate, | consecrate, and Submytt This p[re]sent | worke. | The ffyrst booke of the Philosophicall | effects of Mercury Tryvmphant | concernynge the great & cheyf | medycyne/ | Apotelesma | 1 | *Inc.*: The most hyghe God in the begynnynge created heaven & earthe: [...]. *Expl. fol. 3^r* (*Apotelesma* 61): [...] magycall Anatomye and Phylosophycall Pyronomye/ finis. | The second booke of the Phylosophicall effects or events of Mercury Tryvmphant of the great medycyne | Apotelesma | .1. | The fyrst & common cause of all Mettalles [...]. *Expl. fol. 5^r* (*Apotelesma* 55): [...] the estymation of all men/ finis | The Thyrd booke [...] *Inc.*: Natvre is a certayn Semynary power [...]. *Expl., fol. 8v* (*Apotelesma* 91): [...] Error & extremely seduced./ finis. | The 4th booke [...] *Inc.*: The vse & practyse of this o[u]r worke [...]. *Expl. fol. 11^v* (*Apotelesma* 71): [...] to theyr full perfectyon/ | The fyft booke [...] *Inc.*: After that the stone hath taken on it a [...]. *Expl. fol. 14^v* (*Apotelesma*, 102): | Wherout so great mysteryes of nature do yet more playnlye & more evydently appeare.

Old Royal Coll. 1723 4^o.

Latin, early seventeenth-century, paper, in-4^o, ca. 21 × 15 cm.: [A–D]⁸ (32 leaves), written by three hands. Unbound, second leaf of front cover cropped after B₈, first leaf of back cover cropped before D₁. On front board old sign.: “N. 54.” & “6”. Paper: Quire A: vertical chainlines 24–25 mm, watermark: heraldic shield with four compartments, upper left four vertical lines, upper right lion (?) [Lower: double-headed eagle and tower (?)]. On top a crown ca. 100 × 62 mm. Quire B–D: Watermark: two symmetrical towers with one window each flanking a simple triangular building with one rounded door, width between towers: 43 mm. (Close to Briquet, 15.943: Prague 1573, but cf. Gerhard Piccard, *Die Turmwasserzeichen. Findbuch III* (Stuttgart: Kohlhammer, 1970), X, 183–84, 193–95, or 202–207, Ravensburg, 1583–98. This firm had two papermills in Bohemia: Prague and Trautenau). Cover: vertical chainlines 21 mm, watermark: pot with one handle, crown and a four-petalled flower above crown 64 × 24 mm (seems to be close to quire A of manuscript 247, and possibly also to quires Z and Aa of manuscript 240).

Hands: I: (with separate foliation), quire A; II: fols. B₁–C₄, not unlike Old Royal Coll. 244 & 245; III: C₅–D₈.

On front cover, list of contents: TRACTATVS | Varij, de Lapide | I. Processus Raym: Lullii, Abbati Angelo, itineris | comiti com[m]unicatus, in monasterio

Angliæ | repertus | II. Ejusdem tractatus de investigatione secreti occulti, | ad Celestinum discipulum suum, quem edidit | Anoniæ, in Coenobio fr. Prædicat- a[nn]o 1319· | III. Epistola totam artem complectens. | IV. Alphidii philosophi liber, dictus Domus thesau- | rorum. | V. Dicta Hermetis & Ortolphi, philosophorum. | VI. Hermetis Regis Græcorum, dicta.

1. fols. 1-7^v (pp. “1”-“14”) *Tit.*: PROCESSUS RAYMUNDI LULLII, AB= | bati Angelo, comiti itineris communicatus, in Monasterio Angliæ re= | pertus.
